In this connection the National Federation of American Shipping also notes that Europe's greatest maritime needs are not of the type which could be filled from America's pool of war-built ships. What the European participants most need are smaller vessels for coastal trade. In vessels of the Liberty and Victory types, those of 5,000 gross tons and over, the European maritime nations now have 1,400,000,000 tons more than they had in 1938. Furthermore, they possess 75 percent of the world's capacity for shipbuilding, which is now engaged in the construction of cargo and passenger ships at a time when American operators do not feel that they can afford to build similar passenger vessels for American operation. The Harriman report observed that "the United States needs an active merchant marine for national defense and we must not create conditions in which that merchant marine cannot survive." To this, the federation adds a postscript: "We need American ships to carry a substantial part of our own commerce, to maintain transportation facilities to important world areas, and as a leader among the United Nations we must keep a reasonably strong position upon the seas." In the light of this it seems obvious that we should not be in any rush either to sell or give away what ships we still own.

Price and Allocation Controls Will Defeat Grain Conservation

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the public generally does not appreciate the contribution that is being made by the feed industry of this coun-

try during the present crisis in our economy. The organization known as the American Feed Manufacturers Association has had under consideration for some time the problem of meeting demand and also the public's reaction to scarcity of goods and high prices. It has gone on record in opposition of a return of price and allocation controls and is emphatic in stating that any return to that program will ultimately defeat United States grain conservation. This organization speaks with authority, and the administration and Members of this House should give heed to its counsel. Under leave to extend my remarks, I am including the arguments against a return to price and allocation controls submitted by that group. In addition, Mr. Speaker, I am also extending my remarks to include information on the function of the feed-manufacturing industry. I am certain this will be helpful information for all Members.

WHY THE RETURN OF PRICE AND ALLOCATION CONTROLS WILL DEFEAT UNITED STATES GRAIN CONSERVATION

1. We recognize the amount of grain and feed we export is a problem of high political and military importance on which Congress must make the final decision. However, we do feel that, when a decision is made to export a given volume of material, we should not expect to escape the consequences of such action in terms of its effect on our domestic price structure.

2. The feed industry feels very strongly that the United States must go as far as possible in helping to relieve the desperately short food situation facing many countries in the world today. However, we are even stronger in our conviction that this country must take stock of its available grain supplies to see just how much can safely be moved out of this country without seriously disrupting our own economy.

3. The American public must realize that the heavy exports of grain and feed will mean a smaller available supply of the protective foods; meat, milk, and eggs, in the second and third quarters of 1948, in comparison to the same period in 1947.

4. Present price trends of the protective foods are doing the job that must be done in order to adjust the consumer demand for these products to the available feed supply. Rationing and price controls will hinder rather than aid this adjustment.

5. Price control on feed and livestock is economically unsound, and might well be disastrous to this Nation. It was proven in the 9 months that we attempted to continue price and allocation controls after VJ-day, that price control and usage or allocation controls merely cause maldistribution of feed supplies. These controls did not save 1 pound of feed.

6. During the period of price control and rationing after VJ-day it was definitely proven that these types of orders and regulations cannot be enforced in peacetime in this Nation. Any attempt to enforce such regulations will ultimately lead to complete regimentation, including control of wages and salaries.

CONCLUSION

Restrictions which would limit the available supply of balanced rations to the livestock and poultry producers of this Nation would defeat the purposes of the grain-conservation program by forcing the feeding of greater quantities of grain in inefficient rations, as examples:

United States Department of Agriculture reports show that on the average it required 900 pounds of feed to produce 100 dozen eggs. Through efficient use of balanced rations it requires only 600 pounds of feed to produce 100 dozen eggs, or a saving of 300 pounds of feed per 100 dozen eggs, of which two-thirds is grain. Thus, a net saving through efficient feeding of 200 pounds of grain per 100 dozen eggs produced.

In the production of pork in dry lots it requires 12 bushels of corn to produce 100 pounds of pork. Six bushels of corn fed with 50 pounds of properly balanced supplement will produce 100 pounds of pork. Thus, a net saving through efficient feeding of six bushels of corn per 100 pounds of pork produced.

NOVEMBER 5, 1947.

INFORMATION ON THE FUNCTION OF THE FEED-MANUFACTURING INDUSTRY

The feed-manufacturing industry is a service industry filling a very definite and important need in our national economy. It is estimated that there will be produced in this Nation nineteen to twenty million tons of byproducts feed this crop year. The chief byproduct feeds are mill feeds, corn gluten feed and meal, cottonseed-oil meal, soybean-oil meal, brewers' grains, distillers' grain and solubles, packinghouse byproducts, dried milk and whey, fish meal and oil, etc.

These byproducts are obtained from the manufacture of products for human consumption, such as oils, starches, flour, alcohol spirits, meat, fish, and dairy products. These byproduct feeds all have available certain nutritional values and in order for the Nation to get the maximum amount of good out of all of these ingredients the feed industry ascertains the value of the variable nutritional elements in each byproduct and blends them together so that the maximum production ability of the total supply of byproduct feeds is obtained.

The economic function that the feed-manufacturing industry performs is that of blending this vast volume of byproduct feeds together so that the livestock and poultry feeders of this Nation get the maximum amount of good out of the available byproduct feeds when fed with basic feed grains—corn, oats, barley, sorghum grains. By doing this, feed manufacturers are extending grain supplies.

ADDITIONAL ECONOMIC AND STATISTICAL INFORMATION

The level of prices is determined by the amount of money people have to spend and the volume of goods that is offered for sale. Since prewar, we have tripled our money supply. Factory wage earnings have jumped from 63 cents per hour in 1939 to about $1.25 per hour. Total wage and salary incomes have jumped from $50,000,000,000 in 1939 to $125,000,000,000 this year. Is it not reasonable then, to expect a general price level of two to two and one-half times the prewar normal if the volume of goods available for purchase is about the same?

To illustrate the maldistribution which took place under usage control limitations placed upon the feed industry on March 1, 1946, the following information is submitted from four responsible feed manufacturing companies which represent general conditions in the deficit areas:

Percentage of tonnage produced in the indicated months of 1946 as compared to 1945 (usage limitations were in effect in 1946)

Company	No. 1	No. 2	No. 3	No. 4
	Percent	*Percent*	*Percent*	*Percent*
March	86	100	62	84
April	84	90	95	75
May	64	79	52	57
June	73	68	41	44
Average: 4 months	76	84	62	65

When feed supplies became available through normal channels after lifting of price and usage controls, the following table shows the production of these same companies for the same months of 1947, as compared with 1946:

Percentage of tonnage produced in the indicated months of 1947 as compared to 1946

Company	No. 1	No. 2	No. 3	No. 4
	Percent	*Percent*	*Percent*	*Percent*
March	124	110	119	101
April	154	118	128	128
May	187	130	164	180
June	174	144	168	134
Average: 4 months	159	125	144	136

The following example illustrates that price and usage controls on the feed manufacturer do not save any grain or feed but merely cause maldistribution, with the result of higher cost to the livestock and poultry producers in the deficit grain areas. Two firms in deficit grain areas have submitted evidence that they were forced to purchase a total of 14,000 tons of manufactured feeds of unknown quality to supplement their reduced production in order to take care of the livestock and poultry producers who were depending on them for feed supplies. The average cost of these feeds of unknown quality averaged $12.29 above the list price on their own feeds of known quality to feed the same type of livestock or poultry.

Under a free-enterprise system prices have effectively performed the function of balancing the available supply with the demand. When the supply of feed has been short the resultant increase in prices has quickly forced the inefficient, wasteful feeder out of business. As a result of this inefficient feeder being forced out of business, the feed supply, through the operation of free prices, was made available to the efficient producer who could afford to pay the high prices and still make a profit.

This is what must happen if livestock and poultry production is to be brought into line with feed supply and the output of food per pound of feed maximized.

The feed industry, through its extensive service organizations, has already placed in operation special concrete programs designed to conserve grains.

NOVEMBER 5, 1947.

National Legislative and Administrative Law

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. GWYNNE of Iowa. Mr. Speaker, under leave to extend my remarks, I include an address delivered by me on September 24 before the administrative law section of the American Bar Association at its annual meeting in Cleveland, Ohio:

Senator PAT MCCARRAN, while chairman of the Senate Judiciary Committee, made the following statement:

"The Administrative Procedure Act is a strongly marked, long-sought, and widely heralded advance in democratic government. It embarks upon a new field of legislation of broad application in the administrative area of government lying between the traditional legislative and fundamental judicial processes, on the one hand, and authorized executive functions, on the other. Although it is brief, it is a comprehensive charter of

private liberty and a solemn undertaking of official fairness. It is intended as a guide to him who seeks fair play and equal rights under law, as well as to those invested with executive authority. It upholds law and yet lightens the burden of those on whom the law may impinge. It enunciates and emphasizes the tripartite form of our democracy and brings into relief the ever-essential declaration that this is a government of law rather than of men."

The adoption of this act crowned with success the efforts of many persons over a period of years. The American Bar Association is particularly entitled to great credit for the final result. The members of your committee who worked so long and so faithfully deserve the gratitude of the American people.

I desire at this time to present a few observations concerning our future relations to this law. In that field, the Congress and the bar of the Nation have important responsibilities.

Many of us have long been concerned about the tremendous centralization of power in the Federal Government. There has been a great rise in the number and in the power of agencies exercising legislative and judicial authority. Serious inroads have been made in the rights of States and local communities. Private enterprise and individual responsibility have suffered from increasing, and often unwarranted, governmental interference.

In my opinion, the time has come for a reversal of this trend. Constitutionally created legislative and judicial bodies must be restored to their rightful place. The attempt to regulate governmental agencies must not divert us from the duty of eliminating those not needed and restoring their functions to the source from whence they came.

The Administrative Procedure Act was, of course, not designed to attain that objective. It should, however, be a wholesome influence in checking unnecessary growth and in preventing further usurpation of power. Bureaucracy will not flourish so dangerously when kept in check by a vigilant Congress and when required to operate in accordance with established principles of justice and fair play.

Nevertheless, it must be recognized that many of these agencies cannot be eliminated. They came into existence to render services that purely legislative and judicial bodies could not render. The development of commerce in England created problems that the common-law courts of the day seemed unable to handle. And so there grew up the law merchant—administered in separate informal tribunals. Equity law had a somewhat similar history. It is to the credit of the judges and lawyers of that day that they were able to recognize the need of these new principles of jurisprudence, and to eventually bring them within the orbit of the common law, as then being administered. Thus the needs of a progressing civilization were met; the law was enriched; and the fundamental principles of due process retained and developed.

In similar fashion, the economic development of America, the complexity of our relationships has brought us constantly new and difficult problems. The increasing importance of transportation indicated a need for the Interstate Commerce Commission. Concentration of economic power resulted in the Federal Trade Commission. Difficulties between management and labor introduced the National Labor Relations Board. A rising tide of social consciousness created the Social Security Board. And so the expansion of administrative government and the growth of administrative law has been a major phenomenon of our time.

Just how much this expansion and growth will inure to the eventual welfare of our people has often been debated. The size of our Federal establishment in the future will be a matter for Congress and the people to decide. But whether there be many agencies, or relatively few, we must see to it that all operate according to the pattern laid down in the Administrative Procedures Act. That, I believe, is the first responsibility of the bar of the country.

Secondly, you and I must be ever vigilant in seeing that the act is administered in accordance with its true intent and spirit. In certain quarters, this law was not greeted with shouts of welcome. Some agencies admitted that the proposed legislation was good for the other fellow.

The act lays down requirements as to the issuance, publication, and availability of information concerning administrative organization, procedure, and policies. It establishes methods for rule making and gives the citizen some right of participation therein. It provides for hearings and adjudication under conditions favorable to fair and impartial treatment. It contains comprehensive provisions for judicial review. It requires nothing of the agency that it cannot give; it guarantees to the citizen nothing to which he is not entitled. Those who administer the law must keep that constantly in mind. In fact, much of the success of the law will depend upon its enforcement. So, adequate and competent personnel should be made available to carry out the purposes of the act.

Third, care must be taken that subsequent legislation shall not repeal or whittle down the provisions of the law. During the last session, one bill expressly exempting a certain agency from the act was rejected by the House Committee on the Judiciary. A number of other bills are pending which purport to operate in the field covered by the existing law. These bills fall into the following categories:

1. Those which expressly amend the act by sections, etc.;

2. Those which do not specifically amend the act but modify the procedures for a single agency and refer to the act; and

3. Those which do not specifically refer to the act but which provide for methods of procedure, etc. and appear to be modifications thereof.

All of these bills should be carefully scrutinized before they are allowed to become law.

The fourth suggestion is directed particularly to Members of Congress, and others interested in drafting legislation. The Administrative Procedure Act necessarily modified certain laws existing on the date it became effective. But it does more than that. Its provisions are applicable not only to then existing agencies but to those which may be created in the future. If that is kept in mind, much work will be saved and better results secured.

For example, in future legislation there is no general necessity for express reference to the act. As pointed out, it automatically applies to agency operations within its terms. There will, however, be occasions when references may be made in order to make applicable provisions which, under the act itself, would not be operative. Section 2 contains the necessary general definitions. So long as judicial interpretation applies them according to their intent, there should be little occasion for either amendment or reference to them in the future. In any event, it will be helpful if the same terminology is maintained. Section 3 (a) sets out what rules shall be made or published and the consequence for failure to do so. In future drafting, it should not be necessary to refer to this section unless it is desired that something be published in the Federal Register not included in subsection 3 (a). Many other illustrations could be given.

To state the matter briefly, those responsible for drafting future legislation should keep in mind the following general propositions:

1. Since the act is generally applicable to agencies and actions within its terms, there is no necessity to make general or specific references to it except for special purposes. If that course is followed, it will greatly simplify legislative drafting because it will no longer be necessary to retrace the ground, if the application of the general provisions of the act is deemed adequate in a given situation.

2. Care should be taken not to write provisions which duplicate, conflict with, or appear to minimize existing provisions of the act which would otherwise and in any event be applicable to the subject matter.

Although the Administrative Procedure Act regulates procedure in Government agencies, it does not undertake to determine who shall practice there. This omission was not, however, due to any feeling that such regulation was not needed. Every State prescribes who may practice before its tribunals. On the other hand, Congress, with few exceptions, has left the practice before agencies largely to the control of the agency itself.

The American Bar Association, through its committees, has made an extensive study of this subject and made certain recommendations. A bill embodying these suggestions, H. R. 2657, was introduced in the present Congress and is pending before the House Committee on the Judiciary. The subject is also being considered by the Senate Judiciary Committee. Hearings have been held on H. R. 2657 and will be resumed when Congress reconvenes. It is our intention to afford ample opportunity for all interested parties to appear and explain their views concerning this important matter. The enactment of a proper law on the general subject of practicing before Federal agencies will make much easier the administration of the law already passed concerning the procedure itself.

It is very gratifying to note the continuing interest of the bar in administrative procedure and practice. It is an answer to the charge of the demagogue that our Constitution is out of date—that our form of government is not equal to the problems confronting it. It is notice to discouraged people everywhere that in America we have confidence in those eternal principles of liberty and justice, for which we have fought and which have ever been enshrined in our hearts.

World Monetary Reform

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. HORAN. Mr. Speaker, on a number of occasions it has been pointed out both within this body and in the public press that whatever measures we take, aimed at the reconstruction of European nations, must inevitably fail unless the United States at the same time will take the lead in demanding world monetary reform.

In my opinion this subject has nowhere been as clearly discussed as in a recent book by Mr. Henry Hazlitt entitled "Will Dollars Save the World?" which I recommend to any person who may be deluded by the theory that the mere sending of more credits to Europe will solve our present crisis. It is to me encouraging that at least some European countries are making the first hesitant attempts at currency reform and that we may yet find a way to force an end to the

fiscal insanity which has been an underlying cause of the failure of the world to get back on a sound financial basis.

In further extending my remarks, I should like to include an editorial from the Washington Times-Herald, December 1, 1947, discussing the first move of the Italian Government in the proper direction.

It is my intention in the near future to offer some specific suggestions as to how the United States may take the leadership in demanding a revision of world fiscal policy which will make safe our investments in the foreign countries to be aided under the so-called Marshall plan.

The editorial follows:

ITALY FREES LIRA

The lira is the Italian unit of money, as the dollar is the American and the pound the British. Its prewar value was about 5 cents, or 20 to the dollar.

Those good old days ended after Italy got into the war. We wouldn't know what, if anything, the lira was worth when the Germans were running Italy with Mussolini as their Charlie McCarthy.

From the liberation of the country by the Allies until 1946, the lira's value was pegged at 100 to the dollar, or one-fifth of prewar.

The Italian currency has been devalued three times in the last 2 years, finally skidding to a rate of 350 to the dollar.

That rate was official and legal—meaning the Italian Government insisted that this was what the lira was worth in terms of buying power, whereas everybody, including the Government, knew that such was not the case. Result: Black markets in Italian money, and a general financial discombobulation.

Last Thursday, Premier Alcide de Gasperi's administration decided that all this was going to stop. It further cut the lira's valuation to 589.47 to the dollar, which was slightly lower than what the money had been selling for on the black market.

Further, the lira is to be revalued every month, and these adjustments are to be based on what importers will offer for the dollar on Italian stock exchanges at the time each revaluation is made.

Thus, Italy becomes the first country which has been controlling its currency to cut that currency loose from controls and let it find its true level in terms of what the money actually will buy. What it will buy is determined by such things as the country's productivity and production, the state of its foreign trade, and the confidence that its own people and others have in the country's Government.

Those things determine any currency's buying power and its strength on world exchanges. Currency controls are maintained by countries which know darn well their money units are none too strong.

CONTROLLING MONEY AND FREEZING TRADE

The well-known economist and writer, Henry Hazlitt, says that these currency controls are to blame for most of the postwar world's financial miseries, and that the bulk of those miseries would dry up and blow away if all these countries would do as Italy has just done.

Mr. Hazlitt's thesis is worked out in detail in his new book, Will Dollars Save the World?, D. Appleton-Century Co., New York and London, 1947, 95 pages, $1.50.

Hazlitt is for the dropping of all price controls in other countries, as well as of money controls—and he is against restoration of price ceilings in the United States.

His reasoning is that such things are artificial and arbitrary interferences with the law of supply and demand; that they make black markets, discourage people from producing in hope of reasonable profits, and generally paralyze both home and foreign trade.

If they were all thrown overboard, he claims, the situation would right itself in a hurry, there would be no more dollar famines in Europe, and virtually the whole Marshall plan would become unnecessary.

That may be somewhat on the overoptimistic side. The fact remains that war-devastated Europe has very little as yet to export, while the United States production is at record levels. Until Europe gets more of its factories going, it is hard to see how trade in and out of Europe can be balanced.

But in the Hazlitt theory's favor there is this fact: Italy for many months now has been well known to be just one big black market—meaning its people have gaily ignored the multitude of price controls, and have bought and sold their labor and their goods for what they were worth in reality. And Italy, for all the tumult kicked up by its Communists, has been staging a remarkable economic comeback.

We note, too, that General MacArthur, over in Japan, has been able to stabilize Japanese economy to such an extent that Jap chinaware is creeping back into the United States market—good stuff, we're told, and at virtually prewar prices. MacArthur, so far as we've ever heard, is no believer in price controls, restrictions on individual effort, and other great brain gadgets.

It seems just possible that Italy, in taking the plunge into free-moving money, has given a strong boost to its own economy, and may have started something which will eventually lead all of western Europe out of the economic swamps. Here's hoping, anyway.

The Late Hon. James J. Davis

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. SIMPSON of Pennsylvania. Mr. Speaker, I join the other members of the Pennsylvania delegation in expressing the loss to our State and Nation in the passing of former United States Senator James J. Davis.

Mr. Davis was truly representative of the American way of life. From a humble beginning as a son of Welsh immigrants poor in dollars, he rose to be Secretary of Labor and United States Senator. Deprived of a regular education, he educated himself. Forced to go to work in the steel mills in his early teens, his will to succeed brought about a rapid climb to positions of honor and responsibility.

He was always proudest of his nickname, "Puddler Jim," for it symbolized his place as a working American. It was in keeping with such sentiments that he successfully served as Secretary of Labor under three Presidents.

His leadership was recognized in many other ways. He was elected director general of the Loyal Order of Moose in 1906 and held that position until his death. He was keenly interested in the unfortunate, and during the past several years devoted most of his time to raising an endowment of $10,000,000 for the children's home and school at Mooseheart, Ill.

I was privileged to make many trips with Mr. Davis through Pennsylvania, particularly in the Seventeenth Congressional District. It was on these visits with him to the grass roots of our State that I learned to appreciate the bond between Mr. Davis and the average American.

When he spoke to the workingman and the farmer he talked their language. His concern for the welfare of the average man was not based on synthetic humanitarianism derived from the study of academic theories, but was founded upon a first-hand knowledge of what it meant to work hard. No man in recent years has been a truer champion of the common man than was James J. Davis.

Throughout his career he succeeded in drawing supporters about him from all walks of life, for innumerable fine causes. His personal magnetism, founded upon an imposing physical appearance and a simple, honest directness of manner, made him a man in whom people could have faith.

It is such men as James J. Davis who have been the builders of America. He has gone on, but the spirit he symbolized remains as a vital part of our great Nation.

Congress' Power To Tax People for Aid to Europe Questioned

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Prof. Curtis P. Nettels, of Cornell University, in the Rochester Times-Union of November 4, 1947:

CONGRESS' POWER TO TAX PEOPLE FOR AID TO EUROPE QUESTIONED

(By Curtis P. Nettels, professor of history, Cornell University)

Upon what grounds may grants from the Treasury of the United States to foreign countries be justified?

May Congress lawfully make such grants for the sake of charity? From what clause in the Constitution does Congress derive such power? The only clause which might remotely justify such grants is section 8 of article I:

"The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States."

Clearly, this clause does not authorize charitable grants to foreign countries. The Government of the United States is not an agency for dispensing charity abroad.

If Congress offers charity to one state, should it not be offered to all that may be in need? Will not favoritism antagonize all states that are slighted and deemed unworthy of our official assistance:

Is charity likely to gain us the good will even of the recipients, since they are likely to feel that they ought to receive more than is given? When a Government undertakes

to dispense charity to foreign states, it will get only enmity and ill will for its pains.

May the proposed foreign aids be justified on the ground that they will "provide for the common defense and general welfare of the United States"?

Yet such foreign aids have increased the cost of living in a most unfair manner. Gifts to foreign states have made certain articles scarce and have increased their price. Some of the producers of such scarce articles have benefited, and many purchasers of them have been impoverished. Unhappily, millions of Americans have been levied upon to pay, by inflation, the cost of foreign aids. This is utterly indefensible.

By and large, the poorest people in the country—the least able to pay—have been impoverished by the high price of goods caused by excessive exports. Other favored Americans have profited, through high prices, at the expense of their less fortunate fellow citizens. Wealthy foreign nationals have been exempted from using their hoarded wealth for the succor of their own nationals, while the poorest people in the United States have been forced to make the required sacrifices.

The President's call for a special session has made clear the connection between foreign aids and inflation. Are we to continue to finance foreign aids by inflation, and thereby to impose the burden upon the people who are least able to bear it?

If Congress is to grant immense funds to foreign states, effective action should be taken to see to it that the sacrifices required by such gifts are borne suitably by all Americans. This is imperative, since Congressional grants may be justified only on the ground that they are necessary to the security and welfare of the United States; and uniformity of sacrifice is the rule to be applied when the Nation's security and welfare are at stake.

How, then, may Congress assure that sacrifices will be evenly distributed? Obviously, by adopting measures to prevent such foreign aids from adding to the cost of living, thereby enriching some Americans and impoverishing many others. And how is this to be done, unles the country is to be subjected to a rigid set of economic controls?

In order to avoid the inflationary effect of foreign aids, are we to impose upon our economy a set of stifling curbs and restraints that may spell the end of free enterprise in America?

The notion that the proposed foreign aids are essential to the security of the United States is fantastic. The only presumed enemy that is cited by the sponsors of such aids is Russia. It is proposed to offer immense sums to France and Britain. But neither France nor Britain is a long-term ally of the United States against Russia. On the contrary, both those states are the long-term allies of the Soviet Union. Both are bound by 20-year treaties not to enter into any alliance or to take part in any coalition against the Soviet Union.

Both are bound not to give any effective assistance to the United States in the event of an American-Russian war. Such are the states for which the United States is asked to impoverish itself, in the name of national security.

The proposal that the United States should destroy its basic institutions in order to succor the long-term allies of the Soviet Union is rational only on the assumption that our institutions have failed. But if they have failed, why are we called upon to give aid to others? How may our institutions provide assistance to others if they are so defective that they need to be abandoned, in the name of foreign aids.

Neither the President nor Congress is authorized by the Constitution to dispense charity to foreign states. Foreign aids may not properly be financed by inflation, since high prices here impoverish those Americans who are least able to pay costs of foreign relief. It is infamous when the poorer people in this country are levied upon for the benefit of foreign states, while the wealthy citizens of those states continue to hoard money that might be used for the relief of their distressed countrymen.

And it will be equally infamous if foreign aids are used as a pretext for fastening upon the United States a set of economic controls that will destroy the American system of production and business.

Around the World With Sixty-six Billion American Dollars

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a table presented by the office of the Coordinator of Information of the House of Representatives, which shows the distribution of American dollars around the world. It is a very important table to consider in view of the constant demands upon the Treasury of the United States for more and more dollars.

The table is as follows:

Around the world with $66,000,000,000—how United States dollars were spent

Lend lease	$48,601,365,000
Surplus property	4,686,071,360
Direct loans	4,200,000,000
Export-Import Bank loans	2,960,636,460
UNRRA, United States share	2,279,102,284
War Department civilian supplies	1,365,046,000
Aid to Philippines	695,000,000
Occupation lira credit	258,000,000
International Bank loans	485,000,000
Fixed war installations	146,985,693
Foreign Economic Administration relief	140,000,000
Alcan Highway	138,312,166
RFC loans	30,000,000
Air bases	22,000,000
Cultural and technical projects	3,963,000
Inter-American Highway	3,317,700
U. S. Commercial Co	2,085,664
Office of Defense Supplies	460,944
State Department credit	248,064
Educational aid	196,000
Total	66,017,790,335
Reverse lend-lease:	
Great Britain	6,752,073,000
France	867,781,000
Belgium	182,942,000
China	3,672,000
Netherlands	2,368,000
U. S. S. R	2,213,000
Total	7,811,049,000

Since the start of World War II, the United States has given or lent the rest of the world the staggering sum of $66,017,790,335. Relief funds, goods, and other economic aid have been doled out in various ways which are itemized above, The largest single item went to England, a $3,750,000,000 loan which is almost used up, due to worsening economic conditions. On the other side of the ledger—in the form of reverse lend-lease—is a grand total of $7,811,049,000, making a net outlay of $58,206,741,335. Belgium is the only country whose reverse lend-lease exceeded (by $24,344,000) our lend-lease to it. These latest available figures obtained from Government agencies, are approximate and by no means final or complete.

San Francisco To Get Rough Deal if Lobbyist Plan Is Carried Out

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. MILLER of California. Mr. Speaker, Miss Ruth Finney, a staff correspondent for the San Francisco News, has written a story that appeared in that paper for November 29, 1947, in which she has pointed out the favorable situation in which the city of San Francisco finds itself with respect to its congressional representation. Her article follows:

CONGRESS MAY GIVE SAN FRANCISCO ROUGH DEAL IF LOBBYISTS PLAN CARRIED OUT

(By Ruth Finney)

WASHINGTON, November 25.—San Francisco may be in for a rough ride in the coming session of Congress. If the city's new mayor goes through with his plan for sending a lobbyist back to Washington, and if the supervisors appropriate money to make this possible, the results may be anything except those anticipated.

For Washington, practically as a unit, resents that sort of thing.

In the legislative branch the resentment has two grounds. In the first place, there are already some 900 registered lobbyists pulling at the coattails of the Congressmen and trying by every means which human ingenuity can device, to influence them. Senators and Representatives have built up a resistance and are annoyed when more lobbyists are added to the list.

In the second place, men who come here as lobbyists for any public body meet a special sort of resistance, for they are widely recognized in Congress as usurpers, men who are trying to undermine, take the place of, or openly oppose the duly elected Members of Congress. A Congressman from Houston or Philadelphia is just as apt to resent a lobbyist from San Francisco as are the two gentlemen who represent the city. For he knows that it may be his turn to be undercut tomorrow.

In general the special lobbyist from a city is apt to meet a blank wall of resistance from other Congressmen unless he has the active support and cooperation of the men from his home town. And if he has that he's apt to be looked on as unnecessary, and pretty much of a nuisance. It can be laid down as a safe rule that no Member of Congress is going to push legislation affecting a city unless the elected Congressmen from that city are for it. To do so would be a violation of the rules of the club—to say nothing of the rules of democratic government, which presume that sections of the country shall be represented in Washington by men and women elected by the people.

In the Government departments the feeling against treading on the toes of elected representatives is just as strong, for departments are dependent on Congress for the funds with which they operate, and they know from bitter experience that to snub or offend an individual who helps hold the purse strings may have sad consequences.

At the present time, San Francisco is exceptionally well situated so far as representation is concerned. Representative RICHARD J. WELCH, who has seniority enough to be a power in the Republic Congress, is chairman of one of the 13 powerful committees of the House. As such, members of both parties defer to him and so do members of the executive branch. He is better able to get any favors he may desire for San Francisco at the present time than any Conressman from San Francisco has been for the past 25 years.

San Francisco's other Congressman, Representative FRANCK R. HAVENNER, is a member of the powerful Armed Services Committee, which carries a little extra prestige, both on the Hill and in downtown Washington.

In addition, the city has Frank McKee of the San Francisco Chamber of Commerce here working industriously—but working with and through the Congressmen.

Members of the California delegation were at a loss to understand a Robinson reference to instances in which San Francisco had been "outbid and outjockeyed" by other cities, and could not, offhand, recall any such instance. In addition, there was considerable alarm here, from all shades of political thought, about a reference to reopening the Hetch Hetchy controversy.

The Hetch Hetchy matter was given the quietus, with considerable difficulty, by Representative WELCH, when it appeared likely, last year, that the Comptroller General and Congress would demand the city pay back some $50,000,000 it collected from the P. G. & E. under an arrangement held illegal by the United States Supreme Court. Only WELCH's personal influence has kept that matter from being pressed. If it is reopened San Francisco's lobbyist may cost the city considerably more than his annual salary. WELCH chose to head the House public lands committee instead of either of two others in which he was senior, largely because of this issue, and he is probably the only man alive who can protect the city from having a ruinous claim brought against it.

Is It a Conspiracy?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, this morning Commentator George E. Reedy, over radio station WOL, Washington, made some pertinent comments regarding the American Federation of Labor and its decision to get into politics for the purpose of defeating Members of Congress who voted for the Taft-Hartley bill. I commend this radio talk to every Member of the House who voted for that bill because it may affect his future status as a Member of Congress. Mr. Reedy has rendered a real service in presenting his ideas on this subject:

The American Federation of Labor has taken a long step away from the advice of Samuel Gompers, its cigar-making founder. His attitude toward labor on election day was summed up in the phrase: "Reward your friends and punish your enemies."

For several decades the AFL followed this advice to the letter. It refused to endorse any party and it engaged in no campaign activities. On election day it published lists of public officials it didn't like and let its followers make up their own minds.

Furthermore, it resolutely refused to endorse any candidate for the Presidency of the United States. Only once in its entire history did it budge from this position. That was in 1924 when it went all out for the elder La Follette, running as an independent.

Of course, individual unions did not feel themselves bound so tightly. During the New-Deal era, Daniel Tobin, head of the teamsters, was a strong supporter of the late President Roosevelt. The same was true, for a limited period only, of John L. Lewis.

The parent organization, however, would have nothing to do with such things. Its interest was centered in the individual Congressman and his voting record. If the AFL chieftains like it—fine. If they didn't like it—they'd do something about it.

Now, the period when the federation stayed as far out of politics as it could seems about over. The top leaders are working out a new organization, to be called Labor's Educational and Political League. It looks like much more than a debating society.

Federation heads insist they are not abandoning their traditional policy in the least. They claim that it is just being expanded. But it is obvious that much more than that is intended, and will be attained.

Labor leaders are really disturbed about their relationship with the present Congress. The passage of the Taft-Hartley Act at the last session convinced them that they are in bad repute. They want to do something about it.

The first objective, of course, is to defeat all Members of the House and Senate who voted for the law. Today that is the major test applied by union organizations to politicians who are courting their favor.

If organization can carry out this end, the unions should be able to do it. Practically every major labor group now has some sort of political arm. When it comes to the Taft-Hartley Act, those arms will all pull in the same direction.

The CIO has its Political Action Committee, and the International Association of Machinists has set up a Nonpartisan Political League. John L. Lewis has another so-called nonpartisan league, and now the AFL has entered the picture.

If these various associations accomplish nothing else, they should give the public its first real look at labor's strength in the United States. For once, all the top unions have entered the political arena, and there is no doubt of where they stand.

Many Republicans hailed the 1946 elections as proof that union men do not follow the politics of their leaders. But in their heart of hearts they knew it was no real test. There were just too many things involved in that election.

This coming year will see the real thing. The unions will be organized all along the line, and their leaders will be fighting desperately. They feel that this is the crucial battle in their struggle to maintain their strength and power.

Consumer Protection Against Fraudulent Advertising

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an address by Hon. R. E. Freer, member of the Federal Trade Commission, recently delivered before the American Marketing Association at New York, entitled "The Federal Trade Commission Views Questionable Advertising Copy."

The address is as follows:

THE FTC VIEWS QUESTIONABLE ADVERTISING COPY

Advertising long has been an engrossing subject to students of business and to writers of articles for law reviews, as well as to those paying for and engaging in its preparation and dissemination. One nineteenth-century pioneer proponent who testified to his "most complete faith" in it as "the royal road to business" was P. T. Barnum. Later, in the first decade of the present century, was born today's slogan, "It pays to advertise." Members of the advertising profession itself from time to time have joined in decrying advertising's alleged excesses and shortcomings. Some "outside" critics of advertising have gone so far as to challenge the economic and social justifications for its existence. Countercharges have been made to the effect that such critics harbor either an emotional grudge or an intellectual spite against advertising.

In making these remarks today, I shall just assume, without undertaking to prove such assumption, that advertising has lived so long in conjugal bliss with selling as to cast the burden of proof upon those who question either the legitimacy or the permanency of their union. I shall also assume, without being put to proof, that the advertising fraternity is constantly engaged in self-improvement as a result of constructive criticism from whatever source. It shall be my purpose to relate factually some of the high lights of the Commission's work as it relates to the elimination of false and misleading advertising and thus to develop my subject, The Federal Trade Commission Views Questionable Advertising Copy.

The lead sentence of the lead article recently published in a leading law journal reads as follows:

"Advertising copy generative of demand is a natural concomitant of the distributive process in a competitive economy, and therein lies an inducement to hyperbole that has had its effect on the life, health, and pocketbook of the credulous consumer."

We see eye to eye on that and on the proposition, too, that false advertisements, that is, those containing outright falsity as to a material fact, are harmful both to consumers and to business.

Agreed as we are on the intellectual level of forthright condemnation of outright falsity, differences of opinion sometimes arise on the level of practical application to border-line situations. Words and sentences, literally true, may be framed in a confusing setting capable of—if not artfully designed to be—misleading. It is just our hard luck—yours, the Commission's, and the courts'—that no magic formula can resolve the implications of such ambiguous advertising copy. There is just no guide to whether calculated insertion of a restrictive weasel word here and a contradicting and subtractive phrase there will prove sufficient in a given case to remedy the deceptive ambiguity.

The Federal Trade Commission Act broadly prohibits unfair methods of competition and unfair and deceptive acts and practices in interstate commerce and directs the Commission to prevent their use. Congress refrained from attempting to catalogue the practices it deemed unfair and deceptive, fearing that precise definition might result in evasion. The failure to enumerate and expressly define has been criticized by some

on the ground that no guide is given to businessmen as to what conduct is rendered unlawful. This much is conceded, the statutory test of unfairness is an elastic one under which it is the Commission's duty to keep pace with new promotional inventions.

Court decisions and Commission opinions: Decisions of the courts in unfair competition cases furnish some guidance as to distinguishing unlawful and lawful advertising. Many of the Commission's decisions as printed in some 39 volumes of Commission reports deal directly with the distinction. Some critics have said that judges are too prone to offer vague generalities about honesty and fairness as substitutes for tangible guidance. The courts, it must be conceded, sometimes do premise their decisions determining rights and duties of private litigants in unfair competition cases on the proposition that each case is "a law unto itself." Substantially the same criticism has been directed to Commission findings and orders. Without conceding the substantiality of the criticism against either, except in isolated instances, the Commission in recent years is giving greater attention to reasoned opinions as a supplement to the general guidance afforded by its orders—particularly order of dismissal.

The statutory language: Despite the breadth of language, it is arguable with at least equal persuasiveness that section 5 of the Federal Trade Commission Act, as amended by the Wheeler-Lea Act, does furnish a concrete guide in outlawing unfair or deceptive acts or practices. Furthermore, section 15 provides concrete standards for the advertising of foods, drugs, cosmetics, and therapeutic devices, as follows:

"The term 'false advertisements' means an advertisement * * * which is misleading in a material respect; and in determining whether any advertisement is misleading, there shall be taken into account (among other things) not only representations made or suggested by statement, word, design, device, sound, or any combination thereof, but also the extent to which the advertisement fails to reveal facts material in the light of such representations or material with respect to consequences which may result from the use of the commodity to which the advertisement relates under the conditions prescribed in said advertisement, or under such conditions as are customary or usual."

I submit that this language is both definite and succinct and I feel the Commission's interpretation of it has been realistic.

As our highest Court expressed it, the public is entitled to get what it chooses even though such choice "be dictated by caprice or by fashion or perhaps by ignorance." Of further relevancy on the question of whether the statutory proscriptions are obscure is the hard economic truth that when a seller publishes statements respecting a product's composition, origin, efficacy, principle of operation, method of manufacture, or terms and conditions of his offer, he is deep in the realm of material fact. The same holds true when he makes statements of like tenor to agents in soliciting their services or to retailers in persuading them to put the product on their shelves. Obviously, these claims pertain to matters peculiarly within the seller's knowledge. The practicalities of the public interest require that he who purports to be informed respecting product efficacy and attributes must answer for the veracity of the claims he has asserted.

Mr. Justice Holmes once wrote:

"It is not enough for the knight of romance that his lady is a very nice girl. If you do not admit that she is the best that God ever made, or will make, you must fight."

Unquestionably, there is a legal privilege attaching under ordinary conditions to use of honest expressions of opinion when so characterized even though ultimately they prove erroneous. Some call this puffing. However, if the circumstances are such that they may mislead consumers or unfairly injure a competitor, they fail of justification. Admittedly, the Commission must give very careful study and close consideration to each of the relatively few cases falling in this realm when rendering decision.

As I view it, the mandate of the statute as it applies to false advertising is plain and direct. It lacks, of course, a blueprint showing how to use deceptive, ambiguous, or misleading statements without apprehension that such use may lead to a request from the Commission for their discontinuance and the execution of an agreement to forego them in the future.

Trade practice conference rules: Numerous useful guides to advertisers are found in the trade practice rules promulgated under the Commission's trade practice conference procedure. This procedure was adopted 20 years ago to enable all members of an industry voluntarily to catalog and abandon unfair trade practices simultaneously.

The rules promulgated after a trade practice conference are divided into two groups. The group I rules paraphrase the law in terms applicable to conditions in a particular industry, specifying as unfair those practices which fall within the scope of decisions dealing with the statutory inhibitions. The group II rules express further and higher standards of ethical business conduct which are proposed by the industry and accepted by the Commission as desirable. Many are designed to develop a greater degree of useful information for the consumer than that which the law clearly requires. Concerns engaged in unfair practices in violation of the rules in the first group are subject to formal proceedings by the Commission. The effectiveness of rules in the second group usually depends upon voluntary compliance, but under certain circumstances their violation may lead to action.

The conferences have proved particularly useful in preventing unfair representations by developing an understanding of the meaning of trade terms and of the circumstances under which a seller has a duty to avoid deception by disclosing the facts concerning his product.

Trade practice conference rules designed to aid the consumer may be illustrated by those promulgated for and accepted by the fur industry. Group I rules require that the seller disclose the true name of furs which have been dyed to resemble other fur peltries, together with information as to whether the furs have been tipped, blended, or pointed, if such be the case. They require disclosure also of the fact that a garment is made of pieces, tails, paws, or scraps rather than of full skins. Such rules clearly inform both consumer and dealer as to the meanings of terms which they use in their dealings with each other and by dispelling the former's ignorance, lessen his chance of self-deception while at the same time freeing scrupulous dealers of an unfair competition based on consumer ignorance.

Rules are in effect for more than 150 industries, including among the more recent wood-cased pencils, razor and razor blades, water heaters, hearing aids, musical instruments, household fabric dyes, masonry waterproofing, vertical turbine pumps, watches, piston rings, and dolls and stuffed toys.

In leaving the topic of guides to advertisers, I call attention to the further fact that trade practice conferences are becoming increasingly useful instruments by which the public and businessmen may jointly reach an understanding as to the quantity and quality of useful information needed in the market place.

FACTUALLY INFORMATIVE ADVERTISING

Like other consumers I keep looking for signs that the trend observed today in many industries toward more informative advertising is a general one. Advertising cannot be considered as a substitute for honest market information. I imply no blanket condemnation of advertisements or commercials solely because they stress the subjective or emotional values; but as the scope of these values is enlarged in a particular advertisement, the greater becomes the need for relevant truth as a competent guide to use of the products. As packaging becomes more general, for example, consumers are less and less able to confirm their impressions by presale use of their senses of touch, taste, or sight.

The popularity of some private bureaus, institutes, and consumer reports suggests some degree of public approval of proposals for an authoritative or official source of consumer information. Advertising and advertisers both should concern themselves with supplying such information. If they turn a deaf ear who knows but that this polite consumer agitation may become a roar for establishment of governmental machinery bypassing the advertisers.

Advertising and Selling, for December 1946, contains results of a study by Dr. Daniel Starch, New York business consultant and member of your association, of 583 advertisements from which he found that advertisements above average in information had nearly twice the sales power of advertisements below average in information, both being average in reader interest, while advertisements above average in both respects had sales power three times as great as those below average on both counts.

So much for the art of writing nondeceptive factually informative copy. I turn now to how the Commission surveys advertising and how it proceeds to aid in the voluntary correction of unfairness found to exist therein.

THE COMMISSION'S SURVEY OF RADIO AND PERIODICAL ADVERTISING

The Commission feels keenly its statutory responsibility to eliminate false and deceptive advertising. Not all of the questionable advertising considered by it comes to its attention through complaints registered by a competitor or a dissatisfied consumer. The Commission's Division of Radio and Periodical Advertising maintains a continuous survey of advertisements appearing in magazines, newspapers, radio broadcasts, and mail-order catalogs. This results in earlier investigation of advertisements questionable on their face, whether or not the commodity or claims had been previously the subject of Commission action, as well as in answering the question whether advertisers as to whose representations corrective action has been taken are living up to Commission orders to cease and desist therefrom or to their own voluntary stipulations or agreements to discontinue or modify them.

During the fiscal year ended June 30, last, there were procured for examination 1,733 editions of representative newspapers of general circulation and 1,309 editions of magazines and farm and trade journals. Included in the last were 236 issues of farm journals, 179 issues of trade and specialty publications, and 10 issues of domestic foreign-language publications. Eighteen thousand two hundred and fifty-six advertisements were noted as containing representations that appeared to warrant inquiry as to their factual basis. The catalogs or circulars of 102 mail-order concerns were examined and 238 advertisements marked for further consideration as possibly misleading. Marked for further study were 9,573 of the 641,402 radio broadcast continuities examined.

Much credit is due to Nation-wide network chains, regional network groups, transcription producers engaged in preparing commercial radio recordings, radio stations and publishers who cooperate with the Commission by furnishing the grist ground in its mill.

In instances where advertising agencies or radio-station personnel have prepared or participated in the preparation of advertisements questioned as being false or misleading, the agency or station is included with the advertiser as a party to any resulting corrective action. To date the Commission has not joined as parties agencies, radio stations, or publications which have done no more than serve as dissemination media. Pertinent to this policy is the fact that section 12 of the Federal Trade Commission Act, as amended by the Wheeler-Lea Act makes it unlawful merely to disseminate, or cause to be disseminated, any false advertisement of a food, drug, curative device, or cosmetic. Under certain conditions specified in section 14, such mere disseminators are exempt from criminal liability, but not from civil proceedings.

THE COMMISSION'S PROCEDURES FOR VOLUNTARY CORRECTION

The Commission recently reexamined its own procedures and the methods of handling its work, resulting in an expanded use of industry-wide investigations coupled with increased emphasis upon correction by cooperative procedures as well as in a revision of the rules of practice in formal cases. One criticism of the traditional case-by-case procedure, viz., investigation, complaint, hearing, and order, was that competitors of the party so proceeded against were left free to follow the identical illegal practice until such time as the Commission issued orders to cease and desist against each separate offender in turn. Where appropriate, simultaneous uniform corrective measures on an industry-wide basis are now proposed rather than directing action solely against the concern to which the complaining finger first pointed. I say where appropriate, because, application of such simultaneous uniform corrective action must appear not only to be warranted in the public interest, but also to be practicable of execution.

Not only is the Commission expanding its work in establishing trade-practice conference rules but also it is giving greater emphasis to the elimination of false and misleading advertising and other unfair trade practices through voluntary stipulations to cease and desist.

The time and money saved by use of the cooperative methods of handling false advertising and other matters involving excesses of competition, will be used to implement a broader program of formal proceedings to prevent restraints on competition itself and those tending to monopoly. I hope the results will inspire further confidence on the part of the public in the Commission's effectiveness in both fields.

America's Old Folks—The Forgotten Ones

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. ANGELL. Mr. Speaker, I pose the question, Should America's old folks be permitted to suffer for the lack of the bare necessities of life? We are called here in special session to consider the proposal of sending $597,000,000 overseas to help the harassed peoples of Europe during the coming winter. The big heart of America may be depended upon to give such aid where needed within the limits of our ability to do so. America has never been found wanting when the cry of distress from Europe has reached her.

However, is it not proper to urge that we also give immediate attention to the distress of the old people of our own country? Hundreds of thousands of elderly men and women of America, who made America what it is, and whose loyalty and industry have placed our country at the forefront of the nations of the world, are now in dire need of the bare necessities of life, food, clothing, shelter, and medicines. This one group of our citizenship has suffered more than any other during this period of high cost of food and other necessities of life, due to the fact that their income is restricted to such an extent that it was insufficient in ordinary times to provide them with the frugal necessities of life. Now, with the dollar shrinking to half its buying power, their distress is more pronounced than ever.

The Congress has been dilatory and has failed to bring up for consideration any of the measures pending before it for the relief of those old folks. At the beginning of the first session of the Eightieth Congress I introduced H. R. 16 which has for its purpose giving aid to the old people of America. It has never been brought up for consideration and therefore I filed petition No. 7 to discharge the committee and bring the bill on the floor for action. Over half the required number of our colleagues have signed the petition and I urge every Member of the House who is interested in the welfare of our own country and particularly in doing justice to these elderly citizens of America, to sign this petition before we adjourn. No better Christmas present could be given to the old men and women of America than signing this petition and making clear to them that America does care and that our Congress is willing to consider legislation which will provide sufficient funds to permit them to live in decency and health during their declining years.

I include as part of my remarks a discussion of this important legislation by Dr. Francis E. Townsend, who has done more to advance the cause of old-age security than any other living American. This discussion is a forthright and thought-provoking recital of the needs of this great segment of our population and the soundness of the program for their relief he proposes:

DOCTOR SHOWS HOW PLAN CAN BE A COMPLETE PHILOSOPHY OF LIFE—ANALYZES FUNDAMENTAL AIMS OF NATIONAL INSURANCE PROGRAM

(Dr. Francis E. Townsend)

With passage of the Full Employment Act last year, President Truman appointed a board of economists to advise with him on needs of the American people. This board has so far made two reports. Although neither showed the vision or statesmanship the people have a right to expect from such a group of high Presidential advisers, it may be that the economists are just now getting their feet wet and will soon come forward with more important utterances.

We feel that the economist of vision will never ask, as a basis for his deliberations, "How little can the people live on?" but rather, "How much can the Nation afford?" Some years ago, Stuart Chase asked that question and came up with the answer: "A nation can afford whatever it can produce."

Even before Congress acts on the Marshall plan for Europe and the little Marshall plans for Asia and Latin America, our United States has proved itself able to produce more than $200,000,000,000 worth of goods annually. We say even before the Marshall plan because it is obvious that when other nations begin bidding, with American taxpayers' money against citizens of this country for already scarce goods here, inflation will send the value of annual production up to three hundred billions or more each year.

DISTRIBUTE PURCHASING POWER TO ALL CITIZENS

But we can see now that it is possible for normal production, 2 years after the end of the war, to approximate two hundred billions' worth of goods each year. Buying power to the tune of two hundred billions each year must be distributed to citizens within our own shores if our Nation is to consume this normal production and achieve economic stabilization at a high-productive level.

It is time we Americans quit selling ourselves short. All of us, from humblest citizen to Presidential advisers, have too long suffered under a national feeling of inferiority. We have felt inferior to many of the older nations of Europe in culture, inferior in virtually every direction except in production and salesmanship.

We have felt like a robust youngster in a family of older and wiser nations. It is time we overcame this national feeling and realized that we have proved ourselves in the years of our maturity, can now speak up and lead our brother nations to peace for the world and prosperity for the humblest.

AMERICA MUST REALIZE HOW BIG IT REALLY IS

Let us begin to think big, talk big, act big—and before we know it we will wake up to the fact that we are big.

Let us realize that what man can imagine, man can do; and then let us go on to imagining the lowest and humblest citizen within our shores enjoying products which could only be bought with an income of $5,000 a year or more.

I believe our Townsend plan embraces, within its philosophy, virtually everything required to lay the groundwork for such American progress. But I am willing to listen to the ideas of any other citizens, in the Halls of Congress or anywhere else, so long as they represent dynamic, constructive thinking toward a better world starting here at home.

Spiritual peace and prosperity is something which each individual must find for himself but I am of the opinion that spiritual values can grow and thrive best in an atmosphere of material plenty; thus my insistence on the abolition of poverty and the extension of democracy here at home.

With this preface, it seems to me the Townsend plan can become a complete practical philosophy of life.

TOWNSEND PLAN ALLOWS NO DISCRIMINATION

The Townsend plan makes no discrimination in its payments between Jews, gentiles, Negroes, and whites. It follows that we are committed to a program of promoting harmony between races and creeds within our national shores, and actively fighting discrimination.

The Townsend plan makes no differentiation between citizens in the North, South, East, or West. In this respect it is unlike our

interstate commerce freight rates and unlike poll taxes.

The Townsend plan, unlike the present Social Security Act, does not treat women as second-class citizens, as mere legal appendages of their husbands. We are committed to a program which would treat women equally in the economic as well as the political sphere, with equal pay for equal work.

Since the Townsend plan, unlike the Social Security Act and unlike the present Federal tax laws, would be financed by a levy on the amount of business done by individuals and corporations—and would use revenue under this levy to increase buying power among consumers—it seems to me we are committed to fight any form of taxation which cuts buying power at the source.

This puts us in the camp of those against pay-roll and sales (or buyers') taxes.

LITTLE BUSINESS WILL BENEFIT UNDER PLAN

Since the Townsend plan is a program which presumes to stabilize and improve the condition of ordinary neighborhood merchants with whom consumer buying power will primarily be spent, our philosophy favors the improvement and extension of little business. We are committed to an active fight against monopolies, trusts, and cartels which are organized principally to prevent neighborhood businessmen being able to compete on an equal basis in the American market.

Since the Townsend plan, by compelling monthly circulation of at least 3 percent of the national gross income each 30 days, hinders the power of banks to issue or withhold credit at will, it follows that we are committed to fight for bringing control over credit and currency back to Congress as representative of the people.

This means we oppose ownership of the Federal Reserve System by private bankers and actively campaign for purchase of its capital stock by the United States Treasury to the end that the functions of the Federal Reserve banks may be administered by our Congress.

Since the Townsend plan is an economic path to a full-production economy under our traditional free-market system, we oppose not merely the trusts and cartels so beloved by big business, but we oppose as well the feather-bedding practices and import duties so favored by some segments of organized labor.

In other words, we fight scarcity of goods available to the American people, no matter who is responsible for such scarcity; whether such scarcity be maintained to bring about high prices or wages.

FAVOR TECHNOLOGICAL CHANGES IN INDUSTRY

However, there is one commodity we should like to see used in ever-lessening abundance; that is man labor.

We want to see our scientists invent machines capable of performing virtually every job now performed by man in the sweat of his brow.

We want to see youngsters continue to study under a free public educational system so long as they individually show the desire and capacity to absorb learning.

We stand for immediate retirement, on excellent pensions, of men and women at age 60 instead of the 65-year age set by the Social Security Act. As quickly as more of the work of mankind can be done by machines, we want the retirement age reduced to 55 and then to 50 so that American citizens can spend the twilight period of their lives in the dignity of individual travel and personal occupation.

Everyone knows that the Townsend plan proposes immediate removal from the labor market of some 16,000,000 men and women who would be retired on splendid monthly annuities. That such retirement would result in an immediate scarcity of labor and consequently a temporarily higher wage level, until technology had introduced machines to fill the gap, we are well aware.

PLAN WILL REDUCE THE COST OF LIVING

Despite the effects of our program in bringing about higher pension levels and higher wage levels for those who remain in the labor market, we believe it will reduce the cost of living for all. This result will be brought about by the brains and creative ability of American industry, which, faced for the first time with a limitless market for all, it can produce, will install machinery vastly to increase its output, and thus inevitably lower the unit cost of production. This lowered unit cost will be passed on to consumers.

We were happy when Congress adopted, as high national policy, the goal of full employment. We believe that goal should have been more clearly defined as jobs at good wages for the young and middle-aged, but retirement on excellent annuities for the aged, the blind, the incapacitated, and mothers with dependent minor children.

We believe the only road to lower prices and a higher standard of living for all citizens in our present industrial economy lies in the fullest extension of mass production. But we believe that mass production can only be maintained and extended if our Government works toward the end of assuring regular and immediate mass consumption.

We say that it is possible for our America to achieve these goals under our traditional free market, free enterprise system.

But we call upon the American people, our Members of Congress, and the economic advisers to our President to raise their sights at once to focus on these goals.

AMERICA CAN AFFORD WHAT IT CAN PRODUCE

Someone once asked the question, "Is plenty too much for the American people?" The men and women of this Nation do not think so. And as long as it is possible to imagine an economic way of life under which every family can enjoy the equivalent in goods of $5,000 per year income, the American people will not long remain satisfied without seeking such a way of life.

It is a goal worth dreaming about, worth working for and worth fighting for, is it not? Let's cease thinking of ourselves as little fellows. Let's think of ourselves as what we are—one big fellow composed of 140,000,000 individual parts. Let's think big, talk big, act big—and wake up to the realization that we are the biggest phenomenon in history, a self-governing people able to solve its own problems without help from outsiders.

What Europeans Think of Us

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an article which appeared in the New York Times November 30, 1947, by Raymond Daniell, entitled "What the Europeans Think of Us."

Mr. Speaker, we have recently heard numerous able speeches by Members of the House who have visited Europe during the recess of the Congress and who have reported on conditions as they found them existing in Europe. These speeches by our colleagues have been most informing and illuminating. This article written by an American presently in Europe should provide another point of view regarding conditions in Europe as seen by a representative of the press.

The article is as follows:

WHAT THE EUROPEANS THINK OF US—THEIR IDEAS ABOUT US ARE DISTORTED, BUT WE HAVE FUMBLED THE JOB OF EXPLAINING OUR AIMS TO THEM

(By Raymond Daniell)

LONDON.—While Congress is discussing aid to Europe it is important to try to see ourselves as Europeans see us. Therefore, as I have traveled through a dozen or more countries in Europe in the last few months I have been making a survey of opinion about the United States. In brief, the picture is this:

First, there is universal agreement that the United States is the richest and just about the most powerful nation on earth. Second, opinion is divided on whether America is a nation of sentimental altruists or of sinister predatory imperialists. Third, even our friends are afraid to put their trust completely in us, for they say we are an emotional, mercurial people who have no consistent foreign policy but work by a series of ad hoc improvisations. Fourth, Europe dislikes, as everyone does, being dependent upon someone else, and it tends to shift that dislike to the nation it is dependent on. Fifth, a good deal of thinking about America is colored by fear of war, for, to many, America is the only force left in the world capable of challenging the Soviet Union, and they fear that Europe will be the battleground of a coming conflict.

It must be remembered that the people of Europe are going through a very difficult, nerve-wracking time. That explains, in part, why the picture they draw of us is not always a recognizable one. In addition, we have ourselves to blame for some of the distorted notions Europeans hold about us; we have not done a very effective job of explaining ourselves and our motives to Europe, and the Communists have taken advantage of that fact. Probably the best thing to do is not to let misunderstandings worry us too much but to leave matters to time to correct. A good many of the causes of envy and distrust would disappear if the Marshall plan helps Europe to restore its economy and to achieve a degree of security which it has never had since the First World War.

Such, in short, is the idea of America one finds reflected in European opinion. Let's look at the details.

Wherever you travel in Europe, you discover that America's wealth has its disadvantages. No matter how much we do to help Europe, the feeling is that we could and should do more. A British friend remarked one day that he thought it shameful of a nation as rich as the United States not to share some of the good things of life, such as butter, eggs, meat, and grain with its wartime allies. To him, the termination of lend-lease after the war was an act of narrow selfishness, and there are many of his countrymen who feel the same way, even to the point of resenting the idea of conditions being imposed on postwar loans.

An Italian, better informed and more pro-American than the average, told me recently in Venice that, even if the funds appropriated for European rehabilitation under the Marshall program were on the scale proposed by the Paris Conference, the cost to the individual American would only amount to about one good-sized beefsteak per year. He remained skeptical and unconvinced when I assured him that the cost to the taxpayers would be close to $400 apiece, which would buy quite a large number of steaks and a reasonable amount of Chianti, even in Italy's most expensive black-market restaurants.

A German burgomeister in the Ruhr declared that the United States must provide

more food before there could be any hope of increased production for export. This incidentally is the theme of most interviews with German officials who have ceased to ask and are now demanding on the theory that German rehabilitation is the key to the success of the Marshall plan. This burgomeister was quite truculent:

"If you haven't got the wheat yourselves, why don't you go and buy it from the Argentine? Your country has plenty of money, hasn't it?" Visible evidence of America's material wealth is to be seen everywhere on the Continent. There are the big sleek American cars and, in occupied countries, there are the GI's with cartons of cigarettes, boxes of chocolate bars, soap, and even jars of caviar to give away or trade for cameras and jewelry. Hollywood films give a glamorous picture of a glittering, opulent American way of life, which stirs a nostalgic envy in European hearts and sometimes brings forth disparaging comments on our jukebox, push-button civilization.

Three years ago an American in any country of western Europe was hailed as a liberator. Today he is more apt to find himself defending his country from charges of dollar imperialism, jingoism, and warmongering. To a certain extent, though not entirely, this is the result of intensive Communist propaganda.

The party line also undertakes to prove that while the United States is wealthy, its prosperity cannot continue long under free enterprise. Thus, in a world too cynical to believe in altruism, the Marshall plan is presented as a self-serving device for postponing the inevitable depression. The disfranchisement of Negroes in Southern States is cited as evidence of American hypocrisy when it comes to human freedom, and figures from John Gunther's Inside U. S. A. are used to show that, despite the great wealth of America, millions of underpriviliged citizens are worse off than workers in states with planned economies.

Even Europeans untouched by Communist propaganda are fond of expatiating on the superiority of their culture and civilization to that of the New World. They are appalled by the ignorance of some of our visiting statesmen regarding historical and geographical facts which they absorb almost with the air they breathe. And they think there is something wrong with a country, the majority of whose citizens seem to prefer swing music to Beethoven and Bach, don't know the difference between the uses of burgundy and port, but on the whole prefer whiskey with their meals.

So far has the pendulum swung in 3 years that we are now being attacked in many countries for what is called indiscriminate bombing of their cities. There are grumblings about it in Normandy and Brittany and in Italy. In Czechoslovakia, while I was there, Lawrence E. Steinhardt, our Ambassador, made a formal protest to the Foreign Office regarding charges in a left-wing newspaper that the United States Air Force had wantonly bombed industrial cities in Bohemia and Moravia after all military necessity was ended, solely to cripple Czech industry as a competitor in world markets.

There can be no doubt but that raising the level of industry for Germany has cost us friends in many of the countries which are her neighbors and were her victims. Feeling is very strong in France that, as a barrier to Russia, the United States is prepared to strengthen Germany rather than France, and against this Frenchmen tirelessly protest.

On the other side of Germany, the Poles distrust Russia but fear Germany more. The same is true of Czechoslovakia, where there is a common saying, "Ani Pruska provincie, ani Ruski gubernie," which means "Neither Prussian province nor Russian Government."

However, the Czechs are a Slavic people, and there are strong cultural ties between them and Russia. Jan Masaryk once said that he learned to read Pushkin before he learned to read Shakespeare, and as one Czech statesman, friendly to the West, put it to me, the Marshall plan, with its implicit necessity for restoring German industry to prewar levels, probably did more than the Cominform can ever do, to drive his country into the Russian orbit.

Many of the fears, suspicions, and misconceptions that exist in Europe about America spring from the fact that we are new there. We are an unknown quantity. For many Europeans it would be easier to accept the leadership of Britain, whose aims are better known, whose people and policies are less mercurial than ours. There is still a suspicion that our whole foreign policy may undergo a revolution one election day, 1948, notwithstanding the efforts toward a bipartisan agreement inaugurated by President Roosevelt and continued by President Truman.

"I think that for most of us the United States is not a western nation at all," a Belgian intellectual explained. "We cannot think of Americans as being part of our life here as the French and English have been for so long. To us the United States is not of the east or the west, but a part of another world."

It must be left to time and contact among individuals to correct some of the misconceptions about us. In the meantime it may be that closer contact with an older culture and civilization will remove some of the causes of irritation which now disturb personal relations and understanding. For while we have much to contribute toward material progress, it would be folly to close our minds to the fact that we have not yet created the perfect state or the perfect society.

At this stage of history we cannot afford to be too sensitive. We must make up our minds to be criticized, suspected of ulterior motives and to be faced with ingratitude—even enmity. We will make blunders and we will be attacked as mercenary schemers against freedom and liberty.

That has happened already in Greece. Last spring when the Truman doctrine was promulgated, our only enemies in Greece were Communists and fellow-travelers. Since then we have brought about reforms there. We have been instrumental in broadening the Greek Government, weeding out superfluous civil servants and instituting new taxes designed to bring the budget into balance. In consequence we have made enemies among disgruntled former officeholders, politicians, and rich merchants whose purses have been injured.

It would be a tragic blunder if, when we vote billions to help Europe to her feet again, we did not at least appropriate a few millions to tell the people of Europe what we are doing, why we are doing it, what it is costing Americans in labor and in dollars, and what kind of people we really are. They don't know now.

We can tell our side of the case far more effectively than we have been doing. In Czechoslovakia, for instance, we are spending $31,000 annually for the United States Information Service. The Czech Ministry of Information, which is headed by one of the country's most violent Communists, has the equivalent of $5,000,000 at its disposal, and most of it is being used to sell Russia's cause.

We are fighting what has been called a cold war with Russia. It is a war of propaganda, of ideas, of ideology. The weapons are radio, press, motion picture. We have developed their use to a science in the United States, and we used them effectively during the war. It is time we brought them into play on our side again.

Recommendations of National Foreign Trade Council Convention

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. CRAWFORD. Mr. Speaker, I desire to call the attention of the House to further observations of the National Foreign Trade Council convention in connection with present world economy and submit that organization's recommendations.

Continuing the council's views as I submitted them yesterday, they follow:

7. Participation in the continuing efforts to create an international trade organization designed to effectuate, over the longer term, the principles inherent in the multilateral, nondiscriminatory concept of international trade; and aggressive prosecution meanwhile of the reciprocal trade agreements program as a means for securing every feasible reduction of the barriers to world trade and the removal of discriminations.

Realization of the stated objectives of the projected international trade organization is essential to the development of the greatly expanded volume of world trade requisite to the attainment of the goals of maximum production and higher living standards.

General adherence to the American concept of international trade cannot be forthcoming until those nations requiring economic assistance are convinced that their rehabilitation is reasonably well assured. It is vital, nevertheless, to seek acceptance by other nations of the trading and investment principles to which we hold, and to secure, by international agreement, commitments looking toward their later implementation and fulfillment.

Every effort should be made to improve and strengthen the charter of the projected international trade organization to the end of achieving this result. Meanwhile, full advantage should be taken of the opportunities afforded by the negotiation of reciprocal trade agreements, by the conclusion of treaties of friendship and commerce, and by other means available, to seek an immediate stimulation of economic recovery through the reduction of barriers to world trade.

8. Stimulation of the flow of imports into the United States, to the ends of enriching our consumer economy, closing the gap between exports and imports, and validating a continuing high level of exports of both goods and capital.

Imports increase a nation's wealth and substance; exports provide a means for paying for these imports, and for contributing to the development and enrichment of foreign lands.

The United States cannot derive optimum benefit from its foreign trade until productivity abroad is increased to the point where surpluses beyond domestic needs become available for export, and until free exchange rates are established which will enable these surpluses to be sold competitively in the world market. Underproduction abroad is at the bottom of the existing imbalance in America's foreign trade: Our imports are drastically reduced in consequence of the unavailability of foreign goods, and the needs of other countries for our exports are proportionately enhanced. Increased foreign production, with a resultant increase in America's imports, is the first requisite to a continuing high level of American foreign trade.

In the stimulation of imports, due consideration must be given to the safeguarding of American industries producing strategic materials or other products essential to the national defense, and to the avoidance of a too rapid displacement of any of our productive facilities. Emphasis should also be put upon the need for alleviating the drains to which our natural resources are being subjected, and upon the desirability, as circumstances may require, of stock-piling critical or strategic materials.

The inability to obtain needed imports from foreign lands has made it necessary for us to accept large quantities of gold in part settlement of our international trade balance. Acceptance of gold for this purpose can only be regarded as a temporary expedient looking toward the eventual acquisition of things the American people can consume and enjoy.

9. Development of a modus operandi between our private-enterprise system of international trade and the trading systems of other countries, which will avoid compromise of our own system and protect our traders against discrimination by reason of their private status.

The security and economic interests of the United States require a particularly close economic association among all free nations: it is of great importance, therefore, to preserve an effective basis for the reciprocal flow of trade between these nations and ourselves.

Any modus operandi established between our system and the differing economic systems of these or other nations should provide, among other things, that American traders have the opportunity to compete on equal terms, insofar as state trading enterprises are concerned, for participation in the buying and selling operations conducted by such enterprises. Where such enterprises constitute a product monopoly in their own country, efforts should be made by negotiation to limit the protection the monopoly affords against imported products, and to assure that exports are not promoted by subsidies or dumping.

10. Acceptance and active promotion by the United States of closer economic ties among the nations of western Europe, including western Germany, without prejudice, in consequence, to the reciprocal application of unconditional most-favored-nation treatment.

Maximum utilization of the regional resources and facilities available in western Europe, and reduction in proportion of the need for outside aid, demand that existing European barriers to the interchange of goods and services be eliminated or minimized.

The materials and labor out of which higher European living standards can be built are available on the ground in preponderant measure: Financial aid is needed only for the acquisition, from the United States or elsewhere, of the critical materials and equipment the European economy lacks, and for provision of the marginal subsistence required to enable production to be carried forward. Closer economic cooperation within western Europe, looking toward the establishment of sectional or regional customs unions, is essential to realization of this economic potential, and to effective utilization of the American aid provided.

The benefits granted under our trade agreements with other nations should be extended to those western European countries entering into arrangements designed to minimize or eliminate the barriers to trade among themselves, provided the treatment accorded our trade under such arrangements is no less favorable, on the whole, than the treatment heretofore accorded by the participating countries.

It should not be overlooked, in our concern with the problems of western Europe, that any contribution made by eastern European nations to the rehabilitation of Europe as a whole will give added impetus to accomplishment of the purposes we have in view.

11. Recognition of the importance of cooperation with the peoples of the East, within the limitations imposed by our foreign policy and by the dictates of normal commercial prudence, in the development of their resources and trade; with a view of promoting their well-being and contributing to the building of a healthy world economy.

More than half of the world's population, and vast quantities of the world's natural resources, are concentrated in southern and eastern Asia and the adjacent islands. The progressive betterment of the standard of living of these peoples, and their contribution to the stability and well-being of the world, depend upon the increased productivity of this area and upon its doors being held open to the flow of multilateral trade.

12. Preservation and strengthening of the ties of mutual interest, friendship, and good-neighborliness which unite the American Republics.

These ties had their origin in a common love of justice, peace, and freedom; they have been drawn closer through fellowship in the Pan-American Union, and reinforced and made fast by the Declaration of Chapultepec and the Treaty of Rio de Janeiro.

The nations of the Western Hemisphere, including Canada, are free from the physical devastation of war; the course before them is one not of painful recovery but of healthy growth—growth in the interest not only of the Western Hemisphere but of all the world.

Realization of the economic benefits of hemispheric solidarity will come only when the nations of the Americas find the way at last to make full use of their human and material resources under a regional arrangement designed to facilitate, within the hemisphere, the interchange of goods and services and the free flow of capital and earnings.

The convention holds that the action called for in this program is essential to the creation of an international environment in which free institutions can take root and flourish. It holds that the existence of such an environment is essential to world prosperity and world peace, and to our very existence as a free nation. But it holds, too, that the goal is one which will elude us unless we and the other free peoples of the world stand united in working for its attainment.

America's stake in the world economy is manifest in the value we place upon the freedoms we enjoy, upon the liberties we cherish, and upon the opportunities we hope to preserve for ourselves and for posterity.

RECOMMENDATIONS

In support of the program for action set forth in this final declaration, and in furtherance of the interests of American traders and investors in the whole broad field of their international endeavor, the convention puts forward the following recommendations, and calls upon the National Foreign Trade Council, as the authoritative voice of American foreign trade, to seek their fulfillment:

I

Promotion of foreign trade: The convention commends the Government of the United States for the consistent and constructive efforts it is making, both within the framework of the United Nations and by the other means at its disposal, to seek the expansion of America's foreign commerce by reduction of the barriers that stand in its way.

The convention urges continuing and aggressive pursuit of this purpose, with particular emphasis upon the need for a vastly increased flow of imports into the United States. It recommends intensification, specifically, of the efforts being made under the reciprocal-trade-agreements program and through the medium of treaties of friendship and commerce, to achieve a broader and more vigorous interchange of goods and services among nations, thereby enabling the realization, on an international scale, of the mutual benefits inherent in the concept of all trade.

The convention commends the Government for the wisdom it has displayed not only in attacking the barriers that stand in the way of world trade, but also, and even more importantly, in seeking to remedy the underlying conditions—insufficient production and monetary instability—which restrict world trade at its source.

II

Encouragement of private investment abroad: The convention looks upon the encouragement of American private investment in productive enterprise abroad, supported by the necessary management and techniques, as an essential element in any effective program for action designed to stimulate production and trade throughout the world.

The investment of private funds abroad, like the promotion of international trade, finds its only justification in the concept of mutual benefit. The benefit derived by recipient nations, as well as by investors, will depend upon the economic soundness of the investment itself and upon its continuing productivity. The Convention recommends, therefore, that particular encouragement be given to private investment in industries which are based upon and which will support the basic economies of the recipient nations—upon industries with the inherent strength to survive without subsidies, substantial tariff barriers, or other artificial protective devices. The Convention also recommends to recipient nations that they facilitate the continuing productivity of these investments by fair treatment, avoidance of discriminatory practices, and recognition of the right of the investor to earn and receive a reasonable return in the currency in which the investment was originally made.

III

International trade organization: The convention welcomes the prospect of participation by the United States in an international trade organization within the framework of the United Nations, and commends the Government for the efforts it is making to achieve this end. It approves the stated objectives and the general structure of the organization, as outlined in the proposed charter developed at Geneva; and cites the urgent need of finding a common formula for the conduct of international trade along multilateral, nondiscriminatory lines.

The convention recommends that the Geneva draft of the charter be used as the basis for the negotiations to be conducted at Havana in November, but urges that attention be given by the American delegation to the correction of those provisions which do violence to the American concept of international trade and investment relations.

IV

International investment code: The need for encouragement and protection of American private investment in other lands was recognized by the thirty-third convention, which called for the development of an international code of fair practices and business ethics under the aegis of the proposed international trade organization. This thirty-fourth convention is gratified to note that the encouragement of the international flow of investment capital is now listed as one of the objectives of the organization, and that the charter drafted at Geneva calls for the elaboration and adoption of a statement of principles as to the conduct, practices, and treatment of foreign investment.

The convention is also gratified to note that the Subcommittee on Economic Development of the United Nations Economic and Social Council has been instructed by the Council to consider the advisability of drawing up an international investment code.

The convention endorses the excellent statement of the principle of nondiscrimination in the treatment of foreign investment which appears in chapter XII of the Geneva draft of the proposed charter, but is deeply disturbed by the exceptions listed therein permitting the perpetuation of discriminatory practices in effect at the time charter is signed, and giving encouragement to enforced nationalization of private foreign investments. The convention urges that final decision as to whether or not local capital should participate in American enterprises abroad be determined solely on the merits of the case as the owners of the enterprise may appraise them; and it calls again for insistence that governments which nationalize the properties of foreign investors provide full and prompt compensation in a form satisfactory to the owners.

V

Imports: The convention calls for a greatly increased importation of goods and services into the United States to fortify and enrich our domestic economy, and to validate the loans and credits extended to foreign nations.

The convention asserts its belief that imports into the United States, both of raw materials and of the goods available for the use and enjoyment of the American consumer, can be greatly increased without detriment to the interests of efficient industrial or agricultural producers, and with a resultant net increase in employment in the fields of both production and distribution.

The convention renews the recommendations made last year that scarce metals, minerals, and other materials essential to the national defense or required to maintain a high level of productivity in the domestic economy, be conserved by increased reliance upon importation. The convention urges, particularly, that the stock-piling program provided for under the Strategic and Critical Materials Stockpiling Act of 1946 be expanded, and that Congress appropriate adequate funds for this purpose. It is recommended, however, that the act be amended to eliminate its "Buy American" restrictions.

VI

Exports: The convention recognizes the part that exports play in contributing to the high volume of production essential to the welfare of our domestic economy and in providing the means of payment for the imports the American people require. But the convention flatly rejects the proposition that Government loans and credits should be extended abroad for the sole purpose of maintaining a high volume of exports to stimulate domestic production and employment. Unless exports are compensated by imports and service transactions, or unless they serve, beyond this, a useful purpose in support of the aims of our foreign policy, they constitute an unwarranted drain on our own patrimony and substance. The convention holds that if goods are to be produced and given away with a view merely to supporting production and employment in the United States, it would be better that they be given to those of our own citizens who are in need.

The convention urges that no opportunity be lost to impress these realities upon any foreign governments or peoples who may be deluded into thinking that American financial assistance will inevitably be forthcoming, and who may be lulled, in consequence, into a complacent failure to undertake the hard work and the essential economic reforms upon which their salvation actually depends.

VII

Foreign-trade controls: The convention recognizes that the maintenance of certain export controls may be essential to fulfillment of the purposes of the foreign policy of the United States in consequence of the need for determining the direction and flow of goods destined for foreign relief or rehabilitation. It urges, however, that such controls be held to an absolute minimum; that, where they are applied, they be adequately policed to insure their just and effective application; and that any licenses required be issued promptly in order to eliminate or minimize delays in shipment.

The convention opposes the imposition by the United States of import controls in any form, as being unnecessary in serving the needs of our foreign policy and as constituting an intolerable threat to the freedom of enterprise in the domestic economy.

The convention reiterates the stand taken by previous conventions that the actual entry of the Government into foreign trade activity is contrary to the basic concept of the private enterprise system, and inimical to the welfare of the American people.

VIII

Foreign import and exchange controls. So long as disruption in the economies of foreign lands may require the imposition of import and exchange controls, it is important that any changes in existing controls, or any imposition of new controls, be deferred for a period sufficient to assure that such controls do not apply to goods in transit or to commitments for purchases made prior to their adoption. The convention recommends that our Government use its best efforts to this end; and it recommends further that our Government endeavor to induce foreign countries to coordinate and unify their import and exchange controls in order to ensure that licenses issued for the importation of goods will be accompanied by allocation of the exchange necessary for payment.

IX

The convention urges that the National Foreign Trade Council give forthright and vigorous support to the program for action advanced in this declaration and to the recommendations deriving therefrom, to the end of seeking bipartisan support throughout the United States of a foreign economic policy dedicated to these ends.

Atoms in Industry

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following discussion by Ivan Bloch, formerly Chief of Division of Industrial and Resources Development, United States Bonneville Power Administration, before the Portland, Oreg., Rotary Club, December 2, 1947:

It is customary for a speaker to indicate his pleasure to address so distinguished an audience. I must confess to a feeling of utter inadequacy in discussing today's subject. In large measure, the layman, and I profess to be one, in considering the fabulous problems and promise of the atomic age, feels somewhat like that primordial ancestor of ours, *Pithecanthropus erectus*, would have felt had a P–80 suddenly whizzed overhead. The great drama of the atom seems unfathomable to the lay mind, and one cannot escape a profound realization that here, at last, man is at grips with the infinite: infinite in the promise of its control, infinite in the finality which might result from lack of control.

I shall not, because I could not, discuss the vast theory of atomic manipulation. Although a great deal of the concept underlying its utilization is clearly understandable, most of it is beyond the ken of the average man and even the average engineer. The mathematical tools which must be employed to understand the necessary principles are highly specialized and at the command of a select few mathematicians and physicists. However, just as most of us know something of the principles of the automobile engine without too great knowledge of the subtleties of thermodynamic principles which make modern internal-combustion engines possible, so we must accustom ourselves to recognize—even imperfectly—some of the general principles associated with the release of energy from the atom.

Basically, the principles of atomic energy can best be understood if compared with the more commonplace release of energy by combustion. When a piece of wood or coal is burned, heat, light, smoke, and gases are produced, and ash is left. If weighed, the ash, the smoke, and gases would be very closely equivalent to the original weight of the wood or coal. That is to say, a chemical reaction but no atomic change has taken place. But when an atom is completely disintegrated, it is completely transformed into energy—energy of all kinds: heat, light, radioactive, electromagnetic—and absolutely nothing remains. Einstein stated this fact: mass is energy. E equals Mc^2.

It is possible to disintegrate an atom partially, to produce in general two new atoms, quite dissimilar to the former one and also to each other, and during this transmutation process, to produce all types of energy and radioactive particles. This is the kind of mass-change and hence energy production when its rate is controlled which has beneficial applications in industry and medicine. When atoms are partially disintegrated in an uncontrolled fashion this may occur instantly, in practically zero time. And if enough atoms are so caused to disintegrate, to change a major part of their total mass to zero and thus release fabulous amounts of energy, we obtain the catastrophic explosion of the atomic bomb. Obviously, this violent type of mass change is decidedly not suited for beneficial purposes.

There is not the time, nor am I qualified, to discuss how atoms can be so handled as to provide mass change and hence enormous quantities of energy which can be controlled and utilized in medicine and industry. The fact remains that man has obtained a rudimentary knowledge of atomic disintegration and can begin to foresee some beneficial possibilities. Although the imagination and awe have been captured by the atomic bomb, it would be ridiculous to limit one's approach to this phase of atomics. As one scientist put it: "This would be comparable to looking upon electricity merely in terms of its use in the electric chair." Of course, at this state of the art, we are probably no more advanced by comparison than the first man who got up enough nerve to use fire. Let us hope our wisdom is sufficient to keep us from burning ourselves out of existence.

Although "heat" is only a fraction of the great variety of forms of energy, it is that form which we are accustomed to associate most readily with our daily life. Heat produces the steam of our power plant boilers and for that matter, warms the water of our

morning shower. Heat drives the motor of our automobile, of the airplane, of the sleek streamliner. Heat translated into high temperature steam and high pressures drives the steam turbine which in turn rotates the electrical generator which provides the energy which lights our homes and factories, cooks our food and melts the metal of industry, turns the egg beater in the kitchen and the lathes of our machine shops. Our entire life is patterned by the use of energy of all kinds but the most familiar of which is heat. We have learned to juggle energy from one kind to another: falling water into hydroelectric power, heat into mechanical motion, mechanical motion into electricity, and so on.

Therefore, if the breaking down of an atom by the fission or splitting of its nucleus provides energy, it would seem logical that some use can be made of it. But energy as such doesn't provide the answer. No one would suggest cooking the breakfast egg by the energy of an exploding stick of dynamite. Nor would we care to grill a steak over a burning match stick. To be of benefit, the energy we wish to use must be controlled in intensity, both as to quantity and time of availability.

In terms of common, beneficial uses, the energy released by one atom undergoing even complete disintegration would be insignificant and of too short duration. It takes many atoms, but not too many at that. Thus, the problem is first to allow for atomic disintegration; and second, to make sure it is entirely controlled in rate and quantity. But there is another consideration of prime importance. The heat energy which we wish to use from atomic disintegration is only a portion of all the energy released, and most of which is deadly to life. In a very minor comparative sense, we do not burn fuel to heat our homes without making ample provisions to carry out into the outside air such products of combustion as poisonous carbon monoxide gas. The difference is that some of the products of atomic fission are far more deadly and far more difficult to waste or dissipate so as not to endanger human and animal life. You all recall that the effects of the atomic bomb explosions at Hiroshima, Nagasaki, Bikini were not purely those of an explosion as we commonly think of it. The radioactive effects were awesome and of long duration. As a matter of fact, the famous Nobel Prize geneticist Muller has recently indicated that exposure to radioactivity may have such subtle but nonetheless eventually disastrous effects as to escape notice for several generations.

Up to this time of our experience in atomics, scientists have devised methods, apparatus, and equipment which permit a safe degree of control of nuclear fission. One such device is the atomic pile—a huge, massive structure of graphite blocks. With it the atomic scientist can set off controlled atomic fission reactions of uranium and perhaps other fissionable materials. With it the scientist can produce energy in the form of heat, in the form of radioactive and other types of particles and can provide for the transmutation of various substances. For instance, certain amounts of an isotope of uranium—which is one of several different atoms of uranium—is placed in the Hanford piles. Its principal fission product is plutonium—an element hitherto unknown—and which can be further split to produce other elements. As the uranium disintegrates, much heat energy is also released which is not of primary use to the production of plutonium and which must be dissipated by cooling water so as to insure the safe and proper operation of the pile.

These atomic piles—which it appears are the principal devices known today for the control of atomic fission—are reported to be physically very large. Not only is their structure of massive proportions, but because of the extremely dangerous radiations and emission of radioactive particles which accompany atomic fission, must be carefully shielded by lead and concrete walls. Every part of the entire operation must be shielded, screened, and controlled to prevent the uncontrolled escape of these radiations and particles. Such waste gases as may be generated in this procedure must be disposed of with the utmost of care. It is not merely a matter of taking care of such amounts of radioactive waste substances as may be generated for an hour or a day. The problem is made greater by the cumulative effects of even very small quantities of such substances. Thus, protection from nefarious radiations and particles becomes almost as great a problem in the potential use of atomic energy as the problem of keeping atomic fission within safe bounds of intensity and quantity.

In other words, the basic problem involved in atomic energy utilization is a two-part one: to maintain atomic fission of such quantity and intensity and on such a basis as to keep it under control at all times and yet to provide enough utilizable energy; and to assure the utmost and most constant protection possible from that part of the total released energy which is highly dangerous to all life. The task seems superhuman, and in large measure, it is. After all, we are dealing with the alpha and the omega of the universe.

If we are able to control atomic fission to the extent indicated, what are its industrial applications? Aside from the extremely important tool which it provides for research into the very make-up of matter, the principal fields of industrial interest are in the use of the energy and special particles liberated by fission, and in the production of so-called radioisotopes.

In the consideration of energy use, let me state here that it seems to be the overwhelming present opinion of those qualified that there is little likelihood of our being able to use the energy portion of atomic disintegration except through more or less conventional heat-transfer devices. That is to say, in simplest though perhaps not technically accurate terms, that we shall have to use the heat part of the energy released in some kind of atomic firebox. With such an atomic firebox, the heat or nuclear fission can be made to do its work either to warm buildings or to produce the steam necessary to drive the turbo-generators of our steam-electric power plants. Putting it in still other words, we shall use the disintegrating atom as a nuclear fuel on somewhat the same basis that we use the coal, oil or wood which we feed under the boilers of our heating and power plants. Perhaps we might therefore substitute an atomic pile or a similar device for controlled atomic fission for the firebox and grate of our conventional boiler plant.

Now I would like to repeat that these atomic piles are large and bulky, require extremely complicated control and protective equipment, and that whatever by-products are generated which must be wasted, cannot be merely disposed of as one would the smoke and the gases of normal combustion through a stack into the atmosphere, or the ash into an ashpile. There again, the concensus of available literature is that these characteristics of volume, weight, and complexity of this atomic firebox or heat energy generator rule out, at least for the immediately forseeable future, the possibilities of automotive uses, with perhaps the exception of large ocean vessels, and of such domestic uses as for the heating of individual homes or buildings. Where there are undeniable technical potentials is in the field of fixed, large heating and power plants.

I have used the words "technical potentials" advisedly. Before a technical potential becomes a commercial reality, its economics must approach either a competitive level or must be weighted in the light of extraordinary circumstances where dollars and cents have secondary importance. In plain words, atomic energy might become commercially important only when its use becomes competitive with other sources of now available energy such as from coal, oil, or falling water. This will take years—as in the case of less revolutionary developments such as radar and television, for example. Even in those areas of the world where there are not readily available sources of coal, oil, or hydrcelectricity, there are evident economic limits to the commercial utilization of atomic energy.

Although our knowledge of atomic energy potentials is most elementary, there have been numerous attempts to determine what the economics of this type of energy utilization may be at some time in the future. All the estimates made by reliable engineers and scientists are heavily laden with qualifying statements as to assumptions made. Quite apparently the science is so new that there is no simple ground for the prediction of cost levels. It is an interesting commentary on the state of the art that early appraisals were far more optimistic than those which have become available since. In other words, speculation is gradually giving way to more realistic appraisal.

Although there have been numerous technical discussions of the industrial potentials of atomic energy, some of the clearest and most realistic—to my way of thinking—have appeared in the Bulletin of Atomic Scientists last April and May. The experts of the University of Chicago, reporting in this publication, state that if nuclear fuels were free and were capable of replacing coal in all of its uses, the saving would be 2 percent of the national income. Inasmuch as a very small quantity of fissionable material—perhaps on the order of a few ounces—could be substituted for the many thousands of tons of coal or barrels of oil per year in a power plant, it is obvious that the principal advantage would be gained in transportation savings. That is, with nuclear fuel weighing so very little, there would be no need for the transportation of millions of tons of coal or millions of barrels of oil from mine or well to consuming power plants. But the experts call attention to the fact that the total cost of transporting fuel from mines and wells to power stations is a very small fraction of the entire national effort. This might amount perhaps to an average total saving of about one-eighth of a cent per kilowatt-hour at the Nation's fuel electric power generating stations. As I shall point out, however, other necessary expenditures entailed in the possible use of atomic energy would quickly wipe out this minor advantage.

Of course, it does not appear conceivable at this juncture that nuclear fuels will be free. Furthermore, the cost of equipment for control, utilization and protection is likely to be many times greater than for the already intricate and costly firebox systems of modern power plants. In spite of the fact that there is perhaps no reliable basis for cost estimating, certain levels have been indicated in the technical press. A common comparison utilized by certain experts is that probably nuclear fuels might become competitive with coal when coal reaches $10 to $15 per ton. This contingency—in terms of the large power plants under consideration—is somewhat remote.

Recent analyses of costs for modern coal-fired steam electric generating plants, indicate a range of from between 5¾ mills per kilowatt-hour to 9½ mills per kilowatt-hour at the bus bars. A similar cost of power at Bonneville and Grand Coulee dams' bus bars is 1 mill per kilowatt-hour. The most optimistic present estimates for electric-power

production from nuclear fuels range from between 4 and 15 mills per kilowatt-hour. In all cases of comparison, hypothetical plants on the order of 75,000 to 500,000 kilowatt capacity have been used, with the higher resulting cost figure corresponding to the smaller plants. In other words, on the basis of these admittedly vague estimates, atomic energy-utilization for electric-power production might ultimately become competitive with some coal-fired plants, but it is quite doubtful they could compete—in the strict sense of the word—with comparatively sized hydroelectric-power plants. On the other hand, it is my personal opinion—which is by no means that of the expert—that it may be within the realm of possibilities in the not-too-distant future to make use of byproduct energy from plutonium manufacturing plants such as at Hanford for the production of electrical energy at cost levels which may fit into the present rate pattern of the Federal power system on the Columbia River and supplement hydroelectric power flowing into the power grid. However, this power cost would be based on an allocation between the cost of producing plutonium and disposing of energy which otherwise is wasted. And, I must add, there is nothing in the literature which I have been able to examine which would indicate that the difficult problems of pile temperatures and in the development of materials resistant to the disintegrating action of radioactivity, have reached a point of solution which would indicate the practicability of this method of energy production.

Although I hesitate to reach any conclusions, it seems doubtful that the costs of electric-power production from nuclear fuels would approach anywhere the levels attained at such large multipurpose hydroelectric installations as those which now exist and are planned for the Pacific Northwest. On the other hand, there are areas in the world, and for that matter in the United States, where energy resources—such as hydro, coal, oil, and gas—are lacking. It is in these regions where future nuclear-fuel power plants might have economic importance. But in any event, such atomic-energy plants, if ultimately feasible, should only be considered as supplementary sources of energy to the national production capacity. It does not seem probable that they will displace existing fuels such as coal.

I share the view of some experts that underground gasification of our truly enormous coal reserves—which involves burning of the coal seams in the ground and recovering the coal gases—will provide a clearer answer to the national energy problem than will atomic energy, at least insofar as electric-power production is concerned. In addition, the amount of uranium in the world is somewhat limited, extremely costly to refine, and it seems clearly evident that conservation of uranium resources will be necessary.

As one examines various reports on atomic research, one is immediately struck with the great weight given to benefits to be derived from products other than heat energy resulting from nuclear fission. By proper manipulation of materials undergoing atomic fission, it is possible to produce what are called radioactive substances, principally radioisotopes. The disintegration of these radioactive materials continues at a relatively slow rate and provides the emission of particles with extraordinary properties. These particles and emanations, for example, will affect a photographic plate or a fluorescent screen much as will the more familiar X-ray. They can also be detected in minute quantities by certain equipment such as Geiger counters and other even more sensitive recording devices. In other words, they are valuable as sources of radiation of moderate but penetrating intensity and as tracers. Let me explore rapidly, in simple terms, what this means industrially. As sources of radiation, these radioisotopes could be used for all kinds of inspection jobs now requiring extremely complicated and expensive industrial X-ray machinery. They also may have a stupendous effect in chemistry by acting as an entirely new variety of catalyst. They may have potentials for the sterilization of noxious materials such as sewage. It is already reported that the petroleum industry is investigating the use of radioisotopes for oil cracking.

As tracers these radioisotopes provide an entirely new tool in industrial research. Medical science has already benefited substantially. Inasmuch as a few atoms of radioisotopes will emit particles, the existence of which can be detected rather accurately, they can be used to track down innumerable industrial phenomena. As a crude analogy, they can be used as one might a very discreet quantity of a penetrating dye which by its color would reveal its extent of distribution in a liquid or material. An excellent example was quoted in the Electrical World of May 1947 in which it is suggested that "a bit of radioactive copper included in the bronze of some inaccessible bearing (of some machinery) would disclose wear in the bearing by a radiation check of the lubricating oil." Other possibilities which are being diligently pursued include the use of radioisotopes in exploration of the earth's substrata, particularly in oil-bearing structures. The examples can be multiplied substantially. The use of radioisotopes therefore provides both new and sensitive tools for industrial research as it does for medicine, biology, and geology.

There is another emerging field of industrial importance. The tremendous quantity of radioactive and other particles such as neutrons which are released in an atomic pile can be used to bombard materials and to obtain changes in their crystaline structure. The technical press has reported several possibilities in the bombardment by neutrons of ceramic refractories and various metals to produce new surface properties hitherto not available. In this, the possibilities seem almost limitless.

In as elementary a discussion as this, it is only possible to dabble in the subject. I hope that in some measure I've been able to indicate some of the potentials and some of the limitations. However, I would feel derelict in the responsibility thrust upon me in this discussion if I were to disregard the problem of the control of this fantastic new field of human endeavor. My concluding remarks can only touch on the bare outline of the problem which faces mankind right now.

The very ancient philosophers—to whom we are more than directly indebted for our present discoveries in the structure of matter—were aware of the puniness of man in the face of the universe in which he may be but a passing incident. Greek mythology gave us the legend of Prometheus the god, chained for eternity to a barren rock for unspeakable torture, because he had given the use of fire to lowly man. In this profound legend we are in fact warned that the possible bounties in the use of atomic energy are part and parcel of a responsibility which is sublime in its magnitude. We are not dealing with the horror of the forest fire which can burn itself out, or of the quick burst of cataclysm which obtains from a blast of dynamite or TNT. We are dealing with forces which can blast us or mutate us out of existence either in an instant or slowly in generations to come.

To my way of thinking, our dilemma was profoundly exemplified in the anguished observation of one of the Senators of the Special Committee on Atomic Energy during hearings on November 30, 1945. As scientist after scientist testified somberly about the tremendously destructive potentials of atomic energy and the problem of national and world control this Senator exclaimed in despair: "You scientists have made the world extremely insecure, and now you are coming to the politicians and asking us to go about and make the world secure again by some sort of political agreement." He was reminded by Dr. Irving Langmuir that it was not the scientists who had made the world insecure.

To most of us, busy in the complications of ordinary life, the UN debates seem remote and complex and perhaps even futile. We pay little or no attention to the work of our own Atomic Energy Commission. We form quick reactions as to the righteousness of our cause, the fact that we possess the atomic bomb, or the possibility that other nations possess them. And no doubt the citizens of other nations share the unfortunate shallowness of our consideration. We do not seem conscious yet that it is not the fate of the United States, or the fate of Soviet Russia, or even the fate of the present population of the planet which is at stake. What we must realize, not by casual acceptance but by passionate interest, is that this little planet of ours once had no living organisms upon its surface, that in the infinite scale of the universe's time, it was not so long ago, and that it can happen again. I realize that a statement such as this appears to be emotionally exaggerated, but I don't believe it is. And most scientists feel the same way.

The principles so far enunciated by the United States, as in the Lilienthal-Acheson report, for world control of atomic energy are sound and inescapable. The only alternative, which is palpably impractical, is the abandonment of further work on atomic energy in the entire world and the precise and complete destruction of all the knowledge we have painfully accumulated on the subject. Thus, the only way out of our dilemma is discipline for the world—just as we insist on discipline in our daily society. There must be control—on a world-wide basis—of the production of fissionable materials—from discovery and mining to the refinement and utilization of these materials. Any deviation from this basic principle—however it may be implemented—vitiates the very safety of our existence wherever and however we live on this planet. Because of the very and sheer simplicity of the principle, its attainment will be enormously difficult. There are no demagogic or oratorical tricks out of the situation; there are no compromises.

In this desperate struggle with the world's conscience—and not for domination by one over the other—the determination and establishment of control mechanisms are in the hands of a few, who may or may not speak for the huge population of the world. At least, in these democratic United States, we have an opportunity to hold up the hands of those who truly speak for us—in Congress, in the United Nations. Theirs is a lonely, perhaps frustrating, task in large measure unless we take enough time and energy to consider deeply the principles involved, and help them share the talk. As a first step, each of us must gain a conscious sense of the enormous drama of the situation in which we find ourselves. We must devote more time than I fear most of us have given in the past to a study and understanding of the various control plans which have been proposed. To their simplest denominator, they nearly all reduce to action which should lead to a future of greater opportunity for the pursuit of happiness amidst security, or to eventual and inescapable destruction. We should insist upon more frequent discussion of what this problem involves in our homes, with our daily associates. At least, by so doing, we will develop a sense of informed responsibility, and we can then begin to help our representatives in our legislative halls, in the Atomic Energy Commission, in the United Nations, and in our dealings with the

ministries of the nations of the world. Our personal and direct stakes have never been greater, more challenging or urgent. As the clock of the universe ticks its seconds, we should consciously remember that atomic disintegration occurs in "time—zero."

Let us hope we are up to it—that each and every one of us can take a share in the responsibility of using the fire which ancient and yet present Prometheus has passed on to us.

Dutch Elm Disease

EXTENSION OF REMARKS
OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. CLASON. Mr. Speaker, the people of more and more communities are becoming worried at the spread of the Dutch elm disease in several States. It has entered Massachusetts from Connecticut and has probably cost the lives of 1,052 elm trees. In recent years Congress has appropriated funds for the control of this disease. Congressman CHARLES A. EATON, of New Jersey, has been particularly active in securing a remedy for this evil since New Jersey has suffered greatly from it. I believe that the Department of Agriculture should give further consideration to the proper use of Federal funds in the suppression of this disease before it spreads even more widely than at the present time. The damage in loss of trees has now gone into millions of dollars. However, the great loss is not the value of the trees in money, but in the disappearance of one of the most beautiful trees known to America from communities which have been fortunate enough to enjoy their beauty and shade.

I hope that the Eightieth Congress will provide additional funds for the purpose of eradicating the Dutch elm disease. I am including with these remarks an article furnished by the University of Massachusetts agricultural experiment station, Amherst, Mass., which shows the rapid spread of this disease even when local and State officials are doing their best to combat it. Federal aid is greatly needed.

The article follows:

The Dutch elm disease is caused by a fungus, *Ceratostomella ulmi*, which is spread by elm-bark beetles. Since 1941, 1,052 elms of 68 Massachusetts towns in 11 counties extending from the Berkshire Hills to the Quincy coast have been affected. The disease is most insidious in its encroachment on elms in a new location. One or two elms in a city may die without attracting particular attention unless some alert tree warden investigates the cause. There is nothing spectacular until later, when a dozen or more nearby trees wilt and die. Symptoms of the disease include wilting, curling, yellowing, and early falling of leaves, and brown streaking of fungus-infected wood. Diseased trees may become a staggering burden to a community. A New York newspaper reported recently that $400,000 is necessary now to remove dead elms from a New Jersey municipality. All things considered, prompt removal of diseased trees is the most economical program for any community. Diseased trees deteriorate rapidly and immediate removal is important for reasons of safety. Also, the community benefits by gradual replacement of unsightly ghost elms with other species.

CONTROL MEASURES

1. Remove and burn promptly all elm trees killed by the Dutch elm disease.

2. Remove and burn promptly all cut elm wood. (Under certain conditions oil sprays may be used on cut elm wood for control of bark beetles from April to September, but particular directions should be obtained and followed carefully.)

3. Before May 1, prune and burn all dead material from elms.

4. Do not pile elm wood in the open.

5. Do not permit dumping of elm wood with bark attached in city dumps. (Woodpiles and elm wood in dumps are common sources of disease outbreaks.)

6. Don't transport elm wood with bark attached.

7. In all contracts involving elm trees (new road construction, road rebuilding, street widening, line clearance, new line utility construction, etc.) require the burning or other satisfactory disposal of all elm wood removed.

8. Spray elms to control leaf-eating insects.

9. Enlist support of all municipal departments as well as civic groups and public utilities in the detection and removal of diseased and dead elms.

10. Keep elms as healthy as possible.

DDT kills elm-bark beetles, carriers of the Dutch elm disease fungus.

DDT for logs. Freshly cut wood or broken elm material should be sprayed as soon as possible if cutting or breakage occurs after April 1 and prior to September 1. All other freshly cut or broken elm should be sprayed about April 1. Elm wood sprayed in late summer may require an additional application the following spring. It is important that the bark of the cut or broken elm material be covered thoroughly with spray. Soaking the bark with a 2-percent solution of DDT in fuel oil as indicated here has given favorable results in the protection of bark from beetle infestation as well as in the control of beetles in bark already infested.

DDT for elms in dormant condition may be applied as an emulsion to control bark beetles. Application on dormant trees may be made in spring before buds burst. The dormant application may control emerging early broods of bark beetles. A 2-percent emulsion may be used in ordinary high-pressure spray apparatus. The application of solutions of concentrated DDT usually requires blower apparatus.

DDT for trees in leaf may be applied as emulsions with ordinary high pressure spray apparatus. Application of a 2-percent emulsion about July 15, properly applied, may control bark beetles emerging during the summer. The use of solutions of concentrated DDT usually requires blower apparatus. Considerable care must be exercised in all applications in order to avoid burning of foliage on elms, and especially damage to nearby plants from drifting and dripping.

Caution: DDT is a poison, and it should be stored and handled with precautions usual with all poisonous insecticides. Do not spray DDT over streams, ponds, or grazing areas. DDT is available in a variety of formulations. Directions of manufacturers should be followed for particular DDT products with special reference to mixing, dosage, length of time lapse between mixing and using, etc. Since liquids used as carriers for DDT represent a marked departure from the experience of most handlers of insecticides, it would be well for operators to make sure by means of tests that the materials or the manner of applications will not cause injury to operators or plants.

The present known distribution of the Dutch elm disease in Massachusetts is as follows:

A Story of Hens, Hired Help, and High Prices

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a release by Samuel B. Pettengill entitled "A Farmer and His Hired Man." The release follows:

A FARMER AND HIS HIRED MAN

Once there was a farmer who raised corn, and a man who raised hens but no corn. The hens said, "No corn, no eggs." So the man agreed to work for the farmer 1 day a week for $5 a day, and the farmer agreed to sell corn to the man for $1 a bushel. They paid each other off every time with the long green. The farmer paid the man $5, and the man paid the $5 back to the farmer for 5 bushels of corn, which he wheeled home to his hens in a barrow.

After a while, the man said to the farmer, "Everything's going up, and I regret intensely to inform you that I can't work for less than $6 a day."

The farmer said, "I understand. But you understand that everything is going up with me, too, and I regret intensely to inform you that I can't sell you my corn for less than $1.20 a bushel."

The man said, "I understand." So he got $6 a day, and at $1.20 a bushel, paid the farmer the $6 for 5 bushels of corn.

And both of them said, "Happy days are here again."

By and by, the man said to the farmer, "Things have gone up still more, and I can't work for less than $7.50 a day." The farmer agreed that that was fair, but told the man that things had gone up still higher with him, too, and he'd have to get $1.50 a bushel for the corn. The man agreed that that was fair, also. And both of them said, "Prosperity is here. Gosh, now we are getting ahead." The man was getting $7.50 a day—the farmer was getting $1.50 a bushel—and the hens were getting 5 bushels of corn same as always.

And so things went on until the man got $10 a day, and the farmer got $2 a bushel. And the man gave the farmer the $10 for 5 bushels of corn just the same as before. And the hens kept right on laying—even on Thursdays!

And the man told his wife, "Ain't it wonderful—$10 a day?"

And the farmer told his wife, "Ain't it wonderful—$2 a bushel?"

And the hens kept clucking away on 5 bushels of corn.

And the statisticians down Washington way said, "Ain't it wonderful? National income at record levels."

And the politicians said, "Ain't it wonderful?" and bragged that they had done it, and everybody felt so good and prosperous that the man and the farmer voted for the politicians.

And that is how it was, "eggsactly." The man got three times as much for the eggs, but paid three times as much for his shoes, and the music went round and round.

This raises the question whether commodities and labor have really risen at all. In the above case, isn't it true that 1 day's work still buys 5 bushels of wheat, and the farmer can still hire a man for 5 bushels of wheat? The wheat is worth no more in labor, and the labor is worth no more in wheat.

So what has happened? The value of the dollar has gone down, both in terms of wheat and labor. Men sweat and farmers grow wheat, but neither make dollars. Who manufactures dollars? The Government. So if dollars, or francs, or marks, are cheap, is it the fault of the farmer, the laborer, or the Government?

Inflation is the overproduction of money. Prices are the result of inflation, not the cause. Prices are the penalty for the cowardice of politicians.

Yet in every inflationary period, as in Germany in 1922, the people always think that groceries, etc., are rising in value, whereas money is simply getting cheap. So they blame business, or labor, or the farmer as the value of their bonds, or insurance, or savings melts away. They never blame the real culprit, the government, until it has ruined them.

High Prices—The American Farmer Is Not a Profiteer

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. ROBERTSON. Mr. Speaker, in discussing the matter of high prices and foreign relief, I would like to get down to fundamentals. Let us cease our witch hunt for scapegoats and make a fair and impartial examination of the primary factors involved in the problem of high prices.

Today on every hand the American farmer is being condemned for profiteering at the expense of his fellow citizens and the starving people of the world. I very much regret this unfortunate slander. While I do not attribute this to the administration, we are all familiar with the tactics of the New Deal to create class dissension for the sole purpose of political achievement. Likewise there is a smear campaign in effect attempting to attribute high prices to the National Association of Manufacturers, the real-estate lobby, and just recently to grain speculators.

While I do not deny that there are many contributing factors, I think that the core of the problem is being deliberately side-stepped by the administration. While I cannot accuse it of fostering this falsity against farmers, who represent a 19-percent minority group, I do think it is the duty of the administration to make clear to the people of the Nation the reasons why food prices are high, should free the farmer from this condemnation by innuendo. Likewise, instead of looking for scapegoats in industry, in certain minority groups, then attempting to tie these scapegoats to the Republican Party, the administration should issue public pronouncements pointing out to, and educating the people to, the basic reasons for high prices of food, and, for that matter, all materials.

Secretary of Agriculture Anderson, President Truman, and the so-called Harriman committee, headed by Secretary of Commerce Harriman, cannot seem to agree on things. President Truman last month was reported as stating that the high cost of living is not the result of the export program but has as its chief cause inflationary gambling in the futures markets. He was quoted as saying that we always exported one-third of our wheat crop. Statistics of the Department of Agriculture show that exports of wheat averaged 7½ percent of our crop from 1924 through 1944, less than one-tenth, and not one-third. The report of the Harriman committee, which I feel is an excellent piece of work, disproved the President's contention and very definitely showed the relation between exports and prevailing high prices.

Secretary Anderson, who prior to President Truman had pointed an accusing finger at speculators, recently admitted that the Commodity Credit Corporation of the Department of Agriculture was the greatest speculator of them all, and that "we have tilted and dropped the market by our operations."

Here then has been a perfect example of how the administration tried to mislead the people into believing that a certain small group was responsible for the high prices of food. While I do not speak in defense of grain speculators, I do wish to point out the unfairness and inaccuracy of the charges leveled by the administration.

Look around the world today and see how our farmer profiteer stacks up against farmers of other nations. Argentine wheat is bringing $5 to $6 per bushel on the world market—double the price paid American farmers. French wheat producers are paid $4.50 per bushel for their grain, half again as much as American farmers. Canadian wheat sold for export is about 30 cents per bushel above our domestic price. Canadian rye growers receive approximately $1.30 per bushel more for this grain than do American farmers.

Secretary Anderson, recently in New Mexico, said we will have to "eat less and export less." Two days later in Chicago he said if the people really knew how much wheat was available, prices would tumble.

The administration is either deliberately clouding the issue and confusing the people, or it is wantonly negligent in its failure to present true facts.

During the war the farmer, with inadequate machinery replacement, and with his sons at war, short-handed as far as labor was concerned, achieved record production, at the request of his government. Since the war, with favorable weather in most areas, the farmer has continued to exceed his past records of production, still with a shortage of farm labor and without adequate new machinery. The farmer has not asked for a minimum wage, nor a 40-hour week, he has never gone on strike against anyone—he has worked, and worked hard, to produce.

Because the farmer is consciously or unconsciously striving toward the only solution to the problem of high food prices, that of increased production, he is being accused by many of profiteering.

I should like to ask these questions: Did the farmer know that one-third of the grain he produced would be shipped to foreign countries 3 years after the war? Was he responsible for the drought in Europe? Could he foresee what economists failed to foresee? Is he responsible for the general increase in prices throughout the Nation and the world?

The farmers' costs of production are a factor in high food prices over which the farmers have no control, and for which they cannot be blamed. Wages are three and one-half times prewar wages, seed has increased 140 percent, land 83 percent, and so on down the line.

Are food prices really high compared to other prices? Many people unfortunately compare food prices with prewar prices. They fail to consider that all prices have advanced. From 1930 to 1939 the American people spent about 25 percent of their income for food. In 1946 the percentage spent was slightly lower. Yet Bureau of Labor Statistics show the average factory earner has 30 percent more purchasing power than he had in 1939. Last year farm people netted $620 per capita, compared to $1,326 for nonfarm people. Even after deducting cost of food, nonfarm people had one-half again as much as the farmer—the greedy profiteer. Though farm prices have increased again over the past 12 months, the index increase of nonfarm products made an equal increase.

It is the high production of our farmers that has provided food for our table and has armed the United States with its strongest weapon for preserving the peace—food. We have him to thank for his production. Yet some will call the farmer a profiteer.

Now that I have disposed of this falsity, let us briefly review the basic causes for high prices, and remember that the same economic laws apply to farm products as apply to shoes, automobiles, steel and every other item produced in our economy.

The problem of high prices, inflation, or whatever you might wish to term it, is basically an economic problem. While I do not hold myself as an authority on economics, I am heartily convinced that the soundest and most basic system of economy has been achieved in this country under free enterprise and competition. Therefore, any solution I seek for this problem will be closely related to this system which has provided the greatest material good, the highest living standard in the world, for our citizens.

Let me present the matter of high prices to you in two very cogent manners: Present inflationary trends are attributable to currency inflation. By borrowing from the banks, by pump priming and excessive cost of government; yes, by the actual printing of more money, our Federal Government increased our supply of money and deposit currency from $37,000,000,000 in June 1939 to $110,000,000,000 in April 1947. Thus there is three times as much money in circulation today as there was 8 years ago. Since there is three times as much money, one would conclude that prices should be three times as high as prewar. The fact that prices have increased only about 87 percent is remarkable, but can be explained by noting that we have more goods produced to compete for this money. Production is up 60 percent. Thus dollar production has been partially offset by the increase of consumer goods.

Who should be blamed for currency inflation? We cannot lay the blame entirely at the door of the White House, or of the Democratic Congresses which preceded the present Congress, for the simple reason that a war intervened during these years, and wars disrupt any economy. However, the Democrats were in power during these years, and until the Republican Congress entered the scene, we were living in and under a Democratic government of deficit spending, a condition which antedated the war and was the policy of Government.

Then let us examine but briefly the problem of high prices from the aspect of supply and demand. This is one of the basic laws of our economy and cannot be disproved or changed, try as Government will. When goods are in abundance those goods compete against each other for purchasers, and we have a downward trend in prices. When goods are in short supply we have people competing against people for the opportunity to purchase these goods, and we have an upward trend in prices.

Today, there is not scarcity, but money has been cheapened, and supply is below demand, because with currency inflation demand has increased, dollarwise. We are exporting food and machinery, necessities and luxuries at record high rates, taking these from the free market. Approaching the problem from this viewpoint, we can see that even with dollar inflation we can have a reduction in prices, but only if there is an abundance of consumer goods. It looks very simple to me. The answer to high prices is production, and then, more production.

Price control is not the answer to high prices. We cannot close the door after the horse has been stolen and still have the horse. Price control will not encourage greater production, which is the answer to high prices, in fact it will have the opposite effect.

During the war the Government felt the need to curtail the consumption of goods to support the war effort. We all recall the days of ration coupons and the black market. Patriotism was at a high level then, and the majority of the people did not resent being placed under a regimented economy. But today the possibilities of an OPA, along the lines practiced during the war, operating effectively and providing a solution to the problem of prices, is absurd. Setting ceiling prices on goods takes incentive away from producers, for income is the motive behind all production.

That may sound like a tough statement, but it is nevertheless true. We who believe in the American way of life believe in the soundness of the free-enterprise system. It has proved that it can produce goods, and goods are wealth and strength and happiness. Price control will not only thwart production; it will lead to the black market, where, in addition to paying the price set by supply and demand, you must add the price of the risk the illegal operator takes.

One of the fundamental errors in OPA as it existed before, and as the Administration would have it exist again, under selected controls, is that it neglects to see that price control must be absolute to be effective. By that, I mean to point out the simple proposition that you cannot place a ceiling price on butter without placing a ceiling price on cream and milk, which are price factors in the production of butter. Creameries will not make butter for sale at the ceiling price, for they can sell the cream for more as cream, unless both prices are regulated. That is an exact situation which occurred during the existence of the now-defunct OPA. That was the reason we could not purchase butter at the corner grocery.

Now carrying this proposition to its logical and inevitable conclusion, price control must reach down into every facet of life to be effective—it must cover wages of workers, the costs of every portion of production, or price control will not work on the finished product. Unless price control is exerted on every item and thing in our lives it will promote scarcity, when abundance, not scarcity, is the true answer to the problem of high prices. The President may recognize this in asking for absolute power to install price ceilings on selected industries, but will his administration follow through or be governed by the usual political expediency?

For sake of argument, let me point out how a program of selected controls would work. Assume that the President determined that there should be a ceiling price on meat. He would have to put a ceiling price on corn and feed; he would have to put a ceiling price on truckers' rates; he would have to put a ceiling price on wages paid in canneries and stockyards and slaughterhouses. When he does this he finds that the farmer refuses to produce, the trucker refuses to haul, and the workers who prepare the meat for market seek other more remunerative employment. Where will this power to regulate end? How will this program put more meat on the market, which is the only answer to high prices of meat?

Look at the history of the old OPA and the administration. The people demanded that these wartime measures be revoked. The Republican Congress recognized that this was what the people wanted, but it also recognized that decontrol would have to be orderly to be effective. So Congress passed an act providing for orderly decontrol. President Truman vetoed that act. The President then thought he felt the pulse of the Nation and on his own initiative ended the OPA.

He would have you forget this history now, and desires to place the blame for high prices on the Congress. He feels that the program of providing scapegoats for high prices, and of linking these scapegoats to the Republican Congress, has succeeded in changing the desires of the people to be rid of OPA. I do not think the people have changed in their abhorrence of regimentation, despite the high-pressured propaganda of the administration. OPA is still repulsive to freedom-loving Americans and to the basic fundamentals of economics.

Let us stick to fundamentals. Let us not single out minority groups as scapegoats. I do not point to striking workers, to industries which refuse to expand

their production, to labor unions, or to farmers or grain speculators and claim that each or any of them is responsible for high prices. The answer is much more basic. We have currency inflation, and an inadequate supply under this inflation to meet the demand of our people, and yes, for that matter, the people of the entire world who are making demands upon this country for goods of every description.

The administration over a period of 15 years has been the primary cause of high prices, starting with their philosophy of the 1930's that our Nation has reached the limit of industrial and economic development, and nothing remained to be done except to divide up the national wealth; from this developed its theory that we should have an "economy of scarcity." We heard for year after year about the problem of surpluses. May I submit the thought to you that there are no surpluses when there are millions starving in the world.

Year after year the administration advocated and practiced pump priming and creating of additional billions of dollars. It instituted and managed a poorly conceived OPA. It has followed policies of increasing taxes to the point where they are confiscatory. It has drawn men, women, and youth of the Nation from the farm and factory to work in the political machine in Washington and branch offices throughout the Nation, when we need many of these Government employees in jobs producing goods and wealth. The administration has fought every attempt of the Eightieth Congress to set the economic status of the Nation right. It has done nothing to keep prices down.

What, then, is the solution? Congress should maintain its active program to increase production. It should take every step possible to assure the farmers that their high production will be amply rewarded. It should encourage production in all fields. It should insist upon a tax reduction which will restore incentive to all—the employee as well as the employer. Congress must continue its efforts to cut the expense of Government which is not producing the things we need for home consumption or for shipment abroad. There can be no compromise. The administration will, as in the past, exert every pressure and influence, including the veto power of the President, to thwart a forward-looking, economically sound Republican program, but we must prevail by the strength of our reasoning and sound planning over an administration still greedy for power.

Where Did It Come From?

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. DONDERO. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I wish to state that there appears, in a statement made to the Committee on Public Works by Mr. Heye H. Meyer, president of the Board of Commissioners of Clark County Public Utility District No. 1, of Vancouver, Wash., printed on pages 25 and 26 of hearings No. 11 of the Committee on Public Works, H. R. 3036, amending section 5 of the Flood Control Act of 1944, the following:

It might be interesting to note that the sponsor, Mr. DONDERO, the honorable Representative from Michigan, was a former employee of the Pacific Power & Light Co., in the Portland, Oreg., area, and while his past experience might well qualify him for the needs of the private power companies, we doubt very much if he can know the problems of the publicly owned bodies, such as public-utility districts, cooperatives, and municipalities.

I am not in the least concerned about the statement made by Mr. Meyer because it is utterly false, but I am very much interested in knowing who gave such information to Mr. Meyer and who caused him to make such a false accusation. Just who is the man behind Mr. Meyer?

In conclusion, I add my letter to Mr. Meyer asking him to retract his false statement and his reply admitting that his statement was not correct:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Royal Oak, Mich., October 22, 1947.

Mr. HEYE H. MEYER,
President, Board of Commissioners,
Clark County Public Utility
District No. 1,
Central Building,
Vancouver, Wash.

DEAR MR. MEYER: My attention has been called to your statement on pages 24, 25, and 26 of the hearings before the Committee on Public Works of the House of Representatives relative to my bill, H. R. 3036.

Your statement includes the following:

"It might be interesting to note that the sponsor, Mr. DONDERO, the honorable Representative from Michigan, was a former employee of the Pacific Power & Light Co., in the Portland, Oreg., area. * * *"

This statement is a complete falsehood. The truth is that I have never been in the employ of any power and light company and neither have I ever visited the Pacific Northwest until less than a month ago.

In justice to yourself and to me, you should immediately issue a public retraction of that statement. In addition, I request that you send a statement to me to be included in the record of the hearings of our committee.

Yours truly,
GEORGE A. DONDERO,
Member of Congress.

PUBLIC UTILITY DISTRICT NO. 1,
CLARK COUNTY, WASH.,
Vancouver, November 14, 1947.

The Honorable GEORGE A. DONDERO,
Representative from Michigan,
Washington, D. C.

DEAR MR. DONDERO: I quote, as follows, from my statement entered on pages 24, 25, and 26 of the hearings before the Committee on Public Works of the House of Representatives relative to your bill, H. R. 3036:

"It might be interesting to note that the sponsor, Mr. DONDERO, the honorable Representative from Michigan, was a former employee of the Pacific Power and Light Co., in the Portland, Oreg., area."

I accept your contradiction of this statement to the effect that you have never worked for any power company and I would like to have you know it was made through unintentional error.

I trust this letter can be used to correct the record in accordance with your request and in accordance with my desires to be accurate and fair.

Yours very truly,
HEYE H. MEYER,
President, Clark County Public Utility District No. 1.

The Air Force

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. MICHENER. Mr. Speaker, the entire country is intensely interested at the moment in the type of air force maintained, provided and contemplated by the Congress. Personally, I feel that we cannot do too much research along this line and, by the same token, am thoroughly convinced that we must strengthen our air force immediately. Not being an expert, my views are consequently general. Not even the experts are all agreed. Therefore no one can speak with finality.

I am convinced that we must have more and more, long range, faster and better airplanes in the military service at the earliest possible moment. Our national safety demands this.

This morning I received a letter from Mr. Cass S. Hough, of Plymouth, Mich., who is a practical flyer, an outstanding businessman, with long and distinguished service in World War II as a flyer, and for whose judgment in matters of this kind I have great respect. I am, therefore, including in these remarks that letter which reads as follows:

I would like to call your attention to a matter which I believe greatly affects our national defense picture, both from a standpoint of our ability to defend ourselves in the event of a national emergency, as well as the cost of same.

Prior to World War II the "nonregular" air forces were the Air Reserve and the National Guard. As you know, these two organizations are entirely separate, their administration is handled by two different groups, they operate entirely different matériel, are based at different airports in almost every case—in other words, every item of expense for equipping and training of these units is duplicated.

In the old days this could be partially justified by the fact that the ground division had its own air units attached to it. This meant then that State troops had to have their own air units and that any State division had its air units represented by the then air part of the National Guard. During World War II the only part of our Air Force that was used in direct cooperation with the ground forces were the liaison units, for observation purposes only. All of the strategical and tactical employment of air force was handled as an Air Force function and not as a division or Army function. Now, with the creation of the separate and autonomous Air Force, the necessity of the separate maintenance of Air National Guard and Air Reserve has disappeared completely. However, the old bureaucracy still holds forth, to the detriment of the training and equipping of both

the Air Reserve and the Air National Guard. With billions going for foreign relief, a great many of these dollars at the expense of our own preparedness program, and with the great need for money to be expended in research and development for the Air Force, it seems to be logical that this tremendous duplication and overlapping of effort and expense should be stopped immediately.

It is my opinion that the Congress of the United States should immediately create a joint Board of Air Reserve and Air National Guard, and charge them with the responsibility of integrating these activities immediately under a Department of United States Air Force Reserve. Without going into all of the logistics of the situation, it is my opinion that a saving of approximately 50 percent of our present-day cost for nonregular air units would be had. This saving might run even greater upon a close study of the situation. And what is equally, if not more important, is the fact that having all of these nonregular forces in one group and under one administration, their employment in time of national emergency would be much more easily accomplished and much more in keeping with the dictates of modern warfare, where long periods of time to accomplish this employment will not be available.

I believe this is a matter of extreme importance and urgency. I know that if it is accomplished it will be one of the greatest strides in our peacetime military program. I know, too, that many obstacles will be thrown in its way, particularly by the people who for years have enjoyed a good living at the expense of the taxpayer, while duplicating function after function, airplane after airplane, airport after airport. If any better proof is needed that this should be accomplished one has but to look at the fact that all of the nonregular naval air units are organized under the Naval Reserve. As a result of this organization the Navy, ever since VJ-day, has been able to keep its reserve units up to strength, fully equipped with airplanes and the funds to operate them. By the same token the Air Reserve is in a deplorable condition, both personnel wise and material wise, and getting no better fast. The National Guard has been able to hold its own because of the National Guard Bureau, a bureaucracy of long standing in Washington whose sole purpose in life is to perpetuate themselves.

Believe me, millions and millions of dollars are being wasted—dollars which should be put to work, either in the pocket of the taxpayer or in the more efficient training and equipping of our nonregular air units. Won't you please help accomplish this badly needed reorganization?

Mr. Speaker, I am calling the attention of the Committee on Armed Services to this letter.

Air Force Called Best Insurance

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD and include a newspaper article, I wish to submit a copy of Associated Press dispatch, dated Washington, D. C., on December 2, 1947, quoting Under Secretary of State Robert A. Lovett, and Alexander P. de Seversky, noted flier, aircraft designer, and proponent of air power, under the title "Air Power Called Best Insurance," as follows:

AIR POWER CALLED BEST INSURANCE

WASHINGTON, December 2.—Air power is "about as cheap a way of buying national security insurance as there is," Robert A. Lovett, Under Secretary of State, told the President's Air Policy Commission.

But Lovett, former Assistant Secretary of War for Air, called a second-rate air force "nothing more than useless because it doesn't have the punch when needed." And this country, he said, must make up its mind whether it's going to be a leading air power or not.

Another witness, Alexander P. de Seversky, noted flier, aircraft designer, and proponent of air power, urged against investing in "all conceivable weapons for all conceivable strategies" because the Nation might become "bankrupt and exhausted by the time we decide on a clear-cut logical procedure."

De Seversky advocated a United States air force capable of striking effective blows from the continental United States.

The Commission is expected to recommend considerable reshuffling of civil aviation administration and a larger air force maintained in readiness.

A Warning From a Friendly Neighbor

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include the statement by H. G. L. Strange, research director, Department Searle Grain Co., Ltd., Winnipeg, Canada, before the Joint Committee on the Economic Report on December 3.

All over America this summer we have been hearing comparisons of living costs between this country and Canada. I do feel that Mr. Strange's statement will serve further to inform those of the basic injustices and inequalities that have made these Canadian comparisons possible.

I call particular attention to the fact that the Canadian wheat farmer has actually subsidized the Canadian market to the tune of hundreds of millions of dollars. Mr. Strange's statement—particularly the concluding paragraph—should be read by all thoughtful Americans.

During questioning, following Mr. Strange's statement, he said that America was the last country in the world which had a free agriculture producing wheat and that the world should be thankful that our freedom had resulted, this past year, in the greatest wheat crop in the history of America. We produced about 300,000,000 bushels more than ever before in our history. This is important, for as everyone knows, it is production and more production that will defeat inflation and win the peace.

In Canada, under controls, even in a land with a people similar to our own, production has gone down 2,000,000 acres under controls. Mr. Strange's testimony indicated that this reduction had been from a total of 25,000,000 acres to a total of 23,000,000 acres producing wheat. Truly there is a lesson here for us for, even at 15 bushels to the acre, that is 30,000,000 bushels. Actually their average, like ours, has or at least could have been much higher in the years 1943–47. How we could use Canada's control-lost wheat today.

STATEMENT BY H. G. L. STRANGE BEFORE THE JOINT COMMITTEE ON THE ECONOMIC REPORT

Mr. STRANGE. I am H. G. L. Strange, director, research department, Searle Grain Co., Ltd., Winnipeg, Canada.

In 1929 our Canadian wheat pools suffered a loss of $23,000,000 which they owed to the banks and could not pay. They lost this money because they had adopted a policy of marketing their wheat straight to the millers of the world without using the facilities of the Winnipeg open futures market. They did not hedge their wheat.

Fearing political and economic repercussions if the pools went bankrupt, their losses were guaranteed to the banks by the Provincial and Dominion Governments of Canada. But the Dominion appointed an administrator over their affairs, Mr. John I. MacFarland, to dispose gradually of their unhedged, unsold wheat, using the full facilities of the futures market to sell the wheat. Mr. MacFarland was later superseded by a practical grain man, Mr. James Murray who, by 1937, succeeded in reducing the unsold wheat to a normal carry-over.

From such a small beginning started the Canadian Wheat Board which, from 1937 to September 27, 1943, functioned primarily as an agency to implement a guaranteed moderate floor price for wheat, the wheat, however, being sold through the facilities of the futures market.

This went along quietly until September 27, 1943, when the Government decided that wheat was a munition of war that should be sold to certain countries only and withheld from certain other countries, much of the distribution being a state secret.

The Government then, on September 27, 1943, closed the Winnipeg wheat futures market, with the full expectation that it would be reopened as soon as the war was over. The market, however, has remained closed to this day and is still closed.

From 1943, therefore, the sole marketing agency for all Canadian wheat has been the Government itself through its wheat board headed by three commissioners. Since 1943, Canadian wheat has become a complete state monopoly.

Canada normally has to sell abroad 80 percent of all the wheat offered for sale by prairie farmers (from an average crop of around 400,000,000 bushels a year).

For the crop year 1943–44, the government set the price of wheat to Canadian farmers at a considerably lower figure than the price reflected by the Chicago futures market. For that year our farmers received $136,000,000 less for their wheat than they would have received had they enjoyed the same price that American farmers were being paid through the Chicago and other United States of America open futures markets. For the year 1944–45, our farmers received $147,000,000 less, and for the year 1945–46 $126,000,000 less than American farmers received.

Canadian farmers showed little discontent at these losses during the war years, feeling that this was their contribution toward the winning of the war. When the war ended, however, discontent began to grow, until today the majority of farmers are extremely dissatisfied with the low prices set by the government to farmers.

Since the futures market was closed in 1943, the government alone has had to sell year by year all the Canadian wheat crop. The government became somewhat frightened, apparently, at the possibility of unsold surpluses, so in July 1946, the Canadian Government accepted an invitation from the British Government to engage in a bilateral wheat agreement. The terms were that Canada would sell to Britain 160,000,000 bushels for each of 2 years at $1.55 a bushel basis No. 1 Northern Fort William (equal to Terminal Market, Chicago), and 140,000,000 bushels a year for the last 2 years at a minimum price of $1.25 for the third year and a minimum of $1 for the fourth year, with actual prices for the third and fourth years to be arranged at later periods. (The actual price for the third year was recently agreed upon. It was $2 a bushel basis No. 1 Northern Fort William. Unless wheat prices fall drastically by August 1 next—as does not seem likely—then this $2 price will further increase our farmers' losses.)

The Canadian Minister of Agriculture, the Right Honorable Mr. Gardiner, who signed the agreement, was, it seems, advised by leaders of certain Canadian farm organizations that the price of wheat was likely, after 1946, to fall below the $1.55 price.

As we all know, prices rose steadily after August 1, 1946, the start of the agreement. The Canadian Government and their advisers guessed wrong.

The Government of Canada announced some time ago in the House of Commons that our prairie farmers had lost $123,000,000 (equal to 77 cents a bushel) during the first year of the agreement compared to what they would have received had they been paid the much higher price at which Canadian wheat had actually been sold by the Government's own wheat board to some 65 countries of the world other than Britain.

(It is to be noted here that the Canadian Government's instructions to their wheat board, as contained in bill No. 23, were to the effect that the board should sell any surplus wheat it had over and above quantities required for Britain and for domestic consumption "for such prices as it (the board) considers reasonable.")

In spite of the fact that Britain paid $1.55, basis No. 1 Northern Fort William, for the wheat she bought, the board paid farmers only on the basis of $1.35 for wheat, holding back 20 cents a bushel in case of possible future losses.

The $123,000,000 lost on the first year was, however, not all, for it became apparent that the Canadian Government had seized on this comparatively low price of $1.55 that Britain was paying, to oblige our farmers to sell wheat for Canadian consumption, as flour and bread to 12,000,000 Canadian people, also at $1.55. The loss to our Canadian farmers on wheat for domestic consumption, i. e., approximately 70,000,000 bushels per year, came to an additional $77,000,000, making the total loss for the first year of the agreement $200,000,000.

I have calculated that if anything like present prices of wheat, as set by the Canadian Wheat Board or as registered by the Chicago open market, prevail until December 31, this year, that the total loss to our prairie wheat growers, approximately 250,000 farmers, will amount to $419,000,000, or about $1,600 on the average to each farmer. And the losses are going on today at the rate of around $1.90 a bushel, a most serious loss to our prairie farmers, who are receiving much less, too, than American farmers for their coarse grains and for their livestock.

Our prairie farmers are daily becoming more and more discontented. A recent survey made shows that 79 percent are demanding that the Government shall pay prairie farmers the full world-market price for their wheat and coarse grains, particularly as our farmers note the much higher prices for the same wheat and coarse grains that are being received by American farmers just across the international border line. A few weeks ago, a farmer, Mr. J. Hume Lee, who has a farm at Gretna, Manitoba, and an adjoining farm immediately across the border line at Neche, N. Dak., informed me that last year he sewed his adjoining farms at Gretna and Neche with Thatcher wheat and O. A. C. 21 barley. He harvested both crops together with the same implements. He sold his wheat at the American elevator for $2.56 a bushel and at the Canadian elevator for $1.20½. He sold his barley at the American elevator for $2.10 and at the Canadian elevator for 85½ cents. Since then, the quotations for wheat on November 19 at these same elevators were $2.94 for wheat at the American elevator and the same price as formerly—$1.20½—at the Canadian elevator. It is to be noted that, while Britain is buying wheat from Canada under Government agreement at $1.55, she is paying for American wheat, and has been paying all these years, the much higher price as reflected by the Chicago futures market.

A new farmers organization has been started in western Canada—the Farmers Protective Association. Its objects are to demand that the Government shall pay farmers the full market price for their wheat, coarse grains and livestock, and that if Canada wishes to subsidize Britain, and the people of Canada, with cheap bread, that these subsidies shall be paid by the Government and not by our prairie wheat growers alone. The Association draws attention to the simple fact that Canadians who are supplying Britain with lumber, pulpwood, paper, nickle, asbestos, copper, zinc, lead, automobiles and farm machinery, are selling these things to Britain at full world market prices, and that moreover, the goods that Britain is selling to Canada, much of them purchased by Canadian prairie farmers, are also sold by Britain at the full world market price. Why, asks this Association, should our farmers be the only people required to subsidize Britain with a cheap product?

To implement the government sale of wheat to Britain, the government found it necessary to bring down bill No. 23, passed by the House of Commons on March 13, 1947. This bill completely nationalizes or socializes our wheat industry. The bill gives the Government complete control over the production, the authorized acreage from which farmers can deliver, the amount farmers can deliver to elevators from each acre, and the handling and marketing of all wheat. Wheat, therefore, in Canada, is now a complete State monopoly, just as are the socialized industries in Britain. The new act imposes extremely heavy penalties on farmers and others for any infraction of the multitudinous rules and regulations that are now set, and which even may be in the future set by the Wheat Board without any further legislation.

One reason given by the government for taking over complete control of the whole wheat industry was, as they put it, to prevent speculation in wheat and to prevent speculators from making profits at the expense of farmers. The fact is, however, that those who signed the agreement for Canada, themselves engaged in the greatest wheat speculation of all time. They actually sold "short" 600,000,000 bushels of unproduced wheat over a term of four years, and for prices they could not foresee. They sold short, not with their own money nor with the government's money, but with the future income of our prairie farmers.

These good people forgot, or did not realize, that speculation has no real effect on the price of wheat, either up or down. They forgot also that because wheat in Canada is harvested and threshed and a good part of it delivered to market within 90 days, and because the millers of the world only require and buy their supplies in a steady daily stream throughout the year, that wheat cannot be marketed without the aid of speculators, for whoever buys wheat from the farmer in the fall, so that the farmer can be paid for it, and holds that wheat for months until millers require it later, is a speculator. When the Government buys and holds the wheat, therefore, as it is doing in Canada today, then the Government, hence all the taxpayers, become speculators.

These people forgot, too, that speculators as a group lose money, and that their losses go to the benefit of both producers and consumers. So that speculators, besides performing the important service of holding the farmer's wheat for months until buyers require it, not only do this at their own expense, but indeed pay a little for the privilege of performing this important and essential economic function. All, as shown in the study entitled "Financial Results of Speculative Holding of Wheat" published in "Wheat Studies" for July 1931 by the Food Research Institute of California.

My own observation is that whenever a Government handles wheat and sets a price for it, the price set is never in accordance with economic considerations, but is greatly influenced and sometimes entirely governed by political pressure. Because of this, such Government-set prices are quite unable to fill their natural economic function.

I have compiled records of many attempts to fix prices by the State on wheat and many other commodities during the past 5,000 years—every attempt failed—not one succeeded—usually they merely made conditions much worse.

Free prices, as reflected through a futures market in accordance with the multitudinous factors of supply and demand throughout the world, not only of wheat, but of every foodstuff with which wheat has to compete, besides rewarding producers and making foodstuffs available to the people of the world, have additional work to do. They must perform the function of maintaining an equilibrium between supply and demand and when, for any reason, certain causes bring about a disequilibrium between supply and demand, free prices if left alone under the influence of competition tend to restore the balance, but they must be free competitive prices to do the work. When a scarcity occurs, higher prices are registered which induce farmers to produce more and induce consumers to waste less and to be more thrifty with the product—in short, to buy less. Conversely, when supplies are overabundant, free prices, if left alone, fall, inducing farmers to produce less and the people to consume more. When prices are unsatisfactory, it is not the market that is wrong, but the causes that affect the market that are out of adjustment.

Personally, I regard the open futures market as one of the great economic achievements of men, as tending to distribute foodstuffs quickly and at an extremely low cost and to insure at all times that as the population of the world increases—as it is at the rate of 22,000,000 additional mouths to be fed each year, or at the rate of 1 percent per annum—producers will be induced to put forth extra efforts to fill these additional demands for foods as they come along year by year.

No Government bureau, no matter how able its members may be, can sell as much wheat, I am sure, as can hundreds of merchants, each with his own money invested in his own business, probing every market of the world for possible extra sales, with the hope of making a profit, and working even harder for the fear of making a loss.

It is to a great extent because the United States has enjoyed an open-futures market with its reflected high prices to producers that the United States of America last year increased wheat acreage. It is because of the Government-set price, of necessity a low price to producers, that Canada last year, in spite of the world's great hunger, actually

reduced its wheat acreage, for there was no incentive to Canadian farmers to increase it.

Since the Government closed the futures market in Canada in 1943, our farmers have received much less for their wheat and coarse grains than they should have done. This, I am convinced, is no accident. It must, I am convinced, almost always happen under Government monopoly. I confidently make the prediction that if the "futures" markets in the United States were to be closed, or even were they to be unduly hampered by unnecessary governmental regulation, that much the same great losses that have been incurred by each of our Canadian wheat producers would most certainly fall upon your American grain producers.

There is always much talk about the evils of speculation, for the reason that the important economic functions filled by speculators are not understood. It is often forgotten that should the speculator who operates through futures markets be done away with, the farmers themselves would become speculators by withholding their wheat from the market or even from the Government, hoping for higher prices in the future, and that if prices are set at a low figure for a considerable period, then farmers would reduce acreage and so reduce production, and that nothing could be done about it. Higher prices are the only inducement of which I know that will ever persuade farmers to do extra work to bring forth greater production.

It will have been noticed that the present absolutely complete State control over Canadian farmers and over the Canadian wheat industry all, as set out in bill No. 23, actually started in a very small and mild way in the year 1930, but that it has gone along with a number of quiet, successive, gradual steps, until we have arrived today at complete State monopoly, which illustrates, I suggest, how insidiously Government control, little by little, creeps upon the people once it is permitted to start. Illustrating, too, the truth of the old French proverb which tells us: "It is the first step that counts." I venture to recommend to our good friend, the United States, not to take that first step of control over your wheat industry, for, if it is taken, it will inevitably lead to still further steps until United States farmers would end up in the same bad position in which our Canadian prairie farmers find themselves.

I have heard it stated by some that wheat prices as reflected by the Chicago open market are what some call speculative, meaning, perhaps, they think prices are too high. I venture to draw attention to the simple fact that the price of wheat as set by the Canadian Wheat Board itself has always been higher than prices reflected by the Chicago futures market. Now our Canadian prices for class 2 wheat as set by the wheat board are set under a definite instruction or order to the board by the Government, which says that the board "will sell grain at such prices as it considers reasonable." If, therefore, our Canadian prices for class 2 wheat are reasonable, how much more reasonable must be the Chicago futures prices, which are consistently lower.

During the course of its 60 years of activity no less than 18 royal commissions have thoroughly investigated the Winnipeg futures market. Not one of them ever recommended that the market should be closed, not one even recommended any curtailment or hampering of its operations.

These commissions decided the futures market was in the interest of producers, and that the market performed important services to both producers and consumers.

FINAL COMMENTS

The forefathers of our Canadian people made great sacrifices long ago to win their liberty and freedom from kings, princes, emperors, and from the state. They often sacrificed their very lives for that purpose.

Today, in Canada, our farmers have unwittingly become merely humble servants of the state. The state is their master. Thousands of us in Canada look longingly to the United States, where farmers still enjoy the liberty and freedom fought for and won by their ancestors against kings and governments. Many of us in Canada today believe fervently that the United States is an oasis of liberty in a gradually extending world desert of human servitude.

It was not to have their every action policed and dictated by bureaucrats, with a constant fear of fine and imprisonment for the breaking of minor regulations, that Canadian farmers made very great sacrifices in order to assist in winning two great wars for human freedom. We in Canada are hoping, therefore, that some day we may again be blessed with that same individual liberty and freedom which is still fortunately enjoyed and cherished by our brother farmers in the United States.

Representative HORAN, I am very much interested, having previously read your statement, in knowing if, under control, production of wheat has increased in Canada.

Mr. STRANGE. It has decreased, sir. The production of wheat under these low prices to farmers has decreased.

Representative HORAN. Wheat has decreased. You attribute that to controls and to false prices which do not reflect the true supply-and-demand pressure on wheat.

Mr. STRANGE. Right, sir. We went down from 25,000,000 acres to 23,000,000 acres, because of the low price the farmers are getting. The present price they are getting is not an incentive that enables and that encourages them to increase acreage as you increased it in the United States.

Representative HORAN. Do you know how many countries in the world today are raising wheat under what might be called a free agrarian economy?

Mr. STRANGE. Yes. In the Argentine and in Australia they are selling their wheat for extremely high prices, even higher than Chicago, incidentally; that is the Argentine, and Australia approximately the same as the Chicago price.

Representative HORAN. Is that the individual grower?

Mr. STRANGE. No; that is the government monopoly selling the wheat at world prices; in the Argentine much higher, since it is up to $5 a bushel. But they adopt the same principle that they do in Canada, both in Argentina and Australia. They only pay the farmers a fraction of what they sell the wheat for, so that the farmer receives such a small amount of money and has had no inducement to increase his acreage.

In the Argentine it has has gone down 13 percent since last year, and that 13 percent in itself is about 10 percent lower than the prewar average.

In Australia, they have not decreased acreage, because the farmers there are promised dividends at the end of the year, between the price they are receiving and the price at which their wheat is sold, but they have not in Australia decreased wheat acreage; they have the same acreage on a hundred thousand bushels, 12.4 and 12.3 are the two figures; they have not increased or decreased in Australia.

Representative HORAN. Is it true that the United States is the only country in the world that is raising wheat under what might be termed an approximation of a free economy?

Mr. STRANGE. Yes.

Representative HORAN. We are the last.

Mr. STRANGE. I would say that, yes, sir. In Britain they have increased acreage because they are paying their farmers a large sum of money; they are desperate in Britain to get more wheat.

The land will only feed 20,000,000 people, and they have a population of 27,000,000, and they are paying their farmers for this next year, next harvest, $4.88 for the first 300 bushels, and $4.44 after that on the farm; those are the prices.

Senator KEM. That is out of the proceeds of the so-called British loan?

Mr. STRANGE. Yes, sir. Well, if you like to put it that way, sir. Your loan and our loan.

Representative HORAN. Do you look with favor upon any action on the part of this country toward the emulation of the experience in Canada?

Mr. STRANGE. I beg your pardon, sir?

Representative HORAN. Do you look with favor, sir, upon any action in this country to follow the steps that Canada is now following?

Mr. STRANGE. I did not quite catch that.

Representative HORAN. I do not know whether it is a fair question. I say, do you look with favor as a friendly neighbor toward this country's following in the steps that Canada has taken to create allocations and controls that would eventually result in a government monopoly?

Mr. STRANGE. I am afraid, sir, that if you were to follow in our steps and decided on it, all the troubles that we have there, the great disturbances, the discontent of farmers, the political turmoil that has go into politics now, and the low prices to farmers and a severe reduction of acreage, would inevitably, without any question follow in this country.

Representative HORAN. In other words, it is the incentive that naturally flows from a free economy that has resulted in our raising a record crop 300,000,000 bushels above anything ever experienced in this country before?

Mr. STRANGE. Yes. It had much to do with the high prices the farmers were privileged to have.

Representative HORAN. If we had not produced as much wheat as that, though, the price could be enormously higher, could it not?

Mr. STRANGE. Yes.

Representative HORAN. Supply and demand being still a factor.

Mr. STRANGE. Yes.

Representative HORAN. So we are to be thankful that we did have a record wheat crop——

Mr. STRANGE. Yes.

Representative HORAN. Which came from the ability of our farmers to raise in a free atmosphere.

Mr. STRANGE. Yes.

Representative HORAN. Thank you.

Mr. STRANGE. It is a great blessing for the whole world that the United States has got this large amount of wheat.

Representative HORAN. A little louder on that, Mr. Strange.

That Navajo Problem

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 25, 1947

Mr. MURDOCK. Mr. Speaker, a letter I have just received starts out with these words, "Since the recent publicity of the plight of the Navajo Indians has received national recognition, and so forth," the writer then goes ahead to make certain suggestions. Now I have received numerous other communications from various parts of the country and many inquiries from fellow Congressmen concerning the plight of the Navajo Indians, evidently growing out of what is called

the national publicity which the subject has had in recent weeks. Therefore I feel that I as one of the Members of Congress from Arizona, which State has the largest portion of the Navajo Reservation within it, should make some statement in partial reply to these numerous inquiries. I say in partial reply, for it is impossible for me to make a brief and complete reply to this long-time critical problem of the Navajo Indians. It is a complex problem involving the most numerous tribe of Indians in our country and occupying an area as large as West Virginia and touching four States. Therefore, only a part of the problem comes within the borders of the State of Arizona.

What is the situation with regard to the Navajo Indians? It is true that it is critical indeed, but for a better understanding it should be made clear that it has not altogether suddenly become so. Rather, it has gradually grown worse for more than a quarter of a century. Who is to blame for this critical condition? I cannot fairly specify, as there are numerous causes making it difficult to assess the blame properly. Certainly our Government, including Congress, the Interior Department, and especially the Indian Service, must bear a large share. Perhaps there has been too much indifference and neglect on the part of officials and some indifference on the part of the white people living near this reservation. However, it must be said that various religious groups have done some good work among the Navajos. They have not been able to do entirely what the Government should have done, except only in a very small way, and they have not adequately done what the missionary spirit usually prompts to do because of the magnitude of the task.

While I am discussing the general situation, I must call attention to the fact that the Hopi Indians are in as bad, if not worse, plight as the Navajo Indians. The Hopi Indians number only about four thousand, whereas the Navajos outnumber them 15 to 1. The Navajos are stockmen and move about as nomadic tribesmen, depending mostly upon sheep and goats. As they have sought pasture lands, they have encroached upon the Hopis who are also stockmen, and the Navajos have taken over by far the largest part of the Hopi Reservation. This has gone on to such an extent that the Hopis have today only one-sixth as much land to use as was set aside for them about 60 years ago by Presidential proclamation.

In the case of both tribes, their rather poor lands have been so overgrazed that the Government has found it necessary to reduce their flocks and herds until both the Navajos and the Hopis find it increasingly difficult to make any sort of living at all. Now the Government has had valid reason for limiting their grazing permits. This has not been done in a cruel or inhuman way to plague the Indians or punish them or to threaten them with starvation. This stock-reduction program has not been the sole and only action taken by the Government but rather it has been accompanied by some effort on the part of the Indian service, although I think inadequate, to enable the Indians to get as much animal production and economic value out of their smaller but improved herds and flocks. Therefore, I am not condemning governmental action in regard to stock reduction, in general, other than to point out the inadequacy of the treatment.

It may be that a great number of Navajos are nearer a critical condition today than ever before, but such is not an unusual thing for them in recent years. What has caused the situation to be worse now? One cause is the inevitable result of a growing population pressing against the seeming limits of subsistence. These are a primitive people, and the philosophy of Malthus operates among them so that the natural increase in numbers press hard upon the limits of subsistence on the reservation as they have known it. Another reason why the Navajo situation is more critical at this time is an aftermath of World War II. This is due to the return of Indian veterans to an increasingly impoverished land and a cessation of pay checks to veterans and to the older members of the tribe who had been war workers and even to the young women who had served during the war off the reservation. During the war many older Navajos worked along the Santa Fe Railroad and in munition depots nearby, and a large number of Navajo girls were employed in Fred Harvey's eating houses throughout the Southwest. Therefore, the Navajos got along quite well during the war period even though their stock-reduction program did hit the reservation hard during those same years.

We cannot avoid the fact that the Government has been sadly negligent and inadequate with regard to schools for the Navajos. It has been said that the States containing the Navajo Reservation have also been negligent, but I deny the charge applied to Arizona which contains the larger portion of the reservation. Of course, the public schools of Arizona are not available to the Navajo Indian children, nor can they be made available, because that portion of Arizona having public schools near the reservation is sparsely settled and has inadequate school facilities even for a fraction of the Navajo children, assuming that they could be brought to such schools. The area itself is so vast and lacking in good roads that it is impossible at the present time to bring Navajo children to the nearest white schools on the fringes of the reservation, even if the Federal Government paid adequately on a per capita basis. Of course, Arizona is interested in the educational progress of all children within her borders. The State educational association meeting in Phoenix early in November announced their attitude in an emphatic resolution concerning education for the Navajos. However, the Indians are wards of the Government, and the general care of Indians is such a herculean task that the State of Arizona could not possibly carry the burden, even if it were just and fair to impose it upon the State. Certainly, it would not be right to impose that burden now.

As a schoolman and as a humanitarian, I personally am very much concerned about the education of Navajo and Hopi children and about the health of all our Indians. However, I am giving much thought to their economic rehabilitation and stability since that is the thing that will count in the long run because it is basic. Of course, we must take care of any immediate need due to a food crisis. Dictates of humanity require that we do that, and we have frequently done just that on the Navajo Reservation. Several times within recent years emergency measures have had to be taken to relieve some of these Indians. The whole reservation is situated on a high plateau, but on this plateau are also mountain areas which are dangerous in the wintertime. In late autumn large numbers of Navajos go to gather pinon nuts, hoping to lay in a supply for the winter. Occasionally, large numbers of Indians are endangered in this work. Recently, several hundred Navajos were marooned by snow, and food had to be furnished them by airplane. Of course, we must hold ourselves in readiness to do the humane thing in any or all such emergencies, but this is good Samaritan work and should not be confused with the more permanent obligation for their future. The really important part of our governmental obligation is a long-range program.

Twenty-five years ago, and for several years prior to that, the Navajo Indians were fairly stable economically. They had large flocks of sheep and goats and produced great quantities of wool which they wove into Navajo rugs. They disposed of their production at fair prices. The Navajos are good workers in several different lines, and if given some aid and much encouragement in an economic way they can make their own living and prosper. The Government has done some things to aid them in an economic way, but I think not nearly enough. The Navajos are essentially stockmen, and they ought to be encouraged to produce livestock and its products to the very limit of the carrying capacity of their ranges. I favor increasing the carrying capacity of their ranges and enlarging in every possible way their economic base. I am not suggesting adding any more land to their reservation, but I am suggesting making their reservation more productive. How can this be done?

Something has already been done by improving their stock. The Government has furnished better breeding stock and also dipping vats and, to a certain extent, water holes and water wells, and recently reseeding of their overgrazed land. Now this is a program that I think can be enlarged upon, especially in reseeding to restore their pasturage, but one great addition would be to furnish irrigation facilities to as great an extent as possible. Many thousand acres of land on the Navajo Reservation could be made highly productive through irrigation, and the Indians have one of the very best water rights. Of course, it would be expensive, for the very nature of that region challenges to the utmost the hydraulic engineer, but certainly money spent in such a wealth-producing way is far better than the same amount spent

in mere charity. Therefore, I heartily favor the 10-year program calling for $80,000,000 which has recently been announced by the Office of Indian Affairs for the Navajos. Let us do the Good Samaritan work of a temporary character as is required, but let us also do the basic remedial work which is but our solemn obligation to these Indians and required of us by our own self-interest as well as the dictates of humanity.

It has been my feeling that the wisest course of action for Congress to take now with regard to the Navajo and Hopi Indians other than present care, is to inaugurate a long-range plan for their rehabilitation. I do not want to minimize the need for action in the present emergency, for I think both emergency action and long-range development should be carried on concurrently. One reason for emergency action now is that we have not begun earlier to inaugurate a long-range program for these Indians. Charity work is important, but good samaritan efforts should not stand in the way of constructive remedial work. In the case of the Navajo and Hopi Indians with their real needs and claim upon the Nation's fair dealing, we must not, like the dumb servant, be so busy mopping up the water that we fail to turn off the faucet.

What long-range provisions would I suggest? First, I would suggest a Marshall plan for the Navajos—that is, I would help them to help themselves. If it is possible, and I think it is, for the Navajo reservation to become a national asset rather than a national liability, that is the Marshall plan for these Indians, or any other Indians, which I would favor. How can that be done within the framework of the physical limitations of the area within the reservation? This is a peculiar area as well as a vast one. It presents a challenge to the ingenuity of civilized man as well as primitive man. It can be made suitable for a part of its Indian population as stockmen.

What of the remaining population? Perhaps industries established on the reservation and employment off the reservation will both have to be developed and encouraged for these Indians. I believe that industry on the reservation can be encouraged and become highly profitable, which would be a partial answer. Also, I believe that those Indians can become good farmers if tillable land with a water right can be furnished them. There are a few small plots of good land being farmed by them, but the land is not sufficient at the present time. The Navajos who are farming, and there are many who would like to farm and cannot have the land to farm now, are permitted only 10 acres as a maximum, and that, of course, is not in private ownership but allotted as tribal land by the tribal council.

Scarce as water is in the Colorado River Basin, I feel that the Indian's water right is of high priority, though relatively small. I think there should be no question but that the Navajo Reservation ought to be entitled to not less than a hundred thousand acre-feet of water out of the Colorado River system in addition to that which falls upon the reservation. Of course, the Navajo Reservation has more land in spite of its almost universal rough terrain that could be tilled if there were available water supply. This reservation, like all other parts of the Colorado River Basin, contains more tillable acres than there is water supply for such acres. Any long-range plan, whether it be the 10-year plan now offered by the Interior Department or some other long-range plan, must consider bringing Colorado River water or waters of the San Juan River onto the Navajo Reservation. Any plan lacking this provision will be inadequate and to a certain extent unwise.

In conclusion, I recommend two types of action, authorized and provided by law for the Navajo and Hopi Indians. First, an emergency appropriation adequate to take care of the immediate needs, and second, the initiation of a program calling for, perhaps a hundred million dollars over the next dozen years, to fulfill the Government's obligation to these Indians and to make these tribes an economic asset instead of an economic and social liability to the Nation. It is difficult for most of us to understand how great an economic asset they may be or how heavy a liability they may increasingly become, depending upon our course of action.

This Is Freedom, Mr. Vishinsky

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. TEAGUE. Mr. Speaker, I sincerely hope that everyone will read the following article which has been published in the public interest by many newspapers, as many of us do not realize all the liberties and freedoms which are made available to us by our form of government. This message would serve an even greater purpose if it could be published in Russian newspapers.

Under leave to extend my remarks in the RECORD, I wish to include the following message which was published by the K. Wolens department store in the Corsicana (Tex.) Sun on November 29, 1947:

MR. VISHINSKY, WHEN YOU GO HOME, YOU CAN TELL YOUR PEOPLE THESE TRUTHS ABOUT THE UNITED STATES OF AMERICA

You could do it in Pravda, which means truth. You could use radio Moscow to tell them. You could tell it to your people who are not members of your Communist party but who are owned, body and soul, by your party.

You could tell your people that we Americans are not seeking war and are not warmongers. We hate war. We want peace. We want the whole world to have the opportunities and freedom upon which lasting peace can be brought to all nations. You know that.

You could explain that we are not a capitalistic monopoly. Tell your people that our railroads, telephones, radios, airlines, shipping lines, factories, stores. mines and forests are not owned by government but that they are owned by the people as private citizens. You could tell them that millions—and many more millions—of the people's dollars are invested in our railroad, automobile and our steel industries—and all other industries—all of which come out of the savings of the people.

You could tell your people that we are not a capitalistic Nation—but that your Russia today is the only complete capitalistic nation on earth. It owns everything, including the people and the profits the people could make on their own labor.

In America, the people own everything—including the government. In the U. S. S. R. the government owns everything—including the people.

Tell the Russian people that in America, through the industrial know how, we have turned luxuries into mass production within the reach of everybody. Explain that telephones, bathtubs, gas stoves, radios, refrigerators, electric light, vacuum cleaners, and automobiles are not luxuries in America. Tell them we have over 80 percent of all the automobiles in the world—and they are owned—not by the rich—they are owned by the people. They are the capitalists. Every bit of property our people own is owned because they have saved money out of the greatest earnings ever earned by any people. All because of the free competitive system, made possible by liberty.

Tell your people about our courts of justice. Explain our jury system by which 12 of our equals decide on the guilt or innocence of anyone charged and brought to the bar. We do not have judges who decide on our guilt or innocence. We, the people, decide. The judge pronounces sentence. We elect the judges.

Also tell your people that we sent to your country $11,500,000,000 of lend-lease war material to win your war over Nazi Germany, your former ally, who turned on you. Marshal Stalin said that the war would have been lost without the productivity of America. You might tell your people that all the material and food sent to you was produced by America in addition to what we needed to win our own war and help England win hers.

Explain how much greater American production is than that of Soviet Russia. Why? The secret is that United States production is free and every producer is free. Explain how every family in America is self-regulated and runs itself better than you in the inner circle run all of the Russians from the Kremlin.

Explain, Mr. Vishinsky, that in the United States of America every man, woman, and child has the right to progress—is automatically given liberty and freedom—can pick out any educational opportunity they want, the job they want, and decide, personally, what they want to be.

Tell them about our Constitution and how—if some people want something which is not constitutional—there must be submitted a proposed amendment so that all may vote, and only by two-thirds vote of the legislatures of the States can such an amendment become law. No person, in or out of Government, can issue an order in defiance of the Constitution. Tell them America believes in the rights of man and that we make the State a servant of the people. That is just the opposite of the Russian Soviet Communistic system where man is nothing and the state is everything, the sole possessor of liberty and freedom.

Tell your people the United States of America is a republic. That the same legal rules which enable us to continue as a re-

public also enable our businesses to continue with constant change and modification. Would you tell them that America has achieved the highest living standard—the greatest tolerance, the truest charity—all because of giving liberty and freedom to all people, and that we in America regard the police state as a horror, as a crime against the body and soul of man.

Tell your people that we resent the charges that we are a warmongering people. It is not only unkind and uncalled for—but a malicious statement.

Mr. Vishinsky, if you were a citizen of the United States of America and returned from visiting Russia, you could state publicly what you discovered. You could say it in print, by radio—even in moving pictures. You would have that right as an American citizen. You are one of the big men of the U. S. S. R. Can you go home and tell the truth?

As an American citizen of the United States of America I have freedom to make this statement in public print as often as I please. Recently, I was invited to make a radio broadcast. I will be glad to send it to you. It is something about our country and the freedom of every individual in it. Would you like to read it? I can send it through the United States mail. Any citizen can have it.

That is freedom, Mr. Vishinsky. That is the byproduct—just one of the byproducts—of the most priceless secret that you could carry back to Russia. The secret is the system by which the United States of America has made progress. A system of liberty and freedom for the individual. If you would see your own country move fast into a great, productive nation of happy people, set your people free. Take capitalism out of the hands of your government and put it in the hands of your people—where it belongs. Capitalism then ceases to be what you have called it, and becomes the secret by which common wealth is created for all the people.

Not a single word of this message has a double meaning. We owe a debt of gratitude to those who established our way of life and only by observing and spreading the dignity of man—the rights of freedom—can we pay that debt.

You can answer this message, Mr. Vishinsky, in this same newspaper. You have unlimited funds at your command. Why, you are the agent of the greatest capitalistic power on earth. I am just an American citizen, one of the millions you have referred to as capitalists.

We in America believe in the spiritual as well as the material side of life. They must go hand-in-hand. No country, no government, can abolish nature, the handmaiden of God. Nor can they control the flood and ebb tides, the changes of seasons, nor did any country or government place in the earth minerals, oils, fish in the waters, fowl in the air. No scientist can make the seed which creates the harvest to feed the people. Only God can do that. Nature insists that man be free in order that he may reach his highest possible position and be of service to his fellow man, not to any state.

When you return to your country, Mr. Vishinsky, why don't you tell your people about our way of life in America? "When peace shall once more be acclaimed, the work of the world will have begun."

E. F. HUTTON.

WESTBURY, LONG ISLAND.

Any individual or group may reprint this message. People in other cities are now doing this. Liberty is not private property. It is a public asset. It is the property of all. Treat it as such—wisely, well, and immediately.

Limited Service Corps

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. FOOTE. Mr. Speaker, I have today introduced a measure to authorize the establishment of a Limited Service Corps in the United States Army, trained and capable of performing thousands of noncombat jobs. I believe such a bill will not only bolster Army strength but will enable limited-service veterans to take up jobs for which they are already trained. This measure will also do away with the stated Army policy of hiring civilians to do noncombat work and will automatically, therefore, save the Government millions of dollars annually. Time would not have to be taken to train these veterans for they already know the work to which they might be assigned. I feel that such an authorization will enable the more physically fit and younger men to continue combat training. This is a practical point for it will do away with having combat-qualified soldiers drive staff cars and sit behind desks or count quartermaster supplies. The Army needs young, alert men for field training. My program will open the way for others to take their places. I believe there are thousands of ex-servicemen throughout the country who would gladly return to limited-service jobs in the Army if Congress would authorize such a step. The bill I have introduced, I believe, is the answer to one of the most pressing questions with which the Army has to deal at the moment, namely, the dwindling enlistment problem and the problem of who will handle the so-called desk jobs.

The bill, which would establish a Limited Service Corps, reads as follows:

A bill to provide for the establishment of a Limited Service Corps

Be it enacted, etc., That—

(a) The Limited Service Corps shall consist of officers, warrant officers, and enlisted men of all grades, who have been discharged from the Army of the United States or any component thereof, for physical disability received in line of duty, or whose physical disabilities are rated by the Veterans' Administration as service-connected, but who at time of discharge was recommended for limited service, or who has now become able to perform limited service duty as set forth in paragraph b.

(b) The term "limited service" shall mean unfit for combat duty or combat training, but able to perform the daily supply, administrative, inspection, and kindred duties in all permanent posts, camps, stations, or bases.

(c) The duty of the Limited Service Corps is to furnish personnel who will replace, wherever possible, officers, warrant officers, and enlisted personnel in administration, supply, classification, correctional, postal, accounting, transportation, laundry, finance, post exchange, public relations, and personnel work, and to replace all civilians in the post exchanges, Corps of Engineers, Ordnance Department, Signal Corps, Transportation Corps, and Quartermaster Corps, except laborers and technical specialists.

(d) To further enable physically fit personnel to better their training and to enable troop movements on the shortest possible notice, all posts, camps, stations, and bases will establish a permanent post, camp, station, or base section of Limited Service personnel to handle all post, camp, station, or base, administration, supply, transportation, classification, postal, laundry, finance, post exchange, public relations, personnel, and all kindred work, as well as any other kinds of duties the commanding officer shall set forth.

(e) As all types of duty now performed by the members of the Women's Army Corps can be performed by Limited Service personnel, and believing that the proper place for women is in hospitals or the Medical Corps, it is hereby ordered that 90 days after passage of this act, that all members of the Women's Army Corps, be transferred to the Medical Corps for duty in hospitals and administrative work, until such time as their enlistments run out; further, that from passage of this act, no women be enlisted in the Women's Army Corps, and that the Women's Army Corps be abolished as soon as the transfer of personnel be accomplished, and that enlistments of women be accepted only in the Women's Medical Specialist Corps or a subdivision thereof, hereafter established by law or the Secretary of National Defense.

(f) This act shall be in effect at passage, and the Secretary of National Defense shall be responsible that the Limited Service Corps is established and begins functioning within 60 days from date of passage.

(g) Any laws which are inconsistent or in conflict with this act are hereby repealed or abolished as far as they affect this act, or any part theroef.

SEC. 2. (a) All commissioned and warrant officers discharged for physical disability from the Army of the United States or any component thereof, and recommended for limited service at time of discharge, or who are now fit for limited service are eligible for commission in the Limited Service Corps, and any officer who has drawn longevity pay for 6 years service or over shall be commissioned if his past and expected service before his sixtieth birthday shall equal 10 or more years, regardless of his present age.

(b) Any physically discharged officer who has at his own expense gone to an Army screening center and has been processed in accordance with War Department Circular 289 of September 24, 1946, Public Law 670, Seventy-ninth Congress, and has passed the general survey test and completed his screening, shall not be required to submit to any further tests or examinations, and shall be commissioned in the grade he was eligible for at time of screening, disregarding paragraph 1 (b) and paragraph 2 (b and c) of War Department Circular 289 of September 24, 1946, or any other law or regulation regarding age or rank, and shall be commissioned, based on age, experience and length of service as shown on his pay card for longevity pay.

(c) If in the opinion of the Surgeon General, limited service would be harmful to the general health of the applicant, the Surgeon General will request a new physical examination of the applicant, to be given at the nearest Army post, camp, station or base to applicant's present address, and if this physical examination shows that limited service would be harmful to the applicant, the Surgeon General shall so inform the applicant, fully setting forth his reasons for his decision and the applicant shall be placed on permanent disability by the Veterans' Administration, subject to increase if the veteran becomes further disabled.

(d) Any former officer of the Army of the United States not willing to be commissioned for limited service in the Regular Army, who so desires, shall be commissioned for limited service in the Officers' Reserve Corps, in his discharged grade, or if he has completed 2 years' service from appointment to discharge and has drawn longevity pay for over 6 years' service, he shall be commissioned in the next higher grade.

(e) This abolishes any laws which are inconsistent or in conflict with this act insofar as they relate to the appointment or commissioning of physically discharged officers of the Army of the United States, for duty in the Limited Service Corps.

(f) After appointment as a commissioned officer in the Limited Service Corps, all officers shall be subject to the Officer Personnel Act of 1947 and shall be carried on a limited-service promotion list.

(g) The Secretary of National Defense shall establish regulations under which physically discharged personnel may enlist in the Limited Service Corps, for duty under limited-service officers as set forth in section 1 (b).

(h) Wherever possible, enlistment of physically discharged veterans shall be in the same grade as held at time of discharge.

(i) The provisions of (c) above shall apply to all enlisted men as well as officers.

(j) The Secretary of National Defense is authorized to accept physically disabled recruits for duty in the Limited Service Corps, when the number of veterans applying does not fill the corps to the necessary strength of personnel to carry out the intents of this act.

Home-Buying Veterans Charge Lax Appraisals

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. DAVIS of Georgia. Mr. Speaker, on last Tuesday night the Georgia Department of AMVETS held a meeting in the Fulton County courthouse, in Atlanta, in behalf of veterans' housing.

The AMVETS, under leadership of State Commander Crespi, and Housing Chairman Bowden, are making vigorous efforts to relieve the critical housing situation.

I insert herewith a newspaper report of action taken at this meeting which appeared in the Atlanta Constitution under date of December 3, 1947:

HOME-BUYING VETERANS CHARGE LAX APPRAISALS

Veterans, desperate for any kind of shelter, Tuesday night painted a not-too-pretty picture of the Atlanta housing situation in terms of buckling walls, falling plaster, and roofs that leak.

The evidence was presented at an open meeting sponsored by the Georgia Department of AMVETS at the Fulton County Courthouse for the purpose of spotlighting what the organization termed underhanded methods used to gouge the home-seeking veteran.

Appraisers for the Veterans' Administration were accused by Bill Bowden, AMVET housing committee chairman, of the "worst kind of negligence and inefficiency" in protecting the veteran.

One veteran who bought a house in the Georgian Hills development cited how a VA appraiser had approved a loan in excess of $6,000 for a 4-room house.

Edward Judge, an official of Georgian Hills development, said houses at Georgian Hills had cost about $690 when bought from the Navy in Virginia before being transported to Atlanta.

VETERAN'S COMPLAINT

The veteran told how the wallboard had begun to show cracks, how the floor was so thin his toy terrier shook it when walking over it, and how the caulking had begun falling out of cracks in less than the year he had occupied it.

"An engineer told me that if I turned off the heat and went away for a couple of weeks, the cracks would close up," the veteran said, bringing laughter from an audience of about 50 veterans and their wives present with various officials of building associations and veterans' groups.

Judge defended the Georgian Hills development, saying his firm had repaired much of the damage occurring after erection of the homes and asserting it never had misrepresented facts about the homes.

ANOTHER VET'S STORY

Another veteran, claiming to represent a group of 15 other ex-GI's, cited cases where homes costing $10,000 had begun to fall apart. Roofs leaked, boilers were set in mud holes and had rusted through, kitchen fixtures were coming off the walls, plaster was crumbling and no responsible real estate man in the city would handle the houses for resale, he said.

Once again, the VA appraiser was accused of not having protected the GI from such a bargain.

Judge James R. Parham, a witness to proceedings, suggested such appraisers should be impeached and put in the Federal Penitentiary for breaking their oaths of office. His recommendation brought a loud round of applause.

Bowden, the Housing Committee Chairman, suggested a five-point program: (1) Investigate VA appraisers; (2) place building contractors under surety bonds before building; (3) ask Congress to provide direct loans to veterans at the same rates money is being loaned to countries overseas; (4) encourage private enterprise to build low cost rental housing, and (5) amend Federal Housing Administration regulations on rental housing requirements.

Our Merchant Fleet

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. WEICHEL. Mr. Speaker, as chairman of the House Committee on Merchant Marine and Fisheries, I believe that there exists no doubt in the Congress that the American merchant marine should be the best in the world, and to be effective it must be active and a going concern. In maintaining such an American-flag fleet, I want to include a viewpoint as expressed by the National Federation of Shipping:

The federation has examined the shipping sections of the report by the President's committee on foreign aid (the Harriman committee of 19). The report shows that a thorough and careful examination has been made by this committee of the proposals contained in the Paris report of the Marshall plan nations, and in subsequent discussions with representatives of these participating nations at the Government level as referred to in the Harriman report.

The federation finds agreement with many of the conclusions of the Harriman committee, whose report confirms the federation findings that savings in dollar freight costs which could be effected by the sale or other disposal of American war-built tonnage to the participating nations are but a small fraction of the total of such costs. The Harriman committee has shown that the $1,214,000,000 freight costs attributed to shipping under the 16-nation proposal should really be reduced to the neighborhood of $300,000,000, as recently projected by the federation. This latter figure is only about 2 percent of the estimated aggregate costs of the Marshall plan. The Harriman report reaches the conclusion that the limited financial savings are not sufficient to justify the drain on United States resources for national defense which such transfers would involve.

Such savings are also not sufficient to justify the long-range damage which would be done to the American merchant marine in the future by transferring a substantial number of war-built vessels to nations whose fleets already exceed their 1938 capacities in vessels of this character, and whose competition would have to be met in the postwar manned with low-wage foreign crews. When it is proposed that funds are to be supplied from the United States to buy these ships from us, the resemblance to a gift is brought into bold relief, and the question of capital costs in a competitive situation is obvious.

The Harriman report recommends the sale of further war-built vessels to the participating nations contingent upon a commensurate reduction in European shipbuilding. It must be realized, however, that:

(a) Before the war 75 percent of the shipbuilding facilities of the world were located in these 16 nations;

(b) Shipbuilding is one of their primary industries, recovery of which is a substantial factor in the Marshall plan;

(c) Whatever contingencies are now arranged, it is not reasonable to expect these nations to cease building in the immediate future or for any protracted time dry-cargo vessels to meet their requirements;

(d) Their present fleets of such vessels of 5,000 gross tons and over (suitable for international trading) are now 1,400,000 tons in excess of their capacities in 1938; and

(e) Their shortage really exists in the smaller vessels required for coastal and nearby European trades which are not available in American war-built ships and must of necessity be constructed of special design to meet particular trade requirements, including shallow-draft vessels for small harbors, etc.

Even as to the large dry-cargo vessels which are included in the current European shipbuilding program, it appears that the vast majority of these are Diesel-propelled, obviously for particular trading conditions, and are not available in the American surplus fleet. This is stated in the Harriman report as the contention of the representatives of these participating nations.

We feel that the Harriman report reference to the European passenger-ship construction program may be misleading to the general public. It states that only one strictly passenger-type ship of more than 20,000 gross tons is now under construction; namely, the Cunard's *Caronia*. It goes on to say that there are other so-called combination vessels with passenger capacities varying from 250 to as high as 1,800 passengers. This

turns on a matter of definition. The report states that the latter such vessels in the American fleet would be classified as among our best luxury liners. Princess Elizabeth christened the *Caronia*, but Princess Margaret Rose also christened the *Edinburgh Castle*, a vessel of over 28,000 tons which is building for the Union Castle Line, as is also the sister ship *Pretoria Castle*. These will give the Union Castle the second largest passenger fleet in the world—the Cunard White Star being first. Even with these we must not overlook two other new Cunard liners, the *Mauretania* and *Parthia*, which have gone into service recently, and the Rotterdam Lloyd Line's *Willem Ruys*, of 21,500 tons, with accommodations for 842 passengers. Meanwhile the United States fleet is sadly deficient. No comparable vessels are building in American shipyards. It is not the shortage of strategic materials, as stated in the Harriman report, which causes this condition, but rather economic circumstances under which United States shipowners have so far found it impossible to contract for the building of similar passenger vessels for United States flag operation. Meanwhile we are endeavoring to restore economic conditions in Europe.

The federation agrees with the Harriman report:

"The United States needs an active merchant marine for national defense, and we must not create conditions in which that merchant marine cannot survive."

And we might add—we need American ships to carry a substantial part of our own commerce, to maintain transportation facilities to important world areas, and as a leader among the United Nations we must keep a reasonably strong position upon the seas.

Patents and Progress

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. WILEY. Mr. President, on Friday, December 5, it was my pleasure to address the patent and research section of the congress of industry held by the National Association of Manufacturers. I ask unanimous consent that the text of my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PATENTS AND PROGRESS

THE CONTEMPLATED PROGRAM FOR PATENT LEGISLATION IN 1948

Mr. Toastmaster, distinguished guests, my friends, I am happy to address this distinguished group of manufacturers, industrialists, research experts, technicians, engineers, lawyers, and patent specialists.

I consider it a real honor to appear before a group of men who have achieved distinction and prominence in so many specialized lines of endeavor.

It is a privilege to address you because you as individuals, with varying specialized interests, have demonstrated the ability to work together as a team in furtherance of a mutual interest and a mutual cause.

That in itself could well supply the theme of our discussion today. Probably the greatest single need in the world today is the imperative need for the people of many lands with many interests to band together in the common interest and the common ideal of world peace.

That is a need shared by all men. It is a need shared by all nations.

Within each land and within each nation there are also many conflicting needs and conflicting interests which must be bonded together in a common objective.

NEED FOR WORK AND PRODUCTION

In the United States we have a great common need for work and production. We have a great common need for builders. We are engaged in a mutual crusade to build homes and industries and jobs. We are engaged in a great crusade to stave off a disastrous inflation. We are engaged in building a nation so strong that it may serve as a potent force for world peace and for the peace of our land. This is one of the great trial periods of American democracy.

We have individual interests in patents but we also have a mutual interest which transcends our own particular interests.

Patents are the recognition in the public interest of a property right in a technological creation. Patents might almost be considered as contracts between the inventors and the American public. In my judgment, the paramount interest is the public interest.

In our brief discussion today I would like to stress the element of public interest as it has been involved in the engrossing story of patents as an economic and social force in the development and progress of our land. It will also be my purpose to discuss briefly the patent legislation of the first session of the Eightieth Congress and the avenues of exploration for possible patent legislation in the second session of the Eightieth Congress.

ORIGIN OF PATENT GRANT

Over a century and a half ago the founding fathers wrote in article I, section 8, of the Constitution that—

"Congress shall have the power to pass laws to promote the progress of science and the useful arts by securing for a limited time to the authors and inventors the exclusive rights to their respective discoveries."

We have come a long way as a people and as a Nation in the century and a half since George Washington gave his approval to the first Patent Act on April 10, 1790.

INVENTIONS AND PATENTS BROUGHT HIGHER LIVING STANDARD

We have grown from a population of less than 4,000,000 to over 144,000,000. Throughout that span of one century and a half our land has been richly blessed by inventions which have contributed much to make ours the highest standard of living the world has ever known.

Agriculture, industry, and plain, ordinary, day-to-day living have been simplified and enlarged as a result of American ingenuity and American inventive genius utilized for the public welfare.

Throughout the years our patent laws, as you know, have in part been changed and improved. They were radically changed in 1836, and in 1870 they were extensively recodified. Numerous amending acts have been enacted since that date. As we know also, there are innumerable proposals for further changes at the present time.

Patent law is an involved and specialized field, and I do not feel competent to express any hard and fast conclusion on future patent legislation.

At the outset, however, it is probably desirable that we recognize that in its basic purpose and its fundamentals, our patent system appears to have proven its worth in accelerating the American march of progress.

We are all familiar with the fact that about 6 years ago, a committee of Congress was charging that patents had become a "device to control whole industries, to suppress competition, to restrict output, to enhance prices, to suppress invention, and to discourage inventiveness."

Since that time, the studies and reports which were made have apparently vindicated the validity of the basic concept of the patent system itself.

The charges against the patent system have, however, had a very constructive result.

PATENTS AN INTEGRAL PART OF NATIONAL ECONOMY

The charges about international patent cartels, the charges of patent suppression, and other abuses, the charges of technological unemployment resulting from patents, and even charges that patents were used treasonably, all of these charges brought home to the national consciousness the fact that patents were an integral part of our national economy and were an integral part of our national social engineering.

TYPICAL STORIES OF PATENT DISCOVERIES

Of course, we have always been aware of this fact to some extent. Back in my State of Wisconsin, an 18-year-old farm boy, tired from the back-bending labor of binding grain in a 250-acre harvest field in southern Minnesota, whittled a bird-bill knotter of apple-tree wood, and 19 years afterward that contraption was wrought into steel and installed on a remodeled reaping machine where it automatically bound sheaves.

That original device is almost identical in design with the one used at the present time on millions of grain binders all over the world. That farm boy was John F. Appleby and he developed the first twine-binding harvester ever sold. He gave William Deering, the farm-machinery manufacturer, the right to use his patents and Deering sold 3,000 twine harvesters in a single year. Eventually, Appleby and his partners sold his company with its patents to the Milwaukee Harvester Co., which, in turn, became the foundation of the International Harvester Co.

The point of all this is, that a single invention made possible the growing and cutting of vast grain acreages. That single invention, in part at least, partially banished the threat of starvation because of the scarcity of flour.

Today, when you and I and all of the world are concerned with the menacing spectre of famine which hovers over a substantial portion of the civilized world—today we can be grateful to that 18-year-old farm boy in southern Wisconsin because his labor-saving device became an agency of incalculable value for increasing the Nation's food supply.

Another Wisconsinite, a Milwaukee man named C. Latham Sholes, early in 1867, with the help of a skilled Milwaukee German clockmaker, made a single invention which, in many respects, made modern business possible. It opened the door of opportunity for women to participate in the economic life of the Nation. It emancipated millions of women who might otherwise have been dependents.

If that single invention were to be withdrawn from civilization, the withdrawal would result in chaos for business and industry throughout the entire civilized world. Latham Sholes, tall, frail, Wisconsin citizen, invented the typewriter, and in so doing, changed the social and economic history of America and of the world.

In a little more than the span of a single century—American ingenuity and inventiveness and American industry have emerged from a wilderness as the greatest productive force ever known to mankind.

QUOTES FOR HUMOR BOOK

To be sure, now and then, a little bit of humor enters into patent discussion. For example, as I relate in my book, "Laughing With (not at) Congress," which was

recently released by Crown Publishers here in New York, a patent-minded constituent wrote one Congressman for a list of all the things that had never been invented! If I may be permitted a further brief aside while I am on the subject of humor, let me say this: all of us, I believe, businessmen and Congressmen and others, during these tense and critical times amidst all the trying pressures of the day, need a laugh or two "to help roll the clouds away"—to help make us more adequate to our grim problems, which is the reason I wrote this book on the human side of Congress. As just a final word on this light matter, I might refer to the legendary constituent who wrote another Congressman for a copy of the Declaration of Independence "with all the latest amendments added to it!"

PATENTS A STOREHOUSE OF KNOWLEDGE AND A FORCE FOR PROGRESS

To return to the more serious side of things, it is very obvious that the patent system of a nation can either become a tremendous driving force which jet-propels American initiative and ingenuity into actuality, greater accomplishment, and growth, or it can become a death trap for the hopes and dreams of inventors to such an extent that inventors will keep their ideas to themselves and build their own secret monopolies so that the widespread benefits of their ideas would be lost to society.

Abraham Lincoln said: "The patent system added the fuel of interest to the fire of genius."

There have been about two and one-half million patents granted by the Patent Office in Washington. Over 20,000 patents are now issued every year. They are classified in the Patent Office in some 300 classes with innumerable subclassifications.

Here is a tremendous, unbelievable storehouse of technical knowledge and ideas.

It has been charged that there have been no major changes in the patent system since 1836. This, of course, is not completely accurate, because there have been changes. Some of the changes have been by law and some of the changes have been by judicial decision.

The Federal courts have constantly raised higher standards for patentable inventions. As a result, there have been an appallingly high number of patents invalidated by the courts.

UNIFORM STANDARD OF INVENTION SHOULD BE EXPLORED

1. That brings us to one of the basic factors which must be considered in any possible patent legislation; namely, the feasibility of a uniform objective standard of invention which will be followed by both the Patent Office and the courts.

The Supreme Court has used language which was at that time generally construed to mean that a patent, if it was to be valid, should involve a flash of genius.

Thurman Arnold, acting as a judge of the court of appeals in the District of Columbia, added still another factor when he said:

"Patents are not intended as a reward for a highly-skilled scientist who completes the final step in a technique, standing on the shoulders of others who have gone before him. By the same token they are not intended as a reward for the collective achievement of a corporation research organization."

It is evident that the courts during the past decade or two have set higher and higher standards for invention.

Now the question is: How many companies will spend money in costly research if the results of their work may be copied freely and immediately by competitors?

The problem here is perhaps to balance the short-term view of private patent rights with the long-term view of patent rights and benefits to the public. Future patent legislation must explore the possibility of the uniform "results obtained" standard for invention which has been proposed for both the courts and the Patent Office.

The need for a uniform objective standard of invention seems to be apparent.

Such a standard could prevent the issuance of countless worthless grants. It could insure a continuance of the incentives offered by the patent system because it could give reasonable assurance that the inventor has received a legally enforceable right.

The prima facie presumption of validity on its issuance has carried very little weight in the courts and should be strengthened.

DESIRABILITY OF FILING LICENSE AGREEMENTS SHOULD BE STUDIED

2. There appears to be a necessity for legislation to provide for the filing with the Government of all license agreements in the protection of the public interest. Probably these agreements ought to be recorded in the Patent Office where the general public might inspect them.

We know that there is evidence of industrial control and stabilization through license agreements which can be regarded as restrictive.

It is reasonable to assume that filing with the Government of all patent license agreements could bring abuses to light for proper legal treatment and give the public assurance that its interests are not being ravaged. At the same time, it would give the Government authorities notice of any improper use of license restrictions.

It is difficult to believe that it is desirable to eliminate all license restrictions in production, price, use, or geographic area.

We know that there are economically sound restrictions. We know also that there are antisocial restrictions. We know that there are trade restrictions, which encourage inventions and we know that there are trade restrictions which injure the pubic interest.

Even the courts have recognized this distinction. In the courts, there has been enunciated the principle that conspiracies and combinations which establish price structures under the guise of patent license are illegal. The courts have also recognized the common sense of permitting limited waivers of the patent monopoly to encourage the entry of others into the productive market. Incidentally, the Supreme Court's recent decisions make it quite clear that the latter rule is intended to protect only the proper utilization of restrictive covenants in license agreements.

It appears desirable, accordingly, to consider legislation requiring the filing with the Government of all patent-license agreements.

ELIMINATE UNDESIRABLE NONSTATUTORY LAW

3. Over the years, more than a century of court and Patent Office decisions and rulings and practice have built up a substantial network of nonstatutory law. Some of that nonstatutory law has undoubtedly provided a happy hunting ground for some of the ingenious practitioners who may have been looking for devices to further their own interests. Consequently, it is probably desirable that a complete survey of this nonstatutory law be made and that appropriate legislation be drafted to enact into law desirable portions of these nonstatutory decisions and to sweep away permanently the undesirable portions.

STUDY OF 20-YEAR LIMITATION DESIRABLE

4. In considering possible patent legislation for the second session of the Eightieth Congress, we must also consider a proposal which has been made a number of times—the proposal to establish a 20-year limitation from the filing date.

We are all familiar with the practice of prolonging the statutory monopoly. We are all familiar with the devious methods by which the 17-year life for the patent grant has been virtually extended over periods of unwarranted length since the inventor during the pendency of his application had the common-law right to market the products embodying his invention. We are also familiar with the fact that even though this pending application had no legal efficacy, it served as an effective barrier to anyone who contemplated investment in a competing enterprise.

In the judgment of many observers, the Congress should consider legislation to limit the over-all span of the statutory monopoly for patents to 20 years after the application has been filed, regardless of how long the patent has been waylaid in the Patent Office.

LEGISLATURE SHOULD DETERMINE PENALTIES

5. The Supreme Court has ruled that a patentee must grant licenses to all applicants, as a penalty for violating the antitrust laws.

I am not endeavoring to argue the merits or demerits of such a penalty, but again I believe that this should be the subject for legislative study and should perhaps be established either as a penalty by statutory law or not established.

SIMPLIFICATION APPELLATE PROCEDURE NEEDED

6. Probably there should be a simplification of appellate procedure. That may involve having all appeals from a Patent Office decision go to a single court.

TECHNICAL ASSISTANCE REQUIRED BY COURTS

7. Study must be given to the possibility of supplying unbiased technical assistance to the courts in connection with highly involved technical patent cases—particularly those involving engineering or chemistry.

The courts need authoritative assistance in these technical matters. It is absurd to expect even the best Federal jurist to be completely adequate to a complicated technical patent case involving chemistry, for example. I am not certain what the answer is, but it is possible that there may be some merit in the suggestion that roving technical experts be supplied to the Federal courts.

PATENT OFFICE PROCEDURES NEED REVISION

8. The Patent Office itself needs revision, and I believe that all of the Patent Office Commissioners in recent years have recognized this basic need. I don't know whether it is necessary to legislate on this point, but undoubtedly the Patent Office must accelerate its consideration of patents. There appears to be a need for additional qualified assistants in the Patent Office to the end that patents will be issued only for things that are in fact new inventions.

It has been charged that patents frequently do not conform to the law and that they fail to clearly point out and to distinctly claim the precise improvement of the invention. It has been said also that mistakes are frequently made where the multiplicity of claims contributes to obscurity. That, of course, presents a challenge to both the Patent Office and to the patent lawyer. We must be certain that the personnel for the examining of patent applications is of the highest quality.

We must be certain that the patent conforms to the law and distinctly claims the precise improvement invented. We must be certain that the shotgun multiplicity of claims is eliminated as far as possible.

TECHNICAL PATENT LEGISLATION TO BE CONSIDERED

9. In the next session of the Eightieth Congress our committee will endeavor to consider S. 1340, introduced by Senator GURNEY, to permit the United States to defend patent-infringement suits by using certain written

disclosures in the files of the War and Navy Departments and other defense agencies, etc., not obtained directly or indirectly from the patentee.

One of the House bills which was considered by the Senate in the first session of the Eightieth Congress was H. R. 3958 (Public Law 220), which extended through December 1, 1947, the priority rights and the time for filing applications for patents and for payment of fees, etc., under Public Law 690 of the Seventy-ninth Congress.

As we all know, during the war American inventors who filed applications for patents in this country found it impossible to file corresponding applications in foreign countries within the prescribed periods. This was, of course, the result of conditions over which the inventors had no control. The same thing is equally true with reference to foreigners who apply for patents in the United States.

In order to enable American citizens to secure the benefit of laws extending various periods which have been or may be established by foreign countries, and accordingly preserve the patent rights in this country, it was considered necessary for this country to enact reciprocal legislation creating corresponding extensions to the citizens of foreign countries.

10. Another bill which probably will be considered will be S. 1726, which is a patent national security bill sponsored by the Navy. Its purpose is to prevent in time of peace, as well as in time of war, the publication or disclosure of patents or inventions which are vital to the United States from the standpoint of national security. This bill would make permanent the temporary inhibitory law now in force.

11. In the second session of the Eightieth Congress, the House will undoubtedly consider—and probably the Senate will also—bills which will extend patents (general) for hardship grounds generally based on the war.

House hearings have already been held on this question and no recommendation, as yet, has been made to the House itself, though I understand that the subcommittee has decided to limit the benefits of such an extension of patents to servicemen. Similar legislation was passed after the last war. My own offhand reaction is that we must also consider the possibility of enlarging this possible relief so that it would not be confined to servicemen, but to industries which were denied the use of the patent for the war period due to circumstances over which they had, of course, no control whatever.

12. The House will also consider legislation, which is currently pending, to increase patent fees, to provide protection for the designs of textile fabrics, to provide for maintenance fees, to regulate the United States Court of Claims' and the United States district courts' suits for infringement by or for the Government.

The House will consider bills relating specifically to servicemen, who, during the war, created inventions which, because of their service status, became the property of the United States, so that, consequently, they never were the subject of an assignment of the rights to the inventor. The House will also consider a great many statutory amendments.

I might add that in the first session of the Eightieth Congress, I introduced S. 1707, which, along with the companion bill, H. R. 4074, ultimately became Public Law 380 of the Eightieth Congress. This bill carried into effect certain portions of the treaties of peace with Italy, Bulgaria, Hungary, and Rumania. These portions of the treaties related to patents.

Under the law, citizens of countries which were at war with the United States were excluded from the provisions of Public Law 690 of the Seventy-ninth Congress. This law was enacted for the purpose of extending various times for performing certain acts in connection with patent applications. Because of the war period, these rights lapsed. Now the treaties of peace are signed for the above countries and additional statute is required to permit their citizens (and United States citizens under reciprocity) to qualify. In addition to the independent merits of this legislation it was necessary to fulfill the provisions of the treaties.

I might also mention that during the first session of the Eightieth Congress, the committee, of which I am chairman, received private bills for the routine extension of patents beyond the statutory period. The departmental reports on such bills have been negative and the historical precedents are that Congress has uniformly refused to pass such bills. From time to time, Congress has also had various private resolutions which would force the Court of Claims to rehear infringement claims by inventors against the Army or other Government agencies.

OUR TASK IS TO STRENGTHEN PATENT SYSTEM

Basically, our task is to strengthen the patent system and to make it a vigorous, potent force for encouraging progress in the technical sciences.

Basically, it is necessary for us to improve our international standing by utilizing the patent system to encourage disclosure of inventions made in foreign countries and, in so doing, to protect ourselves against ignorance of foreign technology in the event of war.

Under the terms of Public Law 601, Seventy-ninth Congress, patents are now within the jurisidiction of the Judiciary Committees of both Houses.

The Senate Judiciary Committee, of which I am chairman, approaches the entire problem of patent legislation with an open mind. We have no hard and fast preconceived ideas as to precisely what form patent legislation should take. I would not presume to speak for the entire committee, but I do believe that most of the proposals I have outlined here today will be considered by our committee—probably in the second session of the Eightieth Congress. Some of them, particularly those resulting from studies by the various Presidential committees, will have strong support and some of them represent legislation which is already long overdue.

PATENT LEGISLATION A PART OF OVER-ALL PATTERN

In the Judiciary Committee we are, of course, concerned not solely with patent legislation as patent legislation. Our concern is with making patent legislation an integral part of an over-all pattern. We know that law adjusts and limits and defines the various complicating and overlapping demands of different elements of our system and our economy.

We are concerned with the interrelationship of patent rights and public rights, though it is probably true that this interrelationship as it affects a given case, must continue to remain a function of the judicial process rather than the legislative. It is our obligation, however, to establish a legislative framework within which our traditional patent objectives may function to the betterment of the American people—where they may serve to stimulate new ideas, where they may serve as a force for better living, where they may serve to accelerate the progress of a nation of freemen, working together in a common cause.

CONCLUSION

We are living in a world of cataclysmic changes. It is for us—each of us—to be alert and ever on guard to keep intact our system of checks and balances in government, and our American way of life with its great freedoms. This calls for dedication by each of us of "our lives, our fortunes, and our sacred honor" to preserve these values.

We need vision without which the people perish—the vision which gave us our Constitution, our great inventions, our industrial expansion, and our freedoms, political, economic, and spiritual.

Eternal vigilance is not only the price of liberty, but the price of everything else worth while.

Alaska Undefended

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. BARTLETT. Mr. Speaker, under leave granted to extend my remarks, I desire to include the second and third parts of a series of three articles on Alaska, written by Mr. Wilbur Forrest, assistant editor of the New York Herald Tribune:

ANCHORAGE, Alaska.—Here at the headquarters of the Alaska command under Lt. Gen. Nathan D. Twining and the Alaskan Air Command under Maj. Gen. J. H. Atkinson, the statement of former Secretary of War Robert P. Patterson, that the "feeble" condition of American air power involves a grave national security risk in current world conditions must be applied immediately to Alaska.

Mr. Patterson's statement was made before President Truman's Air Policy Commission in Washington. He emphasized that expense should not be the determining factor in building our air strength, the availability of which may prove the difference between peace and war.

The former Secretary's views apply directly to Alaska because insufficient budget allotments, amounting almost to a congressional dole, are hamstringing the defense of this frontier against an invasion of North America.

Alaska may seem remote to most Americans. However, San Francisco, Seattle, and Portland are but brief air jaunts from Anchorage in propeller-driven bombers. What of jet-driven aircraft? What of planes which carry great bomb loads incredible distances?

STRAIT A NO-MAN'S LAND

Since our national policy is defense, not offense, no one in Alaska wants war. The Bering Strait, however, is today a no-man's land and the route across the top of the world is shrouded in mystery.

Russia, the only potential enemy which might attack us successfully, is glowering across the frozen wastes. Less than 3 years ago Russian cooperation for peace was a fair wager. But in the face of overwhelming evidence of Russian hostility, Alaskans believe that a prompt and adequate defense of Alaska is vital and mandatory because Alaska is the outer defense bastion of the United States and Canada.

By failure to appropriate sufficient funds so that our joint command may build facilities for Alaskan defense expeditiously, most people here believe that Congress is again gambling high, wide, and handsome with national security.

Alaska's defense is nine-tenths air, together with the appurtenances and paraphernalia with which to maintain strong in a winter climate capable of dropping to 50 or more degrees below zero. Hangars and nose docks must be built for planes. Housing must be constructed for pilots, crews, and maintenance personnel. Airfields must be policed, repaired, and kept clear of snow.

Many other services are mandatory, including weather observation and air reconnaissance, constant vigilance by radar and radio and alert rescue operations.

An Eskimo quits at 40 below zero and crawls into his igloo. The American air and service personnel in Alaska do not dare relax at 60 or more below.

THREAT NOT A FANTASY

If history repeats itself with several Pearl Harbors or Custer's Last Stands in Alaska because of a swooping paratroop enemy, it will be because Congress and the American taxpayer do not understand that the threat of invasion from over the top of the world is not a fantasy.

Instead of a budget dole from Congress which has virtually left Alaska thus far undefended Alaska needs a drawing account of at least $450,000,000 in the next budget. Only with such an appropriation may construction contracts be let with some guaranty that the work can be completed. As matters stand today only a figurative handful of men can be maintained or trained to fight under Arctic conditions in any 12-month period.

Operations in Alaska at present is the work of the Three-hundred and Seventy-fifth Weather Reconnaissance Squadron and the Seventy-second Squadron, the latter doing amazing things in long-range weather and photographic work. Operating on radio signals, which have superseded an almost impossible celestial navigation when the sun is barely over the horizon, this squadron has surveyed an air route from Fairbanks, Alaska, across Greenland to Iceland, and photographed all the islands of the Canadian Archipelago both by radioscope and visual photography.

These surveys have picked up much data of basic scientific interest. The fact that there are three magnetic poles, neighbors of the northernmost one in Bathurstland, has already been reported. There is scientific reason to believe that we may be on the verge of information beyond the reach of previous earthbound expeditions and that a scientific survey of the facts by an agency independent of the United States Air Force becomes important.

In any event, it is definitely true that the real North Pole is open water in summer, and that melting ice during summer months drifts northward instead of southward as previously believed. If such is true, then Richard Byrd, who flew over the pole in May 1926 in the airplane *Josephine Ford*, dropped an American flag on melting ice, but not on land as some supposed.

WEATHER SQUADRON MISSION

The primary mission of our Arctic weather squadrons is to proceed on routine, nonstop flights from Ladd Field (Fairbanks) to Point Barrow on the Arctic Ocean, to the North Pole and the area northeast of the Canadian archipelago and return to Ladd Field; from Fairfield, Calif. (near San Francisco), over a route in the Pacific Ocean and to Alaska and Ladd Field. These flights require as much as 18 hours in the air and the men making them are pioneers of science.

Ladd Field, which is the central point of weather observations and geographic surveys, was instituted in 1940. Its original complement of service troops was 500 men. It now houses 4,300 personnel in flimsy structures which must be replaced with permanent construction if men raised in milder climes are to live and work consistently in the sub-zero winter of the Alaskan interior. Ladd's runways are adequate for the B-29 bomber which devastated Japan, and a satellite field with longer runways is now building. It will be capable of serving the newer and larger B-36 bomber.

To house this craft the Alaskan Command is now building great nose docks which are well heated and will cover the wings and engines of these huge flying crafts. Mechanics find it impossible to work on airplane engines in temperatures as low as 55 degrees below zero.

Some 90 miles east of Fairbanks is a region called Big Delta, where other bomber and fighter squadrons may eventually be accommodated. Big Delta is at present the scene of Exercise Yukon. This exercise is being carried out by a company of 250 men of the Twenty-third Infantry Regiment of the famous Second Division quartered at Fort Lewis, Wash. (In World War I, the Second fought at Belleau Wood and was composed of the Ninth and Twenty-third Infantry Regiments and the Fifth and Sixth Marines. In World War II it fought in France and Germany minus the Marines.)

Maj. Gen. Paul W. Kendall, who believes that the infantry is still the queen of the battle, and his men came to Alaska in some 30 "flying boxcars," a 2-motored troop carrier designated in Army lingo as C–82's.

The assignment of Exercise Yukon is to test equipment under Arctic conditions and maneuver for the purpose of holding, reinforcing, or retaking airfields. The Fort Lewis soldiers did their pre-Alaska training on the slopes of Mount Rainier.

Actually Ladd Field (Fairbanks) and neighboring air stations were built to assist our Russian allies in ferrying lend-lease planes to Siberia and on into Russia. The Russians did not permit Americans to ferry these planes to Russian territory. So it is obvious today why the Russians know our Alaskan installations well, and we know less about theirs across the Bering Strait.

The Russians are reckless flyers and are particularly unimpressed with safety precautions. The story is told of a Russian flyer coming into Ladd Field one murky afternoon during the war with smoke issuing densely from his tail section. Investigation proved that he had a wood stove installed in the plane for warmth and a good supply of wood to stoke it.

Some of General Kendall's troubles at Great Delta this winter have involved the incursion of buffalo and black bears into his training quarters. Both are pestiferous, but the buffalo are of especial interest since there are thousands of them in the district. They thrive on the Arctic herbage even in winter and are increasing rapidly in numbers.

ANCHORAGE, ALASKA.—If the American Congress decides upon funds in the forthcoming budget to finance military construction necessary to a real and expeditious defense of Alaska, then Alaskan statehood falls directly in line, according to students of the situation here.

Under moss-grown rules of the Department of the Interior, Alaska's two principal industries, salmon fishing and gold dredging, have languished for many years. If the American taxpayer is willing now to make the investment in Alaska's defense and United States security, then Alaska's immediate industry will become a construction industry bringing tens of thousands of civilians here to work at wage scales which at present give the poorest Eskimo $1.25 an hour. With statehood Alaska will grow, and a wedge of the earned dollar will go for taxes which will build the country for the future.

It is perhaps safe to say that 99 out of 100 Alaskans desire statehood. One is told everywhere here that statehood is opposed only by the vested interests, and notably interests which take their earnings out of Alaska. Fearing taxation, they desire the status quo. They are said to dominate the territorial legislature, which, in turn, withholds funds for local improvement, the erection of schools, and municipal facilities for communal growth.

Alaskans are confused not only about the future of Alaska and statehood but as to the dilly-dallying of our Federal authorities in Washington in setting up a real defense of Alaska, which everyone knows means the defense of the United States. Alaska dominates the Great Circle route from North America to Asia and the air routes connecting these continents. The guided missile form of warfare, if it comes, will follow the Great Circle route.

A LOGISTICS PROBLEM

Robert B. Atwood, editor and publisher of the Anchorage Times, a splendid newspaper circulating over most of Alaska, is a foremost proponent of statehood. Mr. Atwood sums up the situation perhaps more calmly than does Bob Reeve, the famous Alaskan bush flyer who knows how to cuss.

"There are some basic circumstances in the national and international picture which seem to be indisputable," said Mr. Atwood in a recent editorial. "Put together in sequence, they seem to form a picture that reflects the prevailing thoughts among men in high places."

Mr. Atwood lists four premises on which he bases his line of thought. First, there are only two nations presently in a position to stage a war. Second, the chief weapon in any immediate war would be the long-range bomber and, in a not too distant war, the guided missile. Thirdly, World War III, if it comes, will burst forth suddenly not from us but from none other than Russia over the shortest and most direct route from Russia to the United States, over Alaska, and will be directed at some great city or cities such as Chicago, New York, Detroit, San Francisco or Seattle.

Mr. Atwood thinks that Alaska would be about the safest place in the world at first with these first attacks going overhead. But he adds that the best and easiest place to stop these missiles is in Alaska and a billion dollars would be a small investment should it be effective in stopping them. This editor believes that statehood will afford the proper jurisdiction to take advantage of an era of military construction devoted to stopping an over-Alaska invasion and that State and military could coordinate their efforts for Alaska's future.

A LOGISTICS PROBLEM

Among our military authorities in Alaska there is the belief that a serious logistics problem weighs before we will be capable of an adequate defense of Alaska. Roads and railroads must be built and pipe lines laid. Housing is another problem due to the short building season, the dearth of labor, and the high costs.

There is no unity of thought that an enemy from over the top of the world would be content to overpass Alaska. Many would rather prepare to defend physically the airfields and installations which could be of incalculable value to an enemy intent on invasion of the continent.

Many Alaskans believe that the American Congress will not fail in the nearest future to create a new defense construction industry in Alaska and that local governments and citizens may plan for the future. Says Mr. Atwood:

"This is common sense, not war talk. The Nation must provide insurance against unexpected contingencies even though the United Nations may be successful in avoiding another war. The program in Alaska is nothing but insurance for the Nation—like fire insurance on a house which nobody expects to burn."

Bob Reeve, the veteran bush pilot, as well known perhaps as anybody in Alaska, indulges in no polite language on the issue of statehood.

"The people of Alaska want state government and they have a right to work out their own problems," says Mr. Reeve. "The people who oppose it are simply afraid to pay taxes which they have always avoided. We know what statehood means. It means heavy taxes for everybody and some hellish hard sledding for the first few years. We will be glad to take it the hard way and we've got the guts to do it."

HEADS THRIVING AIR LINE

Bob Reeve is today the head of a thriving air line which flies two DC-3's, the standard two-motor type of the American Airways. In addition, he has several smaller planes which he has landed on glaciers, the gravel bars of rivers, and various other unorthodox localities.

Being in the airplane business, Mr. Reeve does not like to contemplate an Alaska of broad highways and railroads. He avers, however, that Alaska's future is not salmon canning, or gold mining, or the boom of military construction. There are many who agree with him that Alaska's future is the tourist business because it is one of the most picturesque spots on the entire earth.

The vast mountains, among them Mount Elias and Mount McKinley, rise in the neighborhood of 18,000 and 20,000 feet. There are smoking volcanoes along the Aleutian chain and on the mainland. There are parts of Alaska which, due to the Japan Current, are never very cold in winter when other sections are huddling under temperatures of 50 to 60 below zero. There are sections of Alaska never yet visited by man.

The airplane trip from Fairbanks to Point Barrow on the Arctic Ocean crosses the wide Brooks Range of mountains, which in their winter garb of snow are of indescribable beauty. The slanting rays of the Arctic sun at times paint these snow piles in delicate pink. Once across the Yukon River and beyond the Arctic Circle, the sharp peaks and the deep valleys, snow covered and fantastic in sun and shadow as far as the eye can reach, form a picture perhaps more awesome and fascinating than anywhere in the world. Little is known of the tortuous terrain deep in the Brooks Range.

ALASKA'S FUTURE IS IN TOURISM

To Americans and Canadians who know the scenic wonders of Europe, there is an even more fascinating continent right at home. Alaska not only affords the finest of scenery but remarkable hunting and fishing.

With the advent of statehood the real conservation of Alaskan resources will begin. Under the rule of a single government department in Washington, conservation is virtually impossible, for laws must be enforced, and this is not the case in Alaska today.

Address of Hon. Claude Pepper at the Dedication of Everglades Park

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD my remarks made on the occasion of the dedication of the Everglades National Park, at Everglades, Fla., December 6, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Amid these scenes of enchanting interest today the President of the United States and the Governor of Florida rededicate to nature and to the people, this vast area of half a million acres which has ever been nature's majestic own.

Hereafter and for all time it belongs only to nature, to nature's God, and to the American people. For today this primeval expanse, containing vast areas where white man has never set foot, becomes the twenty-eighth national park—the Everglades National Park.

It will be the only such tropical park in all the land. Here more than 1,000,000 visitors soon will come each year to enjoy this marvelous museum of nature.

They will see the crocodile, the giant manatee, the alligator, the white tail deer, and 700 varieties of aquatic creatures. They will see the white egret and the roseate spoonbill, the wood ibis, the flamingo, the heron.

Too, they will see the world's tallest mangrove trees and 14 miles of virgin beaches; a constellation of sparkling lakes, streams, bays, and inaccessible swamps in this river of grass—the Everglades.

We wish to express our thanks and gratitude to the President of the United States, not only for his great and strong interest in the success of this project but for the immeasurable compliment of his personal appearance here today; to the Secretary of the Interior, to the National Park Service, and to the Governor and his cabinet and Legislature of Florida; to others too numerous to mention whose determined and untiring services have brought at long last to the people of this State and this country, this tropical monument of nature.

And now to the people's Federal Government and to the National Park Service we happily commit the protection and care of this rare and beauteous treasure for the health and happiness of all the American people.

May it long be a comforting refuge to those who seek inspiration and satisfaction at the shrines of nature.

Place of Trade-Unions in a Democracy

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a prize-winning composition entitled, "What Is the Place of Trade Unions in Our Democratic Way of Life?" submitted by John Dean, age 16, junior student, Stonewall Jackson High School, Charleston, W. Va., in a contest sponsored by the West Virginia State Federation of Labor in December 1947.

There being no objection, the composition was ordered to be printed in the RECORD, as follows:

WHAT IS THE PLACE OF TRADE-UNIONS IN OUR DEMOCRATIC WAY OF LIFE?

(Prize-winning composition submitted by John Dean, age 16, junior student, Stonewall Jackson High School, Charleston, W. Va., in a contest sponsored by the West Virginia State Federation of Labor, December 1947)

Trade-unions do have a definite place in American democracy. Their place is determined by definite needs. These needs are predicated upon the following:

1. Wages in their relation to the static cost of our standard of living and the rise and fall of it.

2. Wages in their relation to hours of effort necessary to maintain a normal economy.

3. Wages in relation to a common adjustment of wide differences which may exist in agriculture and industry.

4. Insurance of safe, adequate, and satisfactory working conditions, including plant and equipment.

5. Health, including medical care and hospitalization.

6. Adequate recreation, vacations, and recreational facilities.

7. Education: Opportunity to learn while you work.

It is a condition of democracy as against totalitarian governments that within a democracy almost any type of business may govern itself as it sees fit. Since businesses are conducted under some sort of organization for the insurance of its continuance, it stands to reason that the worker who is responsible for the success of a given business must have an organization for the insurance that they, too, will receive benefits such as above noted in articles 1 to 7, inclusive. Such protection for such benefits is not guaranteed in the business organization itself, trade-unions have emerged.

The success of present trade-unions is definitely establishing for the worker a high degree. The benefits above outlined firmly indicate their necessity as a part of our economic system as licensed in our democratic form of government. So great a part is played by the union in our democracy that some type of trade-union exists today for almost every type of business and number of employees ranging from a small employer to those employing thousands of workers and wherein certain workers do not have a particular union they are permitted affiliations.

It may be said that trade-unions have a long way yet to go for a well-rounded program of aid and protection which is rightfully due the worker. In order to become even more firmly fixed in our democracy every trade-union should seek to conduct its business in a democratic way based upon our constitutional Government with its checks and balances of the legislative, executive, and judicial departments, seeing to it that its officers be recruited from the ranks of labor and insisting that better benefits be returned to the worker from the dues paid in.

It is an axiom that the worker in our modern economic system has only his labor to sell. Individually he is helpless when facing an employer with a grievance to redress. Should the employer decide to reduce his wages or speed his work or fire him, he is helpless without some sort of protection, hence the need of trade-unions. Our economic system grew so rapidly that businessmen generally overlooked the worker's side other than to hire him for as many hours as possible with as little pay as the worker would consent to. Panics, depressions, and other economic disturbances tended to drive labor to some measure of protection and imposed continued responsibility upon trade-unions for the protections previously outlined. If trade-unions did not exist today some other form of organization would necessarily arise. No matter what angle one views, with our present economic set-up trade-unions definitely play an important part in our American democracy.

The American Railroads

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the

Appendix to the RECORD an article entitled "United States Railroads," written by Mrs. Eleanor Roosevelt from Geneva, Switzerland, and published in the New York World-Telegram on December 2, 1947.

The facts presented in this article are very revealing and demonstrate the success and efficiency of private ownership and operation of railroads in the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES RAILROADS

(By Eleanor Roosevelt)

GENEVA, SWITZERLAND.—Here are the facts in favor of private ownership of American railroads, as presented to me by the head of one of our railroads.

American railroads directly serve 60,000 communities. They employ about 1,360,000 persons with an annual pay roll of about $4,200,000,000. In 1921, the average annual wage per employee was $1,820; today it is almost $3,100. The railroads purchased annually about $1,500,000,000 worth of goods, and their aggregate taxes amount to about $500,000,000 per year.

Today they are only one of a number of types of transportation in the United States, but they did much of the pioneering work in the development of unity between different sections of our country. Railroads have helped to build communities, to develop new industries, to improve farming. They are still interested in such development, because the general traffic and operating policies of the many companies originate with and are mainly directed by local management, which is familiar with the existing and prospective needs of the communities that the railroads serve.

Railroads handle 60 percent of all our inland freight. During World War II, almost two-thirds of all United States traffic and more than 90 percent of Army and Navy freight was moved by rail.

In World War I the railroads were taken over by the Government. The average revenue per passenger-mile increased 51 percent, and the average revenue per ton-mile increased about 80 percent. But during the period from January 1, 1918, to March 1, 1920, in spite of the increase in both freight rates and passenger fares, there was a deficit of $1,616,000,000, which had to be borne by the taxpayers.

In World War II, when the railroads were not taken over by the Government, freight rates remained at approximately prewar levels and passenger rates increased only slightly, but the taxpayers sustained no loss.

Under private operation, with fewer employees, fewer locomotives, and fewer freight cars and passenger cars, the railroads moved on the average each month about twice as many troops, twice as many passengers, more than five times as much Army freight, 20 times as much Navy freight, and nearly twice as much other freight as had been carried during World War I.

In proportion, of course, the taxes paid to the Government were very much higher during World War II, so this would seem to have been an outstanding record for private enterprise.

The railroads and switching companies of the United States are owned and operated by almost 700 separate corporations, and there are almost 1,000,000 stockholders, who are located in every State of the Union. It is estimated that about 1,000,000 people own railroad bonds, and many others are interested through the holdings of trust companies, insurance companies, etc. The railroads contribute in taxes about half a billion dollars annually under present traffic volume. They are given no subsidy, which is not the case with some other methods of transportation.

Housing Problems in Pittsburgh and Allegheny County

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. MYERS. Mr. President, I recently received a copy of a letter which was sent to the members of the Joint Congressional Committee on Housing by the public affairs committee of the Federation of Social Agencies of Pittsburgh and Allegheny County. The letter indicates the gravity of the housing situation in that locality of Pennsylvania. I therefore ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DECEMBER 1, 1947.

Representative RALPH GAMBLE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN GAMBLE: The Public Affairs Committee of the Federation of Social Agencies wishes to call your attention to the urgency of the housing problems in this area and of the importance of Federal leadership and aid in resolving a situation which has reached critical proportions. Though a subcommittee of the Joint Congressional Committee on Housing held a hearing in this city on October 20, little time was available for the presentation of evidence concerning the effects of the situation on the people of this community.

Our committee, which speaks for 155 health and welfare agencies in Pittsburgh and Allegheny County has already endorsed the Taft-Ellender-Wagner bill for a National Housing Commission Act to stimulate the construction of public and private housing and research in the housing field. We feel that this measure is the most realistic proposal that has been offered to Congress to meet a situation that is now extremely grave and is rapidly growing worse. Surveys have shown that in the city of Pittsburgh today only 56.5 percent of the dwellings are structurally sound with all modern sanitary facilities. At least 22 percent of the housing is seriously substandard. Yet many of these houses, as well as those which come up to standard, are overcrowded beyond the limits of human endurance. The vacancy ratio among Pittsburgh's dwelling units is now less than 1 percent.

What this situation means to the many people who are caught without adequate living space can only be appreciated by the victims themselves. We know, however, from health and welfare agencies that a large proportion of the families they serve live in buildings already condemned by the city authorities as unfit for habitation, but from which they cannot be moved because there are no other places for them to go.

The situation is having a serious effect upon family life. Innumerable families are being broken for the simple reason that they cannot find space enough to live together. Our children's agencies report increasing requests for child placement, many of them made for no other reason than the fact that the parents have been unable to find proper shelter for them. The result is that many children are being sent to institutions, including the juvenile court detention home, although they have parents eager and otherwise able to make a home for them. On the other hand, many families which have managed to stay together have been able to do so only by doubling up with relatives in deplorable conditions of overcrowding.

Prompt action must be taken to alleviate these conditions if the nervous tensions which they produce are not to do irremediable harm, both to the individuals concerned and to our community. Such action can be put into motion with a stimulus from the Federal Government to promote building of rental housing for low-income and middle-income groups. The urgency of the situation requires that all housing resources, both public and private, be effectively used.

We earnestly trust that the Joint Senate-House Committee on Housing will take this testimony into consideration in preparing its report for the Congress.

Sincerely,

HARBAUGH MILLER,
Chairman, Public Affairs Committee, Federation of Social Agencies of Pittsburgh and Allegheny County.

The Displaced Persons Problem

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. SMITH. Mr. President, last Sunday night at Calvary Church in New York City, I made an address on the subject of the Marshall plan and its implications in the present war situation. In the course of my address I stressed the importance and significance of the displaced-persons problem as an essential part of any program for over-all European recovery.

I ask unanimous consent to have my remarks on the displaced-persons problem inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The matter of the displaced persons of Europe is so widely misunderstood that a few facts with regard to it are relevant. It is a startling fact that during World War II over 8,000,000 people were uprooted from their homes either because of invading armies or because of persecutions. Of these 8,000,000 people, 7,000,000 have today been repatriated. The problem facing the world through the United Nations involves approximately 930,000 people. These unfortunate people are located in the American, British, and French zones of Germany and Austria, and in Italy, with a relatively small number in the Middle East and in China.

Of these 930,000 people, the IRO estimates that approximately 134,000 more can be repatriated, so the net resettlement problem is about 800,000. Of these, approximately 530,000 are in the United States zones of Germany and Austria.

Taking the displaced persons as a whole, it is estimated that 65 percent of them are

Catholics, 20 percent Jews, and 15 percent Protestants. Children under the age of 18 comprise 21 percent, while 66 percent are between the ages of 18 and 44.

In my trip to Europe I visited these people in their camps and had an opportunity to talk to them and learn about their problems first-hand. Practically all of them are self-reliant and self-respecting people determined to make their own living through their own work if only given the opportunity to do so. Many of them were the first fighters against tyranny, first of nazism and now of communism. They are eager to become useful citizens in a free country. They have skills which would enrich any country. They are farmers, doctors, nurses, needleworkers, chemists, mechanics, architects, bricklayers, and tailors; in fact, practically all trades and professions are represented.

The United States is challenged to act and act immediately. Three courses are open:

(1) Leave these people where they are—which is impossible because the German economy cannot support them and of course the United States Army cannot support them indefinitely.

(2) Repatriate them. This is being done by the IRO on a voluntary basis, but it would obviously be impossible to compel all of them to return to persecution and ultimate liquidation.

(3) Resettle them. This is the immediate problem facing not only the IRO, but also and especially the United States. We have the problem on our hands and we must act. It is my considered judgment that—

(a) We should immediately open our doors to admission of a reasonable number of these people outside the immigration quota system, but subject of course to our regular immigration requirements.

(b) We should then lead in the effort being made by the IRO to organize all the members of the United Nations in a program for a percentage assumption of the responsibility for the remaining problem.

The United States must be willing to take its reasonable share of the responsibility with similar action by other nations in restoring these people to hope and to the opportunity to start anew in fresh environments.

I am confident they would become useful and worthy citizens.

Do Controls Mean a Police State?

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr SPARKMAN. Mr. President, a few nights ago the Senator from Washington [Mr. CAIN], the Senator from Pennsylvania [Mr. MYERS], Representative CLARENCE J. BROWN, of Ohio, and I took part in a discussion of the question, "Do Controls Mean a Police State?" on Theodore Granik's American Forum of the Air Program, over the Mutual network. So many of my colleagues have asked about the broadcast that I ask unanimous consent that the entire transcript of the discussion be printed in the Appendix of the RECORD.

I should also like to take the opportunity here of paying tribute to Pilot Radio Corp. and its president, Mr. I. Goldberg, for making these great public service programs available. Mr. Goldberg was one of the earliest pioneers in radio, and he is now keeping up the good work by sponsoring the pioneer radio forum of them all, Ted Granik's American Forum, which is now in its nineteenth year on the air.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

DO CONTROLS MEAN A POLICE STATE?

Speakers: Senator HARRY P. CAIN, Republican, of Washington; Senator JOHN J. SPARKMAN, Democrat, of Alabama; Senator FRANCIS J. MYERS, Democrat, of Pennsylvania; Congressman CLARENCE J. BROWN, Republican, of Ohio.

Chairman: Theodore Granik.

ANNOUNCER. Pilot Radio Corp. makers of fine radio equipment for over a quarter of a century, proudly presents America's oldest radio forum, now in its nineteenth year of public service, the American Forum of the Air. [Applause.]

"Do controls mean a police state?" Once again from the Shoreham Hotel, Washington, D. C., we present the vital issue of the week discussed on your American Forum of the Air, founded in 1928 by Theodore Granik, attorney and moderator.

Tonight our four authorities are: Senator JOHN J. SPARKMAN, Democrat, of Alabama; Senator FRANCIS J. MYERS, Democrat, of Pennsylvania; Senator HARRY P. CAIN, Republican, of Washington; and Congressman CLARENCE J. BROWN, Republican, of Ohio.

Senator CAIN was kind enough to substitute for Senator JOSEPH BALL, of Minnesota, who was taken ill.

And now, here is your moderator, Theodore Granik.

Chairman GRANIK. Good evening.

The President's proposal to establish price controls and rationing has met with enthusiastic support as well as bitter opposition. Opponents quote President Truman himself as saying that to enforce such controls "police state methods" are necessary.

The opposition contends that a system of controls could put our whole economy in a strait-jacket.

Those who support the President's proposal point out that he asked for only selective controls; that is, rationing and regulation of prices only for those commodities which are scarce and which bear directly on the cost of living.

This rising cost of living affects us all. The situation has become critical. Any plan that promises to stop the price spiral deserves consideration. But we Americans prize our liberty and we do not want to see a totalitarian state imposed upon us.

Could controls lead us to a police state here?

We are now ready for our first speaker in the discussion, Do Controls Mean a Police State?

Congressman CLARENCE J. BROWN, Republican of Ohio. Congressman BROWN.

Representative BROWN. The subject of this debate is, Do Controls Mean a Police State?

I believe the answer depends entirely upon what sort of controls you are talking about. If you mean Government controls which regulate the ordinary everyday activities of individual citizens and the different business enterprises of the countries, such as price controls and rationing in peacetime, then, of course, such controls mean a police state.

I call as my witness to substantiate my statement a very well-known student of economics and governmental affairs by the name of Harry S. Truman, who in a press conference on October 16, in answer to a direct question, made the flat statement that all consumer controls were, in his estimation, police state methods.

The New York Times, a Democratic newspaper, in discussing the President's press interview, stated that he, the President, classed all forms of price controls and rationing as essentially police state methods.

Where can I turn for a higher authority to answer your question?

Chairman GRANIK. Thank you.

Now, Senator FRANCIS J. MYERS, Democrat of Pennsylvania. Senator MYERS.

Senator MYERS. Mr. Granik, if by controls you mean complete control by Government over our entire economy and over our very lives and even over our thoughts, then certainly Government controls mean a police state. But no one seriously proposes such controls for the United States.

What has happened here is that certain partisans have seized upon an academic expression by President Truman of an inherent aversion to peacetime controls and have distorted some words he used about a police state into a hysteria over any and all controls of any kind whatsoever.

America will never have any police state so long as American democracy operates. Our problem comes down to the simple necessity of halting this outrageous inflation, of curbing dog-eat-dog economics at a time of national and international crisis, and of putting some reasonable and some sane restrictions on human greed at a time when such greed cannot only disrupt our foreign policy, but can throw this whole Nation into an economic tailspin.

The President's point at that press conference was that in a police state the Government just imposes its will upon the people, but that in a democracy the people through their representatives impose restraints on themselves.

Chairman GRANIK. Thank you, gentlemen.

And now for our spontaneous discussion: Senator CAIN, on October 16 the President said that price control is a police-state method. Now, what happened between October 16 and November 17 to make him recommend price control for the American people?

Senator CAIN. Mr. Granik, I wish I knew.

The President's statement and his actions appeared to be fundamentally in contradiction, and, being out of the country on October 16, I can't be certain what the President meant, but perhaps Senator SPARKMAN, of Alabama, will explore the question for me and for Americans generally.

Chairman GRANIK. Senator Sparkman.

Senator SPARKMAN. Well, Mr. Granik, I have not seen a quotation of the exact words that the President used, but I think I know what he meant.

Chairman GRANIK. Does anybody know what he really did say?

Senator SPARKMAN. I don't know. His thought, I think, was the same as mine and the same as that of most people; that is, that controls are to be avoided where possible, that they are not to be used in peacetime except as a last resort.

Most Americans would like to avoid them, but I believe that most Americans, just like President Truman, are willing to take them in a time of great economic emergency such as now prevails.

Representative BROWN. Mr. Granik.

Chairman GRANIK. Go ahead, Congressman.

Representative BROWN. Of course, at the time the President gave his interview to the press in which he called price control and rationing a part of a police state he was also telling the newspapers and the American public that he was opposed to these controls and rationing being placed back on the American people. Thirty days, or 31 days, later he appeared before the Congress of the United States and asked for the authority to impose all of those controls, and they weren't just a few hit-or-miss, little

controls. There were a number of controls—10, I believe—which would have given to the President of the United States autocratic power over the entire economy of this country. Which time was he right?

Senator MYERS. Rather than discussing what President Truman may have said and whether he was properly quoted and accurately quoted, we should really devote our time to the emergency with which we are confronted, the danger of inflation, and determine what should be done about it and what might be done about it, rather than merely discussing simply, academically, whether or not controls are a police-state method.

We have many controls today. We know they are not police-state methods. Even Senator TAFT favors the continuance of rent controls and credit controls and export controls and bank credit controls, and others favor other kinds of controls. So, whether all controls are a police-state method, whether any controls are a police-state method is something that seems to me rather academic.

What should be done today about this inflation that confronts us and the great danger that confronts all of us?

Representative BROWN. Mr. Granik.

Chairman GRANIK. Go ahead, Congressman.

Representative BROWN. As the only Member of the House of Representatives, I feel rather lonely in this group of United States Senators. I want to say to you, Senator MYERS, that you are attempting to get away from the subject, as is typical of the Senate. I have listened to a great many debates in that body (the rules of comedy do not apply here), and I know that quite often they get off the subject over there.

And, of course, the subject of this debate is whether or not these controls do constitute a police state. That is what I thought we were discussing.

Chairman GRANIK. Senator MYERS asked about rent controls, whether rent-control enforcement constitutes a police state.

Representative BROWN. I thought so. That was why I voted against it.

Chairman GRANIK. Senator SPARKMAN, do you have a comment?

Senator SPARKMAN. I was going to ask my friend, CLARENCE BROWN, if he is in favor of any controls.

Representative BROWN. I am certainly not in favor of all-out controls that have been given here.

What controls you have had you haven't used wisely or well.

Senator SPARKMAN. Are you in favor of export controls?

Representative BROWN. I am in favor of certain export controls at any time. That is not a control of the activities of the individuals of this country.

Senator SPARKMAN. You can't sell your products where you want to.

Representative BROWN. Yes; you can sell all the products you want to in this country, young man. Go out and try.

Senator SPARKMAN. There are lots of business people who are asking for the right to ship to all the countries of the world.

Representative BROWN. And a lot of other people are asking for better control of exports in this country for which you have authority now, but which you have failed to do, miserably.

Senator SPARKMAN. Simply due to the fact that the Republican Congress failed to give those responsible for export controls an appropriation in the first session of Congress so that they had to cut their staff.

Representative BROWN. You fellows, I feel sorry for you. You only had $37,500,000,000 to operate with this year, four times as much as Mr. Roosevelt ever spent in any peacetime year. And he wasn't such a slouch as a spender, either.

Senator CAIN. I don't think any of us want to duck a question which is fundamental in character: What are we going to do about inflation? How are we going to reasonably carry out our international commitments while decreasing prices for the consumer at home?

JOHN, I should like to ask, in that connection, with reference to your premise: Isn't it true that in 1940 and 1941 we had what was known as selective rationing and we found it did not work and is it any more conceivable that we can start with a meager return to controls today without an assumption that they will soon become all-inclusive, as they were before?

My only chief concern about that is that a control is restrictive by its very nature and how in heaven's name, when we need an economy of abundance, can we get what we need through the imposition of what the President has asked for?

Senator SPARKMAN. You have a pretty big question there, HARRY. I don't believe you are right that in 1940 and in 1941 we had selective rationing. I don't think that was ever true. I do know that in 1946 when such a tremendous drive was made by the Republicans in Congress to repeal OPA, they used the very argument then that we ought to use selective rationing.

Senator CAIN. I don't happen to agree with that.

Senator SPARKMAN. You weren't there, so you can't be blamed.

Representative BROWN. I was in Congress at that time; may I answer?

Chairman GRANIK. Go ahead, Congressman.

Representative BROWN. I know the gentleman has a good memory and I am sure he does not forget that in 1946 the Democrats, or the New Dealers, whatever you want to call them, had 57 members in the Senate to 28 Republicans, and 243 in the House to 190 Republicans, and the poor old Republicans just did it all; didn't they?

Why, you Democrats were voting for it.

Senator SPARKMAN. The Republicans took the lead in advocating it.

Representative BROWN. Let me tell you how it worked. I want to quote what Paul Porter said. He is one of you. He was then the OPA Administrator.

Chairman GRANIK. You missed him by a week. He was here last week.

Representative BROWN. He said on June 5, 1946, while appearing before a congressional committee, that 79 percent of the American communities were short of bread and that it wasn't working. And the President, when he took off these price controls, said that they weren't working.

Senator SPARKMAN. I wonder why it is, Clarence, that you Republicans are anxious to make it appear that the President took off controls, when you know that the whole campaign last year was fought by the Republican Party on the idea of removing all controls. [Applause.]

Chairman GRANIK. Gentlemen, let's go back for a moment.

Senator CAIN. Perhaps, JOHN, it would be more proper if we did not refer to the past as much as we talk about the imposition proposed of controls today.

Senator SPARKMAN. Let me say that I am in agreement with you. Let's talk about today.

Senator CAIN. What do you find in the President's proposal, as proposed, re-creation of controls, which will add to the consumer goods and the productivity of this great Nation?

Senator SPARKMAN. Let me approach it in this way. The thing that impressed me about the President's program when he delivered it was those 10 items which he outlined, 9 of which had been recommended in a report of a subcommittee of Senator TAFT's Committee on the Economic Report, headed by Senator FLANDERS. Senator BALDWIN was on that subcommittee and Congressman RICH, of Pennsylvania, and Congressman KILBURN, of New York, Republicans all, and that subcommittee recommended every single one of those that the President recommended except one.

Senator MYERS. Price control.

Senator SPARKMAN. I thought the President must have read that report.

Senator CAIN. Perhaps he did. I can only say in response to that that all people in the Congress today, be they Democrats or Republicans, are seriously and tremendously worried about this whole program. It simply won't work.

Senator MYERS. Everybody talks about inflation, everybody is worried about it, but nobody on your side seems to desire to do anything about it.

Senator CAIN. I think we are trying to do something about it but our opinion, or at least my opinion, is that the President's program intends to deal with the symptoms of inflation without attacking the causes of inflation, which is the only thing that makes any difference.

Senator MYERS. The Secretary of Agriculture has predicted less meat and higher prices next year. Steers today hit $38.50, an all-record high. Wheat just a few days ago hit an all-record high. It is there. What do you propose to do about it?

Senator CAIN. I am trying to do something about it in connection with No. 5, where the proposal has been made to do something that will induce the marketing of livestock and poultry at weights and grades that represent the most efficient utilization of grains. I think those are words which in themselves mean nothing.

Representative BROWN. May I say one thing here? I am from the House, you know. I am one against three. I would just like to call to your attention, when you talk about this meat shortage, that on June 27th of 1946, we had 58,000 meat shops or butcher shops closed in the United States under price control.

Senator MYERS. When was that?

Representative BROWN. June 27, 1946, when we had a Democratic President and Democratic Congress.

I just want to say to Senator SPARKMAN that I do not recall just what the President may or may not have read, but I read with a great deal of interest the comment that Senator BYRD, one of your colleagues over in the Senate—I think he is a Democrat—made following the President's speech, in which he said that the President, in order to free Europe, was asking that the American people be made the slaves of a bureaucracy.

Senator SPARKMAN. I wonder if you saw in the press just a couple of days ago a statement in which Senator BYRD said that he was going to support a substantial part of the President's program, and by the way, let me say that Senator BYRD is not alone—neither are the Democrats alone. I take issue with my friend and colleague, Senator MYERS here, when he says nobody on the Republican side is trying to do anything, because this eastern subcommittee——

Senator MYERS (interposing). I should have said the Republican leadership.

Senator SPARKMAN. I agree with you there, except for the fact that Senator TAFT has advocated 4 of these 10 controls himself. Senator WHERRY just the last day or two advocated the control of petroleum products. Oh, he wanted voluntary controls first, but when the petroleum people told him they could not control it voluntarily, then he threatened Government action. Senator CAPEHART came out with a program. Read it and see how much control is in it. Senator TOBEY has a program; Congressman WOLCOTT wants rent control.

Senator CAIN. Senator CAPEHART, of Indiana, will embrace any control which in itself adds to and stimulates production. He is violently and obviously in opposition to a number of the President's proposals—I can take the first one, to restore consumer-credit controls and to restrain the creation of inflationary bank credit. He is in violent opposition to both because they are not going to carry out a production quota or goal.

Chairman GRANIK. Senator MYERS, should wages as well as prices be controlled?

Senator MYERS. I think so, if necessary, if we have complete controls.

Senator CAIN. What do you mean, if necessary? Can you control one without controlling the other?

Senator MYERS. Of course you can, because in every instance prices have gone up before wages.

Senator CAIN. Exactly.

Senator MYERS. Prices have gone up and then wages will go up.

Senator CAIN. But one will follow the other.

Senator MYERS. Not necessarily. When wages in the steel industry were increased about 50 cents, steel went up $1. It does not follow at all.

Senator SPARKMAN. One dollar a ton? Ten dollars a ton?

Senator MYERS. Twice as much as the wage increase—so I say if wage controls are necessary, of course I would advocate them. I do not believe, in selective rationing or selective price control, that you need wage controls.

Senator CAIN. Could you explore that just a little bit further? You used the term "selective rationing." Where do you go with selectivity when we have a right to assume that it will be in the future as in the past, that if an article is placed under restrictive control, the producer will quit making that article, if he conceivably can, in favor of making a compromise article which is not half so good, which is ersatz, in fact, at half the price?

Senator SPARKMAN. Let me answer that with the argument of one of your Republican Senators. Senator WATKINS placed a statement in the CONGRESSIONAL RECORD just yesterday in which I think he gave a 10-point program, 6 of which were controls, and the most prominent one of which was to buy up the entire wheat crop. That is his recommendation.

Senator CAIN. Which gets back to my point, JOHN.

Senator SPARKMAN. You are certainly controlling that commodity when you buy it up.

Senator CAIN. That is exactly what Senator WATKINS would do, but the seriousness of this demands from each of us a conviction on our own part, and when you refer to something in a dead piece of paper, called the CONGRESSIONAL RECORD, you are not in fact talking among the live people who are endeavoring to express their opinions today.

Chairman GRANIK. I am not in Congress, but doesn't the CONGRESSIONAL RECORD represent live statements?

Representative BROWN. I just want to rise here for a moment and say to you that I have been sitting back here quietly in awe, and I can understand now more about the Senate than I have ever understood before. No two of them can agree on anything, and perhaps that is part of our trouble.

Senator CAIN. CLARENCE BROWN, I think we could agree on this. Not very long ago, now that you have mentioned the Senate—and I happen to be a part of that Senate, and a very proud one, too—95 of us, all that were in the Senate at that time, voted, and we did not take 5 minutes to do it, to pass a veterans' bonus. It was from our point of view a proper thing to do, but, in heaven's name, it was inflationary by its very character.

My contention on that is that we as a Congress and we as an American people are not realistic about the sacrifices we must make to reduce inflation. We spend our time talking about endeavoring to restrict the extension of bank credit, which, being productive in character, adds to the productivity of this country. I think it is just nonsense.

Senator MYERS. HARRY, you believe that prices are spiraling and continuing to go upward?

Senator CAIN. Indeed I do.

Senator MYERS. The Washington Post says butter will be $1 tomorrow here in Washington. We know we are going to have higher prices for meat next year. What are we going to do, just let it continue, let it spiral, forget it?

Senator CAIN. I would just make one comment. I wish I knew what to do about it. I don't, except I think there are basic premises headed in the direction of curtailing inflation that we as a Nation are absolutely ducking.

Senator MYERS. We have a program here. The President has suggested controls. You disagree as far as those controls are concerned, but you should have a program. I think the majority party in the Congress should have a program. I think you should advocate something definite and positive.

Representative BROWN. I would like to enlighten and inform the Senator.

Senator MYERS. I have been waiting for that enlightenment for a long time.

Representative BROWN. Keep quiet and relax and I will tell you. There are a lot of things you can do. First of all, if you want to stop rising prices you have to increase production, and you have to stop shipping out of this country more than your surplus production.

Senator MYERS. CLARENCE, we didn't ship, we didn't export more than 2 percent of our meat during the year 1946.

Representative BROWN. Wait just a minute; just listen a minute. Whenever you export more than a surplus of any commodity that you have in this country, whether it is 2 percent or 80 percent of your production, you immediately create a scarcity, and with it a high price; and of course you know and I know that you are exporting some fifteen to eighteen billion dollars' worth a year. You are exporting about a billion dollars more than you are importing in this country, and the sad part about it is that most of those exports have not been going to the countries where they need the food and the help.

Chairman GRANIK. I am sorry, gentlemen; we pause now for a summation of the arguments advanced this evening.

Now I see our speakers are ready to sum up tonight's arguments. First we will hear from Senator CAIN.

Senator CAIN. Mr. Granik, our wartime experience clearly demonstrated, to me at least, that once you travel with compulsion you must in time find yourself completely enmeshed in the completely nonproductive futility of regimentation. You cannot establish and maintain retail price ceilings without enforcing ceilings on wholesalers and manufacturers; you cannot enforce ceilings on the manufacturer unless you establish ceilings on the raw materials he uses in his plant. That means controls on the farmer and miner, too, but you cannot stop there. You must also control freight rates in the movement of materials and products.

We have learned the hard way that it is impossible to maintain price control without wage control. We have learned you cannot keep wages down unless you prevent a rise in the cost of living. It is a wild chase around a vicious circle. Every link in that chain is important. That is why price controls, in my opinion, in a free economy must wind up by Government control all along the line in due time. In a word, you cannot tamper with any part of the function of our complicated economic system without controlling the whole machine.

Chairman GRANIK. I am sorry, Senator CAIN, your time has expired. Senator SPARKMAN, will you sum up?

Senator SPARKMAN. As I see it, we have enough food, feed, and materials to go around if properly managed. Unfortunately, the margin is not great and in the event of short crops next year, the world, or a great part of it, might go hungry.

Prices have responded to the scarcities and to the fears of future scarcities to such extent that we have dangerous inflation. To make certain that there is an equitable distribution at a fair price, we need controls. Nearly everyone admits the need of some controls. About the only point of difference is the extent of the controls.

President Truman has recommended a 10-point selective control program. Whatever controls may be needed, they can be imposed upon us in only one way: through the vote of the people's representatives in the Congress of the United States. Such democratic action is not the action of a police state.

Chairman GRANIK. I am sorry, Senator, our time is up. [Applause.]

You have been listening to the American Forum of the Air discussion: "Do Controls Mean a Police State?" Our speakers have been Senator JOHN J. SPARKMAN, Democrat of Alabama; Senator HARRY P. CAIN, Republican of Washington; Senator FRANCIS J. MYERS, Democrat of Pennsylvania; and Congressman CLARENCE J. BROWN, Republican of Ohio.

World Trade

EXTENSION OF REMARKS
OF
HON. TOM CONNALLY
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. CONNALLY. Mr. President, the Honorable James A. Farley, former Postmaster General and a very distinguished American, sometime ago delivered a notable address on world trade. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WORLD TRADE—ON IT DEPENDS PROSPERITY AT HOME

(By James A. Farley, chairman of the board, the Coca-Cola Export Corp.)

The American objective of constantly providing more things for more people cannot be reached without doing business with the other nations of the world. If we are to have prosperity at home, we must have paying customers abroad. In turn, we must buy the goods the other nations produce.

At the moment there is an acute shortage of dollars abroad, and many of the emergency measures to tide over nations hurt by war have ended. These current worries have obscured the longer range vision of countries working together as buyers and sellers. This vision must become a reality if we are to have a steadily rising standard of living.

Though much of the world is still suffering from the shock of war, our export-import planning should be based on the premise that effort and industry in other nations will return to normal. Only when those nations are back on the job can foreign exchange of goods be carried out on a realistic, businesslike basis. Certainly our experience since the end of the war has demonstrated that we cannot continue to export without importing at a reasonable ratio.

GOOD BUSINESS TO DO BUSINESS ABROAD

The United Statets has shifted from a nation that had to be developed by capital from abroad to one that develops foreign areas with capital it exports. The Government, through loans, lend-lease, and relief grants has borne this burden during the past few years. It may do so for some time, but eventually private business will take over this task where it is permitted. The other areas may still be markets for our goods though dealings are carried out on a governmental level.

The warning that by rebuilding foreign industry we are putting competitors for overseas markets back into business is not valid. The history of world trade shows that the best customers are those who are able to sell abroad, generally in direct competition with each other. Their industry makes them better customers for their own products as well as the goods of others.

Because we are a highly industrialized nation, the bulk of our imports will be in the form of raw materials. It may be wise for us to build up our stock piles of raw materials now to hasten recovery abroad. When other nations are back on their feet, they will, as they did before the war, produce many manufactured products that we need in this country.

Another factor that will help bring foreign trade into balance is resumption of travel abroad. Millions of Americans, armed with the accumulated desire and savings of the period in which travel was impossible, will be voyaging to South America, Europe, Africa, Australia, and Asia. The money they spend in other lands will come back to us as payment for goods we export.

It is difficult to say just how much of our national output will have to go into foreign trade to maintain full production and full employment at home. It will be at least as much as the one-tenth of production figure that was the rule before the war. In dollar value it should be much higher than that 10-percent quota.

One thing that will help us maintain this volume of foreign trade is the reputation for quality gained by American products in the years before and during the war. In every land where American forces were stationed they did a tremendous missionary job for American business. The French, British, Italians, Chinese, and others know first-hand that American products are the best in the world. Enemy commanders in World War II frequently admitted that they had lost campaigns because they underestimated the quality of American equipment. In the Near East the word "nylon" has become synonymous with first grade.

Business must continue to build this reputation for excellence if we are to capture our share of the world markets. The old idea of using foreign lands as dumping grounds for merchandise that couldn't be sold at home does not fit into the new scheme of things. If foreign buyers want second-rate merchandise, and if we send it to them, it should be frankly labeled as such so that we may maintain our reputation for fine quality.

ADVERTISING ABROAD IS EFFICIENT

In our trade with other nations of the world advertising can play the same role it has in this country, though advertising abroad is a much more complicated operation than in this Nation, where habits and customs are uniform. Advertising abroad can build the knowledge of American products and the desire for them if each campaign is custom tailored. Our export advertisers must learn the habits and peculiarities of each market if advertising is to be the powerful marketing force abroad that it is at home.

* * * * *

The need for doing a better job of advertising abroad in the future than we have in the past has already produced many changes. Agencies are setting up foreign branches to learn more about the people they wish to reach through advertising. Advertisers generally have abandoned the idea that advertising in other languages is merely a matter of translation. They have learned that some ideas and expressions acceptable here are in poor taste abroad. Their messages now are fashioned in the working language of the people they wish to reach.

This revolution in export advertising stems from industry's broader interest in markets outside the United States. The war sent millions of Americans overseas. Transportation has speeded up; the airplane has brought inaccessible places close to our shores. We have come into possession of established enemy trade-marks and markets. These and other factors combine to whet industry's interest in the vast markets that exist in other parts of the world.

Large American companies have built the framework for our foreign-trade structure. In many cases, they opened new markets alone. In the past 10 years they have been helped by an interested and industrious Government. The State and Commerce Departments have done much to clear out the red tape and to arrange pacts and trade agreements with other nations.

In my recent trip around the world I found our consular service willing and able to help businessmen, large and small. Its members provided facts and figures unobtainable from other sources. These State Department workers, stationed in hundreds of cities throughout the world, are doing a fine service for American business. Their studies, observations, and opinions can serve to cut the cost and time of setting up in foreign trade.

OPPORTUNITY FOR SMALL BUSINESS

The opportunity for building foreign trade is not limited to the giant corporations. In fact, most of our hopes, of the future of our trade with other nations are pinned to the smaller companies. The little fellow, like the big companies, can get information and help from the Government. In many cases the small producer is better equipped to take over a segment of a market than the large companies. American production is uniform, but foreign demand varies from country to country and often from region to region within a country. The smaller manufacturer, being more flexible, can suit his production to meet those peculiar demands.

One of our errors before the war was to assume that everybody would buy the same products that we used. Other countries were better prepared to fulfill the peculiar wants that we did not recognize. If a relatively small segment of the population wanted unusual products, salesmen for other countries could fill the order. Our representatives frequently went orderless because a big production line could not be interrupted to make a few thousand items to suit a special regional taste.

INFORMATION AND RESEARCH NEEDED

I can think of no better illustration of this than the story about the people in the Dominican Republic who wanted buttoned shoes when the rest of the world seemed to prefer laces. Shoe buttons were considered a mark of social distinction there. The brighter and more varied they were, the higher the wearer's social standing. Representatives of both German and American export firms were on hand for the business, but the German salesman got the order because he always agreed to give them anything they wanted. The American salesman had insisted on selling laced shoes because "that's what they wear on Broadway," a selling point that had little effect on the native buyer who very rightly preferred to set his own style rather than follow another's.

Before the war the export-minded people were those in the seaports. Back in the interior, few companies even considered foreign trade, not being equipped to find overseas markets for their goods, or having experience in the complicated mechanics of foreign commerce. Even in some of the larger cities a businessman could not obtain the information and advice on basic export practice.

Since the war smaller companies everywhere have become foreign-trade conscious. They realize now that export represents the difference between full and partial production. They have mastered the paper work and the principles of trading with other countries. In this, they have been helped by the Government, foreign-trade groups, and many fine foreign-trade journals. They will play a major role in the foreign-trade picture of the future.

The airplane has been an important factor in making all of us world trade conscious. American businessmen now journey to countries they had encountered only in travel books before the war. Our knowledge of the world and our desire to trade with other nations have increased. But we must make every effort to increase our understanding of foreign people and their wants if our export-import effort is to be a success.

The need for market research abroad has already brought about some progress, especially in Mexico and South America. These studies should be extended to all areas in which we plan to do business to guide our marketing. We have abandoned hit-or-miss selling at home, and we must eliminate guesswork abroad. New techniques of market analysis suited to foreign countries are being developed; before many years, a wealth of this information should be available to the exporter.

A BRIGHT PICTURE

The improvement of communications facilities and of transportation, both air and sea, will have a tremendous effect on future foreign trade. Some of the delay in getting goods from our factories to customers abroad will be eliminated. Better methods of packing and shipping, many developed during the war, will trim the cost of shipment. Speeded delivery will make possible exchange of seasonable or perishable products that could not be handled before the war.

Of course, political differences and social unrest in many parts of the world will affect foreign trade. But with so many factors pointing to our success, even these seemingly overwhelming political blocks can be passed. We are already well under way in Latin America, South Africa and Scandinavia. Though the dollar supply there is falling low, we can feel certain that equitable arrangements for foreign trade will be made.

In war-blasted northern Italy, industry is coming back, perhaps faster than in other parts of Europe. France is beginning to get a grip on itself again. England, still in a crisis, is sure to emerge again as our best paying customer. India and China, as soon as they settle their political troubles, should be great markets for our products. Our success in foreign trade is certain if we plan right and work to make foreign trade a major factor in reaching a high level of economy and in staying there.

Labor and Informed Public Opinion

EXTENSION OF REMARKS
OF

HON. MILLARD E. TYDINGS
OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting address, entitled "Labor and Informed Public Opinion" delivered by the senior Senator from Rhode Island [Mr. GREEN] at the tenth annual convention of the Rhode Island State Industrial Union Council, CIO, December 7, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Officers, members, and guests of the Tenth Annual Convention of the Rhode Island State Industrial Union Council, CIO, it is a real gratification to me to come before you today. That branch of the great American labor movement you represent has made steady, and remarkable progress here in Rhode Island in recent years, and I am glad to have this opportunity to express my pleasure at your accomplishments and to wish you further success in the days and years ahead. Your movement has grown in numbers, but the expanding influence of labor organizations in this State is based on much more than numbers and even economic skill in collective bargaining. It is constantly building itself a more important place in the community, because it has demonstrated a greater sense of responsibility and leadership in relation to public issues. The fact that your unions have increased wage rate and improved conditions of work is, of course, of fundamental importance. It is even more important that you have made these advances by making genuine contributions to the success and well-being of the economic and social life of our society as a whole. Then too your movement is in a constant state of development. You do not stand still, but by a process of deliberate self-education and training you improve your methods, increase your competence, and widen your point of view.

I am particularly impressed by what I have learned about your educational programs. The work this council and other branches of the labor movement has been doing to train your local officers and rank and file in cooperation with the extension division of our State college and other educational bodies, has impressed me most favorably. It should impress also those elements in our State which continue to keep their fingers crossed in all matters relating to organized labor. The Rhode Island experiment in the field of workers' education is something we have reason to be proud of. It is one which I feel should be carefully studied by the committees of the United States Congress, which I hope will shortly conduct hearings on what is now known as the labor extension bill, S. 1390, which my distinguished colleagues, Senators THOMAS of Utah and MORSE of Oregon, are sponsoring. I am told by those who have made a study of adult education, and of workers' education in particular, that here in Rhode Island we have achieved a sound working relationship between trade unionists and college authorities which is peculiarly valuable and encouraging.

It is not my purpose today to more than mention this particular question but I must congratulate both the leaders of labor and the university officials who are conducting this important project in the field of education and self-development. Let me volunteer to do what I can to help in this inspiring undertaking. So when hearings do take place in the Congress on the labor extension bill, I would like to present to the committee a comprehensive and analytical description of the Rhode Island workers' education program. I would like to prepare this statement in cooperation with a group representing the State college authorities and the various labor organizations who have shared in the planning and operation of this program. The concrete experience and achievements in Rhode Island will be of peculiar value in helping to frame suitable legislation which will make it possible to broaden and strengthen the workers' education program both locally and nationally.

As to the larger problems which now face a representative of the people in our National Congress, the field is so large and the issues so complex that it is literally impossible to undertake any comprehensive discussion of public issues in a single address. The special session of Congress now in progress is presumably concerned with the vital questions of foreign aid and the curbing of economic inflation here at home. The administration, I feel, has wisely urged that these matters be considered together for the very sound reason that the extent and amount of the practical assistance the United States can give to war-torn countries depends in great measure on the volume of production and the range of prices here at home. At a hearing before the Senate Appropriations Committee the other day, I stated I was interested both in interim aid for Italy, France, and Austria for the next 4 months but also in interim aid for Rhode Island and the other New England States for the same period.

The party now in control of Congress has, I feel made a grave error in attempting to separate these questions, and indeed, in taking the position that the matter of inflation is irrelevant at this time. It is true that the Republicans have been split on the foreign-aid issue. Some of them do see the urgency of the need and have disregarded partisanship in pushing for prompt and adequate action. Some others, however, have given comfort to the extremists, both of the left and the right in the European countries, by delaying the assistance program. Let me call your attention to one basic fact in this whole discussion which has not been stressed and which is tied right in with our domestic economic and political stuation. The Harriman Committee which has given this whole question of European recovery the most careful and expert consideration, and on which, let me remind you, top representatives of labor have served, has tried to drive home the need for restoring the economies of these allied or ex-enemy nations so that they may contribute again to world prosperity. Relief of the starving is imperative and essential, but still more important is the task of providing the means to enable these countries not merely to feed and clothe themselves, but to become partners in the immense task of world reconstruction. If this objective is to become American policy in fact, we cannot ignore or sidetrack the question of inflation here at home. Nor, dare we neglect the even more fundamental question of the development and conservation of our productive facilities and natural resources right here in the United States. This latter problem was emphasized in the so-called Krug report, which all Members of Congress have had available to them.

The people of America, I believe, will finally judge the Members of the present Congress not on the fine speeches that they make about the threat of world communism (which I, as you well know, abhor and condemn), or about the wretched condition of Europe's millions, but on their votes on implementing the foreign-aid program by adopting the measures aimed at checking inflation here at home, which were outlined in the recent recommendations of the President. I think that the people of Rhode Island, and you, in particular, understand what I mean when I urge and plead with you never to let anyone confuse you by attempting to separate the question of our own domestic prosperity and spiritual well-being from the question of world economic reconstruction and the maintenance of the democratic way of life. You will never go far wrong in your domestic political judgments, or your obligations as a citizen of the world, if you insist at all times that we must insure the well-being of the majority of the American people if we are to do our full duty to our fellowmen in other countries.

Let me, quite briefly, touch on one or two of the major questions which will come before the Congress in the regular session next year. Reprints of a speech I made on the Taft-Hartley bill during the debate on that measure have been circulated quite widely in Rhode Island and elsewhere. Citizens from all walks of life have written to my office in Washington for reprints of that talk, and I regard this fact not as a personal compliment, although, naturally, I am happy about it, but as evidence of the serious concern that more and more people are showing about this whole problem of labor relations. I believe that the Congress will in time either repeal or drastically amend this so-called Taft-Hartley law. I would be less than honest with you, however, if I were to say that there is any immediate prospect of such action. Not only must there be political changes in this country before that can happen, but also the public must become much better informed than it is today about the actual workings of this new law. This task of informing the people of the country is one which will have to rest largely with labor itself. It is my hope that many industrialists will, in the course of time, come to realize that improved labor relations cannot be permanently achieved as long as there are laws on the statute books which operate in such fashion as to deprive one group in our society of that equality of opportunity which is at the very root of our American democracy.

We, the people of New England, have special problems in addition to those which we share with all citizens of this country. We have in New England a greater concentration of population and industry per square mile than any other section of the United States. At one time New England industries faced quite serious competition from industries located in other parts of the country where lower wage scales prevailed. This particular factor is not quite as important as it once was, I am happy to say, because wage scales generally have been improved. Also, it is now a fact, and this is frequently overlocked, that as a result of the shifts in American industry during the past 20 years or so, New England is no longer the highest wage area in this country. There are other industrial areas in the northern part of the United States where higher rates of pay are found than obtain in New England. I bring out this point to show that New England is not seeking to maintain a privileged position, but is actually prepared to prove its ability to meet conditions as they exist today.

I must also go on to point out that New England labor and industry cannot face the future without some apprehension unless steps are taken to wipe out by law and by proper social policy certain types of unfair economic competition which still persist in this country. I refer particularly to the

failure of the Congress to act on the long-overdue amendments to the Fair Labor Standards Act. Need I remind you that the statutory wage rate in this country is still set at the ridiculously low figure of 40 cents an hour? Equally important, and perhaps even more reprehensible, is the fact that there are still important groups of wage earners in this country who are deprived of any protection at all under the Fair Labor Standards Act. As most of you know, I was a cosponsor in the Seventy-ninth Congress of legislation to raise the statutory minimum to 65 cents an hour and to broaden the scope of the wage-and-hour law. The 65-cent minimum is now too low, and it should be fixed at a higher figure, probably 75 cents an hour. Recent hearings before a committee of Congress brought out the fact that there are still 2,000,000 people in this country earning less than 65 cents an hour.

An area such as New England cannot feel economically secure, nor dare we in good conscience rest, until all such sweatshop wages are eliminated by proper governmental action. It has been demonstrated beyond all question that the higher minimum wage is a positive aid toward the maintenance of stable employment and profitable operations in industry and in business. Yet in the face of incontrovertible evidence of the human and economic need for raising minimum wages and extending the coverage of the FLSA, we find an element in Congress giving ear and comfort to short-sighted interests which seek either to wipe out this law altogether, or to weaken seriously its provisions. Let me say to those who encourage this sort of talk, that they are playing with economic and political dynamite. Both as a New Englander, and as a representative of a highly developed and long established industrial State, I call upon all my fellow legislators from other New England States, irrespective of their party affiliation, to move at once to enact the long-delayed amendments to the Fair Labor Standards Act. This law must be revised to bring it into line with the needs and realities of present-day conditions. I particularly call upon all fair-minded people of Rhode Island and of other New England States to endorse and actively support this move, both in the name of enlightened regional self-interest and in the name of good and sensible citizenship.

There are two final points I wish to touch on quite briefly. One is the need for the immediate extension of rent-control legislation, and the other is the matter of a sound national-housing program.

The present inadequate rent control law expires on February 29, 1948. One of the very first actions of the Eightieth Congress in its regular session beginning next January should be to extend this law for at least another 2 years, and at the same time restore those sections of the law which afforded the individual tenant real protection against eviction. Should rent control be permitted to lapse, we will witness a vicious acceleration of the present inflationary spiral. Such a condition would be as harmful to business itself as it would be to the individuals who would suffer if rent ceilings were removed during the present period of acute housing shortages. No doubt some individual property holders will feel discriminated against by the maintenance of controls at a time when others are reaping sensational profits. This is a situation which can be met, however, by a process of individual adjustment. That can be assured if the Congress is not pound-foolish and penny-wise in the matter of funds for adequate administration of laws which affect millions of ordinary citizens.

Another problem, that of housing in our modern society, is exceedingly complex and only the most irresponsible person would suggest that an easy or simple solution is possible. Let me add, however, that those who insist that nothing be done about this problem because it presents many difficulties, should be severely criticized. The pending legislation S. 866, known as the Taft-Ellender-Wagner housing bill, deals with virtually all phases of the housing problem, but is primarily aimed at enabling private industry to serve the largest possible market. The so-called public housing features of the bill have been ridiculously and scandalously misrepresented. Public assistance or subsidies are only provided for one section of our population; that is the group now living in slums or under substandard conditions, and whose income makes it impossible to pay what is technically known as an economic rent.

As I said to you in opening this talk, it is not possible to do more than barely skim over a very few of the tremendous issues that now face this Nation and the world at large. The best one can do is to indicate one's general approach to these problems and keep abreast of the rush of events. As a public servant talking matters over with his constituents, I should perhaps point out to you that the job of the conscientious legislator is much more demanding than it has ever been before. The difficulties of reaching sound decisions are much greater, not merely because of partisanship, but because of the very complexity of the issues that confront us. These new stresses could endanger our whole democratic process.

I say to you that under these conditions people such as yourselves, who are in touch with great numbers of rank and file citizens, have a special responsibility. Men and women today cannot qualify as good citizens if they merely cast their ballots on election day and conduct themselves with decency and propriety. Nowadays they have to inform themselves to an extent never before considered essential on these broad public questions. We need what is called a better informed public opinion. This is not something that can be safely left to chance. Organizations such as yours should deliberately and energetically play a large role in interpreting public issues to the men in the street, and in that way shoulder more and more of the burden which all of us must bear if the true American principles of personal freedom, majority rule, and equality of opportunity are to survive in a world where hostile ideologies are threatening to lead us toward new and more terrible conflicts. I know from what you have done in the past that you may be counted upon to do your full share in this great work in the future.

Aid to Europe

EXTENSION OF REMARKS
OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. O'CONOR. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD the radio address made by me over Station WBAL in Baltimore, Sunday, December 7, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure and a privilege to substitute today for Senator TYDINGS, who usually reports on the week's developments in Washington at this time each Sunday. The senior Senator must forego his talk today because of enforced absence from Maryland. His weekly reports of important developments have been intelligent and statesmanlike, which qualities he manifests in debate on the floor of the Senate.

The Washington scene this week end is but a reflection of history in the making throughout the world. In one of his masterful speeches to rally the English people during the dark stages of the war Winston Churchill, in epigrammatic fashion, tersely declared that "we live from crisis to crisis." The same might truly be said of the world today. By reason of America's leadership in the fight against communism and in the economic efforts to prevent world catastrophe, Washington has become the focal point of each succeeding crisis. At the moment the immediate critical problem, that of interim aid to France, Italy, and Austria, is heading toward satisfactory solution.

To all those who appreciate the difficulties and disadvantages under which a democracy functions, in attempting to counter offensive moves by a dictator-ruled Government, the almost complete unanimity with which the Senate passed the $597,000,000 interim-aid bill was most reassuring. After a minimum of debate and opposition, the recommendation of President Truman, ably sponsored and furthered on the Senate floor by Senator VANDENBERG, chairman of the Foreign Relations Committee, was passed with only sight change and with only six dissenting votes. While the discussions on the floor of the House indicate sharper opposition there, proponents of the bill are most hopeful that passage will come this week, without substantial change or reduction.

While there naturally will be some question in the minds and hearts of Americans generally as to why this country must go on and on, giving of its substance, sacrificing its own needs in food and other essentials, it doesn't require much study of present-day world conditions to justify the American course in this respect. Five hundred and ninety-seven million dollars is unquestionably a lot of money. When to this is added the billions—whether it be 15 or 20 or whatever the number—which will be asked to implement this European-aid program on the necessary long-term basis, one has only to consider the alternate possibility to be able to decide for oneself whether the proposed expenditures now, like the well-known stitch in time, can save infinitely greater expenditures in the years ahead.

America spent undreamed-of billions between the attack on Pearl Harbor in 1941 and the end of the war to save world freedom from destruction. If we were willing during those years to pour out more than $200,000,000,000 for the purposes of war, is it prudent to be uncooperative now when such a small portion of the wartime outlay may well insure the world-wide peace and security which, despite the cost in blood and wealth of World War II, have not yet been achieved?

This is a time in the world's history when the ideals we all regard so highly must be tempered with a realism which perceives world events in their true perspective. Every true American citizen desires above all else today the attainment of that degree of peace and international good will that would permit all peoples of the world to live in harmony and under conditions of their own choosing. Every thoughtful American at the same time is impressed with the fact that desiring such an ideal is not sufficient to achieve it.

Further, it can be said in all sincerity that the great heart of America throbs in sympathy with the distressed of every nation,

and seeks no selfish gain in helping other peoples to return to normalcy. No one, however, can review the record of the postwar years, and note the checks and road blocks thrown up in the path along which the peace-loving nations are journeying in their effort for peace, without being deeply impressed with the meaning of the old biblical parable about the strong man who keepeth his court.

Look at the unfortunate countries behind the iron curtain which the Soviet Union has established across the heart of Europe. The peoples of good will in these countries lacked the strength to maintain their ideals, and were overwhelmed by the might of Russian Communist forces. The starvation and misery rampant in those countries, and to some lesser degree throughout most of the other nations of Europe, have been aggravated tremendously by the refusal of Russia to join in the efforts for peace. Those who oppose the American policy of helping these free nations to an economic standard that will make it possible for them to retain their freedom, are indulging in the most dangerous type of wishful thinking when they contend that Russia will join in the movement for peace if we lead the way by decreasing America's armed forces to a peace-time basis.

I agree with the statement made the other day by Secretary of National Defense Forrestal that the surest way to invite destruction of our Government is to permit American armed forces to deteriorate to a point where we would be unable to defend ourselves vigorously and successfully against any attacks that might be made upon us.

No move is foreseen today which would result in the removal of the Red Army from central Europe. There the forces of Stalin stand at this moment, holding one-half of Europe in their grasp while they menace the other half. While this continues we must maintain our defense on a basis capable of meeting any threat.

Under the leadership of our President and of Secretary of State Marshall, America has made every possible honorable concession to Russia in an effort to secure her cooperation toward reestablishment of world-wide peace. Not only have these efforts been refused almost without exception, but when America, realizing the danger of imminent chaos in the stricken European countries, devised a humanitarian plan by which each nation's efforts to reestablish itself would be supported and strengthened by American financial and economic aids, we have seen Russia set out with determination, and announced intentions to prevent the Marshall plan from being effectuated.

Molotov's pronouncement at the London Conference only a few days ago makes crystal clear that Russia is not willing to pledge her aid in the European-recovery program. Communism does not desire the restoration of orderly government to liberty-loving people. Rather communism can thrive and flourish best where disorder, discontent, and disaster prevail. If western Europe falls within its power and influence, the next move for its spread would be this hemisphere.

Not only is it a humanitarian obligation on our part to feed and clothe and otherwise assist the people of the war-devastated countries until they can stand, even shakily, on their own feet, it is actually a necessary part of our defenses against the tide of communism which has swept over so much of Europe and Asia, and which, we must admit, is asserting itself even in this land of free opportunity.

How any American parents could see their own children thrive and grow healthy on an abundance of food without being willing to share that abundance with the hungry, pitiful children of Europe is beyond understanding. It may well happen that the American program of relief for Europe may cause some of us here at home to do without some of things we would like to have, might make it necessary for us to wait longer than we would like to wait for new automobiles or other conveniences. Nevertheless, can we turn our backs on the misery of these peoples who, only a few years ago, were as proud of their culture and their economic well-being as we are here in America?

It was with this in mind that I joined this week with other Senators, and personally supervised the redrafting of a bill, reducing mail rates for gift packages to the devastated countries abroad. Under the bill, parcel-post charges would be reduced 75 percent. The stimulation that would thus be given to American generosity to the suffering peoples of other lands would supplement tremendously the official aid supplied by the American people.

What all Americans must never forget is that a revived Europe will be a strengthened outpost for the defense of America against the hatred and the evil designs which Communist strategists harbor against us. After we already have spent more than $200,000,000,000 to defeat one threat against world security, the cost of the program for interim relief is not enormous in comparison to the possible cost of neglecting our opportunity today.

If each of us could spend even a day in Rumania, Albania, Yugoslavia, the Baltic countries, Poland, or eastern Germany, if just one instance of the oppression which daily and without ceasing bears oppressively upon the people of those lands could be seen in its full horror, I am sure there would be a mass appeal to the Congress to act promptly and generously in the interest of humanity. I repeat, we cannot forget that this is not merely a question of helping Europe. It is also, and even more importantly, a matter of defending America and of preserving the last great outpost of free civilization now left upon the globe.

The most desirable method by which our European program could be financed, either in the whole or in part, would be through reduction in Federal spending for other purposes. How timely would it be when we are incurring this extraordinary expense, if our governmental leaders would take decisive action to offset these expenses, at least in large part, by reduced outlays for domestic purposes.

At a time when our citizens are expected to forego luxuries and even much needed foodstuffs it would certainly be in order for government to tighten its belt in foregoing the need of new outlays as well as for certain operational cost.

The total costs of national government for the present year is appalling. Contrary to general belief, the sum total will be shown to be over 40 billions. If America could get along some years ago on much less than this total, it most assuredly could do so now when the United States money is being sent abroad for emergency relief.

Coincident with the discussions of relief for Europe, and as an integral part of any long-range program, is the question as to how much financial aid America can afford to give. And this, of course, presents the question of how sound are our American economy and our financial policy for the future.

In all the concern about the needs of Europe there is one aspect of our country's economy which, to my mind, is not being given nearly the consideration that it rightly merits. I refer to the constantly increasing cost of government throughout America. In making this statement I include the cost of government in Washington and in the States and localities throughout the land. To judge from the budgets that are presented for each succeeding year, and the costly services that are being introduced and expanded unceasingly, one might be led to think that there was no limit to America's financial resources. With a $258,000,000,000 debt of the Federal Government, and with some $16,000,000,000 of State and local debts, we should realize the absolute danger that faces the American system of government unless our people awaken to what is happening and take steps to alter this alarming trend.

Many of our citizens will remember the shocked amazement with which our country greeted the news of the first billion-dollar Federal budget. That any government could ask the expenditure of such a huge amount was unthinkable to the people of those days. And yet, only this year, the largest city in our country had its own $1,000,000,000 budget. And now come reports that the budget of one of the larger States most likely will approach or pass the $300,000,000 mark. Many other illustrations could be cited.

Is it any wonder that living costs are high today when about 30 percent of the Nation's total income must go to defray the cost of government? Is it surprising that many of our people have difficulty living on their incomes when we find that this year's interest alone on the Federal public debt is almost double the entire cost of government in 1913?

Looking at it another way, how can we expect moderation in prices of foods or other necessities when the cost of government today exceeds by more than 25 percent the total national income just 15 years ago. Or again, looking back to 1917, we find that the per capita debt was slightly over $12 per person. During the height of the war it went to almost $2,000 per person and now is just below $1,800.

With 60,000,000 persons employed, it is not too difficult to understand why some of them cannot enjoy the standard of living they desire when we find that nearly 6,000,000, or 10 percent of all these workers, are working for Government alone.

Back in 1913 Government costs represented only 7½ percent of the total national income. Today it is almost four times that percentage, and still rising. And it will continue to rise until it overwhelms our American system of free enterprise, unless somewhere along the line we take stock of our plight, and realize that Government funds do not spring from an inexhaustible source but actually come out of your own pockets.

We can talk all we will about the humanitarian aspects of aid to Europe, and boast of the record-breaking production of American industry, but unless we control the cost of our own Government here, we will find ourselves, some of these fine days, unable to finance not only economic recovery of Europe but even our own swollen and expanded governmental services.

I had the privilege Friday of participating in a committee meeting on the matter of inter-governmental fiscal relationships. Real progress can be made, I am convinced, toward the goal of coordinating and simplifying Federal, State, and local tax systems, looking toward the goal of over-all tax reduction. Desirable as that objective is, however, its ultimate achievement is entirely in the hands of our citizens, in the matter of their demands upon Government.

There is an old saying that we cannot have our cake and eat it. That applies to our fiscal resources, and to the services which we expect Government to render us. We can have an orderly, reasonable tax and fiscal system, or we can demand unlimited governmental services. We cannot, however, have both. It is time our people began to realize

this. Particularly is this necessary when we are engaged in international activities which involve the question of world peace. These are the considerations engaging attention in Washington today and we trust our citizens will give them thoughtful and deserved attention.

The President's Everglades National Park Dedication Speech

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. PEPPER. Mr. President, on Saturday, at Everglades, Fla., occurred a very significant event. It was the opening and dedication of the Everglades National Forest. On that occasion the State of Florida was honored by the presence of the President of the United States. On that occasion the President delivered a very significant address not only in commemoration of that important occasion, but upon the subject of the conservation of our national and natural resources which are of the most vital interest to all the land. I therefore ask unanimous consent to insert in the Appendix of the RECORD the address of the President on Saturday dedicating the Everglades National Park.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Not often in these demanding days are we able to lay aside the problems of the times, and turn to a project whose great value lies in the enrichment of the human spirit. Today we make the achievement of another great conservation victory. We have permanently safeguarded an irreplaceable primitive area. We have assembled to dedicate to the use of all the people for all time, the Everglades National Park.

Here in Everglades City we can savor the atmosphere of this beautiful tropical area. Southeast of us lies the coast of the Everglades Park, cut by islands and estuaries of the Gulf of Mexico. Here are deep rivers, giant groves of colorful mangrove trees, prairie marshes and inumerable lakes and streams.

In this park we shall preserve tarpon, trout, and pompano, bear, deer, and crocodiles—and rare birds of great beauty. We shall protect hundreds of kinds of wildlife which might otherwise soon be extinct.

The benefits our Nation will derive from this dedication will outlast the youngest of us. They will increase with the passage of the years. Few actions could make a more lasting contribution to the enjoyment of the American people than the establishment of the Everglades National Park.

Our national park system is a clear expression of the idealism of the American people. Without regard for sectional rivalries or for party politics, the Nation has advanced constantly in the last 75 years in the protection of its natural beauties and wonders.

The success of our efforts to conserve the scenery and wildlife of the country can be measured in popular use. The national park system covers but a fraction of 1 percent of the area of the United States, but over 25,000,000 of our fellow countrymen have visited our national parks within the past year. Each citizen returned to his home with a refreshed spirit and a greater appreciation of the majesty and beauty of our country.

These are the people's parks, owned by young and old, by those in the cities and those on the farms. Most of them are ours today because there were Americans many years ago who exercised vision, patience, and unselfish devotion in the battle for conservation.

EVERGLADES DIFFERENT FROM ALL OTHER PARKS

Each national park possesses qualities distinctive enough to make its preservation a matter of concern to the whole Nation. Certainly, this Everglades area has more than its share of features unique to these United States. Here are no lofty peaks seeking the sky, no mighty glaciers or rushing streams wearing away the uplifted land. Here is land, tranquil in its quiet beauty, serving not as the source of water but as the last receiver of it. To its natural abundance we owe the spectacular plant and animal life that distinguishes this place from all others in our country.

Our park system also embraces such national shrines as Jamestown Island, the Statue of Liberty, and the battlefields of Yorktown and Gettysburg. These historic places—as much as the scenic areas—also need to be protected with all the devotion at our command in these days when we are learning again the importance of an understanding loyalty to our national heritage.

Our parks are but one part of the national effort to conserve our natural resources. Upon these resources our life as a Nation depends. Our high level of employment and our extraordinary production are being limited by scarcities in some items of our natural wealth. This is the time to develop and replenish our basic resources.

Conservation has been practiced for many decades and preached for many more, yet only in recent years has it become plain that we cannot afford to conserve in a haphazard or piecemeal manner. No part of our conservation program can be slighted if we want to make full use of our resources and have full protection against future emergencies.

If we waste our minerals by careless mining and processing, we shall not be able to build the machinery to till the land. If we waste the forests by careless lumbering we shall lack housing and construction materials for factory, farm, and mine. If we waste the water through failure to build hydroelectric plants, we shall burn our reserves of coal and oil needlessly. If we waste our soil through erosion and failure to replenish our fields, we shall destroy the source of our people's food.

Each conservation need is dependent on the others. A lashed and burned forest brings erosion of uplands and fills downstream reservoirs with silt so that water power is lessened and irrigated farms lose their water supplies. Eroded farm lands contribute to devastating floods. Uncontrolled rivers mean lost electricity, farms without water, and perennial and increasing flood danger.

To maintain our natural wealth we must engage in full and complete conservation of all our resources.

Full conservation of our energy resources can be accomplished by continued construction of dams, hydroelectric plants and transmission lines; by greater use of natural gas, by research for more efficient mehods of extraction of coal and oil, and by exploration for new resources.

CONSERVATION SEEN AS VITAL NECESSITY

In forests, conservation can be achieved by adhering to the principle of sustained yield and forest management so that timber is harvested each year just as other crops are. This should be true for both privately owned and publicly owned forest lands.

In farm land, conservation can be achieved by expanding and intensifying the many soil-conservation practices developed by our agricultural technicians to sustain productivity. The area of irrigated land can be expanded materially with new reclamation projects. Range lands in the West can be protected by the control of erosion and by the enforcement of safe limits on the number of grazing stock.

In minerals, we can come closer to the proper balance with increased efficiency in extraction and with scientific exploration for new reserves. When ores contain several minerals, we should extract all the useful products and waste none. Despite a bounteous nature, this country has never been self-sufficient in all minerals. We have always imported minerals to meet these deficiencies and we must continue to do so.

In water, we need to prevent further dropping of the water table, which in many areas is dangerously low. Surface water must be stored, and ground water used in such a way as to cause the least depletion. Although the water level is high now here in the Everglades, there has been damage from a lowered fresh-water table, and during the war, fires raged through the Glades—fires fed by dry grass which should have been covered by water.

The battle for conservation cannot be limited to the winning of new conquests. Like liberty itself, conservation must be fought for unceasingly to protect earlier victories.

Public lands and parks, our forests, and our mineral reserves, are subject to many destructive influences. We have to remain constantly vigilant to prevent raids by those who would selfishly exploit our common heritage for their private gain. Such raids on our natural resources are not examples of enterprise and initiative. They are attempts to take from all the people for the benefit of a few.

As always in the past when the people's property has been threatened, men and women whose primary concern has been their country's welfare have risen to oppose these selfish attacks. We can be thankful for their efforts, as we can be grateful for the efforts of citizens, private groups, local governments, and the State of Florida which, joined in common purpose, have made possible the establishment of the Everglades National Park.

The establishment of this park is an object lesson and an example to the entire Nation that sound conservation depends upon the joint endeavors of the people and their several governments. Responsibility is shared by the town, the State, and the Federal Government; by societies and legislatures and all lovers of nature.

WISDOM ESSENTIAL TO NATION'S FUTURE

No man can know every element that makes a nation great, what the psalmist meant when people, the daily cooperation, the helpfulness of one citizen to another are elements. A nation's ability to provide a good living for its people in industry, business, and on the farm is another. The intelligent recognition by its citizens of a nation's responsibility for world order, world peace, and world recovery is still another.

The wise use of our natural resources is the foundation of our effectiveness in all these efforts.

The problems of peace, like those of war, require courage and sustained effort. If we wish this Nation to remain prosperous, if we wish it still to be "the home of the free," we can have it so. But, if we fail to heed the lesson of other nations which have per-

mitted their natural resources to be wasted and destroyed, then we shall reap a sorry harvest.

And for conservation of the human spirit, we need places such as Everglades National Park, where we may be more keenly aware of our Creator's infinitely varied, infinitely beautiful, and infinitely bountiful handiwork. Here we may draw strength and peace of mind from our surroundings.

Here we can truly understand what the psalmist meant when he sang: "He maketh me to lie down in green pastures. He leadeth me beside the still waters; He restoreth my soul."

Control of Living Costs

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. O'CONOR. Mr. President, because it is a forceful exposition of the problems involved in any program to control living costs, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an editorial from the Baltimore Morning Sun of Sunday, December 7, entitled "No Miracle in Sight."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO MIRACLE IN SIGHT

The Sun does not believe that any legislative magic, whether evolved in Democratic brains or in Republican brains, is going to alter in any fundamental fashion the situation which produces high prices in this country today.

The reason for high prices is simple. We have created more billions of dollars in purchasing power than we ever dreamed of before. We have not produced goods at any equivalent rate.

More dollars for less goods is just another way of saying higher prices.

Moreover, we are now in the very act of creating even more dollars. For the best possible reasons, for reasons which are overwhelming, we are about to hand over to the countries of western Europe the dollars which will give them the right to take even more of our goods.

This means still more dollars for them and still fewer goods for us.

Whatever the legerdemain in the field of law, of regulation, of controls, of allocations, of rationing, the essential situation will remain. The goods are not there, and won't be there for a long while, in the amount in which we should like to have them. We shall all have to go without many things we should like to have and some things that habit has made us believe are essential.

Thus it behooves wise and prudent men not to expect too much from any of the programs for the control of inflation.

It is all very well to say that we must increase production. Of course we must, to the limit of our ability. But the truth is that there are not many practical measures which we can take right now.

How can we go about producing more iron ore in a hurry? Or more coal, or more automobiles, or more wheat, more corn, or more meat?

Suppose it were in fact possible suddenly to make available more of these raw materials. Where should we find the steel workers to man the furnaces or the auto workers to put the cars together?

Is it possible to persuade Mr. Lewis' miners to remain for longer hours in the pits or Mr. Reuther's auto workers to assemble more cars per hour than they now assemble?

Will any union give up the "working conditions" (i. e., the schemes for doing less work) for which they have bargained and fought for so many years?

To ask such questions is to answer them.

On the contrary, each union is almost certain to demand—indeed, some of them have already demanded—still higher wages and still more lenient working conditions, so that its members at least may get a larger share than others out of the pool of available goods. For itself each union wants to create still more purchasing power and thus intensify the demand for goods.

Some of the necromancers, in politics and out of politics, shout for price controls. A few of these also whisper, a bit uncertainly, in favor of wage controls.

Such magic has little positive value and may do great damage. Obviously, one is impossible without the other. But experience has taught us—and has taught other countries which have gone even further along the lines of planned economy than we have ever gone—that wage controls are never enforced. Every case somehow becomes a hardship case, an exception to the rule. Or, in the particular industry involved, "incentives" (how useful a word) are needed. And so the controls become a farce.

Price controls are equally fallacious in theory and almost as ineffective in practice. Even in Russia, where the state assumes control of everything, the black market grew to such proportions that the authorities had to legalize it. During the war, when most of us were under every high compulsion to obey the rules, the OPA found itself saddled with an almost impossible assignment, no matter how many jobholders were hired. When the compulsions of the war ended, the OPA simply collapsed and had to be abandoned.

Only the naïve can believe that, in these times of uncertain peace, it would be possible to put effective control on prices. The whole idea is in collision with our fundamental practices. Even with an army to back it, it could only disrupt economy.

As to what price control would do to production, which must be our primary aim, ask any manufacturer.

Rationing of a few essentials, as a device to insure a fairer distribution of the available goods, might produce some good results if we could evolve the elaborate machinery for effecting it. Some of our people would accept it willingly. But we have to remember that others would oppose it. Of the opponents, some would be vehement and perhaps even violent.

The only effective argument for rationing is Europe's need, and there are enough surviving isolationists among us to give the appearance of Nation-wide opposition. Politically speaking, consumer rationing is an impossible solution.

In short, there is no cure for the difficulty which we now face save greater production. Greater production is something which cannot be accomplished overnight or over many nights. We must therefore accept the fact of continuing shortages and adjust ourselves to them.

Does this harsh conclusion mean that there are no steps we can take to mitigate the force of the inflationary pressures which the shortage of goods produces?

There are some steps we can take without turning our country into a police state. But we should remember that they are not cures for the trouble. They are, rather, salves and poultices.

One source of our trouble is the increased purchasing power which is the natural result of easy credit. Easy credit in its turn is the result of the vast national debt which gives the banks lending power in almost unlimited quantities.

To some small extent, we can control credit.

We can control it first by doing our utmost to reduce the national debt. That is a long and slow process. But we can make a start on it and establish it as fixed national policy.

We can control credit also by the voluntary cooperation of the bankers. Bankers, as merchants of credit, wield a tremendous influence on manufacturers and merchants. They can use that influence, in cooperation with the Treasury and the Federal Reserve banks, to discourage overenthusiastic use of funds. To some extent, they can discourage a too easy acceptance of higher wages and the ensuing higher prices for manufactured goods.

A second poultice might be what is called allocation. This means control, by voluntary or governmental action, of some of the basic commodities, such as coal, steel, and grain. This step would be hard on many manufacturers of household appliances and other products. We have already seen how heavily it weighs, even in its voluntary form, on bakers, brewers, distillers, poultry raisers, and people in similar lines. But it can be done, provided—it is a big proviso—the men who administer it know what they are about.

But the best poultice, the best mitigating remedy, for our trouble is individual and organized self-discipline.

We call ourselves freemen. Freedom implies that its possessors are capable of acting in the general good demands self-control, even self-sacrifice.

If enough of us restrain our appetites, if enough of us forebear to grab, if enough of us understand the need for restraint and act in accordance with our understanding, we shall get through the period of shortages without too much difficulty.

The issue is self-control against police control; domestic freedom against domestic authoritarianism.

Since miracles are unlikely, we should give freedom a trial.

Admission of Displaced Persons

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Need the DP's," published in the St. Louis Post-Dispatch of November 28, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE NEED THE DP'S

It is high time people in the United States began to think of admitting displaced persons from Europe, not so much as a favor to these homeless unfortunates, but as a great favor to this country. The blunt fact is that there are parts of the United States

which are sorely in need of the DP's as new population to replace crippling losses.

As everyone knows, the North Central States comprise the national breakbasket. They are the granary of this country—to a large extent they are the granary of the world. In the 7 years since 1940, these States have lost population, according to official current census computations, as follows:

State:	Loss
North Dakota	148,417
South Dakota	131,272
Wisconsin	99,528
Minnesota	97,022
Nebraska	92,586
Iowa	83,546

To come closer to home, Missouri and Kansas also have lost population, the former 119,912 and the latter 20,659. Add the Missouri and Kansas losses to those of the six States in the table and we have a total of more than 800,000. And if we add in the 229,416 out-State migration from the Mountain States, such as Colorado and Wyoming, the figure goes above 1,000,000.

Americans who have served with the occupation in Germany are impressed at the advanced years of the men and women who labor in the fields, often in the role of beast of burden as well as plowman and mower. Do these Americans know what the average age of a farmer is in North Dakota? Well, it is 60 years. In the other States of the great wheat growing area the average age mounts close to this obviously dangerous figure. In Colorado, for example, it is 57.

How has this come about? Have all the farmers suddenly grown much older? The answer is as simple as it is tragic for the affected regions. The young men and women have walked out. They went away as boys and girls to the war, either to the armed services or wartime work, and they have not come back. What is more, most of them are not coming back. Technological changes in agricultural methods are a factor, but they do not in themselves account for the migration.

This is something which could be foreseen—which, in fact, was foreseen. Four years ago Joseph Kinsey Howard, in Montana: High, Wide, and Handsome, declared that World War I had left his State "bankrupt in land, money, and men," and that the effects of World War II "may be worse." By 1942 war-plant migration had brought many Montana towns and some cities to "the verge of collapse."

The openings which are thus left on farms, milk routes and dairies, in blacksmith shops, farm-machinery agencies, and small-town businesses are waiting today to be filled by many thousands of Europe's displaced persons. Men and women and children of Europe will be immediately at home on this land. They will be at home just as years ago many of their people came to the States of the Missouri and upper Mississippi valleys and were at home on the virgin plains.

Estonians, Latvians, Lithuanians, Poles, Yugoslavs, Hungarians—these are the chief groups from which displaced persons for the United States would be selected. All of them are used to hardship. Most of them know the rigors of winter and how to take care of themselves if given half a chance. Those from the Baltic countries, in particular, are ideally suited to take over as farm hands and other agricultural workers in the area whose population is smaller with each passing day.

The Stratton bill for admission of 100,000 displaced persons a year for 4 years died in the regular session of Congress. When the issue comes up again, the argument should be more than humane treatment of the DP's. It should be downright need for them in stricken portions of the United States.

Governor Youngdahl's commission of agricultural, labor, religious, and welfare representatives in Minnesota, Governor Aandahl's similar commission in North Dakota are signs that the area is beginning to wake up. Facts and figures are needed. Let these commissions go to Congress with enough evidence of what population losses are doing and the number of DP's who can be accommodated, and the next handling of the Stratton bill will be a different story.

The DP's need America, but no more than America needs the DP's. The National Citizens Committee on Displaced Persons could not have a sounder appeal for action.

Report to the People—Part III

EXTENSION OF REMARKS

OF

HON. W. LEE O'DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. O'DANIEL. Mr. President, I ask consent that there be printed in the Appendix of the RECORD my third report to the people, broadcast on September 18, last, from Station WOAI in San Antonio, Tex.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REPORT TO THE PEOPLE—PART 3

(Radio address by United States Senator W. LEE O'DANIEL, of Texas, over radio station WOAI—TQN, San Antonio, Tex., September 18, 1947)

How do you do, ladies and gentlemen, and hello there, boys and girls. This is your United States Senator W. LEE O'DANIEL, Democrat of Texas, speaking to you from San Antonio, Tex. This is the third in a series of reports to the people regarding the conditions of our Nation, both at home and abroad. This broadcast will deal with foreign affairs.

There are many things in connection with the general problem of the foreign policy of this Nation which I do not know and apparently there are many things which no one knows. I do not expect to go into a detailed discussion of this subject of foreign policy; I only expect to go far enough to give a report to the people of this great State of Texas as to what my action within this field has been since becoming a Member of the United States Senate and at the same time to give my reasons for the course I have followed. I expect to be very careful in what I say so as to not make any statement that is not backed up by the record.

There is one statement upon which I think everybody will now agree; I think even the old-line New Dealers who have for many years posed as great experts on foreign relations, will admit now that the foreign policy of this Nation which was outlined during the war period and consummated under the direction of the then ruling dynasty of the Democratic Party, has been a complete failure and a flop. In this connection, I want to call the attention of the people to the fact that when the campaign was in high gear in this Nation to elect the then President of the United States for the third term and later for the fourth term, all the propaganda agencies which they had set up in the various departments in Washington were spending millions upon millions of the taxpayers' dollars and working day and night telling the American people that the Nation could not afford to change faces in the White House or to change the Membership of the House of Representatives or to change the Membership of the Senate because of the fact that the whole fate of the world depended on having men in Washington who were wise enough to direct the foreign policy of this country to the end that when we won the Second World War we would at the same time win a lasting peace for the people of this and of all other nations.

I expressed the opinion then in speeches which I made all over Texas and in speeches which I made in the United States Senate, and on Nation-wide radio networks, that so far as the record was available, I did not see any evidence of outstanding wisdom on the part of the leaders in Washington in dealing with foreign affairs which would cause me to believe they were indispensable in directing the foreign affairs of this country. I did not then, and I do not now, criticize the decisions made and the policies adopted. What I criticized then, and what I criticize now, was the obvious hyprocrisy of those who would play on the patriotism of the American people and who would mislead our American people to the point of making them believe they would find through the operation of the New Deal gang, accumulated in the State and in other departments of the Government, so much wisdom that if it was just allowed to remain on the job all the world's problems would be solved. What I criticized then, and what I criticize now, was the very carefully worked out plan to deceive the American people, to mislead the American people, and not let the American people have and know the facts. But during those days when I was making these criticisms I was accused by the smear bund in Washington, which for so many years has operated persistently and consistently to question the motives and smear the reputation of every man who dared to oppose the New Deal and its overstuffed stooges—they said I was an isolationist and that I did not know anything about foreign policy, and generally that I belonged to a class of nitwits whose opinion did not amount to anything, and then they would end their criticism with a long statement to prove conclusively that the Atlantic Charter, which later we learned was but a scrap of paper, would hereafter be the foundation of the guaranties of freedom throughout the world, and that we had then in Washington in charge of our foreign affairs men who were building the foundation for world peace in such a manner that the welfare of the world demanded that they be not disturbed. I stated in speeches made then, and I refer you to the record, that I thought this Government was being carried for a ride on the band wagon of the Communists and that just as soon as we quit furnishing the wagon and paying the band, we would wake up to the fact that instead of the policy we were then following leading us to a great era of world peace, it would more likely lead us to the third world war. I pointed out then, and I now refer you again to the record, that the State Department in Washington and other departments of the Federal Government were absolutely saturated with Communists and New Dealers and that they were wielding the power in determining the policy of this Nation, which was not only dangerous for us, but dangerous to the people throughout the world.

These warnings which I issued to the American people back in 1944 and 1945 were not heeded. The only answer which came from the citadel in Washington, where the well-fed bureaucrats and the slimy Red Communists control, was to use every arm of the national administration to smear me, to brand me as an isolationist and a crackpot. They exalted the New Dealers, who by long years of feeding out of the public feed trough and by willingly following the dictates of the master politician, were labeled as great statesmen and I was branded as a demagog.

Today the papers are full of the dirty tricks and betrayals of our Nation by these big shots in the War and State Departments. The papers tell us that about 15 top-drawer officials of these Departments are now being investigated and indictments are expected to follow. These birds, some of them high Army officers, are charged with giving Russia the secrets regarding the construction of the famous bomber, B–29. They carted the records out of Washington to a nearby spot in Maryland, where they were photographed and then rushed to New York and delivered to NKVD and thence on to Moscow. As time goes on we will see the uncovering of more and more of such skulduggery. This is only a sample.

My friends, I am doing just one thing—I am giving a report to the people of Texas and I am citing the record.

Now let's see what has happened to that great document, the Atlantic Charter. It is no answer for this smear brigade to in any sense charge that the failure of this foreign policy to work has been the fault of the Republicans. Unfortunately, the Republicans apparently fell suckers and have been taken for a ride on this foreign policy bandwagon along with willing Democrats. The answer to what happened to the Atlantic Charter is simply a story of how the President of the United States and the leaders of our State Department, not only under the administration of President Roosevelt, but also under the administration of President Truman, were totally fooled and completely outtraded by Marshal Stalin and Mr. Molotov at Teheran, Yalta, and at Potsdam. Go back and get the record that has now been revealed and you will find that our representatives made agreements which planted Russia firmly in Europe. They made agreements which turned over to Russia and made Russia the master of about 125,000,000 people in the Balkans. They double-crossed Poland. They forgot our obligation to Finland. They allowed Russia to set up puppet governments throughout all eastern Europe—and just what did we get for all this? What did we get when we sacrificed Mikhailovitch and allowed Dictator Tito to shoot him as a common criminal? What did we get for the surrender and persecution of churchmen? What did we get for giving Russia absolute freedom throughout all eastern Europe? We have gotten the promise that Russia would see to it that these countries had free democratic government.

Well, now, I ask you in all seriousness, if these great statesmen we had in Washington who were conducting our foreign affairs were so smart they were absolutely indispensable to the affairs of this Nation, why were they taken in by the promise that Russia would guarantee free democratic government to these countries which we cooperated with her to take over? Why did they believe that Russia or any other nation which denies free government to its own people at home would become so magnanimous and provide free government for the people of other nations in their areas? But that is what we did, and where are we today? I will tell you where we are. We are in a position where, after giving Russia about half of Europe, we now face a situation whereby we are called on to say to Russia, "You must stop. Thus far you can go and no further." It may take force to effect that stop order. Now, I ask you this question: What has happened to the great wisdom which we were told was directing our foreign affairs during all these years? Has it led us to an era where we may rightfully expect world peace and democracy and free government? No—certainly not.

Here is another thing. When the soldier boys of this Nation landed on the coast of Normandy, marched across Europe, across the Rhine, encircled the Ruhr, and destroyed the military power of Germany, why did these wise diplomats in Washington hold the American troops out of Berlin and wait for Russia to come in and occupy the city and tell us the particular zone we could control? If the tables had been turned, would Russia have done this? The answer is "No," emphatically "No." The Russian Army would have moved into Berlin, they would have taken over the control of that city, and it would all have been a Russian zone. But what is the situation now?

Month after month we have been negotiating with Russia to try to work out some plan whereby a peace treaty can be signed with Germany which will permit the people to go back to work to earn their own living and thereby take them off the backs of the American taxpayers. Russia is playing the same smart, selfish, unprincipled game which has controlled her every action since the end of the war. Russia is smart enough to know that every day and every year she delays the economic recovery of Europe she is thereby increasing the opportunity for the people through desperation to embrace communism and join with Russia in her desire of complete conquest of all Europe. Not one case can be cited where Russia has in good faith kept her promise to aid in bringing peace to the world. Russia wants only one kind of peace, and that is a peace dictated by Moscow. Such a peace will result in a dictatorship by Communist Russia and her satellites throughout the world.

Ever since I have been in the United States Senate, and this can be proved by the RECORD, I have from day to day called the attention of the people of this country to the fact that there is a well-organized plan by the American Communist Party, and this means Russia, to take over the Government of the United States, and to take it over from within, not from without. Not only have I pointed this out on the floor of the United States Senate, but I have pointed it out in speeches made all over the State of Texas. I did this at a time when the New Deal, with its satellites and henchmen, was driving at high speed. I did it at a time when they were using the whole political machine and all the propaganda agencies of that machine, paid for by the taxpayers of this country, to discredit me personally and to leave the impression in the minds of the Members of the United States Senate and in the minds of the citizens of Texas that O'DANIEL was a crackpot, an isolationist, a Red baiter, and generally an enemy of good government. You people down here in Texas heard me when I told you that the State Department in Washington, which actually handled our foreign affairs, was absolutely saturated from bottom to top with this communistic element. You heard me when I told you that in all other departments of the Government in Washington key places were filled by Reds who owed their first allegiance to Moscow. Well, now, let's see was O'DANIEL a crackpot back in those days when he was making those statements or was he a prophet? Was he a crackpot back in 1944 when he said he thought we should deal with Russia with a firm hand and not give her anything until we knew beyond any question of doubt what her attitude would be? Was he a dumb politician then or a statesman? Well, let's get the evidence, not based on what I say, but let's see how the picture has unfolded, what those who have inherited the New Deal have been forced to say about their own regime—a regime created by themselves. What is the record?

Well, here it is. The President of the United States, Mr. Truman, and our Secretary of State, and some of our United States Senators who have posed as great foreign-policy experts, and who have specialized in shaking their mangy locks in criticizing O'DANIEL, have awakened at long last to the fact that Uncle Joe over in Russia has traded them out of their pants. They have awakened to the fact that Joe has his agents sitting in the key spots in every department of Government in Washington. We see the President of the United States, Mr. Truman, issuing his famous order to the different departments in Washington for them to start on a still hunt to find out and drive out of public office the Communists. His order included other spies who during the war period had made a home on the pay roll of the United States Government. We saw this group admit what I charged on the stump down here in Texas while the war was in progress. We saw them admit what I had charged in the United States Senate while the war was in progress when I proclaimed that the Reds had infiltrated the departments of Government, that they were planning to take over the American Government, and to take it over from within. Then the great spy hunt started.

Well, they found about eight or nine hundred of them over in your State Department. There has been one thing rather amusing to me about this hunt for Communists in Washington and that is ever since this bunch was blasted by the statement made by J. Edgar Hoover, the head of the FBI, and ever since President Truman became thoroughly convinced that the executive departments of Government were saturated with these enemies of our Government and ordered the hunt to isolate and rid the Government of them, almost every day you see an interview in some newspaper where the head of one department of Government has discovered a lot of Reds in the other fellow's department. I never saw such a scrambling around of politicians in my life as we have had in Washington since these New Dealers went on a hunt for the Red Communists. You know, the thing that makes this hunt rather difficult to conduct is that there is so little difference in the color of the two groups, it is hard to distinguish one from the other. But, anyhow, the one point I wanted to bring out is that these master-minding New Dealers, these great foreign policy experts have now admitted that my conclusions about the matter expressed to the people of Texas at a time when it was very unpopular to tell the truth, were correct. They admit now by their own actions that we did have in our Government in key places men who loved Russia better than they love America.

Now, as a part of my report to you people here at home, I want to remind you of something else. I openly stated in public speeches in Texas that I thought the welfare of this Nation would be in jeopardy if with the then condition of the health of the President of the United States we permitted this left-wing element, which then controlled the Democratic Party, to nominate Henry Wallace as the Vice President. I did not then and I do not now mean to be critical of Mr. Wallace personally—he has a right to his views on governmental affairs—but I simply did not want to see a situation develop where a man who had the fundamental ideas, which I know Mr. Wallace had and still has about government, to be in a position where he might become the President of this Nation. There was another thing that made me fearful of Mr. Wallace and that is his constantly expressed views of just how good the government was in Russia and just how bad the Government was in this country. My friends, I think you will agree that I was the torch bearer against Mr. Wallace and the Communists at a time when it was extremely unpopular to warn the people of this State and the people of many other Southern States where I spoke of the dangers involved in that situation. But again I will say the question arises as to whether or not back in those days O'DANIEL was simply a dumb demagog or was he a statesman?

Well, if you will go up to Washington now and ask the boys who are presiding over the Democratic Party what they think of Brother

Wallace you will find that they are all far more critical of Mr. Wallace than I am, or ever was. And, friends, while we are discussing Henry Wallace, I feel sure you have noted that here of late some of our cute little Texas boys, who but a few short years ago were tripping over the Nation arm in arm with Henry, are now denouncing him from every stump, newspaper, and radio they can muster. They were Henry's pals when the New Deal was all powerful and Henry was its crown prince. But now that Henry has been reduced by us Jefferson Democrats to his real stature, these cute little New Deal page boys have clenched their fists against him and would drive him from the temple. But they cannot turn Henry out. He will be with them and they will take him and his crowd back with open arms. He will be sweet in 1948. Right now they think Senator O'DANIEL was right.

The latest step in our foreign policy is based on the theory that if the American people and the American taxpayers will put up the money to feed Europe and to rehabilitate all the nations of Europe, the result will be that they will like us better than they like Russia and the world will be safe for democracy. Well, I want to tell you frankly that I do not believe this is so. I think the American Government is being played for a sucker and most of the evidence now indicates that we are going to take the bait. If we don't mind what we are doing, we are going to wreck our economy and impoverish America, while we rebuild Europe, and then Uncle Joe is going to take over Europe from without and the wrecked economy in America will enable the Communists to take over America from within.

I think the dumb policy which has been followed in handling our foreign affairs has created a situation where we are going to be forced to use the power and the prestige of this Government to stop the march of communism throughout Europe. But we must first purge our own Government of all Communists, fellow travelers, communistic sympathizers, and do-gooders. I want to tell you something more; I also believe wherever the American dollar goes, American control of that dollar should also go. Think about making a loan of hundreds of millions of dollars to Greece and then sending an ex-official of communistic OPA over there to determine what you are going to do with it. No matter how many dollars the American taxpayer puts up to try to save the people of the world, if these dollars are handled by socialistic, communistic planners, and do-gooders who believe in the philosophy of the planned economy and world socialism, then I tell you that democracy will not be established in Europe. I tell you furthermore that all we will be doing will be to fatten up Europe to get it ready for Uncle Joe's slaughterhouse.

I am definitely of the opinion that the foreign policy of this Nation will never be a sound policy until we eradicate from Washington and this Government the last evidence and the last vestige of the old red bureaucratic power that was built up in Washington during the war. That gang has simply got to be run out and while you are in the running-out process, it would be a mighty good idea to look over in the United States Senate, which is by the Constitution a power in ratifying treaties with foreign nations, and lift out of the Senate some of these life-termers, who during the years gone by became so accustomed to working under the brass collar of the New Deal dynasty that their ability to think intelligently has most seriously deteriorated. Again and again I have said to the people and I say it now, that what we need in Washington is new blood. What we need in Washington is a complete break-up of the political machine which has ruled this Nation for the past 15 years. And we are never going to get that until the American voters realize this necessity and vote accordingly.

Think about how foolish it is to have our Government operated by men who believe that the American people should put up fifteen or twenty billion dollars to be handed out on a silver platter to foreign nations with the only hope of reward being that possibly by this process they may be bribed not to join up with Uncle Joe's band wagon of Red Communists. Think about making that investment of the taxpayers' money in Europe and then refusing at the same time to give the American citizens 1 cent of tax relief from the war taxes which these citizens have borne now for many many years. England has had two tax reductions and is hollering for more of our money probably so she can further reduce her tax bill. I say to you that that kind of statesmanship is going to prove by experience to be just as asinine as the statesmanship of these would-be foreign-policy experts has proved to be in the years gone by.

Now as I report to you good citizens of Texas I wish I could offer you more hope for the future peace of the world than is apparent at this time. I believe firmly if the executive department of this country, including the State Department, had handled our foreign affairs as wisely and as efficiently as the generals directed, and the boys fought, the war, that world peace at least would have been assured for several more generations. However, it was but natural when every department of our National Government was infiltrated with smart Communists and their fellow travelers, all of whom were acting under the direction of and for the benefit of Red Russia, that our foreign policy would have been modified as it was modified to meet the desires of Mr. Molotov and Marshal Stalin. Now America and the American people must pay the price for these costly mistakes. We must pay the price for this ride on the Communist band wagon which we have taken along with the New Deal politicians who were willing to trade the welfare of this Nation for the votes of left-wing minorities.

Regardless of who is to blame, today we face the situation where 2 years after the end of the war the world is in chaos, the Red brigades of Russia are marching over Europe and out in the southeast Pacific. They have taken control already of the largest part of the European Continent. They are using their spies and fellow travelers and a few of our dumb politicians to entrench themselves, if possible, in this Government to the point that America may be taken over from within. If they can just get us to be dumb enough to fatten up the enemies of Europe for Uncle Joe's slaughterhouse and in the process of doing so, wreck our own economy and thereby open the way for them to march at the head of the procession of unemployed in America, they will have achieved their objective.

I am not now nor have I ever been an isolationist. I want to see America take its rightful place in the councils of the world, but I would like to see America represented at these council tables by someone who has the courage and the knowledge to protect the interest of America first, last, and all the time. It will require sound-thinking men instead of day-dreamers to save us because we have been completely traded out of our pants and Russia has won by the simple process of negotiating control of a vast sector of Europe and has our Nation almost cornered—diplomatically at least. We can do absolutely nothing until we first put our own house in order by cleaning the enemies of this Government out of every department. But this cannot be done, it will not be done, it never has been done, except as such policies are executed and carried out by able, intelligent men who by years of experience know what they are doing. This job cannot be done if our agents in Europe are to be a bunch of half-baked Socialists, world-planners, "do-gooders," and welfare experts. We need to apply some hard-headed business commonsense. It must be done by patriotic God-fearing honest men and women. It cannot be done by weak-kneed politicians who are willing to kick God out of the United Nations in order to let Stalin in. Yes, my friends, if our Nation is to survive the present crises, the people of our Nation, and especially our public servants, must return to God and the Constitution. What this Nation needs right now is a Nation-wide old-fashioned religious revival. God bless the preachers of our Nation who are conscious of the let down in religion and who are working so hard in their battle against sin and Godlessness. For such a policy I am committed unreservedly.

This is the third in a series of four radio broadcasts. Anybody desiring copies of this or all four of these broadcasts should drop me a line to 314 Federal Building, Fort Worth, Tex. I will be back on the air 1 week from tonight on WBAP and KPRC at 7:30 p. m., and on WOAI at 10:30 p. m. Tomorrow, Friday, I will visit the following towns: Floresville, Karnes City, Kenedy, Runge, Yorktown, Cuero, and Victoria for the night. Saturday, I will visit Goliad, Beeville, George West, Alice, Robstown, and Corpus for the night. Monday: Kingsville, Raymondville, Harlingen, Brownsville, and McAllen. Tuesday: Edinburg, Falfurrias, Hebbronville, and Laredo. Wednesday: Cotulla, Dilley, Carrizo Springs, Crystal City, and Uvalde: Thursday: Sabinal, Hondo, and San Antonio.

This is Senator W. LEE O'DANIEL, Democrat of Texas, wishing you all a very pleasant good night.

Conditions in England

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address regarding conditions in England, broadcast over the radio in the United States and Canada by Sir William Y. Darling, a member of the Parliament of Great Britain, and vice president of the Society of Individualists.

Mr. Darling has stated frankly some important fundamentals which he believes have contributed to the present unfortunate and pathetic situation in which the British people find themselves.

There is an old saying that few people in the world can learn anything except from experience.

Possibly if Americans could properly appreciate the calamities which have befallen the people of Great Britain, they could find a way to learn something from their experience without having to pass through a similar ordeal.

It is with this thought I express the hope that every Member of the Congress and many outside of the Congress will read these important words of Sir William Y. Darling.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

(Copy of transcription made by Sir William Y. Darling, member of British Parliament and vice president of the Society of Individualists; a Scottish businessman interested in banking, merchandising, publishing, and manufacture; introductory and concluding remarks by Hon. Samuel B. Pettengill, former Congressman from Indiana, 1930–38)

This is Sam Pettengill, former Congressman from Indiana. I am about to present to this radio audience a member of the British House of Commons. Certainly, very few questions are of more interest to us Americans today than what is going on in England, her present plight, and the conditions and the reasons which have brought it about.

Sir William Darling, a Conservative member of Parliament from Edinburgh, Scotland, is a member of the Society of Individualists, a group in England that is attempting to prevent the onrush of socialism sweeping over that great country. He is a very distinguished member of the House of Commons and, as a former Member of Congress, I have great pleasure in presenting to this audience the Honorable William Y. Darling, member of Parliament from Edinburgh, Scotland.

Sir WILLIAM Y. DARLING. I came a few weeks ago from a collectivist society, for that is what Britain is to some extent today. I came to observe and to learn. Some of the nostrums of my home country have been freely discussed, and some have been practiced in the United States here, and in Canada, and elsewhere. They are to the effect that the state can do something better for you than you can do it for yourself.

Before I go back to my country with its shilling's worth of meat a week, its declining standard of life, its business desperately entangled, please let me tell you, my friends in the United States and in Canada, that the road Great Britain is traveling is the road you should not travel. The experience is not worth while. It is a road which has led to the degradation and lowering of our human standards in which you and we believe.

How, you may ask, did this crisis in Britain arise?

I think it is fair to say that the crisis arose because the British people have fought two wars; they lost a great deal of their overseas investments; they sacrificed their industrial potential for a war potential; they were obliged to eat up their interior capital which might have been used for rehabilitation, and high taxation rules every class in the community. It has done so, I may say in parentheses, for 50 years, retarding the proper tooling of industry.

If we have fallen on difficult days—I do not say evil days, but difficult days—it has been because of no greater fault than having attempted to do more than perhaps was within our grasp. We have always tried to do big and sometimes we have failed.

Any government which came into power after this last war would have been in trouble. Our Socialist government, inheriting trouble, sought for further trouble. And they have got it.

During our election which brought the Socialist government to power, I suggested that what the country needed was a period of 2 or 3 years of rest. Our Socialists did not take that view. They added to their inherited troubles several troubles of their own making.

In place of realizing that a country is infinitely poorer after a great war, our Socialists sedulously spread the idea that we were somehow a much richer nation, and we could afford shorter hours, higher pay, and less work. Their election campaign was crowded with the most reckless and foolish promises. And enough of our people believed the promises to give the Socialist government a majority of more than 200 over all other parties in the House of Commons.

I think the Socialists have failed in these 2 years—failed in many ways. Nobody would have wanted them to fail but they have failed, and it is historically proper to mention it. They have been maladroit, they have been unlucky, and they have been illadvised. But their major fault was the fault of 2 years ago. They leapt with both hands and feet at the possibility of an American loan. They thought that with the loan they could perpetuate, or at any rate sweeten, the policies to which they were committed—nationalization of the banks, nationalization of railroads, nationalization of the haulage business, and nationalization of coal, steel, and all the essential industries.

I voted against the acceptance of the American loan. I believed that then was the time to face economic realities; that then was the time for the British people to say: "This is our decision. Whatever the Americans may want to do affecting us, we cannot afford to take a loan with all the difficulties which are inherent in such a step."

I say to you that a loan between one nation and another—and I say this with deep conviction—is almost certain to be the cause of international quarrel, certainly of international difficulties. The first of the difficulties is that the man who makes the loan on behalf of his people is not the man who receives the payment. Mr. Truman makes a loan to Mr. Attlee, but the Trumans and the Attlees are gone when the difficulty is actually faced if the loan is not repaid—as it may not be. And there are many difficulties arising in the world. Tariffs may be raised or lowered—and these are inevitable difficulties to those who have borrowed from one another. They all arouse bad feelings between one nation and another.

Now, there are alternatives. There is no use in voting against an American loan unless one has an alternative. We have had—and this seems to be forgotten—countless loans between individual citizens and private groups in our respective countries. Many have been successful; some defaulted. But the point I am making is that no international complications arise from them.

Another disadvantage of a State loan is that every taxpayer of the government making the loan—you in America—feels, quite naturally, that it is his loan. But this is what happens: The cotton exporters want their share, the tobacco people their share, the film people their share—endless claims, endless annoyances leading to misunderstandings, if not to war; but almost certainly to internal disquietudes which no nation should willingly have imposed upon them.

Now let me come to the point which I think most concerns all of us. It is what some of you in America refer to as "big government." I believe that the organization of communities on a large scale is the greatest danger with which the world is faced.

Government is a piece of machinery. It was invented by men for their convenience; and I am sorry to say politicians, sometimes, and I am a politician, exploit it for their own good. By and large, the record of government, throughout the world, is not good.

What can governments do that we as individuals cannot do? Let me give you an example. I look at government as having one supreme unique function—a function which private enterprise cannot handle; it is the defense of the country. National defense is the supreme duty of government. That, surely, will be conceded. Yet most of you have lived through two wars; some, three. In no war has your country, or my country, or indeed any country, been ready to start, Government has had to rely upon private persons to fill its ranks, develop its army, make its munitions, and its fighting machines.

Why should we imagine then that government, which fails to be ready for its supreme and unique task, should be entrusted with tasks which private citizens have done better for themselves?

Still there is a widespread belief among those who are Socialists, a deep-rooted conviction that, somehow, government can do things better than the people can do it for themselves. So our Socialist government in Britain is attempting it. I can tell you the result very simply by quoting the remark made by one of my electors. She is a woman, and this is what she said to me:

"This nationalization," she said, "is a very queer thing. The more you own, it seems the less you have. We own now the Bank of England in Britain, but I am no better off. We own the coal mines, and I have less coal. We own the railroads, but I can't get a train for my holiday. This is socialism. The more we own, apparently, the less we get."

All that my woman constituent said is true—and more. We discover that we are approaching a real dictatorship, because the British citizens have no choice but to accept what is offered to them; and even then, they have less of the satisfactions which they formerly enjoyed. Under nationalization we have less coal than even during the war. We have a worse and more costly railway service. We have restrictions on power to such an extent that in my own business I am invited to work a night shift permanently in order to lighten the load upon other factories working day shifts.

All of these things, in my opinion, have arisen out of the application of this theory that ownership by the State, or by the community, carries with it some unique advantages to the individual. One of the complications arises from the Socialists' failure to realize in my country that Britain is a handicraft country. It is not tooled for the economies of mass production, and therefore it cannot produce on a competitive basis what machine-using communities can produce working only 5 days a week. The Socialists' introduction of the 5-day week has been, quite frankly, disastrous. It may turn out better in the future but it is disastrous today. Production has fallen substantially in almost every industry to which it has been applied.

Our housing is another example of governmental maladroitness. No houses have been built except under the direction of the government. There are hundreds, and probably more than hundreds of houses in the United Kingdom which stand roofless because the planning went wrong. And I would like to know if it is fallacy for I have submitted it to hundreds or thousands of persons without being challenged.

All that I have told you makes a sad picture. It is no pleasure for me to describe it. These evils are due to the fact that for over half a century now, in the United Kingdom and elsewhere, men of affairs, businessmen with experience and "the know-how" have been decried until they have been distrusted. Politicians—and I am speaking again as a politician—do not seem to realize that when they deal in promises, if these promises are to be fulfilled, they must be fulfilled not by the politicians but by the citizens themselves. The politicians go on telling the people that businessmen cannot be trusted to handle the affairs of the Nation. That policy has become a god which bureaucrats ignorantly worship.

They speak of social security. Where does does it come from? Not from the government. It comes from taxing the people. So does the public housing which politicians like to promise.

I have said in the House of Commons, I have said before chambers of commerce, that

the businessman is actually the choice of the people. He cannot exist unless the people vote for him every day—by purchasing from him what it is he has to sell every day. I submit that no man can be even moderately well off in business except by the economic vote of his constituents—his customers. They choose him. If they choose him in large numbers they make him a success. If they pass him by or choose him in small numbers, he is a failure.

Yet businessmen, almost everywhere, have been frightened off from public service because the politicians tell them they are not vote-getters. But men of affairs have defaulted in their duty—their duty to themselves, to their country, to civilization—by failing to defend their system of private enterprise and by not taking their part in community and in national affairs.

I have said to groups of men of affairs whom I have had the privilege of addressing in the United States and in Canada, that Britain's difficulties are largely due to the failure of men who lead in the fields of production but shrank from their responsibilities in politics. They left that field to the theorists—and the Socialists, in Britain, moved in.

I want to put it to you that the people who supply you with the goods and services which you freely choose or freely reject—these are the persons who are warranted and entitled to manage your affairs.

May you, on this side of the Atlantic, profit by our mistakes and our blunders, and we have made many. For us it may be a long, rough road back again, but Britain, that ancient civilization, will come back. In that faith let me thank you and say Godspeed.

Joe Gets His Lumps Again

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a bit of pertinent and first-class literature entitled "Joe Gets His Lumps Again," written by Mr. Syd J. Hughes, vice president, Industrial Bank of Commerce, New York:

The process has been laborious, the conclusions circuitously and ponderously arrived at, but "with truth and virtue inevitably triumphant," we now know who was responsible for the great depression of the early thirties—and the same culprit is driving us inexorably to the great depression to come.

Who is he? None other than "the little guy"—the common average "Joe."

And how does the Joe wield this tremendous, unbridled power of holocaust proportions?

Why, by "buying for a dollar down."

And who says so? Why, a number of fad-regulators, and through them into the propaganda mills and out across the Nation through the usual channels.

Perhaps this new thorn of guilt pressed upon the brows of the country's Joes by their intellectual superiors will come as a revelation to everybody but the Joe himself.

After all, who always filters out of the small end of the prodigious funnel of official and professorial siftings and investigations and clinical diagnoses, but Joe?

After the engulfing tide of graphs and charts and pie-plate visuals has swept its mountainous seas of verbiage and digits across the entire global complexities of astronomical economics, there is good, old, ever-present Joe, lying gasping on the beach, naked and shamefully exposed in all of his conspiratorial guilt and evil.

He's the Joe who buys on the installment plan maybe a washing machine for his luxury-soaked wife and kids, or even maybe an electric ice box, or a vacuum cleaner—or, may providence weep over his most abysmal iniquity, a vintage jalopy.

The death warrant passed by the last Congress on regulation W, one of the few remaining wartime emergency controls and reluctantly signed by President Truman, who couldn't veto everything without spurring Gromyko on to still greater heights, was the signal for blowing the whistle on Joe.

Regulation W was a 1941 emergency Presidential decree authorized under the 1917 Trading With the Enemy Act—a curious bit of skulduggery on Joe's part because if he kept up his "dollar down" practices he might be committing treason or something equally horrendous. At the very least he was subject to $10,000 fine and 10 years in jail because regulation W indelicately and bluntly said so.

The purposes or designs of regulation W were unheard or unthought of when the Trading With the Enemy Act was passed in 1917. But by 1941 it was decided that unless Joe bought his merchandise on terms and conditions to Government specifications, he was running the risk of doing just that.

No matter that during the war years Joe could buy very little anyway, even if he had the cash to spend or the credit to employ. What was being manufactured at all, was either rationed or subject to rigid priorities and controls.

But by an evolution of Washington events that had a high aroma of questionable motives (another subject in itself) Joe was told how much he "had to pay down" and "how quick he had to pay it"—he was, as a high Government official described him, "one of those dollar down guys." If some Joes had lush war wages to buy in the "cash" markets, there were a few gadgets to be had. If he was one of the millions of white-collar Joes and plain-working Joes unblessed by swollen wage envelopes, he had to scuffle the best he could and drag a pointless regulation W after him.

Naturally it took a lot of expensive "experts" on the Government pay roll to keep Joe from losing the war, either by his deliberate and calculated machinations of, "buying for a dollar down" or through his congenital and incurable frailties that were being regulated and regimented in so many other phases of his corruption or adolescent ignorance.

Most of the professional payrollers of "enforcement" have heaved and puffed mightily in defense of their meal ticket since regulation W began to wobble.

With the passage of its congressional repeal effective November 1 of this year (1947), their anguish echoed clear to the White House, climaxed with the President's signing "with reluctance" message and reverberating off many a paternalistic editorial typewriter.

It is a curious fact that probably most of those so spiritually and sympathetically concerned with Joe's "dollar down" antics have availed themselves of the same device at sometime or another, but just as they would curtail or deny Joe many of his other inalienable rights of trade or contract "for his own good," they now would again reserve for themselves the privileges and prerogatives of superiority in this particular respect.

Of course, nothing of consequence or in influential quantities is ever bought "for a dollar down." That's just sort of a figure of speech.

The implication in the use of the term "dollar down" is the supposedly sinister plot to enslave the American millions and to destroy both individually and collectively their connubial bliss—as well as the Nation's economy.

But never mind that Joe's recourse to mass consumer credit (postgraduate euphemism for dollar down) created and sustained mass production and mass distribution to the envy of the rest of the world.

Ignore the postwar national and international maladjustments of 1919 through 1922; forget the opium-like halucinations of fry cooks on the way to fabulous fortunes in the roaring twenties, their racing forms moldering beside the fresh, crisp piles of ticker tape.

Think nothing of the billions upon billions wiped out in that black Friday of October 1929 when more wealth went down the stock-market drain in any given 4 minutes than all of Joe's dollar-downs since the day he began indulging in the habit.

Of what significance were the crashing Insull empires, the collapse of finance and industry and agriculture, the millions of jobless, the soup kitchens, the apple sellers, the dust bowls, the frenzied devaluation of foreign investments and the repudiation of foreign loans?

Who were Hitler and Mussolini and Tojo and the Stalin of 1939? What did they ever do? What of that new national debt of $265,000,000,000, the current Federal budget of $37,000,000,000, much of it earmarked to keep democracy afloat wherever a bailing or caulking job will help.

All so much gibberish. All fantasy. All naive and irrelevant. Joe did it. Joe with his "dollar down." And after November 1 Joe is going to do it again.

"Joe, some of them are on to you." They want high on the agenda of the next Congress that $10,000 fine and 10 years in jail restored as a penalty for your wanton venality.

Joe, there are some other statistics which say that during two wars and two depressions your "dollar down" business came through less sullied than any other form of commerce or finance. And through its priming of mass production and mass consumption, mass credit was to an important degree responsible for our unequaled possession of comforts and conveniences and an all around better standard of living.

But don't let them kid you. You're guilty, Joe. Stand up like you always do and take your lumps.

Noble Foundation

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am proud to advise the membership of the House of Representatives of the existence of an institution in my congressional district, the activities of which may well be emulated throughout the United States. I refer to the Samuel Roberts Noble Foundation established by the Honorable Lloyd Noble of Ardmore, Okla. This foundation which was financed by private capital is dedicated to the restoration of fertility to depleted and arid soil. The foundation has a fine laboratory where, under the supervision of Col. Francis J. Wilson, a staff of experts delve into secrets of the land upon which we all depend for survival. The foundation is dedicated not only to basic

research but to the promulgation of knowledge of soil building. Interest in soil conservation is stimulated among the farmers of southern counties of Oklahoma through annual awards to participants. Recently, numerous cash prizes were given for pasture improvement, garden contests, upland crops, and bottom land crops. Awards were also given to young people participating in a junior division.

Speaking at the first annual award presentation, Mr. Noble said:

If by our efforts with this foundation, we can bring the knowledge and opportunity to even a few men and women by which the depleted fertility of our soil can be redeemed, if we can do a little part in spreading the information that is needed to destroy forever fear from the hearts of a few, our efforts will not have been in vain.

The foundation cooperates with, but performs a function that cannot be performed by State and Federal soil-conservation agencies. Two recent editorials in the Daily Ardmoreite offer further evidence of the nature and importance of the work of the Noble Foundation. An editorial dated November 25, 1947, reads as follows:

IMPORTANT EVENT

On Wednesday, the Noble Foundation will award prizes to the farmers of Love and Carter counties who are winners in the several competitions that foundation is sponsoring.

Hundreds of farmers are to be present. The event is one of major significance to the community as a whole. The Noble Foundation, almost unique in its field, is engaged in the furtherance of one of the State's most vital programs and what it is attempting to do is of importance to every citizen, regardless of his walk in life or of his occupation.

The Noble Foundation is seeking to improve the fertility of the soil through restoration of those elements that wasteful and improper methods have removed from it. It is seeking to encourage the farmers to follow modernized and scientific methods to bring about maximum yield from crops and the most food for all of us.

It is entirely proper that all citizens be at the civic auditorium Wednesday afternoon to join with the officials of the foundation and the representatives of the State agricultural college in honoring those men who are pursuing the approved course the foundation has charted.

It is an event of importance because it marks a new and progressive approach to the problem of conservation and rehabilitation.

An editorial dated December 1, 1947, follows:

IMPORTANT EVENT

The Noble Foundation presentation event of last week should have been underlined even more vigorously than it was in the calendar of Ardmore and southern Oklahoma activities.

Certainly the event was successful—successful in the attendance it attracted; extremely successful in the large number of farmers and landowners who were on hand and expressed their interest and approval of the program the foundation is pursuing.

Anyone who gives the future any thought at all is well aware of the tremendous importance of the work the foundation is endeavoring to advance.

Nothing is so important to the Nation as the advancement of agriculture. The first step in this advancement must be the restoration of fertility to depleted and arid soil. The second step is the wider adoption of those policies and principles which insure the preservation of acres still productive and still fertile.

The Noble Foundation is attempting in the most logical and effective manner to demonstrate to the landowners and farmers the proof that such a program is well worth the money and work it required.

Western Europe Isn't Holding Up Its End of Marshall Plan

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit a copy of an article by Ferdinand Kuhn, Jr., which appeared in the Washington Post, of Sunday, December 7, 1947, as follows, to wit:

WESTERN EUROPE ISN'T HOLDING UP ITS END OF MARSHALL PLAN

(By Ferdinand Kuhn, Jr.)

Western Europe has failed to follow up its first response to Secretary Marshall's historic offer at Harvard last June.

The Europeans could have started many cooperative recovery projects by now, regardless of Communist pressure and dollar shortages. Instead, they have been marking time, waiting to see what Congress would do.

Six months have gone by—six months this very week end—since the Secretary offered new American help on condition that a number, if not all European nations first draw up a program of helping one another.

Sixteen non-Soviet nations promptly took the first step by drafting such a program. Their September report looked like a landmark. It blueprinted a cooperative effort that discarded old concepts, cut across national boundaries, and gave hope of a better Europe.

It was an inventory of collective needs, resources, and capabilities for the next 4 years. Its foresight was so remarkable that its main conclusions have stood up under weeks of analysis on this side of the ocean.

It justified Secretary Marshall's description of the program last Thursday as the great cooperative movement that is being launched for the economic recovery of Europe.

PROMISES MADE

The Europeans made solemn and sweeping pledges. They promised to increase their production, to modernize their equipment and transport, to set their financial houses in order. They promised to reduce trade barriers, and to remove the barriers to the free movement of peoples within frontier-ridden Europe.

Above all, they promised to organize together the means by which common resources can be developed in partnership. This, perhaps, was the most thrilling promise of all, for it suggested that 16 individualistic nations, separated by language and historic rivalries, now recognized their common tradition and their common destiny.

They saw the truth of what John Foster Dulles told the Senate Foreign Relations Committee last month: that the recovery of Europe must be harnessed to a great idea—the idea of European cooperation—if American help was not to be utterly valueless.

The Paris report, in short, contained the glimmerings of a great idea. But in the intervening months there has been so little cooperative European effort that one must use a magnifying glass on the record to find examples of it.

The brave, imaginative things that have been done in Europe since the Paris conference—and there have been many—have been done mostly by individual countries, as if the collective concept of Paris had never been born.

BRITISH RESURGENCE

Britain, struck by a financial crisis in August, has faced up to its desperate situation at last: pushing coal output above 4,000,000 tons for four successive weeks, driving its export trades beyond their prewar levels, postponing expensive housing and road-building projects, and cutting down consumption to such an extent that its people regarded an extra Christmas ration of 10 cents worth of meat almost as a gift from Heaven.

Italy, standing up courageously to Communist sabotage, has succeeded in reducing prices and has devalued the lira down to its true worth in the hope of stamping out the black market. France, the slowest of all in coping with her internal ills, has shown determination and courage in fighting the Communist-inspired strikes aimed at paralyzing her.

But where is the cooperative effort? Where are the signs that the Europeans have understood the meaning of what they agreed to at Paris? If there are examples, they are pathetically few.

One of them, of course, is the pioneer work of Belgium, the Netherlands, and Luxembourg in forming a genuine economic union. This was started long before the Paris Conference, and it cannot possibly be completed until long after the Marshall Plan is under way.

ITALIAN INSPIRATION

Another example has come from Italy, an imaginative one. The Italians need coal from Britain instead of having to spend dollars for American coal at fantastic prices because of shipping costs. The British miners need incentive to produce more coal.

So last month the Italians offered free 12-day vacations to 11,000 British miners and their wives for every 500,000 tons of British coal allotted to Italy. Their expenses in Italy would be paid by the official Italian tourist agency out of the $3 a ton saving.

Moreover, the Italians, with a surplus of labor, offered to send the British 5,000 miners from Sicily and Sardinia.

Whoever thought of this scheme understood the "great idea" that lay behind Secretary Marshall's original offer and Europe's original response.

Still another idea, this one of Franco-Italian parentage, was good in intention but poor in execution. It was a scheme to send 200,000 Italian workers to France. The French have a labor shortage; the Italians a surplus.

But the planners did not take account of the workers' wives and children, or of the stubborn Italian instinct to live in Italian communities in foreign lands. Nor did the French allow for the easily foreseeable desire of the Italians to remit their earnings (in francs) to their relatives, who would want to spend them in lire. So many of the imported workers soon streamed back across the Alps to Italy.

UN GROUP WORKING

International organizations are doing something to develop cooperative projects in Europe, but their work has not progressed far beyond the study stage. The UN Economic Commission for Europe is studying the exchange of labor across European boundaries, and a committee of the 16-nation Paris conference will get to work on this problem

when the UN group has finished surveying the field.

The European Central Inland Transport Organization, an inter-Allied group which has done effective work since the war, has already agreed on the standardization of freight cars. This was one of the objectives of the 16-nation Paris conference, but it will be many months before Europe is ready to produce freight cars of the new dimensions.

The British have pointed the way to another cooperative effort by a recent conference of their African colonial governors, to discuss the development of food and raw material resuorces. If this conference were broadened to include the governors of the French, Belgian, and Portuguese colonies in Africa, it could produce important long-range plans to free Europe from its dependence on American supplies.

Otherwise the record of cooperative effort has been a dreary and negative one. One official will explain, "We are learning that these things are difficult and take time"; another, asked why so little has been done, will answer, "We have to wait to see how the Marshall plan develops in Congress."

But why wait for the Marshall plan? If Europe combined imagination with determination, many projects of collective self-help could be started without a single American dollar. A good example is scrap steel.

LITTERED WITH IT

Originally the Europeans asked the United States for 1,500,000 tons of scrap steel over the next 4 years. Yet scrap is so scarce in this country that it is almost a precious metal. The Harriman committee reported that it was the tightest of all bottlenecks in American steel production, and recommended that not a ton be exported.

Yet the Continent is strewn with twisted steel. A superficial look at the city of Essen alone suggests that there is enough scrap there to supply the entire European steel industry. Certainly there are many Essens in the total of war-wrecked buildings in western Europe.

Why not set up a committee of the 16 European nations to make an inventory of scrap resources and devise means of getting it out to the steel mills? It will be useless, in any case, to wait for the Marshall plan; for if one thing is sure about the program it is that the United States will not export the scrap that Europe wants.

Six months after the Harvard speech, there is talk in Europe of reconvening the 16 nations. But again timid officials say, "We must wait until we see more clearly what Congress will do." If these counsels prevail, the 16 nations will not come together until early spring. Precious months will have been lost.

HOBBLED BY FEAR

The 16 nations do not even have a continuing organization, apart from a few study committees and a small staff. Fear of Soviet displeasure is so strong that the Scandinavians for example, and the Swiss for neutrality reasons, resist setting up any permanent or semipermanent organizations. The British, too, have been holding back, perhaps because they still hope for some kind of special treatment and fear taking their place in a 16-nation queue.

But can western Europe go on waiting for Congress and still convince Congress that it is doing everything possible for its own salvation?

The European recovery program will mean high prices, taxes, and shortages in the United States. It will have to overcome strenuous resistance in Congress.

The best way to overcome it is for western Europe to give continuing evidence of self-help.

The Role of Education in Our Democracy

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. SPARKMAN. Mr. President, on August 8, 1947, Dr. Ralph E. Adams, acting president of the University of Alabama, delivered an address entitled "The Role of Education in Our Democracy," before the Alabama Association of Circuit Judges. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF EDUCATION IN OUR DEMOCRACY

(By Ralph E. Adams, acting president, University of Alabama)

Although it has been suggested to me that I should not talk about the law (which I am not qualified to do and certainly would not dare do anyway in the presence of this distinguished group of jurists) and that I should not talk about the University (which is a subject always close to my heart and one on which I do sometimes expound) it has seemed to me appropriate that my remarks should have some relationship to the work in which I am engaged. I have reasoned to myself that, had your program chairman desired a philosophical address, he would have engaged a philosopher; had he wanted a humorous talk, he would have invited a wit; had he expected a discussion of economic or social or political questions, he would have presented to you a specialist in one of those fields. Since he has, for reasons best known to himself, seen fit to inflict me upon you, he must be prepared to accept responsibility for my choice of topic, subject only to the two limitations which he imposed upon me and which I have already mentioned.

In exercising, therefore, the latitude granted me, and because I think that the shoemaker should stick to his last, I have chosen to talk briefly today concerning the role which education has played and must continue to play in the furtherance of our democracy as our forefathers knew it, as we have known it, and as we would have our children know it. That this role has been an important one there will, I think, be no disagreement.

It has been said that "Education is dependent upon democracy, and democracy is dependent upon education." Democracy and education cannot stand still; in order to live they must move forward together. It should be our purpose to promote for our youth the type of education that will give intelligent direction to the impelling forces of democracy and which will make increasing use of their intellect and will expand their opportunities for full expression of their inherent creative talents.

It is no trite expression to say that our democracy and our system of education face grave challenges and tremendous responsibilities in these difficult and demanding times. They have been challenged before; they will be challenged again. Let us examine briefly the record of the past 6 years, using the war as an undesirable but an effective yardstick, in order that we may judge how well our democracy and our educational system respond to challenge.

Our schools and colleges laid the foundations upon which our citizens' army was built. Our young soldiers met and stood the sternest tests in the crucibles of war in every corner of the globe. Who can forget that the principal factor on which the Axis based its hopes for victory was a flabby soldier, schooled to weakness by a soft democracy? To be sure, our soldier was not like the puppet Nazi nor the Jap fanatic. He was, on the contrary, an individualist who abhored regimentation. But he had the capacity to do his job effectively, in spite of any inherent resentment that he may have felt at the abridgement of his personal liberties which the essential discipline of the Army imposed. Above all, he was intelligent and resourceful.

This product of our educational system manned our research laboratories, piloted our bombers, labored in our shops and on our farms, and made us the greatest military power in the world. His teacher, the myopic professor scorned by the practical world, became the most feared soldier of them all—the brains behind the atomic bomb.

The war did something to our soldier which we must now take into account in our educational planning. War not only made him more realistic and more matter of fact—it also strengthened his natural idealism. Having witnessed so much denial of human freedom, he has a better conception of the value of our constitutional freedoms. He has an awakened appreciation of the principle that strong men gain added strength through helping others; that making allowances for shortcomings is a valid part of living; that elements of cowardice or dishonesty or jealousy are problems for communities as well as for individuals to attack and to conquer. He has come back to us with an impelling passion to make this a better world in which to live.

He believes that under the threat of destruction through atomic fission the key to world peace lies in the development of better human relationships; as Einstein has expressed it, that "Our future lies not in the atom but in the human heart."

In our effort to make and to keep our educational system worthy of our democracy, therefore, one of our principal responsibilities, it seems to me, is to develop within our young people an abiding sense of distinction between good and evil—a sense of beauty as contrasted with ugliness—a sense of good will, of tolerance, and of fair play.

But we must do more. Education for the finer things of life must be synthesized with education for public responsibility and for economic security. We must not succumb to the illusion that cultural education and practical or technical or utilitarian education are mutually exclusive. We need not have—we should not have—on the one hand, the scientist who lacks an appreciation of the social implications of the products of his scientific knowledge; on the other hand, the man skilled in the multiple phases of social, cultural, economic, or political life but with no appreciation of the scientific forces which so powerfully affect that life.

Education for democracy must mean far more than the acquisition of a number of disconnected fragments of information. An intelligent attitude of mind, one of the essentials of democracy, will not necessarily follow the mere absorption of facts, which in itself is likely to lead to the accumulation of an excess of inactive unsystematized information, lacking in purpose. A knowledge of facts without the ability to use these facts is of questionable value. We cannot have understanding without knowledge, nor can we expect intelligent action without the proper use of such knowledge as we have acquired.

Some of our university graduates, I fear, finish their courses without ever having given even cursory consideration to the great problems of politics and government. The con-

tinuance of our democracy is dependent upon the proper handling of the equally difficult and equally important scientific, industrial, economic, political, and sociological problems, some of which are so often neglected in our individual thinking.

The college student should seek to gain from his course a conception of the unity of knowledge and of the interrelationship of its parts. The teacher should make a sustained effort to show his students the relationship of his particular subject matter to knowledge and to life as a whole.

You may ask: "What has all of this to do with us? Why talk to this group about these matters?"

My response to such questions would be that as representative citizens of our State and Nation, and as shareholders in our democracy and in our educational system, it should be your business to interest yourselves in these matters and we should all work together toward a solution of our problems as they arise.

You men in your daily work are brought into close contact with the maladjusted element of our populace. No less an authority than the Surgeon General of the Army has estimated that as many as 14,000,000 of our people are seriously maladjusted. You see the fruits of this maladjustment daily, and you are in excellent position to assess the economic costs arising therefrom, as well as to evaluate the benefits to society which would accrue from the rehabilitation of this large group.

How better can we hope to accomplish this rehabilitation—and to have our people learn to adjust themselves properly to our society—than through education?

We have many common problems and a common goal. Together we can solve those problems and attain that goal. Our chief purpose must be to know the truth, and by properly disciplining the search therefor, to build into the lives of our young people character, ability, and understanding. Through this means we can translate facts into a course of action which will lead to a desirable end.

My Faith

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "My Faith," written by Robert G. Sproul, 56-year-old dynamic president of the University of California, which has the largest enrollment of any university in the world. Dr. Sproul, who is the recipient of 11 honorary doctorates and degrees, and numerous other international honors, has given to the American Weekly this statement of his public and private faith, his religion, and the ideals he believes are needed to build a peaceful and aspiring world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MY FAITH

(By Robert G. Sproul)

According to the dictionary the creed of a church to which a man belongs is an expression of the faith which he holds.

One might say, therefore, that my faith is the creed of the Presbyterian Church, for I have been affiliated with that denomination all of my life, and even though circumstances prevent me from attending services as often as I would like, it continues to hold my allegiance.

But, there is, I believe, more to my faith than this would imply.

As president of a university which attracts students and scholars from all parts of the world, and representing most, if not all, of the major religions of mankind, it has been my privilege to discuss creeds and faiths with many people.

A man's creed determines the architecture of his faith. It supplies him with the instrumentalities, the words, the codes, and the patterns of thought which, like anchors to windward, hold him steady in time of storm.

But faith itself is a thing of life and spirit which neither house nor trellis can confine. It lives in the hearts of men of a thousand different creeds, and joyously dwells with men who know no creed at all.

In these reflections there is, of course, nothing new, for in this matter of personal faith much foolishness and much wisdom have been both written and spoken. Nevertheless, it is necessary that I, too, repeat, not only to define my own faith, but also to point the way toward that world understanding through faith for which today so many millions of people yearn.

The common ground on which peoples of the whole world may meet and work together will never come through creeds; for their number is legion, and their differences as night and day. Rather, that common ground is the faith, urgent, ineradicable, which they all share, in the essential significance and eventual goal of man's existence on earth.

It has taken me many years to set straight in my own mind wherein lies the difference between the creed of my church and my personal faith. My creed is important to my faith, but my faith is greater than my creed.

Only through this conclusion can I speak with mutual understanding to men and women of churches other than my own, and to men and women of no church affiliation. In outward semblance we may differ, but in our hearts there is no difference. We have the same hopes and dreams, and we hold the same strong conviction that faith is the one sure foundation, the rock of ages, on which men must build.

Relatively speaking, religion today does not mean so much to mankind as it did only a few generations ago. In this country and in many others, the percentage of people who maintain membership in organized churches is smaller than it used to be. Moreover, the percentage of those nominally affiliated with churches who attend regularly is also smaller.

There is here a twofold danger. Without the guidance that a church and a creed provide, many people will never find a personal faith. The churches are our spiritual schools, and few persons have the initiative or the ability to educate themselves without a school. But even more serious is the danger that those who avoid churches and creeds will not even seek a personal faith because they believe that all three are one and the same, and therefore shun them all.

This danger is particularly grave in the case of young people. Left to drift without protection and without support they may be killed by frost, spiritually speaking; or growing along the ground instead of upward, they will bury their fruit in the mud.

There are those who are optimistic about this situation. A pastor of my acquaintance, not of my own church, believes that the relative decline of interest in churches does not represent a decline in faith. He believes that it is merely an adjustment to changing conditions.

He points out that a few generations ago people looked forward to Sunday, not alone as an opportunity to commune with God, but also as an opportunity to commune with their friends and neighbors. Most of them lived on farms, and all during the week communed with God through nature; they welcomed the opportunity to meet their fellowmen. But today, most people live in cities, work indoors, and rub elbows with people all week.

As a consequence, my friend reasons, they naturally desire a different approach to God on Sunday. They prefer to commune with nature in their gardens, on a golf course, or on the highway. Moreover, my friend adds, Sunday morning services conflict with the fact that men need sleep to recuperate from the nervous strain of modern living. Perhaps my friend is right. I hope he is.

But I am not at all sure that the majority of men will fashion a personal faith without guidance, or keep it strong without some community of expression. I know that we cannot do without schools in the mundane education of men. I know that men cannot develop strength of spirit, even school spirit, unless they join together in expressing it.

If I may review then, my faith is Christian, but it recognizes a kinship with the faiths of all other peoples, regardless of how my creed and theirs may differ.

My faith requires only one absolute conviction, namely, that there is a significance to man's existence on earth, a goal toward which he must strive, and an inspired guidance within each individual which, if shared and acted on in concert, will help all the way. And that part of my creed which sets a code of Christ-like behavior toward my fellowmen is the core of my faith, however poorly I may express that faith in words.

China's Job Begins at Home

EXTENSION OF REMARKS

OF

HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, December 8, 1947

Mr. ARNOLD. Mr. Speaker, the December 1947 issue of Nation's Business, just received, contains a timely article with regard to the subject of aid to China. The article is by Herbert M. Bratter, entitled "China's Job Begins at Home." Under leave to extend my remarks, I include the article in its entirety:

CHINA'S JOB BEGINS AT HOME

(By Herbert M. Bratter)

Not long ago an old China hand referring to reports he had read that more American money could be expected for the Chinese wrote me from abroad:

"Should this be confirmed, I do hope your people will be wise enough, after past experience, to insist on American control of the use of the money."

Our past experience has not been good.

Despite heartbreaking Burma Road graft and hijacking, we put $1,500,000,000 worth of lend-lease supplies into China. When we got through we found we owed China 150,000,000 American dollars for goods and services she had provided at an extortionate rate of exchange. And we paid.

In the course of the war, Congress lent China an additional $500,000,000, interest-free. This "loan" accomplished none of its stated purposes. Nearly half of it was used by China's Government largely for sales of American gold to the Chinese public at bargain prices, giving highly placed individuals the opportunity to make fortunes.

Our $800,000,000 to $900,000,000 postwar surplus property agreement with China provided that China should utilize to the greatest extent possible established commercial distribution channels for the resale of such property and that United States distributors established in China should have an equal opportunity to bid for and obtain such property. This agreement has been ignored. So we find the Chinese reaping rich profits on United States surplus property they sell to American businessmen.

The history of UNRRA, too, is replete with wholesale instances of misuse of our money for private Chinese gain.

Chiang Kai-shek himself says:

"Honesty is regarded as pedantic and self-respect as backward * * * trickery has spread from business circles to the community as a whole. Officials and gentry, in seeking gratification of their selfish purposes, resort to manipulation and all other ill practices in total disregard of the country as well as of the people."

On another occasion the United Press reported from Nanking:

"In a bitter 40-minute speech, Chiang Kai-shek berated Kuomintang leaders for low morale and corruption within the party. * * * Chiang was quoted as saying that, after 20 years of his leadership, he saw only chaos all around him. Then he added, 'I have failed Sun Yat-sen (founder of the Chinese Republic)'."

Lt. Gen. Albert A. Wedemeyer headed a fact-finding mission to China this past summer. His report, which has been turned over to Secretary of State Marshall for evaluation, has been called one of the best-kept Government secrets in years. The talk in Washington is that it will probably be kept secret.

On the eve of General Wedemeyer's return to America, he made a farewell statement to the Chinese in which he criticized the inefficiency and corruption in their government.

MINGLED POLITICS AND BUSINESS

It has long been recognized in the United States that high public office and close ties with business do not mix for the public good. No Cabinet officer, for instance, could possibly retain the presidency or board membership of a private corporation in this country.

In China, however, such matters are of personal concern. Thus we find Madame Chiang Kai-shek's brothers and sisters and their friends and relatives heading a "cast of influential characters" who have official connections in government and business circles.

American-educated, Madame Chiang is known to millions here through her wartime visits to the White House and the opportunity given her to appeal personally to a joint session of Congress for aid. Her maiden name was Soong. Members of her immediate family are high in Nanking's hierarchy.

INFLUENTIAL TRADING COMPANIES

To understand the situation in China, it is necessary to know something about the interlocking relationships of private corporations and government.

Private Chinese trading companies, most of them formed since the war, include:

Fu Chung Corp. (China) Ltd., and its American affiliate;

Yangtze Development Corp., also with a New York trading affiliate; and

Goldmont Corp.

These are private "family companies," controlled by the Soongs and the Kungs. They act as representatives in China of many American export companies.

These new Chinese corporations have already acquired many agencies for long-established American products.

The Chinese trading corporations have the inside track, particularly the Fu Chung Corp.

Chairman of the Fu Chung Corp. is H. H. Kung.

Managing director of the Fu Chung Corp. is T. L. Soong.

A director of the Fu Chung Corp. is Hsi Te-mou, T. L. Soong's father-in-law.

Vice president of the Fu Chung Corp. is Stanley Shen. Stanley Shen is connected by family ties to Capt. Moon P. Chin, who operates the government air line in China—the Central Air Transport Corp.

Capt. Moon Chin is a brother-in-law of the present Mme. Tsuyee Pei. And Tsuyee Pei is Stanley Shen's father-in-law.

The Fu Chung Corp., the private concern, is purchasing agent for the Government's Central Air Transport Corp.

In 1946, when Uncle Sam sold surplus aircraft to CATC, the Fu Chung Corp. guaranteed payment. Since the Fu Chung Corp. represented the government company, its vice president, Stanley Shen, had a diplomatic passport when he came to the United States to look for agencies for American products. His fellow business directors, H. H. Kung and T. L. Soong, and other members of the two families, also travel on diplomatic passports.

T. V. Soong, a director of the China Development Finance Corp., is Mme. Chiang Kai-shek's brother. Former premier of China, he has also been minister of finance, minister of foreign affairs, chairman of the supreme economic council, and acting chairman of the four Government banks. He has recently been made governor of Kwangtung Province, one of the richest in China.

INSIDERS ARE FAVORED

According to the Nanking Central Daily News, firms controlled by high officials obtained—at the officially controlled and, therefore, extremely cheap rate—nearly $3,350,000 in precious United States dollars. Part of this money they sold to other Chinese businessmen at the much higher open-market rate, reflecting the rampant inflation, and the remainder they used to import items banned by China's import control regulations.

In the administration of the import regulations, the insiders are favored. In allotting quotas, for instance, the Chinese import control board calls for data on the applicant's prewar volume of business but, in special cases, has ignored that period and has taken 1946 as the "previously representative period."

By delaying action on applications for import permits and foreign-exchange licenses, Chinese authorities have made it difficult for American firms to bring goods into China. But Chinese firms with dollar balances have imported freely, sometimes through official agencies. While authorized tire representatives, for example, were having trouble getting permission to import tires, Chinese Government agencies brought in 3,400 tires on a single ship. This is state trading.

Likewise steel, which Americans could not get permission to bring into China, came in for the account of the Chinese Government's Universal Trading Corp.

One American firm which had sold a large amount of piling reported that its Chinese customers could not get import permits; yet, at that very moment, the Chinese Supply Commission in Washington was actively soliciting piling. The Commission and the official Universal Trading Corp. have steadily imported huge quantities of restricted and even forbidden articles—consigned to Chinese firms—while American firms have waited in vain for approval of their import licenses. The more fortunate have thus imported autos, refrigerators, radios, phonographs, paper, tires, metal products, pharmaceuticals, and chemicals.

On the surplus property deal, China got the boodle, the American taxpayer the bill.

The first batch of ships we disposed of to China—valued for disposal purposes at $3,000,000—was handed over without our even getting an official receipt.

Later, 18 tankers were turned over, the first four being delivered before the contract was signed. Then, while the Chinese held the four tankers as a pawn, our officials tried to get them to sign a contract for all 18—and finally succeeded only after writing down their value by almost $200,000 each. That's only part of the story:

Before the sale of these tankers to China, the Texas Co. (China) Ltd., had bid $350,000 each for two of them. After we sold the 18 tankers to China, the Chinese offered some of them to the Texas Co. at $400,000 each.

The tanker deal enabled the Chinese Government to prohibit by law old established United States oil firms from continuing in the up river oil distribution business in China. United States ships had to be registered under the Chinese flag if they were to continue in this trade.

Here is another case: In keeping with congressional policy, we had sold some surplus drum steel in Shanghai to two United States firms. The Texas Co. and the Standard Oil Co. for $95,000. Half of the money had already been paid.

Then the Chinese decided they wanted the steel. So they got the contract canceled and bought the steel themselves for $57,000. Nor is that all. Later we reduced the price to the Chinese to only $19,000. The Chinese then sold the steel on the open market at a fat profit.

Through the press, the American public had heard something about the disposal of Army surplus in Okinawa, one result of which was that Red Cross blood plasma—estimated to have been donated by 290,000 Americans to help win the war—ended up, in part at least, in China's drug trade. Among other surplus medical supplies so sold, narcotics found their way into illicit use in China.

What the American public does not know is that this operation involved the Reliance Corp., financed by T. V. Soong's Fu Chung Corp.

Prominent in the medical supplies deal was J. H. Powell Khoong who, according to Brig. Gen. Bernard A. Johnson of the Office of Foreign Liquidation Commissioner, was an agent of T. V. Soong. American officials witnessed in a Shanghai warehouse the intermeshing private interests and official interests. In this warehouse were stacked medical supplies and plasma bought by Khoong's company, and also surplus candy bought by the Chinese Government. Three persons were allocating the distribution of these goods—an American Army officer, Khoong, and T. L. Soong.

RELIEF SUPPLIES GONE ASTRAY

UNRRA officials were alarmed at a sensational proposal by Chiang Kai-shek last February that China be authorized to sell on the black market $200,000,000 worth of UNRRA supplies. This would have been contrary to the purpose of UNRRA—and UNRRA, of course, could not consent. However, UNRRA supplies found their way to the black market just the same.

The New York Times' Peiping correspondent reported that it was "common knowledge that, during the past year, Chinese governmental agencies have been selling UNRRA supplies on the black market at high prices. The present Chinese Government can neither enforce fair distribution through the

land nor crush profiteering and speculation in relief supplies by powerful politicians."

New York Herald Tribune's Shanghai correspondent describes in detail how Chinese authorities recently violated an agreement on cotton which UNRRA had accepted. Under this agreement, UNRRA was to have received cotton yarn in return for raw cotton at a stipulated ratio, but the Chinese with cabinet support arbitrarily changed the ratio without UNRRA's knowledge.

Concluded the Herald Tribune writer: "It is hard to see how this operation can be described as anything but a direct steal of relief funds. The cotton mills which signed the agreement are owned to a considerable extent by big Chinese politicians."

A former UNRRA official tells me this one: "We had ordered some trucks, which came without batteries. The batteries were shipped separately. When they arrived they were stolen off the docks by S—'s gang (naming a prominent Chinese official) and next day appeared on the black market in Shanghai. We had to take UNRRA cash, American dollars, and buy back those very batteries, plainly marked with UNRRA's name, at $125 per battery!"

An American official told me how—from his Shanghai hotel window on the Bund—he could watch moving junks, laden with American relief supplies they were hired to transport ashore from ocean vessels, being pilfered by pursuing sampans in broad daylight.

A typical Chinese device for attempting to influence United States officers who are in a position to do the Chinese favors is to promise them fat jobs or concessions.

GOLD LENT TO CHINA

The gold scandals, of which there have been a series, were made possible by the $500,000,000 wartime aid turned over to China by Congress in 1942.

Chiang had bluntly demanded the money of us and a like sum from Britain. He gave no explanation of how he intended to use it.

Mystery surrounds the arrangement whereby $220,000,000 of the total was taken in the form of gold. There is no mystery about the fact that our Treasury had to sell war bonds to raise the $500,000,000, and that China immediately put some of this money in United States obligations, so that the Treasury was paying interest twice, once to Americans holding war bonds and a second time to the Chinese Government.

China sought to hold down its wild inflation by selling gold to the public at prices below the prevailing black-market price. As the inflation progressed, China frequently had to raise the selling price of gold.

Insiders, with foreknowledge of such price increases, could and did profit. With wartime censorship, little was known generally about their transactions, but in February 1945 occurred such a fabulous 2-day coup as could not be kept secret.

Financier T. V. Soong, then Foreign Minister, publicly stated that the guilty would be severely punished. But 2 years later American Congressmen, trying to learn from the State Department what punishment had been meted out in China for this misuse of American gold, were—after long delay—informed only that the Department did not have the information but would get it. The Congressmen are still waiting, half a year later.

NO SOLUTION FOR CHINA'S TROUBLES

China's rulers have demonstrated no ability to solve China's problems alone and little promise of being able to solve them with our aid.

Should we keep on trying to help China with more large appropriations by Congress?

Certainly a loan to China at this time is not a good business risk. The Chinese are the first to recognize this. With 80 percent of its budget going for military purposes, the country has been experiencing hyperinflation. The Government's credit finds ever lower levels.

An American engaged in business in China recently told me: "It will crucify me if China doesn't get an American loan, but a loan would be just stupid, like throwing the money into the street. It will all go to a few."

Describing his wartime official experience in China, this man said:

"The most disgusting thing to Americans during the war was not the manipulation of the gold market in the private interest of the top clique, but the 'rooking' our Government got at every turn. Conservatively speaking, 60 percent of lend-lease goods was sold by the Chinese at black-market prices. Our Army had to buy everything it got in China for cash. If the story ever comes to light, nobody will believe it.

"For instance, we needed fuel for 20,000 trucks in China to haul United States supplies. That was in 1943. They wanted us to pay part of the fuel cost in cash, instead of letting us have it as reverse lend-lease. We started by subsidizing Chinese alcohol plants. The price to us went up from 35 cents (United States) a gallon to $5."

The American-published China Weekly Review, long and ardently pro-Chinese, this year examined the question of a proposed American loan to China in the light of past defaults on China's foreign bonds. The Review's advice:

"While we are not convinced that the present time is the best one to grant large additional credits to China, especially in view of the great temptation there will be for politicos and militarists to divert funds to political and military matters, we certainly advocate the closest supervision of any new credits that may be forthcoming. This will be the only way to make certain that the funds are spent in the best interests of the people."

The New York Herald Tribune writer describes pessimistically the outlook in China, saying: "There is the fact that the more we help the present Government, the more we encourage its vices and weaknesses. This is a tendency proved by experience since way back in the Japanese war. * * * Communism is making headway in China—a vast country and one hard for outsiders to manipulate—almost entirely because of factors inherent in Chinese society itself * * * altruistic help * * * reaches those who need it in greatly diminished form."

Communism has gained of late in China because of the official corruption and knavery which the public has had to endure.

Where the Chinese have accepted communism, it has been an action of despair for the old system, rather than of hope for the new.

For decades the people of China have been crying for leaders who would promote the welfare of all of the people at least some of the time, instead of the pocketbooks of a few of the people all of the time.

The strongest propaganda the Communists have at hand in China today is the behavior of her high officials.

So we see the sad spectacle of Chinese "going Red" when China so sorely needs outside guidance and material help. These will never be forthcoming from Russia. They can be had only from this side of the Pacific. This is China's dilemma. For, while the United States has a diplomatic stake in China and wants to help China get on its feet, we should not keep pouring our help through sticky fingers.

In aiding the Chinese people in the future, we have to be very much more realistic than we have been in the past.

Administration of the Employment Act

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, December 8 (legislative day of Thursday, December 4), 1947

Mr. MYERS. Mr. President, I recently read an article prepared by our colleague, the junior Senator from Vermont [Mr. FLANDERS], which was published in the autumn 1947 issue of Public Administration Review. The article is entitled "Administering the Employment Act—The First Year." On the whole I think the Senator's criticisms are valid, and, Mr. President, I recommend that every Member of the Senate read the article. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ADMINISTERING THE EMPLOYMENT ACT—THE FIRST YEAR

(By RALPH E. FLANDERS,[1] United States Senator)

The Employment Act of 1946 has been in operation 1 year. When passed it was heralded as the most significant administrative implementation to the formulation of public policy since establishment of the Federal budget system a quarter of a century earlier. The framers of the act realized that, important as are its goals of maximum employment, maximum production, and maximum purchasing power, the act would serve no real purpose unless adequate governmental machinery was provided for carrying it out.

The act called for the President to transmit an economic report to the Congress at the beginning of each session. The nature of this report was indicated. In general it was to present a picture of the economic health of the Nation, discuss trends, and appraise Federal economic programs. Also, it was to contain a program and legislative recommendations for carrying out the policy of the act. The President was authorized to transmit supplemental reports to the Congress.

To assist the President in discharging this responsibility, the act created a three-member Council of Economic Advisers in the Executive Office. Specifically the Council was charged with (1) helping the President prepare economic reports to the Congress, (2) gathering and interpreting information for the President relevant to current and prospective economic conditions, (3) studying and reporting to the President the effects of Federal economic programs, (4) developing and recommending to the President national economic programs, and (5) making whatever other studies and recommendations with respect to Federal economic policy and legislation the President might request. The act stated the qualifications that the members should have and gave broad powers for staffing. While the Council was given no operating functions, it was empowered to form advisory committees and consult with the various private economic groups and State and local governments. Furthermore, the Council was directed to "utilize the services, facilities, and information * * * of

[1] This paper has been prepared with the assistance of Dr. Grover W. Ensley of my office.

other Government agencies as well as of private research agencies, in order that duplication of effort and expense may be avoided."

The Council was charged under the statute with making an annual report to the President each December. This report is not to be confused with the President's economic report to the Congress. The Council's report is considered an administrative report similar to the annual reports made by most operating agencies. It is not conceived as providing materials for inclusion in the President's economic report.

The Employment Act placed great responsibility on the Congress in carrying out the policies of the act. The Joint Committee on the Economic Report was established to help the Congress meet this responsibility. The 14 members of the committee were to be drawn equally from the Senate and the House of Representatives. The committee's functions were (1) to make a continuing study of matters relating to the (President's) Economic Report; (2) to study means of coordinating programs in order to further the policy of this act; and (3) as a guide to the several committees of the Congress, to report to the Senate and the House by February 1 its findings and recommendations with respect to each of the main recommendations made by the President in the Economic Report, and from time to time to make such other reports and recommendations * * * as it deems advisable. The joint committee was authorized to organize a professional staff to assist in its endeavors.

But aside from these specific and general statutory directives which, in the main, appear adequate after 1 year's experience, the act left to the agencies involved the job of establishing workable procedures and developing sound relationship within the executive and the legislative branches of the Government, between these two branches, and with the outside world. Even with the soundest economic thinking in both Congress and the executive agencies, economic policy would be little improved as a result of the Employment Act unless proper procedural relationships were established and maintained. Thus, while the act placed particular responsibility on economists, it placed great responsibility on students and practitioners of public administration.

The first chairman of the Council of Economic Advisers recognized the vital role of public administration in carrying out the objectives of the act. In addressing the annual meeting the American Society for Public Administration in March, 1947, he stated:

"May I invite you as specialists in public administration to propose or to respond to such consultative or operating relations as may best bring the professional training and business experience of the United States to bear on the perennial and widely ramifying adjustments through which alone our complex industrial economy may be kept running at a rate approximating its potential productive efficiency."[2]

This paper, therefore, has as its purpose an analysis of the operating procedures developed during the first year by the agencies charged with carrying out the act. But rather than merely enumerate the accomplishments—and much has been accomplished in this short period—it will focus attention particularly on those relationship problems which represent danger signals to the successful functioning of the act. It is believed that certain operating policies initiated during the first year can and should be modified and that new procedures should be adopted promptly to assure the act's success in the second and succeeding years.

THE COUNCIL OF ECONOMIC ADVISERS TO THE PRESIDENT

The President appointed the three members of the Council in July 1946, 5 months after the Employment Act became law. While the Council was not charged by statute with operating functions, in the usual sense of the term, it was, nevertheless, faced with significant administrative problems during the first year. These may be summarized as (1) working out its own organization, (2) establishing proper relationships with the President, (3) developing sound working relationships with other executive agencies, (4) arranging for maximum assistance from nongovernmental agencies, and (5) creating a satisfactory relationship with the Joint Committee on the Economic Report.

Selection of professional staff was slow and represented the first serious problem for the Council. The pressing staff requirements of universities with swollen enrollments made it difficult at first to attract persons of high professional qualifications. Furthermore, the reaction of many competent people, following the war and demobilization, was to leave Government service for work in private business. Rather than quickly appoint a full but mediocre staff, the Council elected to start formal operations on October 14, 1946, with a skeleton staff of only five full-time and part-time top professional people. As competent personnel became available, the staff was expanded. By April 1947 the total professional and clerical staff, including the three members of the Council, reached 28; it increased to 38 by June 30, 1947.

Selection of staff has been made in accordance with the Classification Act and hence within the $10,000 ceiling—even though the Council is free under the Employment Act to make appointments without regard to civil-service limitations. The average pay of Council personnel is presently $6,200, probably the highest for any Government agency. This, of course, is defensible in that the Council is a top-level professional agency. It is charged by statute to rely on Government and nongovernment agencies for information needed for purposes of advising the President on economic policy, and can therefore dispense with a large staff of statistical clerks and other extensive personnel required for doing economic spade work.

The Council's budget program for the fiscal year 1948 calls for 48 positions with 10 top functional heads responsible for particular areas of the economy. The members of the Council assume special responsibility for coordinating certain of these areas and for relations between the Council itself and the top staff personnel. These functional areas are: (1) labor market and labor relations; (2) plant capacity, investment, and management; (3) agriculture and food; (4) flow of income, goods, and services; (5) price relations and price policies; (6) international economic relations; (7) development of human and material resources; (8) construction and public works; (9) veterans, social security, and welfare; and (10) taxation, debt, and banking.

The Council met with the President from time to time during the first year, particularly preceding transmission of the President's economic reports to the Congress. There has been established a regular quarterly meeting of the Council with the President and Cabinet. All the evidence suggests that the President has relied heavily on the Council's advice on matters of economic policy.

Working relations with other executive agencies are rapidly being established. The Bureau of the Budget provides library, procurement, and personnel services to the Council on a reimbursable basis—a commendable procedure in light of the small Council staff, physical location of the two organizations, and the fact that both are in the Executive Office of the President. In the important substantive areas, the Council and the top professional staff have developed channels for the flow of information from the several executive agencies charged with administering Federal economic programs. These arrangements enable the Council to obtain information upon which to reach its conclusions for presentation to the President and to synthesize the views of the executive agencies for the President.

An important role of the Council is to bring together the best economic thinking outside as well as inside the Federal Government. The statute specifically asked the Council to consult with "representatives of industry, agriculture, labor, consumers, State and local governments, and other groups," and to utilize services of private research agencies. The Council has undertaken to meet with leaders of these economic groups four times a year, and staff relationships with technical people outside the Federal service are developing. The Council contemplates reimbursing certain nongovernmental research agencies for studies to fill gaps in the Government's economic information.

On the whole, the Council has made significant progress in the short period of its existence in working out the above-mentioned administrative problems. The Council's effectiveness was evidenced by the ability of the President to transmit the first economic report in January 1947 on schedule and a midyear report in July 1947. It has been widely noticed that the factual information in these economic reports is much more current than we have been accustomed to receive in other Executive documents. Today the Council is a going concern.

But there remains to be developed a satisfactory working relationship with the congressional Joint Committee on the Economic Report. A fundamental question of administrative policy which the Council had to determine almost immediately was the extent to which it would cooperate with that committee. Is it the Council's job only to gather facts, make economic analyses, and provide advice and recommendations to the President? A literal reading of the section creating the Council would possibly permit this restrained and academic attitude on the part of the Council. It may be reasoned that the work of the Council is intended to equip the President to make wise economic policy decisions and recommendations to the Congress; that the decisions and recommendations once made become the responsibility of the President; and that the professional character of the Council would be lost if it appeared before the joint committee of the Congress to defend or even to elaborate on the analyses or recommendations presented by the President. It is pointed out that the views of the Council may differ from those of the President and that the stature of the Council would be harmed if such differences of opinion became generally known.

An alternative policy would be to perform the tasks specifically enumerated in the statute and, in addition, assist the Congress in any way necessary to secure adoption of the President's economic programs. The Employment Act, taken as a whole, would suggest that the combined machinery created should work in the directions of achieving maximum employment, maximum production, and maximum purchasing power. Such an interpretation—which appears to be more in line with the spirit of the act—would permit the Council to meet with the joint committee whenever such action would facilitate the formulation of public policies which would aid in achieving the high objectives of the act.

It is suggested that from the standpoint of bringing into focus the President's report to the Congress, and particularly before the joint committee, much could be gained from a meeting—executive or open—at which members of the Council could present and elaborate on the economic reasoning underlying the President's report. The economic report, proponents of the broader interpretation of the Council's functions point out, is the only comprehensive statement transmitted by the executive branch to the Congress that is not supported by oral testimony of an executive agency. The Federal

[2] Edwin G. Nourse, Public Administration and Economic Stabilization, 7 Public Administration Review 92 (spring 1947).

budget is given as an example. Not only is the Director of the Bureau of the Budget on call to amplify and defend the budget in whole or in part, but each agency must justify and defend the President's recommendations in respect to itself—even if these recommendations are adverse to its own views and wishes. It is true that embarrassing situations may arise if the President does not take the Council's advice. If there should be consistent major differences on important economic issues the Council naturally would be apt to resign, and should resign. Of course, it must be recognized that economic considerations must be relegated to a position of secondary importance in some instances. The President must balance the economic with the military, the political, and other factors in formulating his over-all program and in recommending legislation to the Congress.

In practice the Council has moved away from being purely an academic agency. Proof of this is the meritorious Council practice of meeting with the President's Cabinet periodically and of entering into public discussions and debates on economic policy. However, the policy of the Council toward the joint committee was one of aloofness during the first year. The Chairman of the Council, in conversations with members of the committee, urged that the committee refrain from asking the Council to elaborate on the President's economic reports. Furthermore, members of the committee were prevailed upon not to ask the President to direct the Council to sit down with the joint committee. During the first year, the relations between the Council and the joint committee consisted primarily of the Council's giving support, at the request of members of the committee, to appropriations for statistical agencies and the Council's own appropriation. Lack of interchange of views at the council-committee level largely applied at the technical staff level as well. There were, however, some informal exchanges of factual source materials and attendance of committee staff at some Council conferences and of Council personnel at some committee hearings.

Modification of Council policy to permit a closer working relationship with the joint committee at the policy and staff levels appears imperative. This is particularly true because the principal elements of an economic policy geared to carrying out the objectives of the Employment Act must be adopted by the Congress. Every attempt should be made, therefore, to assist the Congress in this endeavor. It is encouraging to note that the members of the Council are beginning to appreciate this problem and progress may be expected in the direction of a closer relationship between the two agencies.

THE JOINT COMMITTEE ON THE ECONOMIC REPORT

Members of the joint committee were not appointed until July 1946 shortly before the end of the second session of the Seventy-ninth Congress. Staff was not employed and work was not undertaken during the Seventy-ninth Congress. Organization of the committee in the new Eightieth Congress got off to a slow start. New members were appointed in January 1947 to replace those defeated in the November 1946 election and those resigning. Hiring of three professional staff members, however, was not completed until May 1947. The committee's report submitted to the Senate and House on January 31 was short and apologetic. It did not attempt to consider the legislative proposals contained in the President's January report. With respect to the President's short-range recommendations dealing with rent control, minimum wages, social security, housing taxes, and labor, the committee merely indicated that standing committees of the Congress were currently studying these matters. The report, however, promised that the committee would proceed to consider these problems with reference to their effect on the economy. No action in the form of guidance to the committees of the Congress followed, however, during the remainder of the session.

The President's midyear economic report (July 1947) received only cursory attention from the committee. A staff-written preliminary analysis which raised some questions of economic philosophy and reasoning was never discussed by the committee. However, had this analysis been considered in the absence of oral testimony by the Council of Economic Advisers, the President's position on the points at issue would not likely have been given adequate hearing because of the obvious and understandable difference in approach of the committee staff from that expressed in the report.

Work of the committee and the staff during 1947 consisted largely of organizing and holding hearings on the economic outlook and particularly on the cost of living, first in Washington and during the fall recess in the field. Questionnaires were also used to elicit the views of business, agriculture, labor, and economists. In addition, in May 1947, Dun and Bradstreet made an independent survey of these groups for the committee as a public service. A concurrent resolution passed in July 1947, specifically called for the Congress, under the joint committee, to hold hearings and report on the cost of living in early 1947. This resolution was technically unnecessary as the joint committee already had power and plans for such studies. It did, however, authorize appointment of additional Members of Congress to sit with the committee temporarily and $25,000 to be expended for this specific study.

The approach of the committee during the first year, therefore, was to solicit views of various nongovernmental groups and individuals. The time of the committee staff was devoted to facilitating this venture, with the result that it had little time for synthesizing information, for focusing attention on pending legislation, or for studying contemporary economic theories. A factual staff report on the food situation constituted the only study completed. The committee did not face up to its responsibility of evaluating economic policy. The Council of Economic Advisers, on the other hand, while consulting with nongoverment leaders in the field, concentrated its activities on analyses of current economic developments, based largely on source materials provided by the executive agencies, and on appraising and interpreting professional economic thinking.

These differing approaches by the committee and Council appear satisfactory to a certain point. But the end results must be synthesized by the committee for purposes of carrying out its statutory responsibilities of (1) reporting to the Congress on the President's report by February 1, and (2) guiding substantive committees of the Congress on legislation throughout the year.

Expansion of staff and relief of members from other major committee responsibilities seem imperative if the committee is to carry out both of these responsibilities properly. The committee staff, first of all, must be adequate to permit organization of materials independently for the committee's February 1 report. To the fullest extent possible the staff should work with the staff of the Council in this endeavor. This preparatory work should be done in the late fall in anticipation of the President's report. The full committee should meet at least once during this period to consider staff outlines for the committee report. This staff work and committee meeting are scheduled for late fall of 1947. Further planning would call for a preliminary committee report to be available to each committee member when Congress assembles early in January. With these materials before them, the committee and staff should devote themselves during January to an analysis of the President's report for purposes of completing their own report to the Congress by February 1. The staff should provide the committee with a careful analysis of the President's report together with an appraisal of the recommendations contained therein and a check list of policy issues to be considered by the committee. After the committee has had an opportunity to study the President's report and the staff's analysis, there should be a meeting of the Council of Economic Advisers and the joint committee with their respective staffs in executive session. This meeting would provide the committee the opportunity to question the economic reasoning underlying the President's report—much in same way that the Director of the Bureau of the Budget meets with the joint committee on the legislative budget. A number of meetings of the full committee should be held during January in an endeavor to evaluate each policy issue raised in the President's report and to complete its report as called for by the act.

In addition to its statutory responsibility in connection with the President's economic report, the committee also has responsibility for presenting supplemental reports on specific pieces of pending legislation as a guide to the substantive committees. This responsibility has not been fully recognized by the committee to date. It is clearly implied in the act, however. The committee is charged, among other things, with making "a continuing study of matters relating to the economic report; * * * coordinating programs in order to further the policy of this act [making, in addition to the annual report] such other reports and recommendations to the Senate and House of Representatives as it deems advisable."

As an adviser to the several committees of the Congress on specific economic matters, the committee faces a delicate question of relationship. To avoid any possible criticism on the part of other committees the few recommendations made during the first year were informal—members of the joint committee carrying the word to members of the committee having primary jurisdiction over the subject bill. This procedure, of course, was facilitated to a limited extent by cross membership. Members of the joint committee were on 10 of the 15 standing committees in the Senate but only 6 of the 19 committees in the House. A number of the committees which were not represented were of no great importance in implementing an economic program, but it would seem to be an omission to have had no members of the House Appropriation or Ways and Means Committees on the joint committee when these two groups are so important in establishing Government fiscal policy. Neither the Senate nor the House Committee on Foreign Relations was represented on the joint committee.

While this informal procedure may have been justified during the first year because of lack of staff and in order to allay criticism by the standing committees, it is too piecemeal as a regular proposition. Rather definite procedures should be established whereby an enlarged committee staff would analyze the principal pieces of legislation which it, or members of the committee, believe have important economic implications. Following the analysis, a staff memorandum should be submitted to members of the committee. This memorandum should contain a brief statement of the economic effects of the subject piece of legislation and specific recommendations as to what action the committee should take. At each meeting the committee should have a place on its agenda for consideration of these pending bills. Committee action could take the form of a report to the substantive committees including an economic appraisal and recommendations. Alternative committee action could take the form of a report to the substantive committees containing merely the staff's

economic appraisal with no committee recommendation.

When committee recommendations are given it may be expected that majority and minority reports could and should be made. The purpose of these reports should be to indicate the economic implications of the pending legislation. Admittedly, other considerations, such as military, ethical, and political, would be involved. All factors, of course, would be weighed by the substantive committee, the majority and minority policy committees, and each individual member of the Congress in taking final action on a bill.

In its first year the joint committee, unlike most other congressional committees, had no regular meeting date. As a result when a meeting was called many members could not attend because pressing business demanded their attendance at other committeees. During the first session of the Eightieth Congress the joint committee met 17 times. Six of the sessions were executive and 11 were open hearings. A significant step in establishing the standing of the joint committee would be a regular weekly meeting on a definite day. This day should be determined after consultation with chairmen of other committees to minimize the number of conflicts. This procedure would assure maximum committee attendance. If a series of fact-finding hearings appear desirable during the session, additional meetings could be held with as many as possible attending.

We come, finally, to one of the most pressing problems of the committee, namely, lack of time on the part of members to devote to the work of the committee. One has only to look at other committee assignments of the present members of the joint committee to appreciate this problem. Three of the Senate members serve on four committees, the other four Senate members have three committees each. Two of the House members are on three committees, the other five on two committees. It is of particular significance that the chairman of the joint committee serves on four committees and is chairman of three, namely, the Republican Policy Committee, Labor and Public Welfare Committee, and the Joint Committee on the Economic Report.

A look at these committee assignments, however, does not in itself give full weight to the problem. It might be expected that each person on the joint committee became a member because of a special interest in economic policy. That was true of the membership in 1947. The matters coming before the joint committee, however, are not always as well defined and are not usually as pressing as are matters coming before substantive committees. In the case of substantive committees, bills are considered and important and crucial steps are taken in respect to these bills. Bills are not formally referred to the joint committee.

One solution to this problem would be for the Congress to consider the work of the joint committee so important that members would be relieved of other major committee responsibilities. Short of a reduction in committee assignments, a partial solution would be to elicit maximum leadership from an enlarged committee staff. The statutory authorization of a $50,000-a-year appropriation for the committee should be tripled.

SUMMARY

In summary, the Employment Act of 1946, which established a statutory mechanism for the formulation of economic policies, is in need of administrative implementation. On the executive side, the role of the President's report could be substantially strengthened through modification of the aloof policy adopted by the council during the first year without compromising objectivity on the part of the council.

On the legislative side, compliance with the act during the first year was largely lacking. Procedures for handling the President's reports were only beginning to evolve in anticipation of the January 1948 report. On the other hand, procedures for fulfilling the committee's responsibilities in judging the wisdom of specific legislation and in guiding the substantive committees were not considered. Attention was concentrated on gathering information rather than analyzing information and advising the Congress on economic policy. Committee operating policies need to be developed, committee staff needs to be expanded, and a sound and workable type of committee staff and committee council relationship established. Members of the joint committee should be relieved of other major committee responsibilities. These steps appear necessary to permit the joint committee to assist the Congress in adopting economic policies compatible with the objectives of the Employment Act.

Speech of His Excellency Manuel Roxas, President of the Philippines

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. DEVITT. Mr. Speaker, in recent weeks our thoughts have been concentrated on the plight of the peoples of western Europe. Certainly they are in great need there, but we must also be attentive to the welfare of the peoples of Asia and the Far East. I recently read the very excellent speech of His Excellency Manuel Roxas, President of the Philippines, delivered at the second plenary meeting of the Economic Commission for Asia and the Far East at Baguio on November 24, 1947. Because the talk is so timely and so logical, I felt it could wisely be inserted with my remarks and read with great profit by the Members of Congress. The speech follows:

Mr. Chairman, members of the Economic Commission for Asia and the Far East, on behalf of the Government and people of the Republic of the Philippines, I extend to you a most cordial welcome. I also desire to express my warmest greetings to the governments and peoples whom you represent.

It is the good fortune of the Philippines that you have decided to hold your second session here. I trust you will find the arrangements satisfactory.

The ECAFE is one of the organizations of the United Nations which gives greatest hope of practical achievements. Its members can meet, and I know you do, in a genuine spirit of cooperation and understanding, unburdened by conflicting national interests. Although you represent governments, your preoccupation is not to gain selfish advantage for your respective countries, but rather the welfare and happiness of all the peoples living in this section of the earth. It is, indeed, an inspiring example of intelligent and constructive international collaboration. It proves that in the New World that we are trying to build, men of different countries, colors and creeds can gather as friends and associates to work out solutions to their common problems.

Your particular mission, as I understand it, is to formulate plans for the most expeditious reconstruction of the economies of our different nations and, insofar as it may prove advantageous, to integrate them on a regional level. It is a gigantic task. It will require courage and vision and statesmanship of the highest order. But of all these, I know, you are capable, and I am confident of your success.

The problems that confront us are varied and complex, and they are acute. Their urgency is reflected in the poverty and extremely low living standards which prevail among large portions of our populations. These conditions already existed in varying degrees in some of our countries before the war; the war aggravated and generalized them. It is futile now to attempt to fix responsibility for prewar conditions, but we cannot forget that for centuries we were never free to direct and much less to control the course of our lives. Our economic systems were highly incapable of insuring either fiscal adequacy for our governments or a satisfactory standard of living for our respective peoples. Large groups of our populations never succeeded in attaining what we commonly regard as a decent human existence.

But even that weak esonomy was seriously dislocated by the last war. Today the majority of our peoples are closer to starvation than they have ever been in the past. Suffering is acute among them. They are struggling heroically to improve their situation, but they seem impotent in the face of insurmountable difficulties. The population pressure on land is intense. The per capita production is very low. Tools and implements are scarce and inefficient. Credit facilities are very insufficient and interest rates are high. Methods of production are archaic and uneconomical. Food requirements absorb practically all individual incomes, leaving almost nothing for clothing, housing and other necessities of life. Communication and transportation services are limited and expensives. Tens of millions are in the ranks of the unemployed. Widespread shortages of consumption goods aggravate inflation due to excessive and largely unsecured currency in circulation. These are but a few indices of economic prostration which grip so many millions among us. They constitute a grave danger to political stability in this part of the world.

It is not possible, therefore, merely to plan for the restoration of our economies as they existed before the war. Our colonial economy must be completely discarded. Our agricultural economy must be rapidly complemented by sound industrial development. Per capita productive capacity must be greatly increased; living standards must be rapidly improved. We should no longer be content merely to produce raw materials to fill the tables and supply the factories of others. We will, of course, continue to grow but we must also make things that we vitally need. We must give people work, all the people. We must insure for them effective purchasing power which will be sufficient to provide not only their essential requirements but also the means to attain a higher social status. We will never truly prosper if we continue to be just a source of raw materials and a market for manufactures made by others from the products that we produce. We must endeavor to process a large portion of those materials ourselves.

The need of stimulating intraregional trade and commerce cannot be over-emphasized. The Commission, I trust, will be able to propose specific plans looking to a drastic reduction of tariffs and the lowering of other trade barriers among our different nations. There are other matters in which regional collaboration is desirable, conservation and prudent exploitation of our common marine resources; a convenient medium of exchange or other measure of value to facilitate trade among us; the improvement of rice production and a plan of allocations of exportable surpluses granting priority to deficient countries in this region.

The formulation of blueprints for the economic development of our respective countries is relatively an easy task. The real difficulties will be found in the effectuation

of these plans. The chief obstacles are lack of sufficient capital needed for productive enterprises and the enormous credits that will be required to finance the program. Without adequately meeting these two imperatives, we can neither hope to solve our economic and social problems nor prevent widespread discontent and suffering among our peoples. The countries of Asia and the Far East need help and assistance from other nations which are capable of supplying those needs.

It is to be regretted that the world's attention seems to be focused apparently only on the problems of Europe. We cannot deny that the peoples of Europe also need help, and urgently so. They need food and other necessities. But it is also undeniable that the needs of Europe are relatively less acute and less pressing than those of the peoples of this part of the world. It is true that the living standards of the peoples of Europe are now much lower than the standards they enjoyed before the war; neverthless, low as those standards are, they still compare favorably with those prevailing today among our peoples.

We have every right to appeal to the generosity of nations able to help others not to forget the sad plight of the hundreds of millions in our part of the globe. The concern over European problems alone may be a result of the false notion that our peoples, not being accustomed to high standards, can be relied upon to endure patiently greater and more acute privations. This is a grievous mistake, for our people, having had very little, will have only a pittance left with the further curtailment of that little that they had.

If the motive behind present plans to aid European nations is pure altruism, I submit that the more depressed peoples of Asia and the Far East have at least an equal claim to that generosity. If the motive is materialistic, or partly so, predicated on the need of maintaining a certain volume of exports, then I submit that Asia and the Far East, if assisted in equal measure, would provide a greater and progressively more profitable market for such exports. Finally, if the motive is to avoid what some nations believe is the danger of large populations of the would embracing political and economic systems which destroy human freedom and endanger the peace of the world, in that case I submit that Asia and the Far East should not be neglected, for here we are concerned with one-half of the population of the world who, because they are immersed in deeper poverty and helplessness, are closer to desperation, and therefore can be more easily attracted to ideologies which promise them radical improvement on their present plight.

If the ideal of one world is to be achieved, world cooperation in the solution of world problems must be rationalized. Men and women, irrespective of race or nationality, should be looked upon as human beings entitled to the same consideration and attention. The peoples of Asia and the Far East are not beggars waiting at the door of wealthy powers. All they seek is an equal opportunity to work out their own destiny. If the nations able to help them should choose to forget them and leave them to starvation and misery, that is their privilege; our peoples will accept that decision with dignity and manly pride. But this seeming injustice will leave in their hearts unanswered the persistent and intriguing questions—whether the one-world concept is limited to the nations of Europe and the Western Hemisphere; whether the generosity or altruism of the great powers have a color mark upon it; and whether the millions in this part of the globe who fought and died for liberty, justice, and enduring peace deserve less from the victors, their allies in the last war, than the peoples who were their enemies and who attempted to stifle the voice of human freedom from the face of the earth.

God may grant that we do not find reason to lose confidence in the nobility of those in whom we have placed our trust.

I feel strongly that world peace is indivisible, that to preserve that peace it is essential to promote the well-being and prosperity of all mankind. There can be no enduring peace for this distracted world of ours unless all peoples are free and are able to enjoy decent standards of life. This world cannot long live at peace half slave and half free; neither can it live at peace when half of the world have too much and the other half have less than is needed to maintain human existence. Without the recognition of these fundamental principles, we cannot avoid another war and our striving to establish a new order of peace, liberty, and justice would be doomed to fail. We must not fail. We will surely not fail if we should just decide to invest in this epochal undertaking a small portion of the wealth, work, and wisdom needed to win the war that everyone fears.

God willing, we will yet see the light.

Thomas Aquinas: Advocate of Natural Law and Limited Sovereignty

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 8, 1947

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article written by the late Wendell Phillips Dodge, Jr.

The article follows:

THOMAS AQUINAS: ADVOCATE OF NATURAL LAW AND LIMITED SOVEREIGNTY

(By Wendell Phillips Dodge, Jr. (deceased), of New York City)

(In an issue replete with expositions of "bread-and-butter" problems of the present-day profession, we turn also to the domain of legal scholarship and offer a discussion of the early origins of basic concepts of law and government. There is also a "human interest" story as to the authorship of this article.)

—

A LAW STUDENT'S TESTAMENT

On May 25, Wendell Phillips Dodge, Jr., a law student in the John Marshall Law School in Chicago, was hit, knocked down and run over by an automobile in East Chicago, Ind. A few hours later he died in a hospital without regaining consciousness. A few days before, he had submitted to the Journal the article which is published herewith. Ordinarily we do not have space for contributions by law students; but your editor in chief was interested, even puzzled, by the scholarship and breadth of view of this exposition, and by its revelation of what at least one young law student had been thinking and writing about. When the article was submitted to those who could judge of its merit, the approval of it for posthumous publication resulted.

Young Dodge was not an ordinary student in law school, in his thirty-sixth year. Born in New York City, having attended at intervals the Bordentown Military Academy, the Academic Commerciale in Quebec City, Canada, Montpelier Seminary, and the University of Vermont, the George Washington University Law School in Washington, and the University of Chicago, he had from time to time done reportorial and editorial work, and written book reviews for the Boston Herald and Traveller, the Christian Science Monitor, the New York Sun, and the Brooklyn Eagle, and had shown marked ability in research and writing.

Despite determined efforts to enlist, he could get into the Army only for limited duty as a sergeant technician fourth class, assigned to the Pentagon in Washington, where he began his law studies by day while on night assignment in the Army. Determined to obtain admission to the bar as soon as he could after his discharge, he became an employee of the law firm of Ryan, Condon & Livingston in Chicago and entered the John Marshall Law School. He was most diligent and ambitious for his future in the law when a tragic accident ended his life.

His flair for research and writing, especially as to the law, stemmed from his family origins. His grandfather, Arthur Pillsbury Dodge, was a successful lawyer in Manchester, N. H., and in Boston, before he forsook the law to become an inventor and manufacturer, the founder and publisher of the New England magazine with Dr. Edward Everett Hale as editor in chief. Young Dodge's father has been an engineer, a dramatic editor and critic, a producer of plays, publicity representative of such producers as David Belasco and Max Reinhardt, and a lieutenant commander in the United States Navy, and is now the editor of Marine News devoted to American shipping.

Young Dodge's article stands on its merits, however, as the last work of his life and an expression of his deep interest in the fundamentals of law and government, the enduring principles which lie back of man-made institutions.

—

Thomas Aquinas was the first to introduce Aristotle's Politics into medieval political doctrine.[1] Under its influence, he announced a new and positive justification of the secular state. In his Summa Theologica, one finds a well-defined exposition of the medieval position as to the state. Despite the tendency to give to reformers in the seventeenth century all credit for the concepts of limited monarchy, equality, and natural law, actually the exposition of these concepts lies in the thoughts of the great scholastics. The systematic character of scholastic social philosophy is striking in Aquinas' works.[2] It is well to examine the doctrines of the angelic doctor that we may the better comprehend the later growth of politico-legal thought.

The Carlyles saw three great principles in the political literature of the middle ages:

"1. The purpose of the state is ethical or moral, the maintenance of righteousness and justice.

"2. The supremacy of law as the concrete embodiment of justice. * * * The conceptions of an arbitrary authority was simply unthinkable. * * * The king is under God and the law. * * *

"3. The * * * mutual obligation to maintain justice and law."[3]

THE SCHOLASTICS AND THE MAIN BODY OF POLITICAL THOUGHT

Let us consider briefly the theories held most widely by men in all ages, that it may be shown that the scholastics were in harmony with the main body of political thought; afterward, let us turn to those thinkers who, either through their own works or through later commentaries on their work, had a direct influence upon the theorists of the later middle ages.

As early as the sixth century before Christ, men held the two doctrines of natural law

and equality. Lao Tse stated: "Only that government has value which is in accord with nature or the Tao. All other civilization is corrupt error." Later we shall find the same opinion expressed by Augustine, Isidore of Seville, and Aquinas. Confucius enunciated the principle that "By nature men are nearly alike." [4]

The influence of Plato on scholastic thought was entensive.[5] Cicero, known throughout the Middle Ages as ever since, had written: "What is a civitas except a society under law?" and "The discipline of law is drawn from the innermost nature of man." Surely, the scholastic concept of the natural law as implanted in every man is akin to this!

Further, Ulpian, who had tremendous influence in the development of law, had proclaimed: "So far as natural law pertains all men are equal." Aristotle had defined the notion: "Equality is to render things equal to the equal and unequal things to the unequal."

In Augustine, the most revered patristic authority for mcdieval writers, we find the statement: "That which is not just seems to be no law at all." [6] And we find even the basis for democratic government: "If a people have a sense of moderation, and are most careful guardians of the common welfare, it is right to enact a law allowing such a people to choose their own magistrates for the government of the commonwealth. But if, as time goes on, the same people become so corrupt as to sell their votes, and entrust the government to scoundrels and criminals, then the right of appointing their public officials is rightly forfeit to such a people, and the choice devolves to a few good men." [7] This position, with its unwillingness to trust completely to the mob, is the very attitude of the founders of the American republic.

INFLUENCE OF THE ROMAN LAW ON THIRTEENTH CENTURY LAW

Before consulting Aquinas himself, let us give some brief consideration to the state of law in the thirteenth century. The sources of the Roman law proper (jus civilis) were the leges enacted by the Plebs, the senatus consulta passed by the Senate, and the constitutiones and rescripta principi ordained by the Emperor. All except the rescripta were statutory. The edicta of the magistrates, especially the praetors, called by Papinian the jus praetorium, aided, supplemented, or corrected the jus civilis for the sake of public utility. The sources and authorities of the Roman law were codified by Theodosius in 438 A. D. and by Justinian in 534 A. D. Justinian's codification was divided into the Codex, the Digest, the Institutes, and the Novellae. The jurisprudential part of Justinian's code was known as the Digest or Pandects. Under Alaric II, King of the Visigoths, about 506 A. D., the Breviarium was composed for his Roman subjects. A feature was the Interpretations or glosses on the law.

Mediaeval Law was drawn from the Codex and Novellae of Justinian, but the jurisprudential law contained in the Digest was well forgotten in Italy as well as north of the Alps.[8] The Breviarium became the code of the Roman Law for the countries included in what is present-day France. It was superseded gradually by a multiplicity of epitomes, an excellent compendium being the Epitome Juliani in which was presented the substance of the Novellae. Throughout the early Middle Ages, law was considered largely the will of the visible ruler, though also the thought of a contract between ruler and people frequently appears.[9]

AQUINAS GAVE FULL EXPRESSION TO PHILOSOPHY BEHIND LAW

It remained for St. Thomas Aquinas to give full expression to the philosophy lying behind the law as seen by men of the Medieval period.[10] He began with a discussion of the fundamental nature of law, what it is, and what is necessary to make it law:

"In order that the volition of what is commanded may have the nature of law, it needs to be in accord with some rule of reason. And in this sense is to be understood the saying that the will of the sovereign has the force of law; or otherwise the sovereign's will would savor of the lawlessness rather than law." [11]

Thus did Aquinas place a limit on, or define, Ulpian's "Quod principi placuit legis vigorem habet." It must be in accord with "right reason." Also, it must be in accord with the "Law of Nature":

"Just as nothing stands firm with regard to the speculative reason except that which is traced back to the first demonstrable principles, so nothing stands firm with regard to the practical reason, unless it be directed to the last end which is the common good. Now, whatever stands to reason in this sense has the nature of a law.[12]

ATTRIBUTES ASCRIBED BY AQUINAS TO THE NATURAL LAW

How a thing may partake of the natural law is described by Aquinas as follows:

"A thing is said to belong to the natural law in two ways. First, because nature inclines thereto: e. g., that one should not do harm to another. Secondly, because nature did not bring with it the contrary. Thus, we might say that for man to be naked is of the natural law, because nature did not give him clothes, but art invented them. In this sense, the possession of all things in common and universal freedom are said to be of the natural law, because, namely, the distinction of possessions and slavery were not brought in by nature, but devised by human reason for the benefit of human life. Accordingly, the law of nature was not changed in this respect, except by addition." [13]

But reason and beneficial results do not of themselves establish the force of law. "* * * Promulgation is necessary for law to obtain its force. Law is nothing else than an ordinance of reason for the common good, promulgated by him who has the care of the community." [14]

The Angelic Doctor defined natural law: "* * * The natural law is nothing else than the rational creature's participation of the eternal law." [15] He then quotes Augustine: [16] "That which is not just seems to be no law at all." He continues: "Hence the force of a law depends on the extent of its justice. Now in human affairs a thing is said to be just from being right, according to the rule of reason. But the first rule of reason is the law of nature, as is clear from what has been stated above. Consequently, every human law has just so much of the nature of law as it is derived from the law of nature. But if in any point it departs from the law of nature, it is no longer a law but a perversion of law."

LONG DIFFICULTY IN VOIDING ACTS REPUGNANT TO NATURAL LAW

The great difficulty for centuries was the lack of governmental machinery for passing upon the legality of acts of the lawmaking authority, whether prince or senate. Hence there was a tendency to find at least some rightness in almost every enactment. Who can judge a king? Aquinas iterates the same conclusion:

"Human law has the nature of law insofar as it partakes of right reason; and it is clear that, in this respect, it is derived from the eternal law. But insofar as it deviates from reason, it is called an unjust law, and has the nature, not of law, but of violence. Nevertheless, even an unjust law, insofar as it retains some appearance of law, though being framed by one who is in power, is derived from the eternal law; for all power is from the Lord God." [17]

This might be considered a quibbling position which would leave one with no real basis for declaring a law unjust. But is it not fundamental to maintain the sanctity of law in general and to maintain respect for the law? Is not the difficulty the practical one of finding a legal means of voiding a law? "In the judgment of God, the sovereign is not exempt from the law." [18]

Although Aquinas recognized the unlawfulness, absolutely considered, of a tyrannical law, yet he could not conceive of the means or instrument by which an unlawful act might be legally invalidated. The day of a written constitution and judicial review had not yet dawned. On the other hand, he did suggest one remedy, however inadequate—disobedience: "Human laws that are contrary to the commandments of God should not be obeyed * * *" and "In such matters, i. e., unjust burdens on the subjects, man is not bound to obey the law provided he avoid giving scandal or inflicting a more grevious injury." [19] Of course, one could question the unjustness of an edict from Rome; but so long as papal intervention confined itself to what was in accord with the natural or divine law as defined in the Summa, the question would not arise.

St. Thomas deemed monarchy the best form of government [20] but in the de regimine principum he was emphatic on the moral limitations placed upon the royal power. Indeed he even called for some provisions for restraining the king,[21] and approached even Jefferson's advocacy of revolution against tyranny.

He was not the first to appreciate the importance of Aristotle's political thought. Albert the Great, his master, who survived him, was earlier in the field and influenced him greatly, so was the great English Franciscan, Robert Grosseteste, Bishop of Lincoln, William of Auvergne, whom Professor De Wulf has called 'the first great philosopher of the thirteenth century,' and a number of others; but of them all, St. Thomas was the greatest, and the subtlety, the profundity, and the comprehensiveness of his writings contributed to make them the principal medium through which the political ideas of Aristotle were reincorporated in the thought of the West in the later thirteenth century."

"Furthermore, it rather seems that to proceed against the cruelty of tyrants is an action to be undertaken, not through the private presumption of a few but by public authority. First of all, if to provide itself with a king belong the right of any multitude, it is not unjust that the king set up by that multitude must be destroyed or his power restricted, if he tyrannically abuse the royal power. It must not be thought that such a multitude is acting unfaithfully in deposing the tyrant, 'even though it had previously subjected itself to him in perpetuity, because he himself has deserved that the covenant with his subjects should not be kept, since, in ruling the multitude, he did not act faithfully as the office of a king demands.'" [22]

AQUINAS' CONCEPTS OF FUNCTIONS AND METHODS OF LAW

After noting his exposition of regal powers, duties, and limitations, we pass to the functions and methods of law. Laws should be made to suit the majority of cases, not framed to particular instances,[23] for—

"As the philosopher says, it is better that all things be regulated by law than left to be decided by judges. And this for three reasons: First, because it is easier to find a few wise men competent to frame right laws than to find the many who would be necessary to judge rightly of each single case; secondly, because those who make laws consider long beforehand what laws to make, whereas judgment on each single case has to be pronounced as soon as it arises; and it is easier for man to see what is right by taking many instances into consideration than by considering one solitary instance; thirdly, because lawgivers judge universally and about future events, whereas those who sit in judgment judge of things present, toward which they are affected by love, hatred, or some kind of cupidity, and thus their judgment becomes perverted." [24]

And in keeping with the universal as opposed to a particularistic conception of law, Aquinas noted that it is not the function of human law to forbid all the vices [25]—the major vices, yes, but the minor vices are left to the natural law in each man. Thus he would have been no friend to the Volstead Act. Law, in his opinion, may require some changes from time to time, but such changes should not be too readily made:

"A measure should be as enduring as possible. But nothing can be absolutely unchangeable in things that are subject to change. And therefore human law cannot be altogether unchangeable." [26]

Aquinas' reasons for infrequent change in the laws were cogently presented.[27] He recognized the difficulty of enforcing any law that conflicts with the prevailing custom of a people and advocated change when custom and law are irreconcilably at odds. In law he was a pragmatist, not a dogmatist. Thus:

"* * * Human laws fail in some cases. Hence it is possible to act outside the law, namely, in a case where the law fails; and yet the act will not be evil. And when such cases are multiplied, by reason of some change in man, then custom shows that the law is no longer useful; just as it might be declared by the verbal promulgation of a law to the contrary. If, however, the same reason remains, for which the law was hitherto useful, then it is not the custom that prevails against the law, but the law that overcomes the custom; unless perhaps the sole reason why the law seems useless is that it is not possible according to the customs of the country, which has been stated to be one of the conditions of law. For it is not easy to set aside the custom of a whole people." [28]

Aquinas next summed up the position of the man who acts outside of or beyond the letter of the law and the reasons therefor: "He who in a case of necessity acts outside the letter of the law does not judge of the law; be he judges of a particular case in which he sees that the letter of the law is not to be observed. He who follows the intention of the lawgiver does not interpret the law absolutely; but he interprets the law in a case in which it is evident, by reason of the manifest harm, that the lawgiver intended otherwise. For if it be a matter of doubt, he must either act according to the letter of the law, or consult those in power. No man is so wise as to be able to consider every single case; and therefore he is not able sufficiently to express in words all those things that are suitable for the end he has in view. And even if a lawgiver were able to take all the cases into consideration, he ought not to mention them all, in order to avoid confusion; but he should frame the law according to that which is of most common occurrence." [29]

Aquinas summarized thus his opinion on the nature of law: "But properly a law is first and foremost an ordinance for the common good, and the right to ordain anything for the common good belongs either to the whole multitude, or to someone who acts in place of the whole multitude. * * *".[30] McIlwin says of the above passage:

"It is apparent that the type of human government here most favored by St. Thomas is a true res publica, in form somewhat like that of the Roman republic, or one in which the people (multitudo) has entrusted the supreme government of the state to a single ruler who has the "care" or responsibility (curo, sollicitudo) for it all. The latter form—and the latter was the form of chief importance in the thirteenth century, essentially the same whether elective or hereditary—is a monarchy founded on the law eternal and created by the people for the common utility of all, and especially to secure peace, the chief earthly prerequisite to human good. Its ruler or prince is, therefore, a true king, with vast powers, especially the power of judging and punishing offenses, and with a responsibility of equal or greater weight.

"This, however, for St. Thomas, as for John of Salisbury, is no 'constitutional' monarchy of the modern type in which this responsibility of the prince is regularly enforced by independent agencies of the community. So far as my knowledge goes, the first and sole clear advocacy before the Conciliar period of a theory of 'limited' monarchy * * * in any strict sense resembling the latter form occurs in Book I of the Defensor Pacis. The responsibility of St. Thomas' prince is of a different order. His prime responsibility is to God, the author of the law on which all his authority rests; and, in a general, or even in a loose political sense, he might be said to be responsible also to 'the multitude' which raised him or his house to the throne and might conceivably sweep them away for acts of tyranny. But in the strictly 'legal' sense he is 'absolute' in the ordinary administration of human law in his realm; within this sphere he is without superior or a peer, and is responsible to no man. Of human law, in the sense of coercive force, St. Thomas says he is wholly free, a monarch 'legibus solutus'—the equivalent of Bracton's legal dictum that no writ runs against the king." [31]

Attesting to the harmonious relationship of Aquinas' political doctrines and the three systems of legislation of the Middle Ages—feudal, civil, and canon—De Wulf writes:

"The Thomistic theory of the state represents the crystallization of the political experiences of the twelfth and thirteenth centuries; but it also represents conformity with the fuedal and civil and canon law, which was making no little progress during this time. Consequently the three systems of legislation (fuedal, civil, and canon) are at one on so many important points, such as the divine origin of power, the subordination of the king to the law, the king's character as servitor of justice, the force of custom, the intervention of the community in the delegation of power to the prince, and the participation of the people in government. In the same way natural law is for the legists and the canonists an ideal to which positive (human) legislation must approach; and the prescription of the natural law must be adopted in so far as it is possible in existing circumstances.

"Finally, the thirteenth century theory of the state takes up and completes various philosophic doctrines which had found credit among former philosophers, such as Manegold, of Lautenbach, and John, of Salisbury. But it has become a social philosophy, and it dresses all in a synthesis which is found neither among the feudal theorists nor among the legists, nor among the canonists, nor among the philosophers of the preceding centuries. It coordinates all, and attaches the doctrines which it establishes to a system of psychology, of morals, of logic, and of metaphysics. It is a kind of democrary, conceived in moderation, and based upon the pluralistic conception of the world and of life." [32]

SUMMARY OF AQUINAS' PHILOSOPHY OF LAW AND LIMITATIONS ON POWER

From our brief examination of the political thought of St. Thomas Aquinas, together with the perhaps cursory view of prior political thought, I think we may soundly say, Bourbons and Stuarts to the contrary notwithstanding, that there was no legal basis in mediaeval political thought for such a doctrine as the divine right of kings. Every expression by Aquinas, and apparently by his predecessors, seems to point not to the divine right of kings, but to the divine responsibility of kings. Indeed, it would be difficult not to draw from Aquinas principles which lead up to the modern concept of the limitation of governmental powers. His suggestion that law, if contrary to divine law, should be disobeyed, and his insistence that an unjust law is no law lead inevitably to the conclusion that the will of the prince is not law per se but per accidens; that is to say, the will of the prince is not law in its essence,

[24] Ibid., q. 95, art. 1, vol. II, p. 783.
[25] Ibid., q. 96, art. 2, 3, vol. II, pp. 792–793.
[26] Ibid., q. 97, art. 3, vol. II, p. 801.
[27] Ibid., q. 97, art. 3, vol. II, p. 802: "Human law is rightly changed insofar as such change is conducive to the common welfare. But to a certain extent, the mere change of law is of itself prejudicial to the common welfare, because custom avails much for the observance of laws, seeing that what is done contrary to general custom, even in slight matters, is looked upon as a serious offense. Consequently, when a law is changed, the binding power of law is diminished, insofar as custom is abolished. Therefore human law should never be changed, unless, in some way or other, the common welfare be compensated according to the extent of the harm done in this respect. Such compensation may arise either from the extreme urgency of the case, due to the fact that either the existing law is clearly unjust, or its observance extremely harmful. Therefore the jurist says that in establishing new laws, there should be evidence of the benefit to be derived before departing from a law which has long been considered just."
[28] Ibid., q. 97, art. 3, vol. II, p. 803.

but only insofar as it partakes of the natural law, which is law in its essence.

In his insistence upon the proper place of authority in the political realm, and his reluctance to place the lawmaking authority in the hands of the multitude, Aquinas was in harmony with both Plato and Aristotle. Indeed, the same distrust of the undisciplined mob was manifest in the deliberations of the framers of the American Constitution. It would seem that, were St. Thomas able to view and pass upon the development of the principle of judicial review, he would acclaim the principle as being the means, the "practical reason," to be used in maintaining what the speculative reason proclaimed: That the natural law is superior to the human legislator.

President Conant, of Harvard University, Defends American Goals and Describes the Contribution of Education to the Perfecting of Our Economic and Political Systems

---

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following excellent address entitled "America's Fitness to Survive" delivered by James B. Conant, president of Harvard University, before the Boston Conference on Distribution.

In the current issue of Foreign Affairs the former Secretary of War, Henry L. Stimson, discusses "The Challenge to America." He describes in realistic terms the present grim international scene and, after refusing to subscribe to the doctrine of an inevitable conflict with the Soviet Union, says "We must make it wholly evident that a nonaggressive Russia will have nothing to fear from us. We must make it clear, too, that the western non-Communist world is going to survive in growing economic and political stability. If we can do this, then slowly—but perhaps less slowly than we now believe—the Russian leaders may either change their minds or lose their jobs. The problem of Russia is thus reduced to a question of our own fitness to survive."

I have taken the last phrase of this quotation from Mr. Stimson's article as the text for my remarks today. The fitness of the United States to survive depends, of course, on many factors; but primarily our survival depends on a vigorous demonstration in the next decade that we can make our form of democracy function even in a war-torn world. This in turn means imaginative and bold policies both abroad and at home; a realization of our international responsibilities as a great power, and a satisfactory development of our internal economy; above all, a realization of the unique nature of American democracy and a determination to move a few steps nearer our historic goals.

All of which is admittedly a large order. Even to discuss all the problems implicit in my brief summary of the challenge before us would require many hours. In the few moments at my disposal today I am going to ask you to consider one group of questions which seem to me central to all discussions of the future of this country. What sort of society do we wish to develop in the next few decades here in the United States? Is this society to be continuous with our past development and a reflection of our traditional aspirations? Or is it to represent a marked deviation? If the former, what are the basic ideals of American democracy and how can we further their realization? And finally, since I come before you as an academic man, how can our universities contribute? That is to say, how can they assist in the development of American society as a strong, vigorous, and united body of freemen?

I have spoken of the uniqueness of American democracy. To my mind we rarely do justice to this fact. Of course, on many counts the evolution of our political and legal systems may be considered as only a slight variant of a much wider pattern. We share with Great Britain in particular many ideals, traditions, and even details of operating a democratic government. Representative government, universal suffrage, and free elections are in this century the sine qua non of democratic government. All nations which have this minimum in common are drawn together in this period of history as never before. But without in the least weakening this vital international link, we Americans would do well to emphasize the special nature of the ideals which characterize us as a Nation. These have arisen from our history and should, if we meet the challenge of our day, point the way for the next stage of our journey.

The United States, unlike almost any other nation, has not arisen from a state founded on military conquest. Therefore, we have nowhere in our tradition the notion of an aristocracy entitled to rule by right of birth. Run through the other democratic nations of the world and, if you recall their history, you will see how striking is our exceptional origin and growth. Neither political nor economic nor social privilege comes to one by right of birth according to our American ideals. On the contrary, the members of each new generation are supposed to start from scratch. Merit alone should win. The cynical among you may shrug your shoulders and say this is theory, the facts of modern American life are far different. Granted, but that leads immediately to the central issue—our fitness to survive.

The morale of a small group of men or of a large nation (if it is a free nation) depends in no small measure on agreement as to the ends for which all labor. Ideals in an open society like ours represent goals toward which men and women may move by concerted action. They never can be reached in practice—almost by definition—but we can readily recognize whether we are moving toward them or retreating. Our American ideals in part correspond to the goals of all democracies, in part they represent a special contribution to the world. If we are to survive we must make these ideals explicit by our actions; words alone will not suffice.

The United States has developed its greatness as a Nation in a period in which a highly fluid society overran a rich and empty continent; one of the highly significant ideals of the American Nation has long been equality of opportunity. This concept may well represent an exportable commodity sorely needed by the other democracies of the world today. There is considerable reason to believe that the absence of this idea in France and Italy, for example, has been responsible in no small measure for the large inroads of communistic philosophy and the subsequent sympathy with Soviet foreign policy. To the degree that we can demonstrate in the next few years that this unique American ideal is no mere myth or legend, we may both contribute to the stability of other nations and forward our own democracy along its historic path.

If I had time, I should like to document the proposition that our free tax-supported schools represent in concrete form those special ideals which characterize this country. Our educational system of universal education with its emphasis on flexibility and careers open to the talented is unlike any other either now or in the past. Our public schools are the sinews of our democracy. We must keep them strong. The machinery of our democratic form of government must likewise be vigilantly maintained. Our educational system, our political institutions, and our social ideals form a closely interwoven pattern. Equality of opportunity could be realized only in a political democracy; it would have meaning only in a competitive society in which private ownership and the profit motive were accepted as basic principles.

I hardly need remind this audience that a competitive society which each generation draws nearer to the goal of equal opportunity is not to be had just for the asking, nor is it just a question of economics. There are few today who would deny that economics, politics, and social ideals are thoroughly interwoven. The history of this century has taught all thinking men that neither do modern industry and trade proceed in a vacuum nor do human beings behave in reality like economic symbols. The problem of morale exists in almost every working group.

For example, people are coming to realize increasingly that a discussion of taxation must involve more than a consideration of fiscal policy: it must include social ideals and the effect of taxes on human motivation. High inheritance taxes reflect the American belief in a fluid society without a hereditary privileged class. We shall want to keep the taxes high in order to move further toward our goal of equality of opportunity for the members of each new generation. Yet we realize the importance of the rewards and incentives which actuate most Americans. These are a complex mixture of social ideals and personal aspirations including the desire to provide for one's family after death. We shall not want our tax laws to be so drastic as to block powerful human incentives from having desirable social and economic consequences. The American public must consider the conflicting factors and strike a balance. High taxes on earned incomes, it may be noted, have the reverse effect of high inheritance taxes on the fluidity of our society. Therefore, insofar as the national expenditures permit, the case for keeping income taxes low is overwhelming both in terms of social ideals and incentives. In short, debates on the future of our tax policy both State and national to be realistic must involve a consideration of social ideals and human motives as well as balanced budgets and the welfare of our national economy.

The point I am trying to make is this. Granted private ownership and the profit motive (which have been sneered at in certain circles, but for which I believe there is no substitute for this Nation), the question of how best to keep our society truly competitive and moving toward a greater degree of equality of opportunity is no easy one to answer. I suppose few would really subscribe today to the old doctrine of "hands off." As in the case of traffic, the nature of modern society has made the public a party to what once seemed a strictly private matter. The role of government has been permanently enlarged. The political machinery of government is today meshed into our industrial life. The problem surely is to see how we can operate our private enterprises and our political institutions so that our society will be in fact competitive and thereby increasingly productive of the goods and services required.

As never before, business needs men who appreciate the responsibilities of business to itself and to that unique society of free men which has been developed on this continent.

Such men must understand not only the practical workings of business organizations but also the economic and social climate in which business operates. Management and labor share with the statesmen whom we elect to office the responsibility for our future. Less directly but ultimately to an equal degree so do those who guide our vast system of public schools. They should be statesmen, too. Professional men and leaders of opinion, particularly the bar and the press, are likewise heavily involved in the question of our survival. Cannot all these people, indeed the majority of our citizens, subscribe to a common set of postulates as to what we desire to accomplish in the coming years? The goals of equality of opportunity, a minimum of class distinction, a maximum degree of individual freedom, and a wide distribution of centers of initiative are inherent in the American creed. If the United States is to continue as a vigorous and healthy republic of free men, it must continue to move toward these goals. Can't we all, or a very large fraction of us at least, agree on that?

If so, then the first condition for survival is assured. Our sights are set, our target is defined. But it is no easy matter to move appreciably toward these goals even if we are all agreed, some of you may say. A modern technological society is a complex affair and the international situation a sorry mess. To find the answers to countless detailed questions—ah, there's the rub. The going will be tough, no one can gainsay that. Statesmanship will be required not only in affairs of state but in other vital areas. I have in mind two in particular, not usually associated together: industry and education. One may reach this conclusion from the following considerations.

The future prosperity of America depends on the capacity of its economy to remain dynamic while providing satisfying employment for all capable of employment. Perhaps you will agree to that. But every year some two or three million boys and girls mature and enter our society looking for jobs. We believe they are all entitled to a fair chance. Our schools are to a large degree ladders of opportunity. In short, our educational system must guide and educate a diversity of talent for the best interests of the Nation. Particular emphasis should be placed on the word "guide" in the preceding sentence because the process of helping people to determine the activity for which their abilities best qualify them is of great importance at all levels of our schools and colleges. I may remark parenthetically that we are beginning to have sound knowledge as to how such guidance can be provided.

Now it is obvious that the best minds of the country should be devoted to a study of the many problems arising as a consequence of our endeavors through industry and education to keep our society prosperous, strong, and democratic. It is may belief that the methods of certain of the social sciences have already been developed to a point where studies of society by competent scholars can provide basic information to assist the leaders of industry and of education. Both fundamental investigations as to the nature of man and society and immediate studies of specific problems are required. It is at this point that I believe our universities have a special contribution to make. Through such studies they may be able to play a significant role in assuring our fitness to survive.

To illustrate what I have in mind may I tell you of certain plans we are formulating at Harvard. In so doing I trust you will not think that I am unduly provincial in my outlook. Undoubtedly other institutions are proceeding along the same general lines, but perhaps you would be interested in the details of a proposal with which I have some familiarity. In the first place, I do not have to remind this audience of the work of the Harvard Graduate School of Business Administration. This school is dedicated to the proposition that business needs men as well trained as our professional men in law and medicine. We believe this is one of the responsibilities of American universities in the twentieth century. Harvard takes pride—I trust justifiable pride—in the work of the Harvard Business School in meeting this new educational challenge—education for business responsibility. But in addition to continuing and strengthening the work of this school we have in mind a cooperative venture involving the business school, the graduate school of education, the Department of social relations of Harvard College (the faculty of arts and sciences). Referring to what I said a few minutes ago, it seems clear that the methods of certain of the social sciences have reached a point where the scholars in these disciplines can help train the future statesmen of business and public education. In particular, certain types of work in sociology, anthropology, and social psychology seem full of promise. The point of view of the younger men in these fields, if coupled with practical experience with industry on the one hand or public education on the other and infused with a zeal to move American society along its historic road, we believe might be peculiarly effective at this moment in our history. Both in training students and in studying problems in the field this fusion of three somewhat distinct areas of the social sciences we think has promise.

As illustrations of what types of activities might be undertaken by a research center at Harvard, thus cooperatively manned, I may mention three major projects.

Prof. Elton Mayo, in his recent publication on the Political Problem of Industrial Civilization, stated: "The outstanding need of the modern world is the need for investigation and study of organization and the principles of intelligent administration. If we are to lay aside the strong and simple religious feeling of medieval times as the chief organizing principle of civilizaton, we can only substitute intelligent understanding of all the necessary elements involved in human organization on the modern scale."

Within this general field lie literally dozens and hundreds of concrete studies, for example, the human qualities and factors which permit the development of teamwork within a group or which work to inhibit teamwork in other groups. Again, a highly important problem in this area which cuts across both business and education is the process of advising and counseling individuals so that they reach in life an activity which generally accords with their abilities and interests. Evidence is accumulating that the square peg in the round hole is at the root of much of our individual and social unhappiness and frustration. Here is the not uncommon situation in the social sciences where a beginning has been made in research. The bringing together of many experiments is required; much actual field use is necessary; and still more research imperative. The possibilities for rapid progress here are very great.

A very different type of illustration is found in the research project which is just about to be undertaken jointly by the members of the Harvard Business School faculty, working in cooperation with the National Bureau for Economic Research. In the economic field the present system of taxation, both corporate and personal, is having profound effects on the way men regard new efforts. It is having a profound effect on the incentives which thus far in our history have contributed to the taking of risks and the seizing of opportunities. Many of these effects were not anticipated in advance, and we do not know by any means what they are or what they may be in the future.

Still another illustration may be mentioned of special interest to this group. The costs of distribution have been a matter of concern for many years. Factual information on the operating costs of retailers and wholesalers has become available in public form over the last 25 years. Very little, however, is available in regard to the marketing costs of manufacturers. This lack in turn prevents careful study of the costs involved in the whole chain of activities from producer to consumer.

These three illustrations will perhaps indicate to you what we have in mind. As resources become available we hope two of our professional schools—business and education—may become more closely associated with each other and with that group of scholars who in the faculty of arts and sciences are studying by modern methods the ancient problem of how man functions as a social animal. We expect no miracles but have a strong conviction that along some such road as this lies the best hope of mobilizing our academic brains and learning to meet the challenge of the times. We plan the undertaking with the firm conviction that this country will continue strong, prosperous, and democratic. Furthermore, that our society will move forward; and in so doing, by example, contribute to the welfare of other nations. One can have no doubt that scholars will participate with vigor in solving the many problems which will be solved as America moves toward its historic goal of equality of opportunity in a society of free men.

Paper Mills for the South

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 8, 1947

Mr. PACE. Mr. Speaker, the manufacture of paper is contributing greatly in the development of the resources of the South, and for its historical value I desire to place in the RECORD an article on this subject recently published in Dixie Business by its editor, the Honorable Hubert F. Lee. The article is as follows:

PAPER MILLS FOR THE SOUTH

(By Hubert F. Lee)

The $30,000,000 Coosa River newsprint mill getting under way in Alabama is the biggest industrial development this year.

Fine paper, machine finished book, newsprint and the pioneer kraft have added to the pay rolls.

However, there was a day in the memory of readers of Dixie Business when kraft was the kind of mill thought of when paper mills were talked of in these parts.

Our good friend the late Dr. Herty conducted notable experiments and his research laboratory proved to the skeptics that native woods could be used for all kinds of paper making.

And before Dr. Herty there was the late L. A. Thomas, who had the distinction of making newsprint for the Carroll County Times and other papers in a small paper mill at Banning, Ga.—the Wilkinson Paper Co., if memory serves us right.

When the late Dr. Herty in December of 1937 announced that his laboratory would have to close down unless more money was available many editors and leaders joined in the movement to have the various States

appropriate money for his experiments to continue.

From Montgomery, Ala., a wire news story went out December 6, 1937, which said:

"Hubert F. Lee, president of the chamber of commerce of the South, said here today 'it would be a catastrophe' to permit abandonment of a pulp and paper research laboratory being operated at Savannah, Ga., by Dr. Charles H. Herty.

"Lee said he was writing Gov. E. D. Rivers, of Georgia, suggesting that the State appropriate funds to carry on the work, particularly regarding development of newsprint paper from southern pine.

" 'Other States, too, could profit through an appropriation and continuance of the work,' he said.

"Dr. Herty was quoted in Savannah dispatches as saying the laboratory would be discontinued December 31 unless new means are found to finance the work."

On the front cover of the January 1938 issue of Dixie Business was an announcement which read: "Herty's newspaper research goes on."

"Gov. E. D. Rivers, of Georgia, has informed Dixie Business that Dr. Herty's Newsprint Laboratory at Savannah, Ga., will go on.

" 'I am tremendously interested in seeing Dr. Charles H. Herty's work continued and in seeing that he gets whatever it takes to continue,' " Governor Rivers said, in an interview with Dixie Business.

"Representative Jim Fowler, Dixie Business learns from reliable sources as we go to press, will probably introduce a bill in the Georgia Legislature appropriating such funds as are necessary for the greatest laboratory for the South.

"Typical of the editorials that have appeared in the newspapers over the South is that of our good friend Jimmy Stahlman, publisher of the Nashville Banner, Nashville, Tenn., and president of the American Newspaper Association. Mr. Stahlman's editorial appears on page 14 of this magazine (January 1938).

"If the South has ever been solidly back of any man or enterprise for the common good of the section * * * it is back of Dr. Herty 1,000,000,000 percent."

In that same January 1938 issue we reprinted in our Editor's Whirligig column a paragraph from John Temple Grave's syndicated column This Morning which read:

"Everybody, surely, will agree with Editor Hubert Lee, of Dixie Business, that it would be a tragedy for the South if the work of Dr. Charles H. Herty should be limited in anywise by the lack of funds. From his chemical laboratory at Savannah, Dr. Herty has contributed the investigations which promise southern pine and black gum eternal glory as the bases of a newsprint industry that will support the whole continent. He is engaged in other research which may rival what he has done in these directions. His work is worth potential billions of dollars to this region, but his laboratory is to be closed after December 31, unless new means of financing it are found."

WE HAD FAILED

We were eager that the work of Dr. Herty succeed because nearly a quarter of a century ago we sought to establish a newsprint mill in the South but failed to interest capital in financing it.

Dr. Herty was proving that the woods of the South were good for making paper, newsprint, all kinds of paper.

In 1923, the editor of Dixie Business, then a young and ambitious man, fought windmills and came off bleeding and sore at heart but undaunted. Lack of money with that project, just as lack of money to properly promote Dixie Business, stopped the first. It required more than a million dollars to start a paper mill but with $15 capital we in 1929 started Dixie Business. With a magazine, all that is needed is subscribers and advertisers—granted able editorial ability. We are still making slow but steady progress to get subscribers and advertisers and we leave to others the judgment of the editorial force and ability. We only do what we can and try to make up in steadfastness and determination whatever we lack in the gift of words.

To Shartle Bros., Middleton, Ohio, on September 17, 1923, we wrote:

"Would you please furnish us with information, data, and catalogue relative to pulp and newsprint mills?

"Consideration is being given to a plan to start a paper-making enterprise using southern pine and possibly tubler gum. A daily tonnage of 25 to 50 would be desirable as a basis for tentative purposes.

"I understand that you manufacture machinery and also have used machinery for sale. Information and prices would not be undesirable for me to have at this time.

"Negotiations are being made to get a man with many years of practical experience to back the enterprise with his knowledge and vast treasure chest of experience. Should we, and it is practically certain I am confident, secure his active interest the South will have taken another forward step in helping bring the paper industry to the land where pulp paper can be grown in 10 to 15 years large enough for use.

"This gentleman is Mr. L. A. Thomas who has the distinction of being the first, so far as is known, man to cut down a tree in the morning, haul it 3 miles to a pulp mill, then to the paper mill and by wagon 10 miles to a small town to be used by the newspaper and at 6 that day have copies for the men at the mills to read. That happened a considerable number of years ago.

"Possibly you would consider helping finance this proposed enterprise. Local capital is always ready to foster such projects but the backing of a large concern who knows the paper making business would tend to give the enterprise a soundness and firmness that only practical and experienced people can exert."

SOUTH STANDS ALONE

The reply from Charles W. Shartle, president, dated September 19, 1923, read:

"We have your letter of the 17th and note that you are considering the manufacture of newsprint from yellow pine lumber, and will say that as far as I know this class of lumber is not suitable for white paper. If I am not mistaken, or misinformed, it is found impractical to bleach it on a commercial basis. At the same time the yellow pine is being used a great many mills in the South for making pulp which is converted into kraft paper.

"In your letter you mention the construction of a mill of about 25 tons capacity and will say that I do not believe a mill of this size would be profitable, and it would not be to your advantage to construct a mill of less than 50 to 100 tons capacity.

"I suppose you know that a mill of this kind runs into lots of money. The Brown Paper Co. is building a mill at Monroe, La. This mill will have a capacity of 75 tons, and am informed that their investment is in the neighborhood of $2,000,000. So while we deal some with second-hand machinery, I would not invest a dollar in a mill constructed with this equipment because I feel very confident that it would not be a paying investment; and in order to compete with the large and fine mills which are being erected in the South the only way we would equip it with the very best and most modern machinery.

"I do not know of anybody just at the present time who might be interested in assisting in financing such a proposition. We have numerous opportunities to make investments with timber owners and lumber mills in the South, but we have never felt disposed to go out of our own line.

"I do not know of any northern paper makers who have gone into the southern field, and whatever has been done in the South has been accomplished by the local people.

"There is no doubt at all in my mind but that first-class paper of certain kinds could be produced from your local woods, and at the same time I feel sure that the paper can be produced very much cheaper than any other place in the United States."

WE READ AND LEARN

Alexander Botts, of the Earthworm Tractor fictional fame, might have given up the idea of trying to promote a newsprint paper mill back in those days had he turned his sales abilities to promotional efforts, just as we did because of lack of capital and lack of promotional abilities to raise the money to build a mill.

However, the letters in our library are historical documents of noble attempts and blunt failure. We think others would find some of them interesting. Here's one written September 12, 1923, from G. S. Barton, then president of the Rice, Barton & Fales, Inc., Worcester, Mass., which reads:

"Your letter of September 5 came to hand during the writer's absence from home, hence the delay in answering same.

"We note carefully what you say regarding a proposition that contemplates the manufacture of newsprint in the South, using Georgia pine. We are aware that several paper mills are in operation in the South using this class of material for pulp, but did not realize that this kind of wood was suitable for making newsprint, as most of the mills that we know of manufacture kraft paper from this class of stock.

"We also note that you say your local market ought to consume the output of a 25-ton-daily capacity mill, and we would say in this connection, that this is a very small daily tonnage for a newsprint mill to turn out. In fact, we are inclined to think that a mill turning out newsprint paper, and having no larger capacity than this, would not prove to be a particularly profitable venture. Even a newsprint mill that had one paper-making machine in it could produce a larger output than this. Of course, we do not know anything at all about the details of your proposition, and it may be that there are certain features in connection with it that would make such a proposition as you have in mind a profitable one, and we would be very glad if you could favor us with any more facts and data concerning the particular proposition that you have in mind.

"As far as referring you to someone who might be interested in financing such an undertaking, would say that this is something that we have on several occasions been able to arrange for, but, of course, before we could say anything at all about your particular proposition it would be necessary for us to have complete information as regards its operations, from start to finish. This, we are sure, you yourself can readily appreciate.

"Our company has been building paper-making machinery now for over 80 years, and we are, naturally, very much interested in your proposition from a paper making machinery standpoint, if from no other, and if, as stated above, you will favor us with further information with just as much detail as possible, stating just what your proposition is, both as regards the manufacture of the paper and the sale of same, in short, send us a complete prospectus of your proposed mill, we would be very glad to give it our best consideration and let you hear from us as to any recommendations or suggestions that it would appear to us would be worth while to make."

"P. S.—The invention you speak of in your letter is also a matter of much interest to us, and we would appreciate complete information from you as to what this invention consists of."

The invention referred to was one invented by the late Mr. L. A. Thomas and not that of the editor of Dixie Business. Our inventive genius is used in devising ways and means of selling subscriptions to Dixie Business and in offering the magazine's advertising columns to whomsoever will accept it at $100 a page, with smaller space in proportion to advertise their wares and institutional messages.

Although complete documents in our Saga of Newsprint Promotion are not available, we do have a number that have survived the years and should any of our readers like to have others printed in Dixie Business, we invite invitations to do so.

Although we never managed to put over the South's first newsprint paper mill, we hope that our pioneer work and the letters we wrote did play some part in getting the news scattered around to leaders of the industry over the Nation that the South offered big opportunities for paper mills. Whether we had anything to do with it or not, we are proud that today the paper industry and the chemical industry has come South and more and more will do so because it is profitable to do so.

Can anyone wonder why we were so enthusiastic that the late Dr. Herty carry on his scientific work? Dr. Herty—statesman of science.

Americanization in Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. FARRINGTON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article from the December issue of Reader's Digest by Blake Clark, in their series Chronicles of Americanization—XIII entitled "'G. J.' Shows That East and West Can Meet."

The article follows:

CHRONICLES OF AMERICANIZATION—XII

"G. J." SHOWS THAT EAST AND WEST CAN MEET

(By Blake Clark)

(Condensed from St. Louis Post-Dispatch)

Gobindram J. Watumull, of Honolulu, is one of the few East Indians to achieve United States citizenship, and few Americans are more grateful for the privilege. To bring Indians the benefits he has found in Hawaii this friendly merchant is giving nearly $100,000 a year through a unique foundation which obtains its funds from a full partnership in his business.

Watumull, whom his family called Goma, was born in Hyderabad, India. On Goma's eighth birthday his father, a contractor, was thrown from his camel and incapacitated for life. Goma's brother Jhamandas went overseas, seeking a job to help support the family. Two other brothers worked for 4 cents a day to keep Goma, their parents, and four sisters alive.

Goma was a bright boy and did well in the village school. By the time he finished, Jhamandas, who had found work in Manila, was able to stake him to a 2-year course in engineering. He graduated to a job with the Indian Government, and in a few months was chief clerk with a salary of 30 rupees ($10) a month. Englishmen doing the same work drew 20 times as much.

One day he happened upon a book about Abraham Lincoln, and read excitedly the story of a dark people gaining dignity and self-respect through the Great Emancipator. Looking out his window to where his countrymen passed, half-starved and submissive, he prayed for an Indian Lincoln.

In 1917 Goma received a letter from Hawaii. "I now have a branch store here," wrote Jhamandas. "My manager lacks efficiency. Would you, Brother, care to replace him?"

Three months later Goma walked down the gangplank in Honolulu. At a busy intersection he saw a native policeman directing traffic. A blond, well-dressed man started across the street and was stopped by a sharp command. The offender scurried back to the curb. Watumull stood dumfounded. It was the first time in his life that he had heard a dark-skinned man raise his voice to a white.

In his brother's bazaar Goma received further surprises. Customers and neighboring businessmen called him "Mister." Across the street was a soda fountain owned by a Chinese who employed white clerks. Every day at noon Dr. Mundorf, the optician next door, stopped by and called out, "How about lunch, G. J." They joined a group of other businessmen of various races at the Merchants' Grill.

Impressed by the democracy he found in Hawaii, G. J. took out his first United States citizenship papers. Soon afterward he met an American girl with whom he fell in love. She was Ellen Jensen, a pretty young red-haired music teacher from Reed College in Oregon. In India, if they had met at all, custom would have forced her to hesitate about going out with him.

In Honolulu, the dark, slender man and his fair companion went everywhere without embarrassment Goma confided to her his ambitions for himself and India and asked her to help. They were married in 1922. The bride thereby forfeited her United States citizenship, but she expected to regain it at the end of a year when Goma would be eligible to apply for his final papers.

Less than a month before Goma was to obtain his citizenship, the Supreme Court barred Indians under the law restricting immigration of orientals. Neither he nor Ellen could now become American citizens.

There was nothing to do to ease the blow but plunge into hard work. With his savings Goma bought into the business, while his brother gradually withdrew, keeping only a small interest for himself. During the next 10 years Goma and Ellen developed what had been a small bazaar into a prosperous department store. G. J. regarded those who worked for him as friends and equals, and all were guests at his home. Each month his bookkeeper set aside a percentage of gross sales for a fund to entertain the Watumulls "& Co." at the best Honolulu restaurants. He established vacations with pay, a plan of health insurance, a model bonus system. Every employee owned his own home.

By 1937 Watamull's methods were so successful that he put up a handsome modern building. In the next few years he opened another show place at Waikiki and a third downtown. Mrs. Watumull was a full partner. While bringing up a family of two girls and a boy, she prepared all the firm's advertising copy, and for 1 year managed the main store. Assisted by loyal-hard-working employees, they built up a business that grossed $2,000,000 a year.

So now G. J. was able to act on a dream he had long cherished. He wanted to help India become more like the United States. He wanted to stop the plagues of cholera, malaria, and dysentery which killed five to six million people a year. He yearned to lay food before the 80,000,000 there who are always hungry. India's salvation, he was convinced, lay in industrialization. India has the iron to forge her own washing machines, refrigerators, and bathtubs, but lacks the knowledge and the means to get it out of the ground. Power to bring electricity to her 700,000 villages rushes unharnessed down torrential rivers. She needs engineers as desperately as doctors.

Goma poured out his dream to a lawyer friend. The lawyer said, "Don't break your heart. What can one person do for 400,000,000 people? It will take billions of dollars and millions of men to revitalize India."

"The longest journey begins with a single step," replied G. J. "I intend to take it."

He and Ellen decided to begin by sending highly qualified Indians to the United States. They would be experts in their fields, mature men and women able to absorb the most up-to-date techniques in such matters as controlling epidemics, preventing infections in mothers and babies, canning food, and building machines. To obtain the necessary money they hit upon the idea of setting up a foundation which would be a partner in the business.

The first year they offered 14 fellowships, guaranteeing passage to and from the United States, tuition at a university of the candidate's choice, and $150 a month for 2 years for living expenses. The grants were open to anyone in India—no political or religious strings attached. The sole consideration was merit and ability to help the country.

The announcement caused great excitement throughout India. Newspapers dubbed Watumull "the Cecil Rhodes of India." Two thousand applications poured in, and an impartial board of American and Indian educators and scientists appraised the applicants.

Among the dozen accepted were Dr. and Mrs. Mahendra Bhat, who went to Tulane's schools of tropical medicine and social work to equip themselves to fight tropical diseases. Two women gynecologists, Drs. Lakhani and Nasir-ud-Din, one a Hindu, the other a Moslem, were selected to perfect their knowledge of the best methods of prenatal and postnatal care. An engineer, M. A. Lokhande of Bombay, was given a grant-in-aid at Rutgers University to study sewage disposal—a neglected problem for thousands of workmen's hovels in his city.

To increase food supplies, H. D. R. Iyengar studied fisheries at the University of Washington. Millions of his fellow countrymen will touch no meat, only fish. India's 4,000 miles of coast line and 600,000 square miles of rivers and lakes teem with fish, but because of outmoded techniques the yearly catch is small.

India has one-third of all the cattle in the world—205,000,000 head, but only 30 percent get the care that enables them to give milk. Amar Rathore, an expert on the staff of a government cattle farm, came to Iowa State College to study the best methods of improving milk production. Indians who will not touch meat will drink milk, the next best source of animal protein.

The Watumulls enlisted the aid of American industries. Four young Indian engineers are gaining practical experience at Allis-Chalmers; three are working as chemists at Seagram's, studying the manufacturture of industrial alcohol, and another is at the Gisholt Machine Co.'s shop building small machines and motors.

Watumull is especially proud of two men whose foundation-sponsored work will benefit both continents. Dr. J. V. Bhat has done important work at the University of California in isolating a micro-organism to dissolve kidney stones, which are a common cause of death in his country. Dr. M. Asirvadham, of the Scudder Hospital in Vellore, had often stood helplessly by and

seen surgical aid denied patients whose run-down systems could not withstand the shock of an operation. Given time and money by the Watumulls to work on this problem, Dr. Asirvadham found restoration of the functioning of bone marrow a great aid to such people, and has developed a special protein diet to restore this basic need.

This year, as their twenty-fifth wedding anniversary present to themselves, the Watumulls gave India its first Beckman spectrophotometer, a machine to record the results of microanalyses. Dr. N. I. Purshottam and Miss Tara Deodhar, nutritionist, are returning to India to conduct a government-approved feeding program. They hope to prove that, with the aid of concentrated meals, malnutrition can be prevented and that India's recurrent famines are no longer inevitable.

Distressed by the lack of understanding between Americans and Indians, the Watumulls set in motion an information shuttle of qualified spokesmen from each country. Sir S. Radhakrishnan, professor of eastern religion and ethics at Oxford University, was invited to lecture in the United States. To India went Dr. Merle Curti, winner of the Pulitzer prize in history for his book, The Growth of American Thought. He criss-crossed the subcontinent for 4 months, telling gatherings in every section about the United States. Audiences at Lucknow were so eager for more information that the university established a Merle Curti award for the best studies on American life or history.

The Watumulls are stocking university library shelves in each country with factual books about the other. They have established lectureships on Indian affairs at American University, in Washington, D. C., and at New York University. And at Columbia they have granted a research fellowship to G. B. Lal, 1937 Pulitzer prize winner for science reporting. He is writing a history of Indian science.

The Watumull Foundation has set an example for Indian philanthropy. An Indian industrialist has just inaugurated a plan of sending scholars on visiting professorships to this country. And the Indian Government recently granted 1,600 fellowships to graduate students to pursue their studies abroad. The Watumulls felt a great deal of pride when more than half of the winners chose the United States.

In July 1946 Congress revised the Oriental Immigration Act, again permitting Indians to become United States citizens. After 28 years, welcomed with flower leis from his friends and warm aloha from newspaper editorials, G. J. became a full-fledged American, hailed as the first Indian to be naturalized under the revised law.

According to an Indian proverb, the two hardest things in the world to do are to give of one's earnings and to find a home in another country. G. J. Watumull has done both.

Frances Bolton

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mrs. SMITH of Maine. Mr. Speaker, again FRANCES BOLTON has shown her great value not only to the people of Ohio, but also to the people of the entire Nation. It is most gratifying to me that the press in my own State—Portland Press Herald—has recognized and commended Representative BOLTON for her recent and effective speech on the necessity of aid to Europe to fight the cold war that Russia is waging.

This is but another instance in which FRANCES BOLTON has forcefully shown that she is one of the most informed, intelligent, and understanding Members in Congress. She continues to amaze those of us in the House with her keen, penetrating mind, her energetic and discerning ability to get at the real facts, and her pleasing and interesting manner of analyzing and presenting the facts.

THE FRENCH STRIKES

Representative BOLTON, of Ohio, made an effective speech in the House the other day that brought genuine applause from her hearers. She was one of those Members who cruised about Europe last summer and fall, and she returned confirmed in mind as to what is going on abroad and what must be done here at home. Overshadowing everything else, she said, is the conviction that Moscow is waging relentless cold war against the United States—a war in which the United States must go all-out if it hopes to avoid a shooting war. She said:

"Having read the Communist posters, incredible in the viciousness of their attacks upon the United States, having read the Paris newspapers, having seen some of the handbills flooding the city, I confess to an inability to understand how men can say, 'I'm not for this aid unless France stops the strikes.' Can't they realize that the Commies do not propose to let the strikes abate in the slightest if they can keep them going? Can't they see the dark hand of Moscow keeping the fire going under the pot of discontent and despair?"

Those are fair questions, the correct answers to which are known to the Senate, but unknown to far too many Members of the House, where there is an evident unwillingness to act with energy and speed upon the Marshall stopgap plan, and a sudden solicitude for economy—in the wrong place and at the wrong time. Perhaps Mrs. BOLTON'S testimony will have effect unless some of the Members take refuge in what they call their private advices from abroad. Full cooperation with the administration program still has a chance of shoving a shooting war well into the future. As a matter of fact, it is the only chance, and it seems strange that there are any who are unwilling to take it. To quote Walter Winchell for once, "Bread on water's much cheaper than blood on streets."

Exports to Russia Versus Aid to Europe

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. MADDEN. Mr. Speaker, in today's discussion on the European temporary-aid legislation several Members recommended that shipments of the various exports to Russia be completely curtailed.

In Saturday's edition of the Gary Post-Tribune, editor H. B. Snyder has written an editorial setting out some practical thoughts concerning our present commerce with the Soviet Union. His editorial contains sound thinking and common sense.

EXPORTS TO RUSSIA VERSUS AID TO EUROPE

It has been moved by Harold Stassen and seconded by Representative JOHN TABER that the United States stop shipping machinery, machine tools, and industrial material to Russia. The suggestion has received a good deal of immediate support—though not from the President, to whom Stassen addressed his advice.

The Republican aspirant to Mr. Truman's job labeled the present trade with the Soviets "economic appeasement," and at first glance the label seems accurate. Our scrap-iron shipments to Japan before the war are almost as fresh in the public mind as Russia's obvious militarism is today. One may ask if, after the Japenese experience, we are again providing the materials of death that will be used against us.

But there are other questions that should be asked before the demand for a break in Soviet-American trade increases.

What sort of machines and material are we sending Russia, and how much?

Is it wise for the United States to impose economic sanctions on its own, while trying at the same time to strengthen the UN?

If such economic sanctions are imposed, what will Russia do about them?

In connection with the last question Stassen made an interesting point in his telegram to Mr. Truman which has drawn an equally interesting, though unofficial, reply from the State Department.

Stassen called attention to the fact that the Communists and the Russian Government "have not permitted a normal flow of machinery and equipment from the steel works of Czechoslovakia to western Europe and have obstructed the movement of materials between eastern and western Europe and eastern and western Germany."

The State Department's point is that if the Russian Government can check the normal flow of exports from its own and its satellite countries now, it might shut off that flow completely in retaliation for America's embargo on exports to Russia. Such action not only might add enormously to the cost of the Marshall plan but also prove to be the final stroke that divides Europe.

It should not be forgotten that the Secretary of State's original proposal for European recovery took in Russia and the eastern European states as well as the 16 nations that finally accepted it. One objective was, and evidently still is, to hasten the return of normal trade throughout Europe. It stands to reason that the quicker this objective can be reached the less the Marshall plan will cost, and the less chance there will be of its failure.

The Members of Congress who favor Stassen's suggestion and who also favor the greatest possible economy in the program of European aid might consider such factors as the relative cost of providing and transporting American machinery and Czech machinery, American and Polish coal.

It can be argued, on the other hand, that the Russian satellites, especially Czechoslovakia and Poland, must export in order to live. The Soviet Government might have to permit them to trade, however much it disliked the idea, in order to retain what support it has in those countries and to avoid an even greater economic burden.

Whatever the decision on continuing possibly dangerous exports to Russia, it will not be easy. There are risks involved either way. It is of great importance that they be weighed carefully. And it is certainly equally important that both Congress and the administration, in weighing them, avoid the growing danger of making this question still another issue of domestic politics.

Guilt by Association Criticized by New York Times Editorial

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. KLEIN. Mr. Speaker, every one of us here is deeply concerned about loyalty to our Government, and about loyalty to the principles on which our Government is founded.

We differ only in our approach; and there are many of us—I include myself—who believe that in our fear of disloyalty we are likely to betray our fundamental principles.

It was, therefore, with more than ordinary interest that I read the editorial which follows in the New York Times of Saturday, December 6, 1947, which states explicitly the attitude I myself have taken.

The New York Times is not known as a liberal newspaper; it is known as a fair and honest newspaper, whose editorial policies have set a high standard of excellence and of influence. When the Times decries the theory of "guilt by association" and advises the Attorney General to avoid the issuance of lists of proscribed organizations and make "decisions as far as possible on individual merit," it heartens all of us who have objected to the current wave of hysteria.

WITHOUT DUE PROCESS

Attorney General Tom C. Clark has designated some 90 organizations in this country as "totalitarian, Fascist, Communist, or subversive." Membership in one or more of these organizations will be one factor in testing the fitness of Federal employees under President Truman's loyalty order.

Obviously worried by the responsibilities laid upon him, Mr. Clark has delayed issuing the list, and he has now issued it with a qualification which ought to win the warm approval of those who look upon civil liberties as the first line of our democratic defense. As he puts it:

"Guilt by association has never been one of the principles of American jurisprudence. We must be satisfied that reasonable grounds exist for concluding that an individual is disloyal. That must be the guide."

But guilt by association is certainly implied in the procedure which the Attorney General was in duty bound to follow under the Presidential order. The designated organizations, some of them schools, were studied under that order by the Federal Bureau of Investigation. The FBI findings were then transmitted to the Attorney General, who in turn made them available to the President's loyalty board. There have been no public hearings on these organizations. None of them, so far as appears, is illegal under present Federal laws. No doubt they had opportunity to defend themselves to the Federal investigators. They have had no opportunity to defend themselves by what is known in our constitutional law as due process.

Some of the names cited speak for themselves. There are organizations that are frankly Communist and others that are recognizably Fascist, and membership in either sort implies a disbelief in American forms of democracy. This belief is not a crime, but it unfits the person who holds it for Federal positions in which he would be expected to work through those forms and in the democratic spirit. Other organizations are less easily identified; the publication of this list will at least cause many persons who are associated with one or another of them to reexamine the basis of their membership. Still other organizations on the list are new to most of us. We simply do not know the evidence under which they are blacklisted. We do know Communists often infiltrate organizations which are not Communist and we know that Communists and non-Communists may occasionally agree up to a certain point—for instance, in their concern for refugees who dare not return to Franco Spain.

Our Federal Government is certainly under no obligation to employ persons who do not believe in our form of government. But it seems to us that the Government will be on safer ground, well within the principles of the Bill of Rights, if it makes its decisions as far as possible on individual merit, if it abandons the rule of "guilt by association" wherever it possibly can, and if it gives every organization designated as "subversive," just as it would give an individual, a public day in court.

Naval Air Reserve Program

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. HÉBERT. Mr. Speaker, an old friend of mine, Capt. William Gordon Roper, a graduate of the United States Naval Academy of the class of 1898, visited with me the other day and brought along a speech which he recently had written. It concerned the establishment of a strong air naval reserve in each of the 48 States.

Captain Roper is primarily interested in the establishment of such a program in New Mexico, where he now resides. Although his own program is directed at the State of New Mexico, which is so ably represented in this Congress, it is really a program which should attract the attention of every other State.

Naturally I personally am vitally interested in such a program, because it was in New Orleans that the naval air reserve program gained its quota first. There Capt. James Leeper, commandant of the naval air station in New Orleans, has done a remarkable job.

I believe that the manner in which the gap has been spanned between Captain Roper, who is now 72 and retired, and has seen service in every war from the Spanish-American War to the recent conflict, and Captain Leeper, who has served his country with distinction in the recent war, is most interesting.

I believe it would serve us all well to read what Captain Roper has to say on the subject and for that reason I have obtained permission to insert his speech in the RECORD at this point:

My fellow citizens of New Mexico, the following is aimed at the students of the University of New Mexico and the high-school and college students from coast to coast, because the future of this land lies in their hands.

I am not here to speak for the Navy or the Navy Department. I am here on my own as a citizen of New Mexico. My only recompense will be the accomplishment of a self-made mission. The establishment of a full-fledged naval air reserve station in New Mexico. When and if authorized by the Navy Department it will become fabulous.

Now it is my duty to tell you, young man, that the interest in forming the station is growing by leaps and bounds.

Since noon, November 24, George Atkinson (American Legion) and I in a plane from the Los Alamitos Naval Air Reserve Station, visited and talked with key young men in Roswell, Clovis, Tucumcari, Gallup, and Santa Fe.

At each place we found a warm welcome for the cause, with a fixed healthy enthusiasm.

You and I must thank the Messrs. Charles C. Broome, president of the Albuquerque Chamber of Commerce; Dan Burrows, editor of the Albuquerque Tribune; Frank Rand, publisher of the Santa Fe New Mexican; Joe Behl, of Boren-Behl Sportings Goods; Knox Converse, manager of Converse Motor Co.; Radio stations KGGM, KOAT, KVER; and the American Legion for their valiant effort in this cause.

They make a team of nine—unsparingly donating time, thought, and material out of which will come to you great good, physically, mentally, and morally, when once the station is functioning.

KGGM, KOAT, and KVER, though keen rivals in business are as one when the public interest is at stake.

The undertaking is a bit audacious for a State of some 600,000 population; so it is up to you, young man, to concentrate, remember, and pass on the following: Because of our remarkable terrain, high and low altitudes, surpassingly superb year-around climate, with more year-round free-flying hours than can be found elsewhere, we could become a great, if not the greatest, naval air reserve training center—the most economical of all.

En passant, Navy and Air Force fliers of long experience in peace and war tell me that basic training should be done at about this altitude rather than near sea level.

When established and equipped you will receive free training in a variety of trades and skills; keep up with scientific and technical developments, having both civilian and naval air application. For example, Atlanta's station has an amazing educational program offering an education to any man in academic or technical training out of which he could get high school or college credits. We must have it here.

The brilliant Lt. Frank Hartzberger, United States Naval Reserve, organized and put it in practice. In my notebook he wrote a complete brochure of same. He would be happy to come here temporarily and set up his system for us.

You will find athletic facilities, baseball, football, etc., numerous indoor sports; housing for the stationkeepers, as well as for the week-end volunteer fliers.

A lot of war surplus is scattered over the land. If alert we of New Mexico will get our share of it for use in building our top-flight station.

Composed of citizens carefully supervised and trained by responsible leaders of the community, the station, like the other naval air reserve stations from coast to coast, will welcome community understanding and support.

New Mexico is destined to become one of the air centers of the world, which became clear from my air travels July 1 to September 24. During that period, as a citizen of Albuquerque and New Mexico, among the 22 air reserve stations now established I visited, observed, compared, made written and mental notes of conditions at naval stations and naval air reserve stations in San Francisco, Los Alamitos, San Diego, Corpus Christi, Pensacola, Atlanta, Norfolk, Washington, Squantum, Mass., Willow Grove, Pa., Glenview (Chicago suburb), Memphis, Kansas City, and Denver.

Had fathers, mothers, and congressional leaders heard, felt, and seen on the spot, what I did by mingling with all hands, from apprentice seaman up, the Congress would earmark annually enough money to equip and maintain a naval air reserve unit in each State.

If so, we will quickly have a million naval air reservists, ready for a frolic or a fight, so adaptable and resourceful that no nation or combination of them will dare deny us gangway when and if we need it and want it for our safety.

The United States Naval Air Reserve is a thing apart, over and above all else, no feather bedding there. With a completely serious system of training, a unique esprit de corps, it is destined to become our corps de lite under the guidance of Rear Adm. Edward C. Ewen.

Moreover, it is a peacetime career; part time for some, full time for others. There is an example of two full time career men: a petty officer second class, ship's cook, age 35, reported for duty August 6, 1946, with base pay, longevity, family allowance, commuted rations, he gets $323.55 a month. A seaman second class, age 38, reported for duty August 1, 1946, with base pay, family allowance, commuted rations, and he get $242.80 a month. Remember these men will be advanced in rating.

Membership is open to the qualified citizen, veteran or nonveteran from any State. He voluntarily becomes a member and may resign of his own free will, mind you, at his own free will. Except in a state of emergency he may not be detached and sent elsewhere, except at his own request. He earns while he learns, in his week-end spare time and on the annual 2 weeks flying maneuvers over the land. What a square deal, made to order for you, young man.

At most stations, high school and college students who are adapted mentally, and physically fit are now taking advantage of that square deal enabling them to do some spare time week-end majoring in aviation technical training and piloting. They are taking advantage of that square deal in the belief that it may be the deciding factor when applying for a job, especially with the big corporations, whose headquarters executives and regional directors are using company-owned small planes for inspecting and pepping up their far-flung holdings; meantime abandoning other forms of transportation to save time and money.

New Mexico's terrain is not unlike that of Brazil, where in 1942 small clubs were formed at inaccessible spots over the land to develop Brazil's hinterland.

Aviation is the only transportation to develop New Mexico commercially and spiritually.

All of which should intrigue and cause you to flock to sign application blanks, and be on the road to becoming a part of the Nation's strong virile young manhood, so urgent in the strategic years ahead, businesswise and otherwise.

The blank begins with "I hereby make application to join New Mexico's Organized Naval Air Reserve, for inactive duty, when and if established by the Navy Department." Sign it now, or, otherwise when our complement is filled, you will be on the waiting list. That will not be so hot for you, if interested.

To properly upkeep and maintain mechanically 10 squadrons, we will need 1,100 enlisted men from apprentice seaman to chief petty officer, some 250 officers from ensign to commanders. If there are not enough properly fitted men in the State to fill the complement, I am sure that the nine leaders mentioned herein will be happy to fill it with men from any State, east, west, north, or south.

It is to be noted that 160 men may be appointed annually to the Naval Academy from the total number of Naval Reservists and Naval Air Reservists.

Among the part time and full timers there will be doctors, clerks, mechanics, electricians, high school and college students, lawyers and bankers, etc.

Three hundred of the enlisted men and 28 officers will be assigned as stationkeepers. The balance of enlisted men and officers will be in the part time volunteers.

Don't let this State down. So shake a leg; always have application blanks on your person. Get them signed properly and mailed to Albuquerque's chamber of commerce at once. The blanks are at Navy recruiting stations and American Legion posts.

When a sufficient number of signed applications are in hand, then and not until then will we put it up to Washington. Aided by an upsurge of New Mexico's spirit, demanding that we join the fast-growing network of Naval Air Reserve stations, so that our young aviators may broaden their knowledge and gain experience through interchange of flights with other Naval Air Reserve stations throughout the land.

It can, it must be done.

Let's do it for New Mexico, a land of low humidity, enchanting sunshine, long life and a happy one, your State and my State.

Let's do it for ourselves and our firesides.

Alaska: The "Promised Land"?

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. LeCOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the gentleman from Utah [Mr. DAWSON] which appeared in the National Publisher for November 1947:

ALASKA: THE "PROMISED LAND"?

CRY OF "TIMBER!" RESOUNDS AS THE STAGE IS SET FOR GIGANTIC PULPWOOD, NEWSPRINT INDUSTRY

(By Representative WILLIAM A. DAWSON, Second District of Utah)

(Congressman DAWSON is a Member of the House Public Lands Committee and has just returned from a 3-weeks inspection of the resources of Alaska.)

For too many years Alaska has been referred to as "the promised land." Today she stands on the verge of a huge expansion in industrial activity.

My recent visit to Alaska has convinced me that this future development holds promise, not only to residents of Alaska, but the newspaper industry of the United States as well. During the war years American newspapers have been faced with a most serious shortage of newsprint. World production of newsprint is fast getting back to what it was before the war. Output last year was 7,083,000 tons, compared to 7,732,000 tons in 1939. The trouble now stems from a war-borne spurt in newsprint demand. Dealers estimate that from 9,500,000 to 10,000,000 tons could be sold this year if such a supply were available. Instead, many newspapers in the United States have less than a month's reserve on hand, which in many cases is worse than the situation during the war.

Canada, long the world's leading producer of newsprint, is working at full capacity, but her producers are reluctant to invest in new mills for fear the present demand will not be sustained.

Now is the time to utilize the vast resources of Alaska and build a lasting newsprint industry of our own.

The last session of Congress passed a measure authorizing the Forestry Department within the Department of Agriculture to sell timber in Alaska to prospective bidders interested in developing a pulpwood industry. Already bids have been advertised and much of the groundwork done on two proposed plants.

Two plant sites are located

One of these plants would be located near Ketchikan and the other at Thomas Bay, near Petersburg. Both will be in the Tongass National Forest area in southeastern Alaska. These are large-scale projects and the specifications call for plants which will eventually produce 600 tons of newsprint a day. Each plant would cost from $25,000,000 to $35,000,000 and contracts now being offered by the Forestry Service extend for a period of 50 years with readjustments on the stumpage rate every 5 years. Each of these plants would employ over 1,000 men which it is estimated would support a community of over 10,000. This would be larger than the most populated towns now in Alaska. The specifications call for the operations to be on a sustained-deal basis, and it is estimated that each 87 years the forest will be completely regrown so as to offer continuous operations. Provision is also made to protect fish and wildlife from stream pollution.

One of the chief advantages to Alaskan operations is the availability of hydroelectric power and water for purifying purposes. The site of the plant which I visited at Ketchikan is within 7 miles of a huge glacier filled lake located several thousand feet above the plant site. The proposal is to bore and install a conduit under the bottom of the lake to furnish the necessary hydroelectric power. It is estimated that over 800,000 horsepower could be developed in this area. The timber is located on hundreds of accessible islands and inlands and extends from the shores of tidewater to an elevation of about 2,000 feet. The stand per acre averages between 20 to 25 thousand board feet, or 40 to 50 cords. It is estimated that three-fourths of the 80,000,000,000 board feet of timber on the Tongass Forest lies within 2½ miles of navigable tidewater.

High-grade pulp

Two principal timber species, western hemlock and Sitka spruce, are of high value for pulping. The hemlock, which is superior to eastern hemlock in this regard, is the same tree which is the foundation of the large bleached and unbleached pulp industry in Oregon, Washington, and British Columbia. The bleached output goes into rayon and cellophane, and the unbleached and mechanical grades into newsprint. Sitka spruce is an excellent all-purpose pulping wood, comparing favorably with white spruce, the standard pulpwood of eastern North America. With an estimated commercial stand of virgin timber on the Tongass National Forest of 78,500,000,000 board feet, and allowing an average of 78 years as a rotation period during which this timber may be entirely removed under sustained-yield forest management, some 1,600,000 cords of wood of 600 board feet each can be taken from the forest each year. This amount would produce 800,000

tons of sulfite pulp a year or well over a million tons of newsprint paper, which is about one-fourth of the present annual newsprint consumption in the United States.

In the entire Tongass Forest area there is an estimated commercial stand of virgin timber amounting to 78,500,000,000 board feet.

It is the plan of the Forestry Department to sell sufficient timber for four additional plants some years in the future, making a total of 6 plants in southeastern Alaska. All this, coupled with an increased production in the Southern States, will greatly alleviate the newsprint shortage in this country. The first two plants are now in the bidding stage. Bidders on the Petersburg plant have been given until January 5, 1948, to qualify. An oral auction of all such qualified bidders will be held in Washington on February 18, 1948.

Large pulpwood manufacturers in the United States have also submitted proposals for the Ketchikan plant. These firms have had their engineers on the ground for the past few months and the indications are that bids will be let within the next 6 months.

Congress has evidenced an active interest in this development and the indications are that full cooperation will be given in this giant undertaking.

On the future of Alaska rests the defense of our country and on the availability of a free press rests the defense of our American way of life.

Political Isms

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. SMITH of Ohio. Mr. Speaker, Russian communism, German socialism under Hitler, Italian socialism under Mussolini, British socialism under the falsely called labor government of Britain, and new dealism are all the same disease. All are police states.

What appear to be differences between these isms are but manifestations of different forms and stages of development of identically the same social and economic malady.

All the bodies controlling these isms subsist on the sweat and toil of others by substituting the political profit motive for the private profit motive; political laissez faire—let the politicians run the affairs of the workers—for private laissez faire—let the workers run their own affairs—government by men and bureaus for government by representation and law; a politically planned economy for a natural economy.

All are based on the principle of unlimited power to tax, to expropriate private property, to "take from the mouth of labor the bread it has earned."

New dealism is not as fully developed into a police state as the others but it is making rapid progress in that direction. About all it needs to finish the job is the power it is now inveigling Congress to give it—peacetime price and wage control, rationing, authority to seize farm crops, livestock, savings, and so forth. The President himself has said so, though perhaps at an unguarded moment.

Social-Security Program Wanted

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mrs. DOUGLAS. Mr. Speaker, those of us who have been vainly pleading for action on the broad social-security program recommended year after year by the President and endorsed by both political parties in their 1944 platforms were pleased to hear on Tuesday, November 18, that the chairman of the all-powerful Ways and Means Committee, the gentleman from Minnesota [Mr. KNUTSON] had joined forces with us. He tells us that everywhere he traveled in his own district and in 16 other States people were asking the same question, namely, why more thought is not being given "to the needs and suffering of our own indigent."

Some of us have been asking the chairman of the committee with jurisdiction in this area the same question repeatedly and we are glad that the voice of the people, hungry for security in their later years and other times of need, has at last been heard.

It does seem strange, however, that it takes starvation in Europe to arouse the gentleman to the fact that we have insecurity at home. He has not lacked for information.

In 1946 a technical study—Issues in Social Security, a report to the Ways and Means Committee, 1946—was made and published by the Ways and Means Committee which spelled out the inadequacies of the present social security program in persuasive detail.

He has not lacked for evidence of popular support for social security extension. Extensive hearings—see 3 volumes of Hearings on Social Security before Ways and Means Committee, 1946—were held by the Ways and Means Committee following the release of the technical report and witnesses representing the widest possible range of viewpoint appeared to support comprehensive liberalization of the program. I refer to such groups as the American Federation of Labor, the CIO, the United States Chamber of Commerce, the National Association of Manufacturers, the Grange, the American Legion, the Federal Churches of Christ in America, the National Catholic Welfare Conference, the Fraternal Order of Eagles, and a great many others.

He has not lacked for encouragement from his own party, which in 1944 pledged itself—see Republican platform of 1944—to extension of the existing old-age insurance and unemployment systems to all employees not already covered as well as to the strengthening of programs for maternal and child health, dependent children, and assistance to the blind.

We sincerely hope that the chairman of the Ways and Means Committee is determined this year to press for the fulfillment of the promises made year after year by the committee—see, for example, House Report 594 and other reports on stopgap social-security legislation—to give this matter priority next year. We sincerely hope that the popular demand for real social security for all our people is at last to be fulfilled and the pledges of the Republican Party to this end are to be redeemed.

But we are not for a moment deluded that this has anything in the world to do with the Marshall plan, with aid for European recovery. What kind of national self-belittlement is this which says we, the richest nation in the world, cannot afford both security for our own people and a helping hand to those European nations in whose recovery we have such a stake? What kind of tactic is this which seeks to confuse the great humanitarian impulse of the American people by illusory conflicts and delusive doubts lest this endanger their own chance to achieve security for themselves and their families? Of course, we are going to press for a broader social-security program, and this would be a good year for our colleagues on the other side of the aisle to show their good faith in at least this one area of social legislation.

But we are also going to fulfill our pledges to human kind in the broader arena. What is social security worth at home if the peace of the world is to be everlastingly threatened? What is social security worth at home if the people of Europe are starving, embittered, and desperate? Above all, what kind of mischief is this which asks us to blind ourselves to the hunger for security in the rest of the world in order to achieve it for ourselves? Security, like peace, is indivisible, and we must and can direct our efforts to achieving it simultaneously at home and abroad.

If We Really Believe in Free Enterprise the Unjust Restraints on Sale of Margarine Should Go

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. HAYS. Mr. Speaker, the Washington Daily News recently carried an excellent editorial on the proposal to repeal the Federal taxes on margarine. I hope that the Committee on Agriculture will get around to this problem, in justice, not only to the producers of margarine, but primarily to millions of consumers who are entitled to fairer treatment. Under leave previously granted by the House I include the following editorial from the Washington Daily News:

CHANCE TO BE HEROES

We don't know what measures for controlling the cost of living will be proposed by President Truman or enacted by the special session of Congress.

But we know one simple measure, long overdue, that would help materially:

Repeal the Federal tax on margarine.

There is no respectable reason for these taxes. Their sole purpose is to protect the

butter business—to make margarine cost consumers more than it should and to make its use needlessly inconvenient.

Each margarine manufacturer must pay a Federal license fee of $600 a year, plus a tax of one-fourth cent on each pound of uncolored margarine he sells. His tax for selling colored margarine would be a prohibitive 10 cents a pound.

That's why housewives can't buy yellow margarine, but must work the coloring matter in at home.

The Government charges wholesalers $200 a year, retailers $6, for the privilege of selling white margarine. If they sold it colored, wholesalers would have to pay $480 a year, retailers $48.

There are no similar Federal taxes on other foods. Even with these taxes and fees, which are rank discrimination against margarine, it sells for about half the price of butter. But it would be even cheaper still if the taxes and fees were taken off.

Many bills to take them off have been introduced in recent sessions of Congress, but blocked by the influence of the butter lobby. The special session offers a grand opportunity to get rid of them.

Let's see how many Senators and Representatives would rather please the butter lobby than be heroes to millions of housewives.

A Blueprint for European Recovery

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including as a part thereof an editorial which appeared in the Akron Beacon Journal of November 12, 1947:

BLUEPRINT FOR EUROPEAN RECOVERY

The Harriman committee report and Secretary of State Marshall's statement of purposes provide Congress with guidebooks as it begins to work its way through the maze of the European recovery program.

Although there is general agreement on the idea of helping western Europe out of its economic difficulties, Senator TAFT'S warning indicates that Congress will write no blank checks for the administration to fill out. While he agrees that reasonable aid should be given, the Republican leader is determined to fight wholesale additions to the taxpayers' burden and commitments that would increase domestic inflation and require restoration of price controls. TAFT'S arguments are certain to act as a brake upon free spending abroad.

Congressmen should paste on their desks or in their hats these fundamental truths from the President's 19-member advisory committee headed by Secretary of Commerce W. Averell Harriman:

"Such aid must be viewed not as a means of supporting Europe but as a spark which can fire the engine.

"For all its resources, the United States is no limitless cornucopia.

"The hope of western Europe depends primarily upon the industry and straight thinking of its own people.

"The aid which the United States gives will impose definite sacrifice on this country.

"The extension of such aid calls for anti-inflationary fiscal policies on the part of this country and a new agency to administer the aid extended."

The Harriman committee report offers a realistic approach to the problem of European aid. If the interim assistance immediately required and the long-range Marshall program are to produce the desired results the first condition is that Europeans be warned that they'll have to work.

If the European people are not sufficiently interested in remaining democratic and free to work for those privileges, the United States can better spend its money on building its military defenses.

The American people, at the same time, must realize that this country cannot lend or give sixteen to twenty billions in dollars or products without sacrifices on our part. President Truman has been inclined to treat the Marshall plan as a painless adventure in check writing. But the money has to be in the bank when the checks are presented for payment. And the money must come from the American taxpayer.

The Harriman committee wisely suggests that the European recovery plan be financed out of taxes rather than by treasury borrowing. "Maintenance of a surplus in the United States Treasury is a necessity in this inflationary period," the report states.

Moreover, the taxpayer will have a greater interest in how his dollar is spent if it comes directly out of his pocket. He'll know the amount of his personal sacrifice for European recovery, and he'll howl when the drain begins to get too heavy.

The committee correctly brands as "nonsense" the idea that helping Europe will make America prosperous. It recognizes—although the administration doesn't—that exports of commodities in shortage contribute to higher prices and constitute an economic danger.

When export-import balances are restored, our economy will be strengthened, but until then, aid to Europe does carry certain risks. Buying prosperity is as silly today as it was in the Roosevelt era.

It is essential, too, that Congress differentiate between the interim emergency aid needed to see certain countries of Europe through the winter and the plan for lasting restoration of European economy. When people are cold, naked, and starving, there is little time for Congress to haggle over minor details. The need is urgent. The answer must be immediate.

This program, as Secretary Marshall said, is not a recovery plan. It is designed to keep people alive through the winter. It must provide enough and in time.

Congress' chief chore will be to determine whether the State Department's estimate of $597,000,000 is too high. If it is possible to scale this down, without reducing the effectiveness of the program, Congress should do it, to relieve the load on the American taxpayer.

Congress should also have something to say about what commodities are to be sent, to whom and how they will be distributed. Aid-to-Greece supplies piled up on docks in Greek ports because the machinery for distribution was faulty.

Although Secretary Marshall prefers to have existing agencies handle both immediate relief and long-range aid, the Harriman committee suggestion for creating new direction is better. The head of the new agency should be appointed by the President and confirmed by the Senate, the committee report proposes. He should assume active, personal direction, cooperating with a board of directors composed of Cabinet officers and others named by Congress. The agency should work in cooperation with the State Department, since foreign policy is a primary concern. But the State Department is expected to cooperate, not control.

The committee further recommends that a European representative be named to direct and coordinate activities abroad. It does not urge, as does the National Association of Manufacturers, that financial assistance be channeled through private enterprises instead of foreign governments.

The committee prefers to keep the recovery agency from interfering in domestic political affairs of the recipient countries, as long as those countries work for the announced goals. A regular check up would be made to make sure that the money is being spent as intended. Those governments which fail to do so would be denied additional help.

Over all, the Harriman committee has given Congress a workable blueprint for a colossal task. The necessity of helping western Europe is admitted as a measure to keep cold war from warming up to a shooting war. If Communist penetration of western Europe can be checked with dollars, America will get off cheaply.

The danger lies in subsidizing Europe at the expense of our own security. We can afford to give and lend generously, only as long as our own strength is not impaired.

The Harriman report erects a danger signal for Congress to heed.

AAA

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert seven resolutions adopted by the delegates from 12 communities of Washington County, Ark., at their convention held at Fayetteville, December 3. These people are leaders in agriculture in that county and are doing good work.

Delegates from the 12 communities of Washington County held their annual convention at Fayetteville, Ark, December 3, 1947, and elected the county committee for 1948 and passed the following resolutions:

"1. That the ACP funds for the program year 1948 and future program years be appropriated by Congress in the amount of not less than $400,000,000 with adequate funds each year to properly administer a program controlled by elected farmer committeemen.

"2. That the agricultural agencies operating in the State are all accomplishing much and merit the support of Congress and should be continued. However, in the event that any combinations are made by Congress involving triple A, that such combination should remain under the control of farmer-elected committeemen.

"3. That price support be continued at 90 percent of parity on all commodities now covered and on such additional commodities as are necessary for national economy.

"4. That community and county committeemen be elected by farmers as at present and that State committeemen be elected by county committeemen and representatives of the State committee act as an advisory board to the Secretary of Agriculture.

"5. That the triple A is the program through which the Nation and public should discharge its responsibility in rebuilding and maintaining the soil and preventing erosion.

"6. That funds appropriated for conservation are not doles to farmers but public investment in soil conservation similar to investments in other national public necessities.

"7. That the State committee be responsible for developing and carrying out the

triple A program with the assistance and recommendations of community and county triple A committees and that the State program be subject to the approval of the Secretary of Agriculture."

Article by George E. Sokolsky

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to submit an article by George E. Sokolsky, which appeared in the Washington Times-Herald Sunday, December 7. I am happy to know that Humphrey Bogart and his wife, Lauren Bacall, have had a change of heart. Like Mr. Sokolsky, I think a great number of us would like to know who persuaded Humphrey Bogart and the others to make their much-publicized trip to Washington.

The article follows:

THESE DAYS

(By George E. Sokolsky)

DEAR HUMPHREY BOGART: I received your mimeographed letter in which you say:

"My recent trip to Washington, where I appeared with a group of motion-picture people, has become the subject of such confused and erroneous interpretations that I feel the situation should be clarified.

"I am not a Communist.

"I am not a Communist sympathizer.

"I detest communism just as any other decent American does.

"I have never in my life been identified with any group which was even sympathetic to communism.

"My name will not be found on any Communist front organization nor as a sponsor of anything communistic.

"I went to Washington because I thought fellow Americans were being deprived of their constitutional rights, and for that reason alone.

"That the trip was ill-advised, even foolish, I am very ready to admit. At the time it seemed the thing to do.

"I have absolutely no use for communism nor for anyone who serves that philosophy.

"I am an American.

"And very likely, like a good many of the rest of you, sometimes a foolish and impetuous American."

Confession is good for any man's soul. And you display great courage and manhood to confess error. Yes, that trip was foolish. You and your very beautiful lady did look exciting in the photographs, leading your gang that flew through the air all the way from Hollywood to Washington to save the world from the Thomas committee. You all looked so tall and masterful.

Next time, however, I hope you will look before you leap. Things are not always what they seem to be in the exciting game of international politics.

For instance, you people out in Hollywood had an idea, like so many others in America, that this country had an ally during the war. You were asked to portray Soviet Russia as a glorious, free, democratic country that was allied to us. You may recall that Hollywood produced some pictures along that line.

Of course, that was never true. Soviet Russia was never an ally. Germany's war on Russia coincided, more or less, with our war on Germany and the Russians were ready and willing to take advantage of that situation.

So we gave them $11,000,000,000 of lend-lease, and we shipped them airplanes and tanks and machinery. But they never coordinated their military plans with ours.

They never permitted our military observers to visit their fronts. They declined such cooperative action as appeared in the Joint Chiefs of Staff.

They put terrific pressures on us for the second front, as they called it. And they blackmailed us at Teheran and Yalta. Allies do not act that way. Only enemies, temporarily related by coincidence, act that way.

If you are genuinely contrite for a very foolish bit of exhibitionism, you ought to go further. You might tell us who suggested that trip from Hollywood to Washington. Whose brain child was it? Who projected you and your wife to take the lead?

Your wife, Lauren Bacall, is a beautiful young lady, and you are a popular actor, but some of those who marched behind you were neither beautiful nor particularly popular. They stuck you two out front because you did not belong to them.

That is an old trick. But somebody was using both of you. Who is that somebody? In the pictures you often sock a swine on the snout. You might sock whoever used you in this way. It would be a great service if you told all—and gave him a sock.

Anyhow, I am glad to see you among the Americans and not the stooge of that little gang of serious conspirators who are using their ephemeral Hollywood fame to ruin the country that gave them wealth, comfort, and opportunity.

You show first-rate manhood in taking the people who admire you into your confidence. Now do something for your country that is really constructive.

Tell us who suggested and organized that trip. If you have no better way, use this column for that purpose. It gets around.

Best regards to the lady.

The Real Communists

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert the following article by David Lawrence, in the United States News, entitled "The Real Communists":

THE REAL COMMUNISTS

(By David Lawrence)

The real Communists are not in Hollywood.

Nor are they to be found in any substantial number in the rank and file of American labor unions.

The real collectivists and socialists are in Washington, in the high places of Government, in the high councils of national labor unions, in the high councils of the Democratic Party.

For the real Communists which America must combat are not those who are in league with foreign governments or who are subversive in the sense that they wish to see our form of government overthrown by physical force.

America has only a handful of Communists who sympathize with totalitarianism in Russia or are really working in the interests of a foreign power.

But America has many citizens whose loyalty to the United States is unquestioned and who yet are the enemies of our risk-capital system. They are doing everything in their power to overthrow it by political means.

The enemies of our system of risk capitalism are for the most part conscientious citizens with a sincere conviction that state socialism is better for America than the free-enterprise system. They do not avow that belief. They would be offended if called by any other label except liberals.

This very group, however, strives to destroy our system of risk capitalism. They really want government capital and government control substituted and some form of planned economy established, with the government as master. This group is infiltrating our Government, our churches, our schools and colleges.

UNDERMINING TACTICS

The underlying strategy at the moment of the group is to break down America's strongest sinew of strength—the profit-and-loss system.

In recent months the main attack against the profit-and-loss system has come from the strategists in the CIO, aided and abetted by Democrats of the radical school of thought in Congress.

The objective seems to be to undermine all confidence in the profit-and-loss system, first, by arguing that profits are too high and, second, by attributing all price increases to profiteering and playing down the part that wage increases or agricultural conditions or scarcities of materials have played in the inflation of prices.

CONFUSING THE FACTS ON PROFITS

The attack isn't subtle. It is out in the open. It starts with the emphasis on the numerical size of profits. It ignores the large volume of business done in an inflationary period and the fact that profits have not changed materially in ratio when related to the national income. It omits mentioning that the profit dollar is taxed twice and that the purchasing power of the profit dollar has shrunk by 51 percent while the worker's dollar has diminished 39 percent.

It ignores, moreover, the fact that profit margins or percent per dollar of sales have not varied materially from prewar averages. It overlooks entirely the fact that the book value of capital in terms of the cost of plant or buildings or equipment is low and that any use of "net worth" when applied to 1939 figures will necessarily be wrong today. For the "book value" of capital is not a true picture on which to make measurements of profit.

A locomotive still running today was bought at about $50,000 in prewar days. A new one costs about $150,000. A plant unit to produce an ingot of steel is on the books at a depreciated level of about $50 whereas a new unit would cost close to $200 today.

Plant is wearing out. Machinery must be replaced at present-day costs—not "book value" costs. Where is the capital coming from to replace what is worn out?

Fortunately, the excess-profits tax was repealed in time to prevent the worst depression America would have faced in her whole history. The Communists or radicals call it a "windfall" and ignore the economic implications altogether. They want fixed expenses increased because 1 or 2 years of readjustment show numerical profits to be high. They ignore the fact that the ratio of profit to total sales in 1947, according to the Department of Commerce figures, is less than eight-tenths of 1 percent above that of 1929.

After eliminating the inventory profits, which are temporary, and the benefits due to carry-back provisions in the tax laws, corporate profits in 1946 were lower than in 1945. This is the statement recently made by the

economic staff of the Legislative Reference Service of the Library of Congress in response to inquiries from the Senate Committee on Labor and Public Welfare.

The Nation owes a debt of thanks to the conservatives in Congress who foresaw the need both for the repeal of the excess-profits taxes immediately after the war and for the carry-back provisions that have so well cushioned the transition period.

There are, nevertheless, radicals in Congress who have so little regard for economic reasoning that they now want to put back the excess-profits tax on the mistaken theory that it will hold down prices. What they really want is a managed economy—a public utility status for most industries and Government-created monopolies and cartels. Yet they vehemently deny any such purpose and consider themselves liberals.

Some of the enemies of our risk-capital system are merely demagogs who distort the economic facts of life, but some of them are good men who just do not know what makes the wheels go round in a profit-and-loss or risk-capital system.

EVERYBODY ON THE SAME LEVEL

The most conspicuous example of this is to be found in the attitude toward tax reduction on the part of many Democrats. Some, to be sure, go along blindly with the Administration without stopping to think what the implications of their position really are. Others know what they are after—they want to reduce all earnings to a level of so-called equality. They want to put the skilled and the unskilled, the talented and the untalented all on the same footing. They belittle management's skill at every opportunity.

The Communistic doctrine, too, is based on a leveling of incomes. Many of our American Communists do not know that in Russia the original revolutionary concept came to be modified after some practical experience with human nature. Some rewards are given today in Russia to the skilled workers. Some incentive systems have been adopted. Private capital and private ownership of the means of production are, however, still tabooed.

But in America the first step in the original approach apparently has been introduced—not as communism, of course, but as so-called liberalism. It is plainly a move in the direction of state socialism.

PENALIZING THE THRIFTY

In the message of President Truman last summer vetoing the tax bill, for instance, is to be found the equivalent of the original bring-everybody-to-the-same-level doctrine of the Communists. He argues, in effect, that the successful must be penalized, that thrift is not to be rewarded, that tax reduction must not benefit those who by their very earnings have achieved an advanced position.

The Democratic administration's argument is that proportionate tax reductions from high wartime rates cannot be given those upon whom the burden fell heaviest during the war. These men must continue indefinitely to bear wartime tax burdens. They have felt the biggest cut by the tax collector in take-home pay of any group in America since 1939, and on top of this has come inflation's cut in purchasing power.

There is no more certain way to kill risk capitalism than to punish the managerial class.

The managerial class usually furnishes investment money for the purchase of stock equities. Today this market has dried up. The middle class is pinched by inflation and the administration denies it tax relief. Companies that were not fortunate enough to earn big profits in 1946 and 1947 cannot expand or replace outworn equipment to increase production because they do not have sufficient earnings to justify bond issues and they cannot find a market for the sale of stock. The investor class foresees no dividends high enough to be worth the risk as long as tax rates are virtually confiscatory.

The system of risk capitalism can be demolished by a refusal to relieve individuals of wartime tax rates, thus destroying incentives and depriving the middle class of a chance to save money for investment.

The enemies of the system of risk capitalism are the unwitting exponents and allies of the Communist philosophy.

Need for Laws To Fight Communism

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 8, 1947

Mr. ROBERTSON. Mr. Speaker, Mr. Donald R. Richberg, prominent Washington attorney and once former head of the NRA in the prewar days, has made some great contributions to the welfare of the United States and our constitutional form of government.

He writes in the Sunday Star with deep conviction on the need for laws to fight communism, shown in the motion-picture hearing.

Under unanimous consent, I include herewith his intellectual and far-reaching philosophies that should have a bearing on every Member of Congress and every citizen of the United States:

NEED FOR LAWS TO FIGHT COMMUNISM SHOWN AT MOTION PICTURE HEARING—RICHBERG SAYS NO WITNESS HAS A RIGHT TO REFUSE AN ANSWER WHEN POLITICAL HOSTILITY TO UNITED STATES IS INVOLVED IN INQUIRY BY CONGRESS

(By Donald R. Richberg)

The need for legislative action to combat Communist efforts to undermine and eventually to destroy our form of Government is obvious. As a people we are seriously menaced by the persistent activities of a political organization whose purposes are so sinister that its membership and programs must be concealed and its policies advanced by calculated deceit and treachery.

The right of a legislative committee of Congress is unquestioned to compel testimony to bring out the facts which are the necessary foundation for legislative action.

The investigation of the motion picture industry by the House Committee on Un-American Activities provided a good example of Communist tactics in evading exposure and confusing public opinion. The refusal of alleged Communist Party members or Communist followers to admit their beliefs and affiliations was glorified as an exercise of civil liberty and individual rights which, of course, do not exist under communism, and which were in no way violated by requiring a congressional witness to answer the simple question, "Are you now or have you ever been a member of any Communist Party?"

NO RIGHT TO REFUSE

No witness had either a legal or moral right to refuse to answer such a question. Yet, Communists and many of their deluded followers have so confused public opinion with irrational, emotional harangues that the simple legal and moral issue is quite widely misunderstood.

Infiltration into labor organizations and the disorganization of production and distribution are major features of the Communist program. Likewise, it is well known that all possible avenues of publicity are being utilized for the misleading of public opinion by Communists and befuddled "liberals" who follow the party line. If communism were a creed advanced only by those who openly espoused it, there would be little need for committee hearings or legislation to protect the American people and their Government from this political activity. If communism were not an international creed, national legislation to protect the United States against foreign aggression by Communists might not be needed.

TOLERATED BY AMERICANS

But here we have a political organization, born and nurtured outside the United States, acting as the agency of a foreign government which is admittedly antagonistic to the Government and institutions of the United States. Here we have what is essentially a treasonable organization giving aid and comfort to our enemies which, however, has been tolerated because of the extent to which Americans are willing to go in the protection of individual liberty, free speech, a free press and freedom of conscience.

If the Soviet government were waging an ordinary war, or if that government even acknowledged that it is waging a cold war against the United States in which American Communists are providing the fifth column of attack, it would be evident that we need a national law to compel the public registration of every agent of such a hostile foreign government and every person engaged in any way in helping such an agent. Such a law would, of course, make it a crime to conceal any such activity. Under such a law any one called to testify as to whether he was a Communist or a Communist helper would be required to answer, unless he pled that his testimony would incriminate himself, which would be tantamount to an admission of guilt.

Clearly, the United States is facing the need of Federal legislation to limit and confine the evil effects of Communist propaganda and activities in this country. It is a necessary foundation of fact for such legislation to determine the extent to which channels of public information are being befouled, the methods that are being used, and the persons who are so engaged.

NEW LAWS ARE NEEDED

Thus, the legal question which the Communists have attempted to raise disappears immediately. Since the question asked of every witness was relevant to the inquiry being made, the witness had no legal right to refuse to answer, because until it is made illegal to be a Communist or to conceal one's communism, no one can plead that he will be incriminated by admitting that he is a Communist. As a matter of fact, no witness pleaded the defense of self-incrimination.

There is no privilege of a witness recognized in the law to refuse to answer the question propounded by the House committee since it did not involve self-incrimination. It is mere farce comedy for apologists to babble about free speech and free press and secrecy of the ballot since none of these rights was involved. No one but a Communist ever pretended that freedom of speech or press authorizes a witness to refuse to testify regarding his opinions or his political activities, or that the secrecy of the ballot is involved, when one is called upon to state whether or not he belongs to a certain political party.

A lot of foolish articles have been written arguing that it is offensive to American principles to compel a man to testify as to his opinions. As a matter of law, if the opinions a man holds, whether political or economic, are evidence which will shed light upon the question under legal consideration,

he has no right to refuse to testify. He must even testify as to his religious beliefs if that is relevant to the pending issue.

MATTERS OF PERSONAL PRIVILEGE

The obligation of a witness to testify has been established for centuries as shown by the rule laid down long ago in England in this judicial language: "The public has a claim to every man's evidence and no man can plead exemption from his duty to his country." Or, in the more recent language of an American court, "There is no privilege of silence when reticence, if tolerated, would thwart the public good."

There are some varieties of personal privilege which are recognized in the law and are justified by the desirability of preserving the confidential character of certain relations, such as those between a priest and a penitent, or a physician and a patient, or a lawyer and a client. But none of these privileges justifies a man in refusing to testify to his political affiliations or his political or economic opinions if those facts are relevant to a lawful inquiry.

It is very easy to criticize a legislative committee which is endeavoring to get the facts about what is essentially a conspiracy to violate the laws and to overthrow the Government. Witnesses trained in Communist tactics do everything possible to muddy the issues and to avoid a direct refusal to answer. They try to make speeches, They denounce Government officials. They do all they can to provoke disorder and to confuse the public mind with cries against fascism and tyranny and denial of constitutional rights.

These are the same tactics which lead to street rioting, kicking policemen in the shins, using any means of annoyance and physical injury that may provoke exasperated officers to use force against force and thus create public resentment against police brutality.

ONE WAY TO COMBAT THEM

The chairman of an investigating committee is required to have the patience of Job to avoid turning an ordinary hearing into a mob scene and making a spectacle of himself in his righteous indignation. There is only one way in which these subversive activities of trained Communists can be effectively combatted. That is to turn the light of publicity on these secretive treacherous practices and to put the finger of suspicion upon all those who, whether by design or from adulterated notions of liberalism, carry on the insidious campaign of creating industrial and political disorder and undermining confidence in the fairness of democratic government and the desirability of free business and labor.

Of course, efforts to expose secret plottings and activities harmful to the general welfare, will sometimes go astray. Despite my own rather conspicuous services, writings, and speeches devoted consistently to upholding constitutional government and individual liberty under a competitive system of private enterprise, I had to hear myself denounced as a revolutionary and Socialist, off and on for many years, and frequently by publicists who addressed large audiences. More recently the tide has turned and because of advocating the same principles (such as freedom of labor from any form of tyranny), I find myself now denounced as a Fascist and reactionary.

MORAL PRINCIPLES IGNORED

So, I can sympathize with those who, because of their associations of muddle-headed liberalism, find themselves wrongfully accused of being Communists or fellow travelers. But, there is one final defense that any one has available by virtue of civil rights and free institutions which are the inheritance of Americans. He can always avail himself of the opportunity which is his birthright to state frankly what he does believe, and to express clearly his political and economic views and thus let his fellow men judge of him by his own utterances and actions.

It should be accepted as a truism that anyone who is unwilling to have his fellow citizens know what he believes and what he is trying to accomplish politically is seeking to accomplish his aims by deceit and fraud and is not to be trusted.

It has been argued, with a curious disregard of moral principles, that Communist writers have a constitutional right to conceal their opinions because, if their communism were known, they would lose their highly paid employments. This is a brazen claim that a man has a constitutional right to obtain and to hold a job by fraud—by concealing his disqualification from his employer.

According to this argument, a lawyer could properly obtain fees from a client by concealing the fact that he was hostile to his client and his client's ideas and by concealing his intention to use his employment to work against his client—as far as he could do so without losing his fees. But if a bar association should investigate such a lawyer with a view to disbarring him for his dishonest practices, we would hardly expect to hear the lawyer try to justify his refusal to state his opinions on the claim of a constitutional right to defraud his client.

THE PRODUCER'S RIGHTS

This is precisely the claim that has been urged on behalf of these overpaid egotists of Hollywood. When a writer is employed to do a specific job it is not only on the basis of past performance and technical ability but also on certain assumptions as to the kind of person he is, the ideas that appeal to him, and his reactions to popular or unpopular opinions—all of which will inevitably affect the work he produces. A writer might be employed to write contrary to his own convictions if he were known to be able and willing to do so. But surely the employer would have a right to inquire, or even to expect information without inquiry, regarding any mental disqualification or impediment in an employee hired to do a mental job—just as a physical disqualification for a physical job should be revealed.

Moving picture producers may not all have a keen sense of public responsibility, but the inevitable censorship of their films by customers, in addition to various restraints from religious, political, and social organizations, certainly has a powerful influence on their judgments. Whether their opinions are wise or foolish, they have an undoubted right to insist that those who work for them shall, in good faith, not use their productions as the means of spreading social, economic, or political views which the producers regard as unhealthy or unprofitable or otherwise undesirable.

These employers certainly have a right to know whether an employee will try to do an honest job or whether he is a fanatic who will probably use his job as the means of advancing his secret purposes and accomplishing ulterior aims, which, if eventually revealed, will do untold injury to the employer whom he is defrauding.

PROTECTING THE AMERICAN WAY

If there were a little more attention given to the old-fashioned virtue of honesty, both in Hollywood and Washington, the excuses of essentially dishonest men for plainly dishonest conduct would not have been seriously offered in press conferences or seriously treated in any news commentary.

This democratic Government of ours cannot endure, except upon the basis of general confidence that the ways of learning what is true, of ascertaining the facts, and of exposing fraud and dishonesty, are always open. The courts must be able to command the testimony of every citizen as to his knowledge or belief, when these are pertinent to the case on trial. Legislators must be able to investigate all the facts regarding the good things that should be preserved and the evil things which should be checked or remedied. Therefore, the ability of both courts and legislative bodies to compel testimony is one of the most vital protections of the American way of life.

With all the power which resided in banking institutions and large property ownership, congressional committees were enabled through investigative authority to expose many evils in uses of money power which led to far-reaching reforms through new Federal laws. Despite the enormous influence of large employers of labor, congressional investigations paved the way to the enactment of laws to uphold the right of workers to organize for the protection and advancement of their interests. Recently, despite the powerful opposition of widely organized labor, congressional investigations paved the way to correcting many of the inequalities in legal rights and privileges which had given to labor unions monopolies and coercive powers injurious to the general welfare.

NO IRON CURTAIN HERE

It is recognized today that the great world-wide political economic struggle is being waged between the advocates of an authoritarian system, with a controlled economy and enslaved labor, and the upholders of a free industrial and political system. As to the success of the latter, the United States is the outstanding example and the fortress of individual liberty; and so, above all things, we need today to have the guiding light of publicity shine upon the leaders and programs of communism, just as it shines all the time upon the leaders and the workings of our democracy.

If we cannot lift the iron curtain abroad, at least we can insist that no iron curtain shall be maintained in the United States, behind which the destroyers of liberty can operate in a legally protected secrecy.

The defense against communism should not be made by projects for the suppression of free speech, or a free press, or the free organization of those who wish to espouse and advance the creeds of communism. The best defense would be a demand enforced by law that Communists and their followers come out in the open, identify themselves, and honestly endeavor to convince others that they can give guidance toward a better way of life. If we undertook to suppress all communistic organization and publicity, we would provide the Communists with a justification for secretive, fraudulent activities, which are now indefensible.

COMMUNISTS' STRATEGY

Of course, the Communists know that their program and its methods and its directing personalities cannot stand the light of day. They are seeking, not only to promote a revolution by the force of a well-organized, treacherous minority, but also to establish tyrannical internationalism which would destroy our institutions of self-government and subject our people to a foreign rule. This project is not merely the aggression by a foreign nation, but the aggressive action of people at home and abroad whose thinking and whose purposes are so alien to the spirit and promise of American life that they cannot, by any peaceful persuasion, convince the American people that they should embrace this alien way of living and deny themselves the individual ambitions, rewards, and liberty that are the very heart of what we call Americanism.

It is not necessary to indorse or approve all the activities of the present or preceding House Committee on Un-American Activities. But, the issue raised by the refusal of witnesses to testify truthfully and candidly is one which should not be lost in Communist contemptuous confusion. The

witnesses did not merely defy a committee of the Congress. They defied the Government which is seeking to find the facts upon which necessary legislation be based, legislation which should require all citizens of the United States engaging in political action to use their civil liberties only as assuring the opportunity for free speech and honest action, and to stop using their civil liberties as a license to carry on a treasonable conspiracy against the American people and their Government.

Resolution of Eastwood Civitan Club, Atlanta, Ga.

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. DAVIS of Georgia. Mr. Speaker, I am today in receipt of a letter from Hon. James A. Rollins, president of the Eastwood Civitan Club, Atlanta, Ga., in which he enclosed copy of a resolution adopted on November 25, 1947, by Eastwood Civitan Club, in which resolution passage of House bill H. R. 4278 and Senate bill S. 651 is recommended.

The Eastwood Civitan Club draws its membership principally from the Kirkwood and East Lake sections of the city of Atlanta, and is one of the outstanding civic clubs of the city. It owns its home on Boulevard Drive NE., where I have, on various occasions, had the pleasure of visiting. The officers and members of this club are patriotic citizens of the highest type, and I take pleasure in presenting herewith the above-mentioned resolution for the consideration of my colleagues:

EASTWOOD CIVITAN CLUB,
Atlanta, Ga., December 5, 1947.

Hon. JAMES C. DAVIS,
House of Representatives,
Washington, D. C.

DEAR JUDGE DAVIS: There is enclosed herewith a resolution which was adopted by the Eastwood Civitan Club on the date stated in the resolution.

It is our sincere hope that when this piece of legislation comes to the floor of the House you will exert your influence in its behalf.

With all good wishes, we are

Civitanly yours,

JAMES A. ROLLINS,
President.

Whereas the members of this club are interested in preserving and promoting peace and in preventing further wars; and

Whereas this Nation has been forced to engage in two wars within the past 30 years for which it was not adequately prepared in advance, resulting in prolongation of the wars with added costs and loss of life; and

Whereas the present state of world affairs is unsettled, rendering it uncertain as to when it may be necessary to defend ourselves and help preserve the peace of the world; and

Whereas there is pending in the Congress of the United States proposed legislation providing for universal training of our young men to insure partially trained reserves and enable us to defend ourselves more readily and effectively in the event of war, and which would, we believe, constitute a deterrent to war in that other nations would hesitate to provoke war if they knew we were prepared; and

Whereas this proposed legislation, contained in House Resolution 4278 and Senate bill 651, has been prepared after mature consideration and after consultation with leaders of civic, educational, and religious organizations, is designed to achieve the purposes stated above and at the same time to safeguard and develop the physical, moral, and civic character of the trainees: Therefore, be it resolved:

First. That the Eastwood Civitan Club approves the principles incorporated in H. R. 4278 and S. 651 and recommends the passage of this legislation.

Second. That a copy of this resolution be forwarded to each of the United States Senators representing the State of Georgia, and to each Member of Congress from this State.

This resolution was, upon due motion, made and seconded, and, after discussion, unanimously adopted at the regular meeting of the Eastwood Civitan Club, November 11, 1947.

This 25th day of November 1947.

THIRON J. SMITH,
Secretary.
JAMES A. ROLLINS,
President.

Letter of J. Peter P. Healy

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter recently received from one of my constituents setting forth his views on current questions:

NOVEMBER 11, 1947.

THOR C. TOLLEFSON,
House of Representatives,
Washington, D. C.

DEAR SIR: At the opening of this adjourned session of Congress, you are entitled to receive, and may appreciate, and the people have the duty to communicate with you some ideas of what are the needs of the country, and the desires of the people.

In recent months, for some reason that I don't fully understand, a great deal has been brought to the attention of the people by newspapers, radio commentators, and some public officials about the importance of taking sides in European affairs between Russia and dominated countries on the one hand, and alleged western democracies on the other hand, and these public utterances have been, in my opinion, a little overdrawn. I don't underestimate the tendency of Russia to dominate eastern European countries and some other areas; but I do question the manner and method of Europe and the United States to combat the tendency and creeping control of Russia. In my opinion, no one can buy a favor excepting by continuous payments and usually increasing payments, and it invariably happens when the payments cease the recipient turns into an enemy instead of a friend and it doesn't make any difference whether it is a rich uncle and a grasping nephew, or a nation that has been saved from conquest by a friendly neighbor, or whether it is an infant industry growing in strength and practice to get into keen competition with a former employer; the tendency is always the same. That tendency is born of selfishness and aggression and greed for power, and it won't be wiped out of the world, ever. For these reasons, I seriously question the practicability of the Marshall plan to subsidize western European democracies. I feel too that some of the administration officials in Washington have been talking about Americanism and working with and lending a helping hand to persons and organizations altogether too friendly with Russia. The Russians never obtained any information about the atomic bomb from the ordinary workers in Richland, Wash. If they got that information, they got it from higher authority than that, and I have had a feeling all the time that some administration officials wanted them to have it. As Fulton Lewis, Jr., said a while ago, the millions of dollars that the administration was asking Congress to appropriate to eliminate "Commies" from the Federal structure was a prodigious amount to spend to get rid of Communists, which the administration said were nonexistent in Federal offices.

We have problems within the United States which are of vast importance to the people here and to the welfare and progress of the country at large, and altogether too little has been done to work out those problems, to strengthen our own economy, our national defense, and the moral and loyal qualities of the people inside our borders. In this connection, I consider that the four articles recently printed in the newspaper from Senator WILEY, of Wisconsin, are rather outstanding. He said that the battle rages for communism in every school room, movie, screen, pulpit, street corner, and home, and that the effect of it was to undermine our system of government; encouraging executive usurpation of legislative power; centralize authority over local affairs in the seat of government; encourage an unwarranted control by labor unions over the affairs of the people; to teach the youth of the country ways inimical to our form of government; weaken the natural strength of our armed forces by ideas of sedition and by interfering with the proper diffusion of information through newspapers, radios, and movies. Then he urges every American to take an active part in local, State, and National affairs, to wipe out corrupt machines, and get back to the fundamentals of American Government by representation of the people. However, I don't believe he goes quite far enough. The idea is good; it is necessary and indispensable to the recovery of and maintenance of our form of government, but you cannot take the tools of man's trade from him and then expect him to produce record quantities of goods, and you can preach all you want to about individual citizens taking an active part in local, State, and National affairs, but unless you give these individual citizens the right to select their own representatives, small, medium, and large, by caucuses of their own, so that they may choose originally their own representative instead of accepting some self-selected ones, they are going to have an ineffective and futile voice in their own affairs.

You will remember well, we had a candidate for public office in Tacoma, not long ago, who was never mentioned in any caucus meeting nor by any group of representative citizens chosen by their constituents, nor sponsored by any political party, but apparently backed by some nonresident group which supplied liberal amounts of money to obtain his election, and that came altogether too close to doing so. That kind of procedure is not representative government. Now, I appreciate that the correction of this lameness in our nominating system is not a concern of the Congress, nor of the Federal Government, but it is a concern of the local people, and has an important and abiding effect on the officials in Federal offices, and to my mind, that is the source where correction will have to begin before the people

of the United States can expect a proper responsiveness in their public officials.

There was no ground, nor excuse, for the excessive exercise of power in the Federal Government over nearly every activity of local concern over the last 5 or 6 years, except to promote the war effort and strengthen the national defense. Now, the war is over more than 2 years, much of the War Powers Acts have been cast aside, but there is still altogether too much dominance by the Federal Government over the affairs of the people. It is a practice which is out of tune with our Constitutional Government, and is inimical to the best interests of the people. If the officials in the New Deal feel that they have to save the people from themselves, then there must follow that those officials have lost confidence in the people. Still those officials continue to say that they are servants of the people. I say, if the servant has lost confidence in the master it is time for the servant to find another position; and if the servant doesn't voluntarily do that, he ought to be discharged.

Yours very truly,

J. PETER P. HEALY.

Political Ties Secret?

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. DEVITT. Mr. Speaker, Mr. Gustaf A. Nordin, a Washington representative for the St. Paul Pioneer Press, has written an interesting column which was published in the December 3 edition of that newspaper, with reference to the action of the Congress in citing the Hollywood writers for contempt. The article exposes the fallacy in the argument that these people have been deprived of their constitutional rights. I include the article as part of my remarks:

POLITICAL TIES SECRET?

(By Gustaf Nordin)

WASHINGTON.—The recent congressional contempt citations against 10 Hollywood writers and directors has raised the question, "Just how sacred is the political affiliation of an American?"

To some degree, 39 States invade those rights.

The 10 Hollywoodites, all of whom held Communist Party cards, according to the House Un-American Activities Committee, screamed at the hearings that the committee did not have the right to invade their minds and ask their political affiliations.

Take as an example the reply of Samuel Ornitz, of Los Angeles, a writer, when he was asked, "Are you now, or have you ever been, a member of the Communist Party?" He said:

"I wish to state to you that my political affiliations, like my religious affiliation, is a matter fully guaranteed by the Constitution. I can belong to any party that I see fit to join, and you have no right to inquire into—."

But if Ornitz and the other nine Californians cited want to vote in California—or have in the past—they must declare their party affiliation 40 days before the State primary. When they register they must do so as Republicans or Democrats if they wish to participate in a partisan primary election in that State. That registration is a public record. If they refuse to state, they can vote only for nonpartisan offices or they can sign petitions and hope to get enough signatures to get their party on the ballot.

In fact, only 7 States have so-called "open" primaries, where no test of the voter's party affiliation is required. Those States are Wisconsin, Minnesota, Montana, North Dakota, South Dakota, Utah, and Vermont.

Two others—Connecticut and Rhode Island—have no primaries.

The other 39 have "closed" primaries. These fall into two categories: Disclosure of party affiliation at registration time, such as in California, or at the time of the primary.

In the latter case, there is no way at all to conceal your political affiliation. When the information is requested upon the registration of a voter, it is still possible for the voter to cast his ballot for the opposite party if he wishes. He does so quite often when voting machines or the printed ballots include the names of all candidates of all political parties.

Political faith is certainly not sacred in those States which have the "challenge" system. Under it, the voter can even be examined under oath as to his qualifications to cast the ballot of a particular party.

The "open" primary has come in for much criticism from those who believe in strict political party discipline. Under such a system, it is possible for Democrats to enter a Republican party to gang up on a particular candidate, or vice versa.

Baruch's Prescription

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette:

BARUCH'S PRESCRIPTION

At the risk of being branded a New Deal Communist, or something equally as preposterous, Bernard M. Baruch has looked a group of New York doctors and hospital administrators in the eye and told them of the need in this country for compulsory health insurance.

Mr. Baruch, long one of the most respected men in public life, does not go off half-cocked. By no stretch of the vocabulary can he be brushed off with a catch-phrase implying that he is out to overthrow the American system. This elder statesman is the son of a doctor. He has given millions for the advancement of medical education and research. He has studied carefully the health needs of this country.

A man doesn't need to be in league with Joe Stalin to appreciate the plight of millions of low-income Americans who simply cannot afford adequate medical attention. Nor does the term compulsory health insurance necessarily imply socialized medicine, with a Federal bureaucrat looking over every doctor's shoulder.

"A form of compulsory health insurance for those who cannot pay for voluntary insurance can be devised, and adequately safeguarded," said Mr. Baruch, "without involving what has been termed 'socialized medicine.' The needs can be met, as in other fields, without the Government taking over medicine, something I would fiercely oppose."

Mr. Baruch would establish a Federal agency, with Cabinet rank, to handle all health and welfare problems. He also recommended more and better doctors—in more places—more general practitioners, more hospitals, more group practice, more preventive medicine, a committee to guard veterans' medicine against politicians, increased medical research, health education, preventive medical program for children, more trained nurses and technicians, and adequate dental care.

These things are not too much to expect of the wealthiest country in the world. The wonder is that Congress, which has had similar proposals before it, has not acted long ago to meet the obvious needs of the people.

A recent booklet of the medical society of the State of Pennsylvania outlines a program of better health and medical care. Like similar groups in other States, it recognizes the plight of people who cannot afford proper medical attention. It encourages wage earners to participate in voluntary prepaid medical and hospital care plans. As for the more needy, it declares that State and local governments are responsible for providing medical care and hospital services, at public expense, for those not financially able to afford needed care.

Thus one finds leading doctors accepting in principle both health insurance and the health obligations of Government. It is a logical and inevitable extension of such thinking to make health insurance compulsory and to shift the major governmental responsibility to Washington, the only place where a uniform, comprehensive program can be set up.

Like Mr. Baruch, we do not wish to see doctors regimented or deprived of personal and professional prerogatives. But we do most earnestly wish to see a badly needed extension of medical services in this country.

President Truman offered a program last May, when he advocated an extension of the social security system to embrace a broad medical aid plan. We are glad that a man of Mr. Baruch's stature has added his voice to the growing demand for better medical care. It is not unreasonable to expect the medical profession to cooperate fully with Government in the adoption of a satisfactory program along the lines proposed by President Truman and Mr. Baruch.

Constantine Brown Says Billions May Not Prevent Fall of Western Europe to Communism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, while we are in the midst of debate on H. R. 4606, known as the foreign-aid bill or stopgap legislation, Mr. Constantine Brown, noted columnist, writing in the Washington Star, points out that United States officials fear that the billions of dollars which we are appropriating may not halt the fall of western Europe to communism. I commend this article to every Member of the House:

UNITED STATES OFFICIALS FEAR BILLIONS MAY NOT HALT FALL OF WESTERN EUROPE TO COMMUNISM

(By Constantine Brown)

Billions of American dollars may not prove adequate to prevent the complete collapse of western Europe and its envelopment by the iron curtain.

This is the fear that is taking hold of some high-ranking Government officials and Members of Congress who are watching with growing anxiety the struggle between the forces of order and democracy on one hand and those of Moscow's totalitarianism on the other. This struggle is regarded as the start of the showdown between the two remaining great powers—America and Russia.

Maurice Thorez, leader of the French Communists, returned this week from Moscow. After conferring a few hours with his colleagues in Paris, he went on a tour throughout northern and eastern France, where the back-to-work movement by strikers is most pronounced.

He has already made a number of inflammatory speeches, all bearing the marks of the propaganda which the Russians are pouring out all over the world: That America's aim is to enslave the peoples whose governments accept American help under the Marshall plan.

Thorez told the workmen that their misery, hunger, and low pay is all the work of the Paris government, which receives and blindly obeys orders from Washington. He said further that unless the administration, which has sold out to the United States, is overthrown and replaced by a government which truly represents the workers, farmers, and small bourgeoisie, the French people will become the slaves of American capitalism.

SIMILAR SPEECHES IN ITALY

Similar speeches are being made in Italy by Palmiro Togliatti and his henchmen. They have roused the masses in certain areas, such as southern Italy, to such a pitch that the Italian military police had a hard time preventing the destruction of the coal stocks near Bari. The coal had just arrived from the United States.

The French National Assembly has just passed drastic antisabotage and strike laws designed to halt subversive activities in the provocation of strikes. To bolster the enforcement of these laws, the French Government this week called to the colors about 80,000 more men, thus raising the armed forces of the Republic within the metropolitan area to about 200,000 men.

This is a substantial force, capable of dealing with any kind of civil strife. But some American observers in Paris report that this determination of the Schuman Government may be too late. Railway strikes have paralyzed France's transportation and it is feared either that the men called to the colors may not be able to reach their garrisons, or that the military units may not be able to move into the areas of France where the situation is considered very serious.

The Communists have concentrated their main activities in what is known as the Communist belt of France—the central plateau which includes such important centers as Marseille, Toulouse, St. Etienne, and Grenoble.

SOVIETS ALREADY ORGANIZED

In some of the smaller cities in this area "Soviets" already have been organized. These workers' and peasants' committees have taken over not only the police and judiciary but also control the press, which is permitted to publish only bulletins and news emanating from the committees themselves.

There is little news since communications have been interrupted. Whether these experimental "Soviets" will spread to other cities depends on how quickly the government is able to rush forces to put down the Moscow-directed efforts to create chaos in the country.

This is no longer a dollar battle. No amount of assistance in the form of food and living essentials can have any effect. The French Government has accepted the Communist challenge and it is now merely a question of who is strongest. Mere debates in Congress and kind words of encouragement are of no avail today.

The second phase of Russia's drive toward the channel has already begun and can be halted only by force. Whether the French Government will be able to hold the fort with the means it has at its disposal is a question which none can answer. But it is recognized in the highest Washington quarters that the struggle is not easy and the chances of the Schuman government surviving are by no means great.

The Late Maj. Gen. Alexander D. Surles

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. THOMAS of Texas. Mr. Speaker, all of us have been saddened by the recent passing of Maj. Gen. Alexander D. Surles, wartime director of public relations for the Army. Throughout his long Army career, he served with distinction and honor. However, his job as public relations director was perhaps the most difficult of his many assignments. It required intelligence, tact, balance, and understanding. These qualifications he had in abundance. General Surles' duties brought him in constant touch with the President, the members of his Cabinet, the Secretaries of War and the Navy, and the Members of Congress. Every one of them had the utmost confidence in him.

The general was well and favorably known to many Texans because of his service there as a young officer, and because of his marriage to one of our most charming Texas girls.

The Department of the Army has lost a distinguished soldier and officer; the people of the United States, an outstanding citizen and public servant; his family, a lovable, devoted husband, and father.

Don't Believe All You Hear About Hollywood

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. McDONOUGH. Mr. Speaker, Hollywood is not all the tinsel and bauble that the public is led to believe. As the congressional representative of Hollywood I have always maintained that there are many more substantial, home loving, good, sound Americans living there than there are of the class and character that the public hears so much about.

It must be remembered that Hollywood existed long before the motion picture, radio, and entertainment industries became established there, and the firm foundation of good sound and reliable citizenship which they established far outshadows the reports of the present day Hollywood.

Many of these good sound citizens are identified with the motion picture, radio or entertainment industry. It is only the few who are seeking publicity all of the time that give the impression that all of Hollywood is of this class, and these few represent a very small percentage of the population.

Neither the motion picture, radio, entertainment industries, or Hollywood should be condemned because of the few who are always seeking the public limelight.

The Hollywood Reporter recently made an accurate check of the type of people that make up Hollywood which revealed the following facts: 79 percent of Hollywoodians are married; 70.1 percent have never been divorced; 66.5 percent own their own homes; 61.3 percent attend religious services; 29 percent list themselves as executives; 33 percent plus save 10 to 30 percent of their gross income; 99.7 percent voted either Republican or Democrat in last congressional election; three-tenths of 1 percent voted for another party; 33 percent belong to golf clubs.

The favorite indoor pastime is reading.

Far from being inveterate night owls, as most non-Hollywood Americans believe, more than half of the good people of the village venture forth but once or twice a week after dark. Only a highly durable 2 percent admit to going out "every night" and some of these, the survey implies, may refer to putting out the cat.

When Hollywoodians do step out, three fourths of them head straight for the movies at least once or twice a week—just like in Kenosha, Wis., or Kalamazoo, Mich.

As might be expected from all this, 87 percent of the honest people of Hollywood are smarting under the indignant belief that the rest of the country has got Hollywood all wrong.

A Sensible Solution for the Navajos

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. MURDOCK. Mr. Speaker, many interesting proposals are being offered by friends of the Navajo Indians whereby the Government may do some long-range planning and construction to enable the Navajos to better their lot. I ask leave to extend my remarks and include herewith a letter to the editor of the Arizona Daily Star from an engineer connected with the University of Arizona offering one of these solutions. This letter is prepared by an eminent authority who is well acquainted with the subject of which he treats and well qualified by training and experience to offer this suggestion.

It is a well-known fact that the Navajo Reservation, vast and varied as it is, cannot support its present population according to its present utility by stockmen. It is also a well-known fact that some of the best farm land in Arizona, belong-

ing to Arizona Indians and controlled by the Indian Service, is now virtually unused. These facts give point to Dr. Smith's suggestion. I, myself, am convinced that it is a practical proposal.

It is not entirely a new proposal, for something has already been done toward making the rich lands along the Colorado River, belonging to Arizona Indians, available to the hard-pressed Hopis and Navajos. I say something has been done, which is merely an earnest of what could be done. One of these foundational matters has been a generous offer by the Colcrado Reservation Indians to share their land and its potential wealth with the Hopis and the Navajos. I agree with Dr. Smith that the Indian office should push this matter to the full.

Dr. Smith's suggestion is as follows:

DECEMBER 2, 1947.

To the EDITOR OF THE ARIZONA DAILY STAR:

In an editorial recently you called for a solution of the problem of Navajo Indian poverty and threatened starvation. Since none of the other readers of the Star has responded, I will accept the challenge.

The Navajos are by tradition nomads. They are inured to severe winter cold and long drought seasons. They were not moved by the Federal Government and were given a reservation of great dimensions. But the phenomenal growth of population of the tribe outstripped the economic possibilities of the dry plateau region and the increased number of sheep destroyed the natural range, aided of course by the resulting accelerated erosion.

Meanwhile, the rich alluvial land on the Colorado River Indian Reservation languishes. This land reaches southerly from Parker for about 40 miles and is flat bottomland, similar in origin and in soil to that of the Yuma Valley. It is the most conspicuous undeveloped natural resource in western United States.

A small area, about one-twentieth of the valley, at the north end is occupied by the Chemehuevi Indians with a few Mohaves and at times some of the cleared land has been leased to white farmers, but over 90,000 acres covered with brush lies unused. Water from the river was obtained by a well-designed pumping plant and desilting basin until 10 years ago when Headgate Rock Dam and a main canal were constructed, a huge investment for the small area in cultivation by five or six hundred Indians but justified if the canal system is extended, some drains constructed and the whole valley brought into use.

The Navajo tribal council should enlist or conscript by lot a couple thousand of their younger, strong-bodied men and settle them on an area lying next south of the area now occupied by the Chemehuevis, with the aid and guidance of the Indian Service. Vegetables and fruit and grain ample for the entire Navajo tribe should be raised, also alfalfa on which to fatten their sheep and lambs and for dairy cows. Meanwhile, most of the tribe would remain on the homeland weaving blankets, fashioning silver jewelry and in other productive pursuits. Each year some of the young men with ambition to help themselves and the tribe would move to the "temporale", or colony in the Parker Valley.

In 1934 when I was in Safford preparing a report for the United States Planning Board, I saw huge truckloads of vegetables loaded at the FERA gardens ready to depart for various State institutions including State College at Flagstaff. We can imagine huge truckloads of food loaded at the tribal land area at Parker and distributed at various points on the Navajo reservation. The Navajos would enjoy a better diet than ever before in the memory of their oldest men.

I understand that the Indian Service made just such a proposal to the Navajos a few years ago. I cannot believe that the bureau officials made a strong effort to sell the idea to the Indians; if they did they were poor salesmen. The sales talk was made probably to the old men, it should be directed to the younger generation.

Do the Navajos prefer to be mendicants forever? I think not. But there is an evil side to unconditional charity. It breaks down moral qualities and the spirit of ambition, it destroys self-reliance. Read what Count Rumford accomplished in middle Europe in a period of widespread poverty.

It will be argued that the Navajos cannot live in a hot climate. That is wholly specious and fallacious. I myself had been accustomed to a temperature of 45 degrees below zero several mornings in a row, but I have worked long hours in the summer heat of Mohawk Valley and Yuma Valley. Tens of thousands like myself have chosen to live in southern Arizona and Imperial Valley. The Indian Bureau has a medical service which would look after the health of the Navajos in the Parker Valley.

For 40 years I have believed that the Parker Valley should be opened to settlement by white farmers, that is, the major part of it, the part not needed for Indian settlement. One of the early superintendents of the Yuma project convinced me on that point. The Indian Service should utilize that highly valuable land or should relinquish it.

An irrigation project could be built on the San Juan River which is nearer the reservation, but the high cost would far outweigh the benefits. There is no alternative to the proposal above which is so feasible and promising.

G. E. P. SMITH.

Resolutions Urging Adoption of Legislation by Congress Quitclaiming, to All the States of the Union, Lands Beneath Tidewaters and Navigable Waters

EXTENSION OF REMARKS

OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 8, 1947

Mr. BRADLEY. Mr. Speaker, referring to my remarks in the Appendix of the CONGRESSIONAL RECORD on December 4, 1947, and supplementing the resolutions therewith, I submit herewith resolutions from the American Association of Oil Well Drilling Contractors and from the League of California Cities, in support of legislation which would quitclaim marginal sea areas of the United States, as well as lands under rivers and harbors, and so forth, to the individual States of the Union:

Whereas on June 23, 1947, the Supreme Court of the United States rendered its decision in the case of *United States of America* v. *California*, Original No. 12, and in said decision it was determined, among other things, "that California is not the owner of the 3-mile marginal belt along its coast, and that the Federal Government rather than the State has paramount rights in and power over that belt, an incident to which is full dominion over the resources of the soil under that water area, including oil," and in said decision the court stated, "we cannot say that the Thirteen Original Colonies separately acquired ownership to the 3-mile belt or the soil under it, even if they acquire elements of the sovereignty of the English Crown by their revolution against it," and "this Court has followed and reasserted the basic doctrine of the Pollard case many times. And in doing so it has used language strong enough to indicate that the Court then believed that States not only owned tidelands and soil under navigable inland waters, but also owned soils under all navigable waters within their territorial jurisdiction, whether inland or not"; and

Whereas the Supreme Court of the United States, in approximately 54 prior decisions rendered over a period exceeding 100 years, held that such lands belong to the States or to their successors or grantees, and that they have full and complete title and ownership thereto; and

Whereas municipalities throughout the Nation, in reliance upon said decisions, have invested untold millions of dollars of public funds in the construction of ports, harbors, and other public improvements on lands reclaimed from the sea and from inland navigable waters; and

Whereas the decision of the Supreme Court of the United States is of extremely far-reaching importance, not only to the State of California and its cities located upon said navigable waters, but to all coastal States and cities in the Nation similarly situated, and is detrimental to the best interests of these municipalities throughout the Nation which have invested vast amounts of public funds in the construction of said improvements; and

Whereas House Joint Resolution 225 was adopted by the Seventy-ninth Congress, but subsequently vetoed by the President, to quiet the title of the States, their successors and grantees, to all kinds beneath tidewaters and navigable waters, whether along the seacoast or inland, within the boundaries of the respective States, in order to remove the cloud on said titles created by the attack made by the Department of the Interior upon the rule of property law settled by said decisions of the Supreme Court of the United States; and

Whereas it is imperative to protect the title and interests of the States and municipalities so adversely affected by said decision that corrective Federal legislation be enacted similar to House Joint Resolution 225, introduced in the Seventy-ninth Congress, to rectify the injustices and damage to many municipalities and States by reason of said decision and in order that there may be restored to the States, their successors, and grantees, title to their rightful property; and

Whereas such legislation would not interfere with the constitutional paramount power of the United States to control navigation or to provide for the common defense: Now, therefore, be it

Resolved, That the League of California Cities urges the Congress of the United States, during its next session, to adopt legislation similar in substance to House Joint Resolution 225, to correct the injustices which would follow from the Supreme Court's decision and restore to the States and their municipalities their property rights and titles in accordance with the law of property established by the Supreme Court of the United States in a long line of decisions handed down throughout 100 years, to the effect that the States and their grantees hold complete title and ownership to all lands lying beneath tidewaters and navigable waters within their respective boundaries; and that this organization lend its cooperation and full support to securing the enactment of such legislation.

That a copy of this resolution be sent to the President of the United States, the Secretary of the Interior, Senators SHERIDAN DOWNEY and WILLIAM F. KNOWLAND, and to each Congressman representing the State of California.

Whereas the Supreme Court of the United States, by a recent decision, has deprived various States of the Union of their rights to the minerals underlying submerged lands, contrary to the doctrine heretofore recognized by the Federal Government and exercised by the various States; and

Whereas this decision not only deprives the various States of the Union of the resources which are rightfully theirs, and of the exercise of power over such resources, but is a violent infringment on the rights of the various States guaranteed to them by the Constitution: Now, therefore, be it

Resolved, by the American Association of Oilwell Drilling Contractors in convention assembled, this the fifteenth day of October 1947, That the Congress of the United States be, and it is hereby petitioned, to enact, at the earliest opportunity, such legislation as may be required or necessary to confirm into the various States the ownership of all submerged lands adjacent to or within the boundaries of the various States, and the title to all resources underlying such lands; be it further

Resolved, That copy of this resolution be sent to each Member of the Congress for his consideration.

AMERICAN ASSOCIATION OF OILWELL DRILLING CONTRACTORS,
By J. DOYLE SETTLE, *Secretary.*

How Phony Liberals Are Made

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, Frank R. Kent has forcibly indicated in a column which appeared in the Washington Star of December 6 just how some Members of the Congress are built up as so-called liberals. Under leave to extend my remarks, I am including all of Mr. Kent's article:

SOME PARTY REBELS GET GREAT BUILD-UP AS PHONY LIBERALS—THEY SERVE A PURPOSE BUT CREATE DANGER OF LEGISLATIVE CHAOS

(By Frank R. Kent)

It always has been true in politics that one of the surest ways to get that personal publicity for which most men in public office yearn and without which many wither and fade is to make oneself a nuisance to the majority of one's own party.

Evidences of this basic political fact are unusually plentiful at this time among the Republicans in the Senate, where their party has a very slender margin of control and a few defections may reduce it to futility. This is the type of situation which offers the richest rewards in newspaper notices to those with a tendency to buck the party leadership and it is not surprising the number of such Senators has increased since the last session. Most parties have them.

Undoubtedly some are men of conviction and character but by no means all of them. Quite a few are largely motivated by the itch for favorable publicity and know no other way to acquire it. Once they break away from the leadership they are there.

In the first place, the break is news. Where the margin is so small, any indication of a split naturally is of public interest. Under existing circumstances, 1 rebel's voice carries a lot further than that of 20 regulars. And the so-called rebel is always more articulate. Naturally, the reporters leap to get his side and play him up.

PHONY "LIBERALS" BUILT UP

No matter how wrong he may be nor how cheap he is, the rebel really makes news. In consequence, he reaps the publicity benefits. In the second place, he especially appeals to the left wing—New Deal columnists and commentators of the Roosevelt regime who have become incurable professional liberals and whose disposition is to rush up on the roof and cheer anyone who seems to go in the old New Deal direction. Particularly is this true if he opposes reduction in governmental costs and advocates the general economic and social program of the CIO propagandists.

As a result of this attitude upon the part of a considerable number of publicists and the eagerness with which some of the so-called rebel Senators lend themselves to it, a number of what seem to be ridiculously phony "liberals" are being built up.

All a Republican Senator has to do to gain the support of the left-wing journalists is to vote a few times against cutting appropriations and in favor of CIO proposals. He then will find himself gratifyingly alluded to in the press as "able," "clear-headed," "hard-hitting," "forthright," "broad-minded," "independent," "thoughtful," or by other stock terms of a laudatory nature. Also, inevitably he will be called a "humanitarian" and contrasted with the "reactionary," "hard-boiled," "narrow-minded," "selfish," "penny-pinching" "Tories," who want to go back to "the Harding days" and "return the American workman to slavery."

WHOLE GAME TRANSPARENT

The whole game is so transparent that it is amazing more people do not see through it. An illuminating story is being told of how one Senator came to be a "great liberal." Coming from a conservative State, until about a year ago it had been the invariable habit of this Senator to vote with his older and generally conservative colleague. One day an amendment came up upon which his colleague had voted and then left the Chamber. The Senator wanted to vote with his colleague but got confused and voted exactly the other way.

When he found it out it was too late to change. He felt rather badly about it until the next morning when he found himself played up in the press as a "liberal," commended for his independence, courage, and enlightenment.

This was a great surprise to him. It was the first favorable publicity he had ever had, and it certainly did things to him. The next time he had a chance he again voted against his colleague and again was deluged with praise by some of our most eminent journalistic observers. Now he regularly waits until he finds how his colleague is voting and then votes against him.

The result is he has become a sort of liberal hero. He has had magazine articles written about him and talks the liberal patter as fluently as any. Probably this is not exactly a true story, but it is not very far off the track.

To repeat, none of this means there are not among the alleged rebels some sincere men. Nor does it mean that even phony rebellions of this type do not often serve a useful purpose. They keep the party leaders from becoming too smug and going too far. They discourage abuse of power. They compel compromises that may be in the national interests. They may force action along progressive lines.

On the other hand, if the rebellion is manned by publicity-seeking demagogs and promoted by extremists, it might bring about legislative chaos, destroy all party potency, and do a great deal of damage to the country.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. DEVITT. Mr. Speaker, a very thought-provoking editorial with reference to tax reduction appeared in the December 3 issue of the St. Paul Pioneer Press, of St. Paul, Minn. It challenges the thinking of Secretary of Labor Schwellenbach with reference to this subject. Because of the soundness of the reasoning and the general interest in the subject, I include it as a part of my remarks:

AN EASIER WAY

Secretary of Labor Schwellenbach, testifying on ways of avoiding more price increases, says that a third round of wage boosts can be averted only by quick action to cut the cost of living.

The Secretary of Labor has overlooked an easier way to accomplish the same thing. It could be done by a substantial cut of the Federal income tax.

What he is worried about is another round of wage increases that would increase costs of production and thus raise prices still further. Gone is the delusion that entranced President Truman in the days just after the end of the war. We no longer are told that there can be across-the-board wage increases without price increases.

So now the Administration is worried because it thinks wages have to run faster in order to catch up with prices.

President Truman and his colleagues might reflect that the same effect as a wage increase could be brought about by a cut of the income tax. What the wage earners is interested in is the amount of money he gets to use for his own purposes. If his withholding tax were cut, he would have in effect a wage increase without any raise in costs of production or on the price of the product he is making.

There are objections that any tax reduction is in itself inflationary, because it puts more money in people's pockets to spend and because the more money they spend, the higher they bid up the price of goods. There is only so much goods to be bought. Increase the amount of spending money and the only result is to make the goods more expensive. So runs the argument.

But if the tax cut is accompanied by a cut in the Government's spending, there is no such result. The tax cut then only means that the people spend the money instead of the Government.

So it is easier for the Government, which never likes to cut its spending, to say that some other way has to be found. It talks about bringing down the cost of living. That is to be done by price ceilings, controls of all sorts and rationing. It would also be done to the tune of black marketeering and it is doubtful whether, in peacetime, the controls could be held together. Knowing this, the proposal is to put them on only here and there. This would mean that pressure for higher prices would disappear. It would only mean that it would be exerted in different places. Pretty soon everything would be out of line again.

Perhaps something of that sort will have to be done, but it hardly seems easy. The tax cut would have the further advantage of doing justice to people who, more than 2 years after the end of the fighting, are still

struggling to carry the peak load of wartime taxation.

There is a many-billion dollar surplus. The real question is whether part will be used to cut taxes or whether all will go to debt reduction, a large part of which goes to cashing war bonds.

President Truman seems to think that it would be inflationary to cut taxes. But what does he call it when people are forced to cash in their war bonds to get money to pay their bills? Using the surplus to pay bills is every bit as inflationary as giving a tax reduction so people can pay bills—and much more painful to the ordinary people who have to sell war bonds to do so.

It Can Happen Here

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch:

IT CAN HAPPEN HERE

Unless Congress reconciles itself to limited counterinflation controls now, it may need to put everything under rationing and price ceilings later, Secretary Harriman warned the House Banking Committee. That is true, in the same way that a fire fought early enough can be put out with an extinguisher but will take heavy equipment if it is reached late. Attacked now, the damage from inflation can still be limited; attacked belatedly, the ruin can be incalculable. Who can calculate the cost of 1929–33?

It is 17 months since there were effective price ceilings. Inflation has had ample time to burn itself out if it were going to. Citizens on rigid low incomes know the damage it has already done. Retail food has flamed up 40 percent since mid-1946, consumer prices as a whole 23 percent. Seven dollars then would have bought the groceries that cost $10 now.

Nor is the end in sight. Living costs are climbing at the rate of 16 percent a year. With short feed supplies, meat will go skyhigh next spring. Steel, automobiles and other scarce goods are black marketed. The time is past to speak of the imminence of inflation. Inflation is here.

Therefore, conceding everything he could to the temper of a hostile Congress, President Truman proposed a minimum program to keep the fire from spreading further. Some measures, especially the control of consumer credit and of exports, seem sure of adoption. The main attack, however, lies in selective rationing of the most critically inflated foods, fuels, clothing, and industrial commodities, accompanied by ceilings over prices and wages in the rationed fields. If anything, this proposal does not go far enough. Nevertheless, offering little more than the hands-off policy which they have had in force this past year, Senator Taft and his faction are balking. Reiterating his opposition Monday night, Taft had little more to offer than a homily about working more and spending less.

There would be some reason to this stand if the cold statistics did not speak so grimly. There would be some reason if the administration were out of harmony with the people. But the President is in harmony; he speaks for the millions who cry for a halt.

There are those in Congress, too, who see how urgent it is to halt the flight toward disaster. The bipartisan Flanders committee wants a rationing law to spur voluntary cooperation and, if that continues to fail, to invoke with legal force. The committee goes with Mr. Truman most of the way. In fact, he is reported to have drawn much of his proposal from its report. He outran the committee in proposing some direct price-wage control, but on this explosive question the Congressmen were perhaps happy to leave leadership to the Executive.

Inflation is bad enough to reserve curbs on its own account, but Congress has a further motive to act promptly and adequately. In a boom and bust, President Truman put it, "our economic system, as we know it, might not recover." (That, of course, is what the world's Communists hope for and expect.)

The warning is not overdrawn. Inflation and deflation reduce the ranks of the middle class, the mainstay of democracy. Inflation in Germany paved the way for a fuehrer, at the same time undermining the liberal democrats who might otherwise have stopped the Nazi movement. Inflation made postwar Hungary a push-over for communism. The United States had a mild taste of political revolution in the New Deal, which came to power because the ruling conservatives let a boom and depression happen. Another New Deal will surely sweep wider and may be less disposed to restore private capitalism to working order.

As a partisan matter, doing too little to arrest inflation would court a GOP defeat next year. Today the blame is divided, but a refusal to take strong action would shift it to the Republican Congress. However, this thing is bigger than partisanship. It is a national emergency. Inflation has already caused suffering and will cause worse suffering. It threatens the genuine prosperity that underlies the dangerous boom and, in some degree, the country's way of life.

The Voice of America Must Be Heard Abroad

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I am including with these remarks a copy of an editorial recently appearing in the Daily Argus-Leader of Sioux Falls, S. Dak., the largest daily newspaper published in a five-State area of the Northwest Central States. In this editorial, its author, Fred C. Christopherson, endorses the support which John Cowles of the Minneapolis Tribune has put behind the proposed United States information program abroad after having made an extensive trip in Europe.

Thus, Mr. Speaker, we find two more important editors of the United States and close students of world affairs voicing their support and approval for an adequate American information program. Now that we are again being called upon to supply food for unfortunate people in unhappy European countries, certainly it is clear we should accompany this aid with an intelligent, adequate, and effective program of publicity and information. We can never hope successfully to run a Freedom Train through Europe if we concentrate all of our efforts on stoking the boilers while leaving to others with unfriendly motives the assignment of handling the throttle and arranging the running schedules!

VOICE OF AMERICA MUST BE HEARD ABROAD

Just back from a visit in Europe, John Cowles, of the Minneapolis Tribune, finds himself tremendously disturbed by the lack of American understanding there.

And, reading his impressions, it is easy for all of us to share his disturbance.

Our assistance, actual and proposed, is not being appraised accurately.

"We must not think," Cowles writes, "that most Europeans understand our motives in connection with aid to western Europe. They do not. Many officials and businessmen in Europe regard the Marshall plan as a clever scheme whereby the United States, under the guise of altruism, can export unmanageable surpluses and in that way postpone a serious price recession and business slump in America. Europe has not the slightest understanding of the fact that the commodities we are sending abroad are contributing to the price inflation here at home."

Cowles explains this lack of understanding as a result primarily of an excellent Russian propaganda service.

"Much of the press of continental Europe is now, as it always has been, venal and corrupt," he says. "Many editors or owners are now on the Russian pay roll."

As a counter measure, he advocates a strong "Voice of America" program, suggesting an appropriation annually of at least $50,000,000 for this purpose. The current American propaganda effort in Europe, he points out, is largely ineffective.

These statements of Cowles supplement those of Representative KARL MUNDT, of South Dakota, whose observations upon his recent return from Europe were similar. He, too, found a deplorable absence of understanding abroad and a broad tendency to misinterpret the motives behind our programs of assistance. As the sponsor of the Voice of America program, MUNDT was particularly emphatic in urging its need. It was his initial suggestion a year ago that Congress provide a large amount for this service but the appropriation was slashed to a relatively ineffectual total.

In view of these comments, it seems that our future program should involve adequate sums for a propaganda service that would really tell our story to the Europeans. We should by all means let them know that European assistance is accentuating our inflationary pressure, that it is depriving us of commodities and articles we need, and that it is jeopardizing our tax-reduction program.

Fleet Adm. Chester W. Nimitz

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mrs. SMITH of Maine. Mr. Speaker, in my service as a member of the Committee on Naval Affairs and the Committee on the Armed Services, I have had the privilege of meeting, knowing, and working with all of our military leaders. I have conferred with them during war and during peace, here in America and

all over the world. Their courage, determination, devotion to duty, and broad-gaged vision have been demonstrated time and again under most trying circumstances. They have been an inspiration to me in my work on the Naval Affairs and Armed Services Committees.

None has been more outstanding or inspiring than Fleet Adm. Chester W. Nimitz, the retiring Chief of Naval Operations. Much of what Admiral Nimitz did in leading the brilliant naval victory in the Pacific is well known throughout our country and the world. Our smashing naval victories under the guidance of Admiral Nimitz turned the tide of war in the Pacific and mark him as an outstanding naval hero of World War II. Most people in the world know this.

But when I was through the Pacific when the war was still being waged, I saw something in Admiral Nimitz that actually contributed more to his greatness than his tactical and strategic genius—something that was never reported to the rest of the world. I saw a commander-in-chief who was literally worshipped by the men who served under him. It was this morale ingredient that actually tipped the balance of war in our favor during those dark days of the Pacific campaign when so much of our fleet had been put out of action and when our naval force had so little to fight with. The most powerful weapon of our naval force was its fighting heart—it was practically the only weapon that they had for so long.

What made the men worship Admiral Nimitz? It was his father-like way with all of his boys—and every single one, from seaman to second class to admiral, was one of his boys. Words are not adequate to describe the quiet, modest, and reassuring interest that Admiral Nimitz had in his boys—nor their faith in him. It was the nearest approach to a mass father-son relationship that I have ever seen.

Chester Nimitz personified the United States Navy at its very best—he epitomized its greatest virtue, a "fighting heart."

Radio Address to the People of My District

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on December 6, 1947.

Dear friends of the Triple Cities and my congressional district, this coming week I will dine informally with the next President of the United States.

I received an invitation from one of my colleagues, which reads as follows:

"DEAR ED: I am giving a dinner for my old friend, Tom Dewey, and should like very much to have you come. The dinner will be on Thursday, December 11, at 7 p. m., in the Federal Room of the Hotel Statler.

"Please advise me at your earliest convenience.

"Believe me, very faithfully yours."

Naturally, I look forward to this friendly occasion as it will be my first intimate meeting with Governor Dewey since I was entertained by him for dinner at the Executive Mansion in Albany a year ago and at a subsequent affair tendered him by the Republican Congressmen from New York State here in Washington last spring.

A few days ago I made the following speech in the House:

"Mr. Speaker, there is certainly no Member of this House more anxious than I am to extend the help of American food, clothing, and other vital necessities to those of the downtrodden and hungry throughout the world. We Americans must aid the unfortunate to get on their feet and to enable them to be self sustaining with respect to food. Therefore, I am introducing a bill today which provides for the services of from 100 to 500 county agricultural and home demonstration agents in the European field. It is entitled: 'A bill to provide for the rehabilitation of foreign countries being financed with American aid by making available to them the services of American county agricultural and home demonstration agents and for other purposes.'

"'*Be it enacted, etc.*, That the Secretary of Agriculture shall select not less than 100 and not more than 500 county agricultural and home demonstration agents wherever available throughout the United States for immediate voluntary service in countries devastated by the recent war and being financed by American aid.

"'SEC. 2. The Secretary shall assign said agents to duty along the following general lines:

"'(a) To scrutinize, study, and observe agricultural activities in the afore-mentioned areas.

"'(b) To work along with departments of agriculture in the official governments of these nations in advisory capacities.

"'(c) To make available to them their services, advice, and knowledge to individual farmers to the end that their production of grains and foodstuffs be increased to adequately feed their entire populations.

"'(d) To encourage the improvement of farming and husbandry wherever necessary.

"'(e) To foster the inherent desire on the part of the farmers of said countries to be self-sustaining and raise sufficient food crops to make their populations eventually independent of outside aid.

"'(f) To introduce and improve the arts of homemaking, cooking, dressmaking, and allied subjects.

"'SEC. 3. For the purposes of carrying out the work of said agents, there shall be made available funds from whatever appropriations are made by the Congress for official United States aid to Europe.

"'SEC. 4. Wherever localities in the United States have been deprived of services of said agents, vacancies shall be filled forthwith by regular authority so as not to impede or hamper agricultural extension work in the United States.'

"I hope that we will be able to devise some plan like this whereby the millions of helpless people across the seas will have the advantage of making themselves independent through American aid and American genius.

"Any plan this Congress adopts to finance aid to Europe and Asia must, it seems to me, consider as its ultimate goal lifting the recipients out of a relief class in which so many have been since the war.

"Put the farmers over across on their feet by material help accompanied by real advice, instruction, and education which the county agents are capable of giving. They will remedy this tragic situation in a short time if they get the cooperation of our Government and of those they are designated to assist.

"This plan is worth a try. It cannot possibly cost more than a tiny percent of the whole aid expenditure and it is bound to work over there just as American agriculture has profited by it here."

Address of Gov. Jimmie H. Davis, of Louisiana

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following radio address by Governor Davis, of Louisiana, Thursday, November 27, 1947:

Ladies and gentlemen, the cycle of time brings my administration near its close, and in accordance with our laws and customs, we turn once more to an accounting to you and to the selection of our officials for the next 4 years. For these reasons mainly I am speaking to you for the next few minutes.

Just 4 years ago I opened my campaign for governor and again I express to you my sincere appreciation for the faith you entrusted in me.

At that time as I spoke from parish and from town to town I did not make to you a lot of impossible promises and wild statements. Neither did I tell you things that were untrue nor did I defame the name of any man, to be Governor of Louisiana. On the contrary, I told you nothing but the truth.

I knew there would come a time 4 years later when I would meet you again face to face to give an accounting. That day is here, now, and certainly I am not at this late hour going to tell you something that is untrue or misleading.

I am very thankful that I have been able, within myself, to serve as Governor of Louisiana without malice and without hatred toward any man regardless of political differences.

And this fact alone is a source of satisfaction and pride because I had a great deal to say about peace and harmony during my campaign—a time of war—when all men needed to be just a little closer together, in order that we might obtain an all-out effort to support our fighting men and to preserve our Nation in its most trying hour.

I was elected governor at a time when we were in the midst of the most horrible war mankind has ever known—naturally, the uncertainty of war precluded specific promises as to what might be accomplished in Louisiana, or any other State.

The conflicting claims and varied statements of those engaged in a political campaign often becloud the record as to what has been achieved and what remains to be done.

It is to bring these two relationships into proper focus that I speak to you tonight. I'd like to say in the beginning that when I became governor we still had a tremendous State debt, that became our responsibility several years ago. We have paid on that debt the sum of $48,000,000, and yet we are operating on a cash basis—and we are going to leave the State's financial affairs on a solid, sound, and businesslike basis—we believe that is our solemn duty to leave it in good shape for future administrations and for

future generations. The State's business is the biggest business in the State and it should be operated as such.

It is good to know that this administration has been honest and conscientious in its undertakings, in that we sought to render a service truly beneficial to the people. Perhaps I have not run all of the affairs of the governor's office exactly as you would have, and sometimes, if I had it all to do over, maybe I would do a few of the things a little differently. I am somewhat in the position of a quarterback, referee, or umpire, when the game is in progress I must call them as I see them, and that's what I have done without apologies. At no time have we compromised with honor, with integrity, and with the high purpose which you have a right to expect of all your State officials.

If in my administration there may be found something that is worthy and good, I am pleased to acknowledge that a great many able assistants and coworkers have helped to make this possible. I shall be forever grateful also to the members of the legislature who cooperated so helpfully and understandingly. It is also due to the ambitions and cooperation of you, the people, that progress has been made.

It is quite difficult in the time allotted, to cover the full scope of the achievements of the past 3½ years, but we will have time to outline certain aspects of these advances and services to our people.

First, let us discuss the major benefits.

My personal interest in the cause of public education has not, to my knowledge, been questioned. This cause has continuously been close to my heart. I had been a teacher. I married a teacher. I taught in the country and I taught in the city.

I recall that during my campaign for Governor that the per educable in our State was $20 and I was urged by school leaders and politicians, and friend and foe, to pledge that I would raise the per educable from $20 to $22.50. I told them I would not make such a promise unless I knew it could be done. I investigated the matter and found that this would be possible, and I pledged that I would work toward that end.

In my administration we not only raised the per educable from $20 to $22.50 but we raised it from $20 to $40, not only a bigger increase than any other administration, but a bigger increase than all of the administrations combined since the beginning of our school system.

In 1939 the State's support of public schools was only $15,000,000. This year it will be $34,000,000, more than twice the previous amount.

In addition to appropriating the amount fixed by Congress for school lunches, we gave an extra $300,000 this year.

But even the most farsighted of schoolmen did not realize that with the end of the war our soldiers would come back so rapidly and that our colleges and universities would be filled and overflowing almost overnight. In spite of this unexpected increase in enrollments, however, we were able, with the cooperation of the Federal Government, to provide emergency housing for more than 5,500 GI's and since the school year 1939–40 we have more than doubled appropriations for the operation of these institutions so as to enable them to meet this emergency condition.

Moreover, projects approved or under construction provide for permanent new dormitories and other badly needed facilities for men and women. Approximately $15,000,000 has been made available to cover the cost of these improvements.

In our vocational educational program there has been an increase of from five to eleven State-supported trade schools, operating with more than three times the amount allocated in 1939.

In other words, during my administration, the cause of education will have received a total of $160,000,000. I did not promise this, but you are getting it.

Could anyone sincerely interested in public education, tell you that we've done nothing as far as our schools and school children are concerned?

As you know, we maintain four types of institutions. General hospitals, mental hospitals, penal and correctional institutions, and special hospital services.

After making a survey of the conditions of our institutions, we found that our general hospitals needed enlarging and that we needed a completely new general hospital at Shreveport to replace the obsolete facilities there.

We found that from 1928 to 1940, not one cent of public funds had been expended to make repairs or expand the facilities at our mental institutions. We found our mental hospitals overcrowded, poorly equipped, and deteriorated almost beyond repair.

In 1942, during the preceding administration, $5,000,000 was authorized for hospital improvements, but because of the war, none of this building program could be carried out. There was an urgent need for a new mental institution near New Orleans, and there was also a need for expanded special hospital services. So to remedy this unsatisfactory condition, and provide greater services for the sick and needy, a $24,000,000 building program was inaugurated. It is based upon suggestions made by citizens, Federal prison experts, hospital authorities and surveys made during the Jones administration, as well as my own.

In order to meet the needs of our general hospitals, $8,346,000 was set aside for construction and expansion. A greater portion of this amount, $6,500,000 has been allocated for a completely modern general hospital known as the Confederate Memorial Medical Center at Shreveport. The remainder of this amount has been divided among Lafayette Charity, New Orleans Charity, Florida Parishes Hospital and Alexandria Hospital, and the Monroe Hospital, to enlarge them to accommodate the needs of our people in those sections of the State.

Since our mental institutions were in worse shape than our general hospitals, an appropriation of $11,000,000 was set aside for use in this manner. $7,000,000 has been allocated to East Louisiana, Central Louisiana, State Colony and Training School for repairs and expansion. $4,000,000 has been set aside for the erection of a new mental hospital at Fontainbleau Park, with a receiving station in New Orleans. There is now, about complete, a new building for women patients at Jackson, described by Federal experts as the finest of its type in the world. Such a building as this is a godsend to people who are helpless and penniless, and in need of this special care.

Two million dollars has been allocated to our penal and correctional institutions. Most of this money goes to the State penitentiary for a new hospital and receiving station and to provide many other badly needed improvements. The remainder has been dedicated to the expansion of facilities at the State Industrial School for Girls, and for the erection of a $400,000 new industrial school for colored youths, the first of its kind in the State, and it is now complete and ready to operate.

A new hospital is being built at Hot Wells. Four new tuberculosis units are planned. Some are to be under construction soon. These are at Shreveport, Monroe, Alexandria, and Lafayette. Another 250-bed unit is ready for operation at Ruston—$2,500,000 has been set aside for these facilities. The first time in the State's history we have had hospitals for the incurable tubercular patients.

So, my friends, during my administration, the entire existing facilities of the department of institutions has been expanded. There is programed or under construction a new mental hospital, a new correctional institution, five new tuberculosis units, a special hospital at Hot Wells, and a great new charity hospital in Shreveport. This is a total of 11 new hospitals.

This constitutes, we believe, the greatest institutional building program ever undertaken in one administration.

During the first part of my administration, as well as practically all of the preceding administration, we were not permitted to build roads—due to the War, as you know. But I am glad that I will have had about 2 years to get our road program going.

During my tenure as Governor, $128,000,000 in Federal and State funds will have been allocated to the department of highways.

Eighty-eight million dollars of this amount has been earmarked for new construction and forty million has been allocated to maintain our existing 15,000 miles of roads and 11,000 bridges. We have actually awarded $40,000,000 in highway contracts—half of them completed and half now under construction throughout Louisiana.

These achievements have been made in spite of the desperate shortages and the skyrocketing prices, and our labor costs more than doubled since 1939.

Nevertheless, we have already contracted for $40,000,000 in highway improvements, and $48,000,000 more is programed now—this year—for construction as soon as plans can be finished, rights-of-way obtained, and contracts let.

This huge program, one of the greatest ever undertaken by the State of Louisiana, will mean major improvements for every parish and almost every city and town in the State.

Again, my friends, as you know, more than one-half of our people here in Louisiana gain their livelihood from agriculture or allied pursuits. While I did not make any specific promises to these people, during my administration the activities of the Government devoted to agricultural interest have received great increases in appropriations to aid all types of agricultural development.

In addition, I have taken a great interest in the furtherance of the State-wide flood control and drainage program which is so vital to our future welfare. We dedicated $5,000,000 to underwrite the State's portion of this program which is destined to become one of the most constructive developments of our time.

As a result of this drainage program and because of the time, effort, and leadership given, the aid that will come from local and Federal sources, is now more than $65,000,000 in projects. With the Overton Canal, which will soon get under way, an additional $48,000,000 in improving flood control and drainage expenditures will be made.

Altogether in the next few years this program will entail an outlay of more than $100,000,000, which will reclaim 5,000,000 acres of our best farm land and save $25,000,000 in annual crop losses.

This program will also greatly aid our soil conservation work to which activity more than $600,000 has also been allocated during my administration.

Since 1940 the new industries that have come to our State, including the additions made to existing industries, is an approximate total of 700. This is an investment of more than $268,000,000, creating 70,000 new jobs.

In the last 11 months we have signed up 246 new plants, a total investment of $134,000,000, providing 13,950 new jobs, with a pay roll of $31,000,000. I am sure you realize that these things just do not casually happen.

This represents a lot of work, effort, and planning. When one considers investing millions of dollars in our State with the idea

of moving here to spend his life he first is anxious to know that the State's affairs are on solid ground.

Thus, my friends, I might go an and on enumerating advances made during my administration. I could refer to the aid and money which we appropriated to all parish police juries to be spent on parish roads; to reforestation; to the development of our fur, game, oyster, and fish culture. I could cite the new agricultural experiment stations in Claiborne, Bossier, and Plaquemines parishes; or remind you of the exhibit buildings which we provided for Delhi; Lake Charles, Arabi, Alexandria, and Shreveport; and remind you of the new junior college established at Thibodaux; the large vocational agricultural school established in Rapides parish; the complete new building for the school for the blind and deaf at Baton Rouge; the impetus and support given the sweet potato development program; the increased parks and recreational facilities; including public shooting grounds.

I could cite the fact that, even though it is not enough, since 1940 the average old-age-assistance check has been raised from $11.90 to $21.35.

I am also reminded of the fact that today we have a lot of unexpected people on the welfare—the total number being 75,443, more than we ever had in the State's history.

I could mention that we provided for the first time retirement and pensions for State employees and school bus drivers, and many, many other activities and services which all have felt proper and needed by the people. The State of Louisiana contributes an amount equal to 5 percent of any employee's pay. I hope many of you already have contrasted that with the days when 5 percent of the then poor pay received by State employees was deducted for the benefit of somebody else—not the employees. But I don't think there's any use in my getting into that.

I called a lot of these things to your attention just in case someone asks you "Where has the money gone?"

Summarizing briefly, 37 percent of all our moneys go to the cause of public education. We now pay a larger percent of our tax dollar to education than any State in the South.

We are devoting 26 percent of all moneys to public welfare and hospital care.

A big portion of all our moneys go to the highway department.

Ten percent of all our moneys go to pay off the public debt. This is an inherited obligation. Nevertheless, during this administration we have paid $48,000,000 on this obligation. I would like to remind you that most of this money went to pay for improvements, primarily on roads built 15 or 20 years ago. So you are reminded here that no one has given you anything. You pay for everything you get, one way or another.

Six percent of our moneys goes for homestead exemptions.

The other 11 percent of all moneys goes to conservation, law enforcement, health, agriculture, and general government.

Again, my friends, let me repeat, your money has gone to satisfy your needs and services which you wanted and which your State government alone could give you. Yes; it is true that your government, especially in these inflationary times, is spending a lot of dollars. But I am proud also to be able to tell you, and I hope you will not forget it, that with all the many millions expended or invested for public benefits there has been no increase in taxes during my administration. No, sir; not a single increase in taxes.

Our gains have accrued through your industry and increase in prosperity. Good financial management of your Government has helped make it possible.

I am proud that this administration, like the former administration, increased benefits without increasing taxes. Many of my fellow citizens of Louisiana repeat that I made no promises. I confess I did not make promises, but I believe you will agree that we have given you more during this administration than most politicians dare to even promise.

In final summation, as a result of our planning and management, we now have under way and fully financed an over-all improvement program of approximately $250,000,000 covering education, institutional, highways, drainage and flood control, and other services. Although nothing was promised, you are to receive these great benefits.

At this point, I again acknowledge the indebtedness of my administration for the $15,000,000 surplus which we inherited from the Sam Jones administration. As I pointed out earlier, this administration is going to leave the State's affairs in fine shape—financially.

It is a deep satisfaction for me to know that money will be available to better provide for our needy old people, our public schools and hospital services and for other direct benefits to our people.

And that we were able to do this without any increase in taxes.

But, my friends, I wish to remind you that there is no end to the parade of progress. Much yet remains to be done. Through honesty and efficiency, through the development of our great natural resources for the benefit of our people, we will reach to even greater heights of prosperity.

The governorship of Louisiana is a tremendous responsibility. I sincerely believe that the future progress and welfare of our State and our whole people depends in a very large measure on the character and ability—and especially the character—of the man you select to administer your affairs.

He should be one who not only stands as a very symbol of honesty, but he should be a man of vision and of courage, and one who understands fully the economic aspects of governmental operation, and the need for the economic development of our State.

Naturally, I am anxious to see this work that is now in progress finished. I am interested in seeing the people who need it get the most benefits. I am interested in seeing a friendly successor elected. Thus far, I have refrained from expressing publicly my choice.

I have watched with interest the development of the campaign. I have observed that of the four candidates campaigning for office of governor—one has sponsored the principles and projects which I have mentioned in this talk.

The choice, therefore, is not a difficult one for me to make.

I am naturally in favor of completing the program that is under way today. I am in favor of electing a man who will protect the works that I have started.

It is for this reason that I announce my support of Sam H. Jones.

I believe he has the sympathy of the masses at heart. I believe his background as a man who sprang from the soil and a poor family enables him to understand the needs of the under privileged people of the State.

Because he has known poverty, it is my thought, therefore, that his heart is close to the problems of the people and certainly he has shown a sympathetic attitude. The State cannot go wrong in electing such a man to the high office of Governor of this State.

Then, too, I am convinced that time and experience have tempered his attitude and made him more tolerant of all people—his foes as well as his friends. I am convinced that he is ready to spend his time in working for the up-building of the State. I am convinced that the era of political bitterness is ended—and that Sam Jones can work with all the elements who have cooperated with me in the last 4 years.

Believing these things, I have asked my friends to support his candidacy—not for him personally—but because his candidacy offers the only real hope for the continued development of our State and the bringing of prosperity and happiness to the people.

I am not for one minute holding him up as a "superman", but a man who is capable, a God-fearing man, and a man who is honest and sincere in purpose.

And now, my friends, since this is Thanksgiving Day, I'd like to take this occasion to wish all of you a lot of health and happiness. You know there are a lot of things more important than being governor, or being sheriff, mayor, or being president and holding all the other political offices. If a man has health, good neighbors and friends, if he has a family that is healthy—physically and spiritually—and an opportunity to make an honest living—well—he's a rich man.

Again, I extend to you the greetings of the day.

Designation of December 7 as Gold Star Mothers' Day

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 8, 1947

Mr. KEATING. Mr. Speaker, 6 years ago yesterday this Nation was aroused from Sunday afternoon lethargy by news of the infamous Japanese attack on the United States at Pearl Harbor. The solemn significance of this day must never be lost to future generations.

Among us who live today this event marked a turning point in many of our lives. For those who were to offer up their lives on the altar of freedom it was the beginning of a final chapter. There is one group whose magnificent sacrifice probably surpassed all others, the memory of which we must forever keep fresh and beautiful. This group is the Gold Star Mothers.

In order that the remembrance of their priceless gift to the Nation may never grow dim I have introduced today a joint resolution authorizing and directing the President of the United States to designate December 7 as Gold Star Mothers' Day, a day on which all citizens of the country may join in grateful tribute to these mothers of hero sons.

Diplomatic Boondoggling

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann which appeared in the Washington Post today:

DIPLOMATIC BOONDOGGLING

(By Walter Lippmann)

The other day while reading the newspaper reports of a speech by Mr. Bullitt I found myself wondering what Joseph Stalin would make of it. It was from Stalin's point of view a most extraordinarily flattering picture

that Mr. Bullitt painted. There is a man, said Mr. Bullitt, who will "eventually" mobilize "all the resources of Europe and Asia against us." He will "organize" 450,000,000 Chinese. He will organize 350,000,000 Moslems and Hindus of India. He will organize all the Arabs. He will organize all the French, Italians, Germans, Poles, Scandinavians. He will organize them into "overwhelming masses of men and machines."

Stalin is, in short, at once Caesar, Napoleon, Hitler, Genghis Khan, the Great Mogul, and the biggest Manchu of them all. If Mr. Bullitt's estimate of Stalin's ability is even approximately correct, then we are dealing not with a man but with superman himself.

The purpose of this kind of hysterical agitation is, presumably, to rouse the country and persuade it to give money, arms, and men to Chiang Kai-shek and to everyone else in Asia and Europe who is struggling with Communists. We cannot afford, I believe, to let ourselves be rattled by this kind of agitation. It can lead only to the squandering of our wealth, our power, and our influence in an immense diplomatic disaster.

For the American people are not rich enough, the United States does not have the troops, and it does not have the political influence, required to intervene decisively and effectively all over Asia and all over Europe. The practical result of the kind of policy Mr. Bullitt is agitating for would be to entangle us at so many places, commit us irrevocably in so many widely separated conflicts, that we would lack the resources and the energy to be successful anywhere. That is not foreign policy but diplomatic boondoggling, of which, considering the results in Korea and in Greece, we have had quite enough.

The difference between Mr. Marshall's foreign policy and what preceded it is that Mr. Marshall has been acting on the strategic principle that a nation must concentrate its effort at the point where the greatest results can be obtained. In his China policy and in his European policy Mr. Marshall has been seeking to correct the error which we had fallen into of dispersing our effort on secondary objectives while we neglected our primary objectives.

Mr. Marshall has had, of course, to carry on as best he could the commitments which he inherited. But the policy which, quite justly, bears his name—the Marshall plan—calls for a concentration of American effort at that point on the face of the earth where our civilization is most deeply threatened, and where on the other hand there are the greatest opportunities for the recovery and the revival of our civilization. That point is not China. It is not the Middle East. It is not the Balkan Peninsula. It is in the British Commonwealth, in France, in Scandinavia, in the Benelux countries, and in Italy.

It is there that the struggle will be won or lost in the advanced countries, not in the backward ones. It will take our utmost effort to succeed. But if we entangle ourselves in many other places we shall not have the resources that are necessary if we are to succeed. We shall have made the catastrophic mistake of trying to do so many things that we do none of them successfully.

Federal Taxes Paid by Hawaii

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, December 8, 1947

Mr. FARRINGTON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein an analysis of the taxes paid to the Federal Treasury by the Territory of Hawaii in the fiscal year 1947, as follows:

LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D. C., December 1, 1947.

Hon. JOSEPH R. FARRINGTON,
House of Representatives,
Washington, D. C.

DEAR MR. FARRINGTON: This is in response to your request for a statement of the relative position of Hawaii and the various States with respect to internal-revenue collections during the fiscal year ending June 30, 1947. We enclose two tables; one shows total collections and the other shows per capita collections in Hawaii, the several States, the District of Columbia, and Alaska.

Total collections of internal revenue in Hawaii decreased more rapidly between 1946 and 1947 than collections in all States and Territories combined, the percentage of decrease between 1946 and 1947 being 24.9 (Hawaii) and 3.8 (total). This represents a reversal of the trend of the years prior to 1945–46. The drop in total collections resulted mainly from the reduction in excess-profits collections, for all areas. In Hawaii collections were reduced for all except employment taxes.

In spite of this reduction in revenues, the total internal revenue collected in Hawaii in 1946 exceeded that collected in 12 States. The States are: Arizona, Idaho, Mississippi, Montana, Nevada, New Hampshire, New Mexico, North Dakota, South Dakota, Utah, Vermont, Wyoming. These States had also provided less revenue than that provided by Hawaii in the fiscal years 1944 through 1946.

As shown in one of the tables attached, per capita collections of internal revenue in Hawaii were greater than per capita collections in 24 States (50 percent of all States) during 1947. Hawaii's rank was lower during 1947 than during 1946; in the earlier year per capita collections had been larger in Hawaii than in 34 States.

The States in which per capita collections were smaller than in Hawaii are: Alabama, Arizona,* Arkansas, Florida, Georgia, Idaho,* Iowa, Kansas, Louisiana, Maine, Mississippi,* Montana,* New Hampshire,* New Mexico,* North Dakota,* Oklahoma, South Carolina, South Dakota,* Tennessee, Texas, Utah,* Vermont,* West Virginia, and Wyoming.* Of the States in the last for 1946, Colorado, Indiana, Kentucky, Minnesota, Nebraska, Nevada, Oregon, Virginia, Washington, and Wisconsin are not included in the 1947 list; collections of internal revenues in those States were smaller per capita in 1946 but larger in 1947 than in Hawaii. (An asterisk indicates that both total and per capita collections were smaller in the State than in Hawaii.)

Sincerely yours,

ERNEST S. GRIFFITH,
Director, Legislative Reference Service.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following notice indicating that the Massachusetts Council of Churches recently went on record as opposing universal military training:

NATIONAL COUNCIL AGAINST CONSCRIPTION,
Washington, D. C., December 2, 1947.
Representative PHILIP PHILBIN,
House Office Building,
Washington, D. C.

DEAR MR. PHILBIN: You may be interested in noting that the Massachusetts Council of Churches, on November 17, in Fitchburg, went on record as opposed to universal military training in peacetime. There were 172 delegates from churches throughout the State attending, including the Episcopal and Methodist bishops of Boston.

Sincerely yours,

JOHN M. SWOMLEY, Jr.

The President's Recommendations in the Fight Against Inflation

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. HOLIFIELD. Mr. Speaker, the President of the United States has called the Congress to Washington to enact legislation of vital importance to every individual at home and millions abroad.

He has asked for an emergency appropriation to be spent for food to prevent starvation this winter in the western European nations.

He has outlined a plan for combating inflation here at home. He pointed out that "the housewife who goes out to buy food today must spend $10 to buy what $7 bought a year and a half ago." He continued as follows:

The cost of living is still climbing. In the past 4 months it has risen at a rate of 16 percent a year * * *. Adequate protection from high prices and unfair distribution can be assured only by establishing authority for price ceilings and rationing in fields of critical importance. * * * Next to food, the most important element in the cost of living is rent. Under the modified rent-control law, rents are rising at the rate of about 1 percent a month. A 12 percent annual increase in rents imposes an intolerable strain upon the family budget. The rent-control law should be extended and the weaknesses in the present law should be corrected.

The harsh effects of price inflation are clear. They are felt by wage earners, farmers, and businessmen. Wage earners are finding that bigger pay checks this year buy less than smaller pay checks bought last year. Small businessmen are being squeezed by rising costs. Even those who are well off are asking, "How long can it last? When is the break coming?"

We must win the battle against inflation, so that our long-range efforts may start from high levels of prosperity and not from the depths of depression.

In summary, the immediate anti-inflation program that I recommend calls for the following legislative action:

First. To restore consumer credit controls and to restrain the creation of inflationary bank credit.

Second. To authorize the regulation of speculative trading on the commodity exchanges.

Third. To extend and strengthen export controls.

Fourth. To extend authority to allocate transportation facilities and equipment.

Fifth. To authorize measures which will induce the marketing of livestock and poultry at weights and grades that represent the most efficient utilization of grain.

Sixth. To enable the Department of Agriculture to expand its program of encouraging conservation practices in this country, and to authorize measures designed to increase the production of foods in foreign countries.

Seventh. To authorize allocation and inventory control of scarce commodities which basically affect the cost of living or industrial production.

Eighth. To extend and strengthen rent control.

Ninth. To authorize consumer rationing on products in short supply which basically affect the cost of living.

Tenth. To authorize price ceilings on products in short supply which basically affect the cost of living or industrial production, and to authorize such wage ceilings as are essential to maintain the necessary price ceilings.

If we neglect our economic ills at home, if we fail to halt the march of inflation, we may bring on a depression from which our economic system, as we know it, might not recover. And if we turn our backs on nations still struggling to recover from the agony of war, not yet able to stand on their own feet, we may lose for all time the chance to obtain a world where free peoples can live in enduring peace.

The freedom that we cherish in our own economy and the freedom that we enjoy in the world today are both at stake.

I have recommended interim aid for certain western European countries and a program to curb inflation in the United States. I regard the measures which I have presented to you as vital and essential to the welfare of the Nation.

When the American people have faced decisions of such magnitude in the past, they have taken the right course.

I am confident that the Congress, guided by the will of the people, will take the right course on this occasion.

Mr. Speaker, In my opinion the President's recommendations are timely and unless heeded by the Congress, we face further dangerous inflation.

I shall support any legislation which is properly drawn for the purpose of accomplishing the purposes in his recommendations.

Democracy Can Defeat Communism

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. McDONOUGH. Mr. Speaker, the Honorable Jan Ciechanowski, the last legal Ambassador from the Republic of Poland to the United States, recently made an important address in Los Angeles at a meeting on Friday, November 7, sponsored by the American Federation of Labor, the Knights of Columbus, the Society for the Promotion of Poland's Independent, the Friends of Poland Association, and the California Division of the Polish American Congress. Mr. Ciechanowski spoke on the subject Democracy Can Defeat Communism.

This meeting was presided over by the Honorable Joseph Scott, one of California's most prominent citizens who has a national reputation for defending and upholding constitutional government, and is a vigorous opponent of communism in the United States and other parts of the world.

The following is the address delivered by Mr. Ciechanowski:

We have been living for several years in a fool's paradise of mock security. While it lasted, public opinion wanted to believe that the prospects for a secure peace, established on the much-vaunted big power unity was attainable and that progress was actually being made at the numerous peace conferences held in various world capitals.

Only since February 1947, when General Marshall became Secretary of State, through March 12, when President Truman launched a more active American policy to meet what he termed "a very serious world situation," has the public been made officially aware of the gravity of the situation, of the high tension in Soviet-American relations and of some of its dangers.

For over a year, the American press has been practically filled with accounts of startling facts and developments showing the steadily growing controversy between the United States and the Soviet Union.

But really we are mainly indebted to Comrade Vishinsky's outbursts at the United Nations Assembly, to Comrade Ehrenburg—the great official Soviet editorial writer—and to other Soviet leaders and writers of the Soviet-controlled press for opening our eyes to the grim realities of today.

From their crude remarks we know that they openly accuse the United States of being "an imperialist power," a "potential aggressor, out for world domination," and the President of the United States and Secretary of State Marshall of being "the servile puppets of Wall Street." These are only a few choice quotations from their insulting statements.

In a recent masterly attack on the United States, in the official Moscow Literary Gazette, Comrade Ehrenburg wrote: "Our soldiers

gave a friendly greeting to the Americans on the Elbe River (in Germany). Our people do not hold grudges, and, in their joyous victory, they were ready to forget the bitterness of 1942, when Russia was covered in blood and America was covering herself in gold."

So "America was covering herself in gold"—in 1942? At the time when all her vast resources, her manpower, her industries and labor, her public and private enterprises were making the greatest coordinated effort in the good fight against German, Japanese, and Mussolini's fascism and its satellites? At the time when America's lend-lease assistance to her fighting allies was the mightiest, in fact, the only weapon which allowed them to carry on the fight?

No, Comrade Ehrenburg, America was then and throughout the war and after it covering herself with gold to the tune of over $11,000,000,000 of lend-lease to Soviet Russia, of one additional billion dollar cash loan, and of some three additional billions in Russian war relief and UNRRA supplies and services to the Soviets. How enriching for America, and how useful this "chicken-feed" aid has proved to be in the light of the truly Sovietic gratitude which she is now reaping.

Well, we live and learn. Recently another Soviet propaganda bubble has been exploded. The allegedly dissolved Comintern has suddenly been revived. It is now called the Cominform. In this new guise it declares itself to be the determined expression of an active anti-American drive on the part of nine European nations, at present Soviet satellites behind the iron curtain. But its leader and spokesman is Comrade Zdanov, so frequently mentioned in past years as Stalin's most probable successor. This new Cominform, reborn as a Soviet-led center of information, has challenged American policy on all counts and has declared its determination actively to oppose the Truman doctrine, the Marshall plan, and in fact any American initiative for European and world rehabilitation.

On the basis of its declared intentions this newest instrument of anti-American Soviet policy can no longer be regarded as merely another center of ideological Communist propaganda. It is a strongly organized, fully armed and equipped, Soviet-led coalition of satellite countries, now Communist controlled. It is the militant spearhead of Soviet expansion and of communism, armed openly against the United States.

We may no longer indulge in wishful thinking. We are fully informed. The veil of secrecy has been brutally torn off reality. A new situation now faces the American people and all the nations still outside the iron curtain. It is time to sit up and take notice. It is time to debunk. It is high time to meet the Soviet challenge by an active counter-challenge of democratic determination. By boldly doing so, we may prevent the present showdown from becoming yet another armed conflict.

Let us first briefly review the situation and some of its origins and then turn our attention to a choice of effective counter-measures. In wartime, when Soviet Russia's participation was of such paramount military importance, it was realistic to give her fullest aid, support, and assistance. It was fair to admire and to praise the courage and sacrifice of the Russian people in the defense of their country against the German invasion. This was unstintingly done. But it was ill advised to oversell Soviet Russia to public opinion as a kind of liberal democracy of which the Soviet dictatorship is the direct antithesis. It was shortsighted to regard as a permanent alliance the purely incidental and temporary war association of democratic nations, fighting against one kind of totalitarianism, with that other totalitarian Communist power.

The alliance between the democracies and Soviet Russia could not be expected to survive after the war and to continue as a working partnership in establishing a one-world peace of freedom, justice, and collective security. Such miracles just don't happen. It was therefore a basic error of policy to agree, under Soviet pressure, to finalize in wartime any territorial or political problems. All such settlements should have been firmly rejected and postponed to the end of the shooting war. That would have allowed the western powers to preserve the initiative in later negotiations.

Their premature settlement at Tehran and Yalta did not only result in depriving Poland—a staunch, fighting ally and charter-member of the United Nations—of her independence, together with that of Estonia, Latvia, and Lithuania. It directly violated the fundamental principles of the Atlantic Charter and the principle of self-determination of nations. It allowed the Soviets to create a dangerous precedent for future negotiations. On the Polish test case, they realized the American and British passive policy would agree under pressure to sacrifice basic principles and war aims to opportunism, even if thereby the United States and Britain became parties to such acts of violation. Thus, the Soviets succeeded in opening a wide breach in the moral front of the United Nations' principles which set a dangerous precedent and opened the way for ever-growing pressure and demands.

As the Western Powers' appeasement policy of Russia developed, the Soviets forced the acceptance of a power-political pattern, instead of a democratic one, in the structure of the United Nations Organization. It was then that the one-world concept was irretrievably lost and the world divided into two spheres of power influence. The appeasement policy pursued by the two western democracies towards totalitarian Soviet Russia was as hopeless as trying to induce a man-eating tiger to become a vegetarian.

During and immediately after the war, by means of Communist-ridden puppet governments, which were the Soviet version of the Yalta formula of governments "friendly to Moscow," they gradually subjected to their domination 11 previously free countries: Finland, Estonia, Latvia, Lithuania, Poland, Czechoslovakia, Yugoslavia, Hungary, Bulgaria, Rumania, and Albania—with a joint population of one hundred and fifteen millions. All these nations are now being communized in the exclusive sphere of Soviet influence behind the iron curtain.

The Soviets have sabotaged the U. N. by constant use of their veto power, and have stalemated it completely on all important peace problems and made it inoperative.

They have managed to seize and to hold the initiative at all international conferences and to force the United States and Britain to be always on the defensive.

By facing the western powers with ever new accomplished facts, Stalin has periodically probed and challenged their policy. Their reactions showed him how far he could go in carrying out his expansionist designs. Unfortunately, even quite recently, in January 1947, on the case of the faked Polish election, the feeble protests of London and Washington, followed by almost immediate recognition of this flagrant violation of the Yalta agreements, convinced him that he had nothing to fear in the way of a tough American policy at the Moscow Conference which took place in March, barely 8 weeks later. At that Moscow Conference the Soviets wrung another important concession from the American Government on the key problem of Austria, insuring their prolonged military occupation of that country.

The Soviets staged their Communist coup in Hungary on May 31, 1947. President Truman called it publicly an outrage. But again, a few days later, this gross violation of agreements and of Hungarian sovereignty was recognized after but a feeble protest.

As these accomplished facts and outrages were prepetrated by the Soviets during and shortly after the change in American policy to a more active one as expressed in the so-called Truman doctrine, without arousing any more definite reactions, the Soviets must have concluded that they could continue to thwart the Western Powers, even when American and British signatures on agreements were directly involved.

The Soviets are conducting an armed Communist aggression on China, having obtained from President Roosevelt at Yalta territorial advantages in Manchuria which made this possible, while all American forces and aid in war matériel have been withdrawn from the legal Chinese Government. In their Chinese aggression the Soviets have encountered no American opposition, although China has always been regarded as a vital factor of American security.

Korea is being Soviet-communized and armed.

In Germany the Soviet zone of occupation is strongly manned by a considerable, fully armed Russian force. Recently, in summer, full-scale military maneuvers were staged in the Austrian Burgenland by a Soviet army of 350,000 troops, mostly mechanized, with a powerful display of air force, tanks, and modern weapons, obviously to intimidate Europe and to give warning to the United States, whose occupation force in Germany at present is about one soldier to 2 square miles.

The national conscript armies of the European countries, now satellites of Soviet Russia, are being communized, Soviet-trained, armed, and equipped. Tito's small Yugoslavia alone boasts an army of 650,000 with modern armament, trained under Soviet supervision, and poised in the vicinity of the focal port of Trieste.

Strategic railroads are being built in haste through these countries, their direction clearly indicating that they are planned for eventual Soviet military aims of further expansion.

The populations, the military establishments, the natural resources of all these Soviet-dominated countries are made to work primarily for Russian war preparedness and for the Soviet economy—while the western portion of partitioned Europe, deprived of their mineral and agricultural resources which it so badly needs, depends on American assistance for its existence and rehabilitation.

Having achieved their immediate aims in eastern central Europe and in the Far East, the Soviets are consolidating their hold and preparing the next phase of their expansion.

There is every indication, in the light of their moves up to date, that they are tending to complete their advance in the Balkans by Communist aggression on Greece and by planning to gain a foothold in Turkey and Iran. They appear to be following out the old Tsarist basic policy of gaining control of the Straits and an outlet on the Persian Gulf.

In addition to these activities, they menace Italy through their satellite, Tito, via Trieste. They are exerting political pressure in France and other European countries by means of very active Communist parties which they entirely control and which they richly finance, for the purpose of "taking these countries from within."

They have spread their centers of disruptive communism to the Western Hemisphere and have set up Communist pressure groups in Canada, in the United States, and in all central and southern Latin American Republics.

Based on actual facts, such is, in broad outline, the true picture of Soviet achievements and activities.

When one looks at the map of the world, it is clear that Soviet Russia has taken over Hitler's succession. For the time being, she is out for world domination on Haushofer's geopolitical theory of the Eurasian Heartland. But, in addition to this grandiose plan, the Soviets are actively working to impose their Communist leadership on all the remaining free nations.

Owing to war exhaustion and disruption, only two really Big Powers are left which are capable of pursuing a world-shaping policy, and of assuming world leadership. They are the United States and Soviet Russia.

The United States is the natural, the acclaimed leader of the world which fears communism and is ripe for true democracy. America can exercise its leadership if it takes the initiative in a policy of bold and active determination.

The Soviets could only impose their leadership in the case of American default to meet its vast responsibilities as the foremost world power.

Through the elimination of other powers, owing to present-day conditions, the actual world conflict, which in reality is a conflict between totalitarianism and democracy, between freedom and Communist enslavement—has now been narrowed down to a duel for leadership between the Soviets and the United States.

The vital question is this: Will democracy let communism get away with it and impose its leadership on the world, or will it call the Soviet bluff by boldly accepting their challenge and assuming leadership?

The fate of the world, of peace and security, of human happiness, prosperity and, in fact, the very survival of our Christian civilization—all depend on the answer. The American people hold the answer to these most important questions of the day.

What are the Soviets now counting on to deliver the world into their hands?

Most recent, entirely reliable reports from Moscow, received in October, show that Stalin and the Politburo mainly rely on a general crisis in the United States. On the basis of their own reports from their envoys, agents, and friends in America, they foresee a financial, industrial, and social crisis which they expect will cripple the entire economy of this country and prepare the way for communism. They are sure that American labor is being effectively permeated by communist trends, especially as regards land and sea transport, the coal and steel and electric power unions. And to crown this Soviet wishful thinking, Moscow appears to be convinced that American political forces are swinging to Henry Wallace, whom Stalin apparently regards as the most likely chance in the 1948 election campaign.

Not long ago some American fellow travelers connected with American labor circles assured Stalin that, if ever American-Soviet relations were to reach the danger point of armed conflict "40,000,000 American workmen would down tools and make war with Russia impossible." This and other similar assurances, passed on to the Soviets by American fellow travelers, appear to have encouraged the Kremlin in the belief that it can discount American opposition to Soviet Communist expansion.

Dictators are usually misinformed because their envoys and observers are afraid to tell them the truth, while their foreign sympathizers are too anxious to gain their confidence and praise to dare give them even friendly warning.

In preparing any kind of strategy on realistic bases, it is necessary to appraise dispassionately the elements of strength and weakness of one's adversary and to weigh them against one's own assets and liabilities.

In this conflict for world leadership between Soviet Communist imperialism and American democracy, what have the Soviets got that America does not have? What can they offer that America cannot give the world?

They certainly have an enormous military force, armed and trained for any emergency. They have added to their military potential the considerable potential of their present satellites in eastern central Europe. They have secured by fair and foul means some of the best and most efficient war scientists, engineers, technicians and skilled labor from Germany and other countries, to raise their most inefficient standards of industrial production and research. They have added to their own military force a German elite force of some 36 divisions, mostly shock troops, which they have recruited, armed and carefully screened and indoctrinated from among selected prisoners of war. They continue to hold and to use for military and labor purposes more than 1,000,000 Japanese. They have their subservient puppet governments in 11 European countries and Communist centers in all other foreign countries.

They have their admirably organized propaganda machine, with its far-reaching tentacles everywhere and they have converted the United Nations into a convenient sounding board from which they organize and rally their supporters all over the world.

Their policy is highly aggressive and dynamic.

Their weapon for retarding negotiations, for preventing solutions of urgent problems being reached is the veto power.

They have broken practically every agreement they have signed, and in their diplomacy they do not hesitate to resort to brutal pressure and blackmail.

Those are their elements of force and pressure.

They have the advantage of operating in a war-weary world, and among democratic statesmen mostly ignorant of their mentality and methods, whose natural fear of war discourages them from debunking the Soviet methods of intimidation and from calling their bluff.

In this framework, so propitious to the furthering of their expansionist policies, the Soviets have been, and still are, making full use of the receptive readiness of passive democracies to swallow any of their lies rather than to challenge them and to disprove them.

So let us debunk some of their lies and see what they really have to offer the world as compared to democracy.

The Soviets have brazenly assumed the role of champions of freedom and of the sovereignty of small nations, allegedly menaced by American capitalist imperialism, and the championship of the common man.

They have declared themselves the defenders of democracy, especially among the colored populations of this hemisphere, where it is easy to intensify race problems, and in colonial regions where it serves them to set indigenous populations against Great Britain and other colonial powers.

While thus championing human rights outside the iron curtain—in Europe, as a means of attraction, and in African and Asiatic possessions, and in the Americas, as a means of fomenting unrest and disruption—the Soviets have subjected 11 formerly free European countries to their domination, to their forced communication, and to practical enslavement. In their own vast country they have suppressed for 30 years all the freedoms of the Russian people and are actually using around 17,000,000 slave laborers in their mines, industries, and public works.

Under their ruthless one-party system, the standard of life in Russia is the lowest of any country inhabited by the white race. Labor is not free to choose its kind of work or to leave it. The Stakhanoff system is applied to labor. In the satellite countries the lowering of standards of living, indispensable to the spread of communism, is proceeding at full pace.

Wherever the Soviets have held sway, the "four freedoms" have been doomed and destroyed.

Those are the gifts and advantages which bankrupt Soviet communism has to offer humanity in the twentieth century of our Christian civilization.

It may be argued that if those are the only attractions they have to hold out to other nations, then why has their infiltration and propaganda been so surprisingly successful? Mainly because their lies are presented so insistently by an organization of truly diabolical cunning and knowledge of psychology, and with a methodical and gradually planned coordination of the minutest details and with that incredible efficiency of which the Marx-Lenin Institute is a past master. Also, because their propaganda has no scruples in making use of lies, because it makes fullest use of every situation, of every slightest opportunity offered by any actual or potential political, social, religious, or even personal tension anywhere which can be fanned up into serious antagonisms, into racial or class hatreds, into strife, or unrest on which communism thrives.

Last but not least, because of the amazing, incredible passivity displayed by democracies in the face of the Communist danger and of active Soviet imperialism.

Here you have on the one side a highly dynamic, fanatical Communist doctrine, ever on the offensive, effectively challenging and actually invading the strongholds of Democracy, its government departments and agencies, its intellectual, scientific, professional, business, and labor centers—while democracy sits back complacently, wishfully hoping against hope that some miracle will automatically stop this aggression, that the merits of Democracy will prevail of themselves, without having to take up the challenge and fight by pitting truthful arguments against lies, by assuming leadership, by actively strengthening its natural friends and allies the world over and helping them resist this menace.

And yet Democracy was ready to fight a total war in defence of its principles. It mobilized and militarized its entire might and won the greatest military victory over the most technically perfect war machine in defending its rights to freedom against the combined forces of totalitarian enslavement.

Is Democracy only capable of military action? Are its Christian foundations and principles to be used only as a war cry for rallying its followers in a shooting war, or are they truly so convincing and compelling that they can be effectively used to rally freedom-loving peoples to ensure peace and happiness?

Ideologically, democracy has all that sovietic communism lacks.

Its doctrine follows the doctrine of Christ. Its record has evolved through years of militant progress into the only known system of government "of the people, by the people, for the people." Its way of life has insured juridical equality to all. It has placed the worker in a position of dignity and insured his rights. Contrary to communism, it is the very antithesis of imperialistic domination, and it is founded on truth and, therefore, needs no iron curtains to conceal its methods and its institutions.

Its magnetic attraction for all freedom-loving peoples is so great that its rallying force is the most powerful of all.

This has been strikingly proved most recently by the sweeping victories of the constructive forces of stability and rehabilitation in the French and British municipal elections, and in the political elections in Switzerland and Denmark.

These elections are a triumph of democracy in action. Not only because they stop some Communist-pressed, too radical political, and economic policies, but because, above all, they express the peoples' power to reverse the course, when the people regard it as unpractical or unsuitable.

In democracies the government is the expression of the will of the people and its

servant, not its bully, as under Communist dictatorship.

For the American people these elections should be most instructive, for as Anne O'Hare McCormick writes in the Times of November 3: "This trend away from communism in western Europe is the first dividend on the Marshall plan. Besides, it constitutes the only test which Americans can apply to the Governments we propose to aid under the Marshall plan, for its objective is to extend, if possible, but to hold at almost any cost the area of freedom in the world. A free government is one which can be changed by the peoples' will."

I often heard it said that American organized labor is fast becoming communistic. These assertions, coming mostly from people who have never had much direct contact with labor or its union leaders and from hopeful fellow travelers, do not impress me. On the contrary, there are two main unsurmountable obstacles in the way of communism; the Catholic church and labor.

The former constitutes the solid spiritual vanguard, the latter the solid practical one against Soviet communism. The doctrine of the Catholic Church is the very foundation of individual freedom and justice which has evoloved into democracy. Labor has achieved all its rights through democracy and stands to lose them all under communism.

But as far as labor is concerned, it should be borne in mind by every one of its representatives that the Soviets count on labor troubles, on strikes and stoppages, on labor-management difficulties—all of which they skillfully encourage through their infiltrated agents and fellow travelers—to gain direct influence in labor quarters and thereby to weaken American enterprise and economy in a preliminary softening process aimed at reducing its coordinated resistance.

It is to be hoped that the October AFL convention at San Francisco and the latest news from CIO quarters in New York, will somewhat disillusion Moscow on that score.

The Soviets who still live in the superannuated Marxist doctrine of a hundred years ago of exploitation of labor by industrial bosses apparently cannot yet grasp the fact that in democracies and especially here, in this blessed land, enlightened and organized labor has long ceased to be a working class and has become a working power. Today, only in Russia and in Communist-dominated countries, the superstate has replaced the blood-thirsty bosses of old, and still drives labor on the antiquated patterns of compulsion and class hatred.

In summing up, may I say that this is no time for complacency. The danger facing democracy is real and close and menacing. It is militant and thoroughly organized. Although democracy is so eminently sound and unassailable on its merits and record—while communism hasn't got a leg to stand on—democracy can only defeat communism by actively fighting it everywhere, by assuming leadership, by taking up its challenge, by organizing and coordinating all its forces and by taking the offensive boldly and unitedly. It will have to restate its own principles and aims, and oppose their mighty force of persuasion and attraction to the empty slogans and lies of Soviet-led communism. It will have to denounce Soviet enslavement of peoples and isolate them as the barbaric aggressor and slave driver which it is. Democracy will have to revise its own statesmanship and revert once more to its fundamental spiritual values and principles, and replace its temporarily adopted cynical superrealist opportunism, by the basic realism which has made democracy great and which can never be divorced from the rights of humanity, from the ideals of freedom and justice.

Only if it is thus armed, determined and militant, democracy can defeat communism.

Report on China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 8, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a most informative and illuminating article on the present situation in China by the Catholic archbishop of Nanking, an eminent scholar in the language and cultures of many peoples. When the American people hear such conflicting reports, including so many from those who see China only as she is now at the end of 10 years of war, and for a short time at that, it is most helpful to have one that can be depended on as wholly accurate.

REPORT ON CHINA TO INSTITUTE OF CHINESE CULTURE

(By H. E. Paul Yu-Pin, D. D., archbishop of Nanking, China)

WAR IN CHINA

Today, China is fighting, not a civil war, but a life and death struggle against Soviet communism—the new invader of China. True, the fighting in China has the appearance of a civil war. Let us not be deceived. It is part, the beginning, of an international war, a world war, launched by the Soviet Union against the democracies.

The third world war has already begun. The armed skirmishes of this new war started before the old war was finished. In Europe, the third world war started with the so-called civil war in Greece. There, an armed Greek Communist army, assisted by international brigades from the surrounding Soviet-dominated countries, revolted and attempted to overthrow by force the Greek Government.

In Asia, the third world war started in China. It began when the Chinese Communist armies, sheltered, equipped, and in part officered by the Russian Army, attempted to establish independent sovereignty in Manchuria. These armies met in battle with the armies of the Chinese Government.

There were no Chinese Communist troops in Manchuria on VJ-day (surrender of Japan). The Soviet plan was to use the time gained by the armistice to transfer as many Communist troops as possible from North China to Manchuria and there to arm them with the abundant Japanese supplies and equipment which the Russian Army had seized when the Japanese Army surrendered. To withdraw the Russian Red Army from Manchuria only when it could be replaced by a well-armed Chinese Red Army, and use the Marshall truce period for this purpose: this was the Soviet plan. It worked perfectly. Today the Communist forces occupy 90 percent of Manchuria.

The fighting in China today is a war between Soviet communism (using her satellites, the armed Chinese Communists) and the democratic forces of the world, of which China has, by choice, taken her place, and for which cause she is now fighting. The whole truth is that China, today, is fighting for the democracies—as in World War I and II. It is but a half truth to call it a civil war. Chinese communism, like communism in every country, is but a part of the international Communist movement.

International communism obeys and is led in all its activities from its supreme headquarters within the Soviet Union.

In the war in China, the Communist forces have fighting for them, not only Chinese Communist troops, but also Korean troops, Mongolian soldiers, Japanese troops, and Russian officers. These international brigades comprise one-third of the Communist force in Manchuria. Some officers of the Russian Army direct military operations. Russia supplies much of the war materials used by the Chinese Communists, most of the guns, ammunition and artillery used were surrendered to Russia by Japan; some of the supplies are part of American and British lend-lease to Russia.

These events I have been citing, so-called Greek civil war and the so-called Chinese civil war— are not part of, the Second World War. True, great wars have as their aftermaths civil war, revolutions, and mass strikes. But these two events, the war in Greece and the war in China, are of a different character. The forces basically opposed in them, opposed and clashing by arms, as well as by economic and political competition, are not alined as were the opposing forces of the Second World War.

One of the main power groupings of that war has indeed been eliminated—Germany and her nazism. The main power grouping, in this third world war, is Russia and her Communist satellites on the one side and the democratic forces of the world on the other. China is fighting the opening battle of the third world war for the democracies.

Is there any hope for world peace? After these years of death and suffering, of exile and destruction, there is a great weariness in the world. It is hard to say it, but hope without action is empty. The penalty for closing our eyes to facts will be heavy; the price of inaction will be catastrophe. To be forewarned is to be forearmed.

Also it is true that preliminary skirmishes, even bloody skirmishes, are not identical with the grand battle and the further widespread, advanced stages of a full world war. Sometimes the grand battle can be delayed, and even avoided. It is possible that the third world war may never advance much beyond these preliminary stages. If the democracies join together and assist each other with the common cause, and put up a united, strong front againt the new aggressor, Soviet communism will fail in her objective—world conquest.

CHINESE GOVERNMENT

During my last visit to the States I was happy to hear and feel the praise and warmth of friendship that swept the country. On this present trip, since I arrived here, I observed a change of attitude toward China. Before, there was admiration and praise for China's heroic fight against the Japanese invader. Now criticism and disappointment because of our courage and determination to fight the new invader. If fighting against aggression and invasion in 1941 was a great virtue, how can it now in 1947 be a vice? Whilst we did not deserve all the flowery praises you showered upon us at the time of Pearl Harbor, yet neither do we deserve the unqualified criticism and scoldings which too many American writers, broadcasters, and some Government officials are giving us today. Specifically, the Chinese Government is accused of being undemocratic, Fascist, nonliberal.

What means Fascist and nonliberal? These words are confusing. What they mean here in the United States, I do not know. But, as used by the Communists in China, all who oppose communism are labeled Fascists and nonliberals.

Is the Chinese Government democratic? In a very true sense I can bear testimony to the fact that it is democratic. However, it does not enjoy all the luxuries of democracy yet. No country does during war. Let me explain.

Some 19 years ago (only yesterday in the perspective of history) the present Government of the Republic of China was established. Only one-score years ago China was

a loosely knit country of semi-independent states (provinces) under the rule of war lords. Today the authority of the Central Government is firmly established except in Communist areas. This is progress. And, incidentally, the reason why we could fight the war so long and victoriously against the might of Japan.

China has already passed through the three stages on the road to a constitutional government: the military period, the period of tutelage (or educational stage) and is now at the door of the constitutional stage. The first two periods are over, and now the era of constitutional government becomes effective, Christmas of this year. Since April of this year, there has been ruling China, an interim, multi-party government. It is a liberal government, because it includes all the political parties of China (except the Communist Party, which was invited, but refused to come in).

Now the highest policy-making body of this coalition government of China is the state council. This coalition council of state is, by law, made up of 40 members. Here is the break-down: The much-belabored Kuomingtang Party, under Chiang Kai-shek has 17 members. The Young China Party has 4 members. The Democratic Socialists have 4 members. The Independents have 4 members. The Communists were allotted 8 members; their front parties given 3 members. Hence out of 40 seats, the Kuomingtang Party has only 17 members—far less than a majority.

Now the executive arm of the Chinese Government is run by a coalition cabinet made up of 24 heads of the various government ministries and commissions. The present political representation in this coalition cabinet is as follows: Kuomingtang 14; Democratic Socialists 3; Young China 3; Independents 4. No more one-party rule in China.

Is the Chinese Government democratic? If by democracy you mean Soviet democracy—that we have not got it. Soviet democracy is slavery. If by democracy you mean certain types of democracy that came out of Europe in the past century, that too we have not. For the engineers and philosophy of that democracy were godless men with no respect for the dignity and rights of all men of all classes. But if by democracy you mean American democracy, which has as its basis and philosophy the American Constitution, and in its interpretation Lincoln's "government of the people, by the people, and for the people," and in its application to others, John Hay's open-door policy in China (defending the integrity of China)—this kind of democracy we have in China in principle, in law, and in government.

Our new constitution is practically a copy of your American Constitution; the children in the schools of China knew the American Constitution almost by heart. The set-up of our government is much the same as yours; its administration is in the hands of a multi-party government. We have freedom of speech, religion, and assembly in China. As I said before, some of the luxuries of democracy we do not yet enjoy, and that because of the necessities of war. For instance, the new general mobilization order, which was issued and signed by the new coalition government, curtails some rights in the interests of national security, for the purpose of mobilizing the nation to fight the new invader and aggressor of China—Soviet communism.

CHINA HINDERED BY INFLATION

The people of China live in a glass house. There are no curtains on the windows of China, much less iron curtains. Within that glass house of China 400,000,000 people, one-fifth of the human family, labors and strives and struggles to make a scant living—with not enough food in the pantry. Everything they do can be seen by the world—nothing is hidden. The correspondents of the world are free to come to China and look in each of the 10,000 windows of the house of China. (In Manchuria Soviet communism has drawn a heavy iron curtain—your newspapermen cannot go there.) If these newspapermen report to you what they have seen, even though it is bad, we are not displeased—that is democracy—for the press can be a powerful deterrent against evil. The truth is that a large section of the American press has criticized China unfairly, indulged in exaggerations, half-truths, and falsehoods.

Runaway inflation in China is the cause of most of the deplorable conditions there. For inflation brings on high prices, which in turn creates black markets. Inflation, cutting down the buying power of salary, brings about a low standard of living. Government servants, military and civil, must look elsewhere for enough money to support their family. This is bad. It drives good men out of the Government. It creates inefficiency and corruption.

All this is true. I wish to state the facts. But I also want to place them in their proper perspective and causes. I am free to speak out. I am a private citizen, not a government official. In China, my six daily newspapers and two broadcasting stations have waged a crusade against these evils of inefficiency, corruption, and graft. I criticize the Government, but constructively, by hammering at the causes of these evils. And the main cause of these evils in China today is Soviet communism. By their invasion, they necessitate a huge standing army and huge war-costs—which is the main cause of inflation. They have robbed Manchuria of her heavy industry ($2,000,000,000 worth), which was brought back to Russia. They have deprived China of 80 percent of her raw materials. They have destroyed large sections of rail-transportation in China and sabotaged every effort of the government to improve China's economy. Conditions in China, political, economic, and social cannot be improved until the Communist invader is driven from our lands.

You might well say: Why does not the Chinese Government tell the world about Soviet Russia's invasion of China? Officially, she cannot. Yalta forced China into a 30-year alliance of friendship with Russia. This treaty of friendship is officially still in force.

Why does not the Chinese Government, at least nail and blast the lies about China in the American press? I will permit a great friend of China to answer that one. I quote Clare Boothe Luce:

"China * * * is the greatest country in the world in terms of what counts most—individual human souls. China, the oldest civilization in the world—and China, the first and longest-suffering of all the United Nations—China—a country too civilized to be 100 percent militaristic, too isolated to be industrialized, too polite to master the vulgarities of propaganda, too patient to know how to complain against her allies. And because the Chinese are too polite and they are too civilized, too proud and too loyal to their allies to give their side of the story in the vulgate called by our so-called civilized nations propaganda * * * therefore, you and I must tell it."

CHURCH IN CHINA

Today in this world, the church is suffering a great persecution at the hands of Soviet communism and her satellites. Greater than the old Roman persecution against the early Christians. Today there are more martyrs for the faith than in the days of early Christianity. The same is true in China. That is, it is true in that part of China occupied by the Soviet Communists—North China and Inner Monogolia.

During the Japanese war, the Communist Party line in China was to appear tolerant toward the church—to win them over. However, after the war, particularly beginning this year, the Communists started an open persecution of the church. The Communists now know that they cannot deceive or win over the church to their cause. Hence their policy now is to annihilate the church. This terrible policy she is methodically carrying out in Mongolia (Inner). Here are some case histories.

Some months ago, in Inner Mongolia, in the Province of Chahar, in the city of Chungli, the Communist troops overran this little Christian village of 3,000 people and slaughtered half the population. Church buildings were destroyed. Inhuman cruelty was perpetrated on this Christian community.

Sungshu Twei Tsi is a town of the Province of Jehol in Inner Mongolia. This is a Christian community of 2,000 people. Communist troops invaded the town. They murdered hundreds of Christian inhabitants.

Recently the famous Trappist Monastery in Yung Kai Ping, Chahar Province, Inner Mongolia, was overrun by the Communist troops, 80 Chinese Trappist monks—noble men who never harmed their fellowmen—were captured and taken away as prisoners. The monastery was burned to the ground. What happened to the monks? Most probably, they were forced into being carriers for the Red army—perhaps they were put to death.

A Polish bishop in north China, together with 12 priests and sisters were beaten by the Communists. Somehow they escaped. Afterward the Communists burned the bishop in effigy before his own church. The Christians there suffered great persecution from the Communists.

Ninety percent of Manchuria is occupied by the Communists. Missions there, both Catholic and Protestant, are suffering at the hands of the Communists. Many missionaries are leaving Manchuria because of this persecution. It is difficult to tell just what is happening there, because the Communists have drawn an iron curtain across Manchuria.

The refugee missionaries seek refuge in the Province of Hopei. Hopei is the most Catholic Province in China—600,000 in number, one-fifth of the Catholics in China. The great Cardinal T'ien is the metropolitan, with his episcopal seat in Peking.

I here pay tribute to the Christian courage and heroism of our suffering and persecuted Christians in north China and Manchuria. They are fighting the good fight. We are proud of them.

CHURCH IN CENTRAL AND SOUTH CHINA

Central and South China is free of the Communists. There the central government of China is in control. Christian rehabilitation is not handicapped. There the church is progressing tremendously. There the church is cooperating with the Government in spiritual and moral reconstruction. Specifically in reopening high schools, colleges, and universities. And in opening new ones. The demand for Christian teachers and educators is far in excess of our humble resources.

High Prices—A Positive Program

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. HOFFMAN. Mr. Speaker, politicians, some editorial writers and radio commentators following their lead, constantly charge that the Republican Party

has no positive policy; that it merely criticizes, offers nothing in exchange for what it condemns.

That criticism is not sound, rests upon the false assumption that, unless the people are offered more and more of the things which most of us desire, we have no sound program.

If it were possible to give everybody everything we wanted, then the charge that Republicans offer nothing better than what we have would be true. That is not possible for the reason that the supply of things—whether it be money, food, clothing, homes, automobiles, yachts, race horses, or chorus girls—just is not sufficient to satisfy the demands of everyone.

The charge also overlooks the basic fact that a program to end—put a stop to—an unsound, wasteful policy, is a constructive move. When the firemen put out the fire which is destroying your home, they do not build a new home. Yet their act was a constructive one.

Republicans in Congress have had for, lo, these many years, a positive, constructive program. It was an attempt to do away with unnecessary Federal jobs; with waste, extravagance and—worse yet—the corrupt use of the taxpayers' money to aid politicians who were in office; keep us out of war.

The Republican policy was one of retrenchment, of economy, of greater efficiency, but they could not force it upon the administration for the reason, which all informed people should know, that they just did not have the votes.

The last year, Republicans have had a majority in the House. There was an apparent but not a real Republican majority in the Senate. There, almost always three, sometimes five, who were elected as Republicans, refused to go along with acknowledged Republican policy.

As we know, the Republican attempt to cut taxes was twice vetoed by the President. So, too, was proposed labor legislation—on two occasions—until finally enough Democrats joined Republicans to pass it.

HIGH PRICES

High prices are caused by an unusual amount of dollars in circulation or by a scarcity of the things people wish to buy—sometimes by both.

In spite of the persistent efforts of most Republicans, the present administration, backed by a bipartisan group, has insisted on adding to the dollars in circulation. That policy gave the average individual more dollars than he ever had before; thus he was able to bid a higher price than ever before for the things he wanted. Prices went up.

In addition to increasing the number of dollars in circulation, the New Deal, by frightening the people into believing that we were in danger, first from Hitler and nazism, now from Stalin and communism, has been giving foreign nations not only billions of dollars, which are used to compete with us when we go into the market to buy, but it has sent abroad millions upon millions of tons of most of the things we wanted to buy. You cannot send wheat to Europe and bake it into bread here.

Thus you see that it was inevitable that we have high prices. We will have high and yet higher prices until we either get a depression, which no one wants but for which we, by our conduct, are asking, or until we quit giving to others so much of what we ourselves want to buy.

If there are only two cows in the neighborhood and each of 10 farmers with plenty of money wants to buy them, we know the price is going up. If the owner gives one of the cows to someone a thousand miles away, we know that the price of the other will go up, and so will the price of the milk she gives. If we send her abroad, we cannot eat her, nor will she give us a veal roast.

That sort of a situation, as it applies to national policy, Republicans, including your humble servant, have been trying to end by opposing the giving away of things we need, by the printing of billions of dollars—evidenced by bonds—tossing them into the market to compete with your purchasing power.

We have consistently fought to reduce the number of Federal employees, to stop the waste, but so far, when we move in that direction, many times we are circumvented by some administrative agency.

Only through the election of a Republican President, determined, as are the Republicans in the House, to take this Government away from the bureaucrats and the politicians, restore it to the people, will we come out of this inflationary tailspin. It is that or a depression. Avoiding a depression, restoring their Government to the people, is a positive, constructive program. We are for it.

Hospitalized Veterans Aided by Free Educational Courses—Program Originated by Leib

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 9, 1947

Mr. SMATHERS. Mr. Speaker, the Veterans' Administration recenty announced that over 20,000 hospitalized veterans are now making profitable use of free educational courses offered to ill and disabled patients in Government facilities throughout the Nation.

It is, indeed, gratifying to note that so many disabled veterans are being benefited by this new and far-reaching educational program.

This is a step in the right direction. Needless to say, this progressive measure has changed many dull and dreary hours into bright and hopeful days for thousands of former servicemen. GI's are now able to continue their educational objectives regardless of their unfortunate illness.

At this time I desire to place in the RECORD three newspaper articles which explain how J. H. Leib, former American Legion and AMVET official, developed the idea and the progress the program has made to date. The documents are as follows:

[From the Washington Daily News of February 19, 1946.]

VA ARRANGES SCHOOL BY MAIL FOR PATIENTS

Free correspondence courses covering 92 educational fields will be available in a few days for patients hospitalized in Veterans' Administration hospitals, Medical Rehabilitation Chief Dr. Donald A. Covalt said today.

United States Armed Forces Institute training will be available for shop as well as classical work for veterans well enough to undertake them, Dr. Covalt said. When the veteran is discharged from the hospital, credits derived from this work may then be added to any further schooling he desires under vocational rehabilitation plans now operating.

The plan was first suggested by J. H. Leib, national director of American Veterans of World War II, in a letter to VA Vocational and Educational Administrator H. V. Sterling. "Future VA hospitals will have class and shop rooms built into them," Dr. Covalt said.

[From the Stars and Stripes and National Tribune of January 24, 1946]

MAIL COURSES AND HOSPITAL SCHOOLING ARE NOW IN OFFING

The legislative representative of the AMVETS, World War II veterans' organization, is out to obtain for tubercular and other World War II veterans who will be hospitalized for protracted periods of time correspondence courses under the GI bill of rights.

Joseph H. Leib, now speaking for the AMVETS in a legislative capacity, has used as a basis for his appeal to the Veterans' Administration the case of a young veteran who had completed all but 1 year of a law course, had contracted tuberculosis, and was in a dilemma for fear that long hospitalization would deny him the right to earn a degree.

A number of Members of Congress interested themselves in the problem, and a favorable ruling has since come from the Veterans' Administration. The decision in the case of tubercular veterans is expected to be extended to ex-servicemen suffering from other disabilities, and it is hoped that eventually classrooms and instruction, in addition to correspondence-course work, will be set up in Veterans' Administration hospitals.

ADMINISTRATION ACTS

A release from the Veterans' Administration dated January 20 and emanating from the office of H. V. Stirling, Assistant Administrator for Vocational Rehabilitation and Education, follows:

A training course for Veterans' Administration personnel, who will offer bedside job counseling and prevocational training to patients in tuberculosis hospitals, will begin January 28 at the Administration's TB hospital at Oteen, N. C.

Students for this training course, which is to last 3 weeks, will be vocational advisers and training officers, occupational therapists, social workers, and doctors of physical medicine from regional offices at Columbia, S. C.; Fayetteville, N. C.; New Orleans, La.; and Lexington, Ky.; and from hospitals at Oteen, Columbia, Outwood, Ky., and Alexandria, La., as well as representatives from the central office in Washington.

Upon completion of their training, vocational advisers and training officers will be assigned to counseling positions in TB hospitals. Similar schools will be held at other TB hospitals in the future.

Instructors for the course will include both Veterans' Administration representatives and members of the National Tuberculosis Association, which is cooperating in expanding its guidance program for TB hospitals.

Job counseling and prevocational training for veterans in the 62 Veterans' Administration general medical and surgical hospitals has already started, with successful programs in progress at such institutions as Hines (Chicago), Bronx, N. Y., and Jefferson Barracks, Mo.

Plans are being mapped to also put the service in the 32 neuropsychiatric hospitals.

[From the National Tribune and the Stars and Stripes of October 30, 1947]

PATIENTS GAIN SCHOOL CREDITS—VETS IN HOSPITALS USE LEISURE TIME PROFITABLY IN STUDYING CORRESPONDENCE COURSES

Twenty thousand ill and disabled patients in Veterans' Administration hospitals are making profitable use of their long hours in bed by studying correspondence courses ranging from high school English, mathematics, and history, to bookkeeping, farming, and carpentry.

Most of the 234 available courses have been obtained by the VA from the United States Armed Forces Institute (USAFI) in Madison, Wis.

The purpose of the educational program—conducted by the educational retraining division of the VA's medical rehabilitation service—is fourfold:

UTILIZES LEISURE TIME

1. It offers a patient the opportunity to utilize his leisure hospital time to best advantage and at the same time provides him with an interest in activities other than the hospital routine.

2. It furnishes him mental stimulation to replace the lack, in many cases, of physical activity. This stimulation is particularly important for patients with tuberculosis who are permitted little, if any, physical exertion. In some VA tuberculosis hospitals, up to 50 percent of the patients are taking advantage of the educational program.

3. It provides a patient with an academic or vocational background of particular value when he leaves the hospital, either to continue his education or to obtain employment.

4. A patient often is enabled to leave the hospital and return to his community earlier, and in a better physical and mental condition for normal living.

The courses, available to patients only with the prescription of physicians, are conducted in this manner:

A patient studies a subject at his leisure, using a recognized textbook, under the direction of a trained VA medical rehabilitation staff member. At the end of the course, he may take an examination to measure his mastery of the subject. The tests are sent to the University of Wisconsin Extension Division for grading.

COURSES USED FOR CREDITS

In most cases, educational courses studied in hospitals may be converted into credits toward a high school diploma if prior arrangements are made with the patient's last secondary school. When credits are desired, examination results are forwarded to the high school for evaluation by the principal.

The amount of credit to be granted for these courses—as well as evaluation, in terms of credits, of all training courses completed by veterans in the armed forces—has been suggested in a Guide to the Evaluation of Educational Experiences in the Armed Forces, published by the American Council on Education.

As a result of the Guide's evaluations, patients may receive credit not only for standard academic subjects but also for military courses such as radar techniques, aviation mechanics, typing and the like.

In cases where long periods of hospitalization interfere with veterans' plans for their future education, they may obtain high school diplomas or equivalency certificates by taking USAFI general educational development tests (Form B), which measure their entire educational background.

These tests consist of five sections, each requiring 2 hours to complete: Correctness and effectiveness of expression; interpretation of reading material in the social studies; interpretation of reading material in the natural sciences; interpretation of reading material in literature; and general mathematical ability.

More than 2,500 patients last year were discharged from the VA hospitals with high-school diplomas earned while bedridden.

One such veteran made use of his diploma to enter Marine Corps preflight training. Eligible for a commission in the Marines after he completes preflight, he wrote the VA, "I finally reached the goal I could have had 4 years ago if I had had a high-school diploma then."

ENROLLS IN DE PAUL

Another former patient, also a bedside high-school graduate, enrolled this fall in the De Paul University pre-law school.

A number of communities are cooperating with VA hospitals in helping patients qualify for high-school diplomas.

Veteran-students in the TB hospital in Sunmount, N. Y., are carried on the rolls of the local high school, and may take New York State Regents examinations when they complete their studies.

The Los Angeles, Calif., school system furnishes teachers for patients studying high-school subjects in nearby VA hospitals.

The Brecksville, Ohio, post of the Veterans of Foreign Wars awards a yearly scholarship of $500 to the outstanding student-patient in the hospital there.

In addition to the VA's educational retraining program, about 100 courses of a technical nature, also obtained from USAFI, are available to patients in the manual arts therapy program of the VA medical rehabilitation service. In this program, patients engage in purposeful shop activities, enabling physicians to measure their work capacity, and at the same time furnish them the opportunity to acquire skills of value of their post-hospital careers.

Courses taken by patients in the VA hospitals are not charged against their entitlement to education or training under the Vocational Rehabilitation Act (Public Law 16) or the Servicemen's Readjustment Act (GI bill). However, a recent VA directive provided for the VA training officers to recognize hospital courses in helping former patients plan educational programs or on-the-job training courses under both laws.

Prohibit Christmas Carols in the Schools?

EXTENSION OF REMARKS

OF

HON. ALBERT L. REEVES, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. REEVES. Mr. Speaker, a day or two ago I had a very interesting discussion with the distinguished commentator, Albert L. Warner, concerning the proposal which has been made to ban the singing of Christmas carols in the public schools. As a portion of my remarks, I include an excerpt from Colonel Warner's broadcast of December 8, with the feeling that there is nothing which could be added to its eloquent appeal:

I run into considerable congressional comment on the effort that has been made in the public schools of New York to prohibit the singing of Christmas carols at Christmas time. I remember last year a local civil liberties union tried to suppress the carols in the schools of San Francisco.

Representative ALBERT L. REEVES, JR., of Missouri, suggests it is a pity that such an issue is raised. The singing of carols is an old historic tradition, he says; they carry a universal message. By the same token, schools and churches, too, Mr. REEVES goes on, might well sing from time to time, and know, the hymns and songs of other faiths. We need to get away from sharp divisions and stratification, he suggests.

As a digression, I might point out that the Noyes Elementary School here in Washington, under Miss Grace Bush, is having a children's play dealing with the current Jewish Feast of the Candles even as it is having a Christmas play later.

It is, of course, proper to be sensitive to the pride and beliefs of all religions. In that connection, who is there of any religion who has not been moved by the grand strains of those old carols? Who can find himself remote from their simple theme of hope and peace and good will?

The real spirit of Christmas is no more exclusive than is the aspiration to peace. It is a time when we are good neighbors and when at last we do something about the less fortunate among us and when we go back to the eagerness and wonder of childhood.

It is a time when good will surges in cold veins and old Scrooge relents and Tiny Tim may say to a universal audience of the heart, "God bless us, every one."

In such a season, oh, school administrators, go about your business of raising the standards of learning and getting teachers who know how to teach and schools enough to give decent equal opportunity to all races. In such a season, oh champions of minorities and civil liberties, go about your business of helping the oppressed, succoring those who are victims of mobs, challenging and fighting prejudice and discrimination. Your task is large and imperative.

But leave to us all, the minorities included, the spirit of Christmas. Leave to us peace and good will, and the songs that sing that message.

Veterans' Administration Boston Office Should Have New Streamlined Building

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an excellent letter I have received from Thomas Dorgan, clerk of the superior court, civil business, Suffolk County, Boston, Mass., as to the reasons why the Veterans' Administration in Boston should have a new Veterans' Administration building in downtown Boston with all the various facilities housed under one roof.

The letter follows:

COMMONWEALTH OF MASSACHUSETTS,
SUPERIOR COURT, CIVIL BUSINESS,
Boston, December 5, 1947.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR TOM: For the past 3 years I have been suggesting to the Senators and Congressmen of Massachusetts that the only way to have an efficient and economical service in the Veterans' Administration in Boston is to have a new streamlined Veterans' Administration

Building in downtown Boston, with all the various facilities housed under one roof. In fact, I circulated petitions and obtained over 20,000 signatures of Massachusetts citizens which were sent to the Veterans' Administration in Washington.

You know what the set-up is in Boston. At the present time the facilities are operating in three different locations—150 Causeway Street, 555 Tremont Street, and 17 Court Street. It would be an utter impossibility to prevent confusion and duplication of work with such an arrangement. By the time the veteran gets through traveling from one place to another he is pretty well worn out and must feel like putting in for extra compensation.

Furthermore, the present set-up is difficult for the personnel. There is now a shortage of 233 employees, chiefly clerical, at the Boston regional office. The worst situation exists at the Finance Division, which pays the veteran his monthly allotment for disability compensation and educational subsistence. This Division, with the tremendous volume of work entailed, has a shortage of 75 employees. This means that when the work gets behind clerks have to be borrowed from other divisions, which, in turn, causes a serious backlog in their own divisions. The cause of this shortage of help can be blamed originally on the lack of space at 17 Court Street when the Finance Division was started. They were authorized to hire additional help but could not because they had no room for them. Later, when Finance was moved to 150 Causeway Street, where more space was available, the freeze was on, and the central office would not permit the hiring of new personnel. This inefficient arrangement certainly cannot be blamed on the management or personnel of the Boston office, who are doing a tremendous job under difficult conditions. It can be blamed directly on the lack of proper space and the confusion resulting from the present arrangement of facilities.

It is certainly hard for the average taxpayer to understand why, with all the billions of dollars being poured into Europe, it is so difficult to get the money appropriated for a suitable and efficient Veterans' Administration Building in Boston. As long as the present set-up continues there will be inefficiency and confusion—it cannot be helped. It is about time the ball started rolling for a new building for the veterans in Boston, with all the facilities under one roof, and which can be operated on an efficient and economical basis.

With kindest personal regards, I am,

Sincerely yours,

THOMAS DORGAN,
Clerk.

Il Progreso Italo-Americano Publishes Prize Editorial on National Unity

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. KLEIN. Mr. Speaker, "divide and conquer" has been the guiding rule of aggression as long as there has been aggression. Totalitarian dictators believe that because America is a nation drawn from many nations they can find here a fertile ground for their aggressive international aims. Yet, our national unity has stood like a rock against the continuing flood of divisive propaganda from overseas and even from among some of their tools here at home.

Obviously, the reason is that here in the United States we are, all of us, Americans first of all.

We may be Catholics, Protestants, Jews, Mohammedans, or infidels; but we are Americans. We may be Caucasian, Negro, Mongoloid, or red Indians; but we are Americans. We may have come, or our parents and grandparents may have come, from any country on the face of the globe, yesterday or 400 years ago; but we are Americans.

Here in America we have achieved the nearest to the realization of mankind's dream of equality, freedom, and justice. With it we have attained the greatest development in terms of industrial production and high living standards.

To that accomplishment men of all creeds, of all races, of all shades of political belief, and of every kind of national derivation have contributed without stint.

At the present time there are more than 5,000,000 Americans of Italian descent in the U. S. A., and the history of their contribution to America is inspiring.

It was in that tradition of devotion to America that Il Progreso Italo-Americano, a daily newspaper printed in the Italian language and published in my congressional district, printed an editorial on national unity which was awarded first prize yesterday by the Common Council for American Unity in a national competition in which over 1,000 foreign-language newspapers participated.

Il Progreso Italo-Americano is owned and published by Generoso Pope, a loyal and progressive American and a loyal and progressive Democrat who is himself of Italian parentage. He is a successful businessman of many interests; but closest to his heart are his publishing enterprises.

I know that to Gene Pope—as, indeed, it is to me—it is the utmost gratification that an editorial from his newspaper, which has a daily circulation of 150,000 and a Sunday circulation in excess of 200,000, should have won the common council's first prize.

I am happy to insert in the RECORD the full text of the prize-winning editorial from Il Progreso, and I take the liberty of expressing the hope that Members will take the time to read it, with its exhortation to national unity lest we arm our enemies:

REMOVE THE BLIGHT ON AMERICA

There are three main requirements for our country's fulfilling its great responsibilities in promoting world reconstruction and preserving peace. These three vital requirements are: The maintenance of a healthy national economy, continually invigorating our democratic way of life, and the solidification of our national unity. Upon examination, it will be found that these three distinct factors are intertwined beyond separation in the life of the people.

However, there is one element around which these three prerequisites revolve. That element is the question of racialism—race prejudice and hatred. We know of no other social question which involves as much, and which cuts so completely across our country's welfare and the world's future. Every single manifestation of discrimination on account of race, national origin, or religion hurts America's economic life, saps the vitality of our democratic foundations and institutions, and dangerously disrupts our national unity. Every action in any part of our country rooted in racial prejudice and conceived in bigotry and intolerance is a blow against the entire American people and the fundamental interests of all other nations dedicated to economic reconstruction and peace.

OUR TRUE GREATNESS

The basic source of America's national strength lies in the unity, not only of its geographical sections and 48 States, but above all of its component human elements of diverse national, racial, and religious origins. Here is a rich variety of cultures, ideals, ideas, talents, capacities, and aspirations mingled into one new and distinct national and social pattern. This is America. Here is the why and wherefore of our Nation's unity, vitality, accomplishments, and bright prospects of progress. And by the same token, here is the most dangerously vulnerable spot in the body-politic of the American people. Those who would divide our country along the lines of color, creed, or national origin would ruin its present and future. What we have done in America in welding under one banner and common ideals, men and women from all climes, of all creeds and colors, is a model for older continents, for a world in despair and misery. To spread bigotry in our midst, to peddle anti-Semitism, to discriminate against human beings because of the color of their skin, or to put up economic or social handicaps against someone because he speaks with an accent, or happened to be born in another land is the surest way of undermining America and tearing her asunder beyond repair.

Whether they realize it or not, that is precisely the fatal blow some inhabitants of our country are striking against America when they resort to race hatred, to hostility toward their countrymen of a different faith, and to petty persecution and disgusting discrimination against those who may have been born in Italy or the Ukraine, or whose accent may not be Yankee-pure or of the crystal-clear below the Mason and Dixon's line variety. When such bigots engage in their thoroughly un-American propaganda and practices, they not only hurt some particular individuals at home but injure beyond measure the good name and moral prestige of the whole American people abroad.

ARMING OUR ENEMIES

In Italy, in France, in England, in China, and in Latin America the main weapon, the most effective argument of the demagogs against the United States is the manifestation of race predjudice in our country. Of course, individuals of this ilk engage in terrible slanders and exaggerations. Yet, even the slightest manifestation of race hatred in our country is an opening for dangerous infection, since it provides just the fuel demanded by those who want to inflame world opinion against our Nation. It must be frankly stated that throughout Europe and the Old World, the most sinister and telling method of discrediting America's motives and policies is the pointing of a finger of guilt at our Nation for abominable crimes like lynching or reprehensible economic and social practices based on national prejudices and antagonisms in the United States.

With even the best democratic foreign policy, America will never be able to win the peoples of other lands for world reconstruction and peace as long as we do not seriously set about to uproot every vestige and discard every practice of race hatred, religious prejudice, and national discrimination at home. It is painfully significant that the one section of our country where racialism is rampant, where lynching now and then rears its ugly head, has the highest rate of illiteracy and illness and the lowest level of

poverty. Nothing makes more difficult good government and broad participation of the people in political life than does race prejudice.

Laws against race prejudices? Fine! A Fair Employment Practice Commission? Sure. But valuable as these are, preventive rather than punitive measures will be decisive. Our schools, churches, labor unions, cultural bodies, press and radio must be aroused and mobilized for an unceasing drive against this ghastly blight on the good name of our Nation—against this serious, but not insuperable, obstacle to America's fulfilling its historic destiny.

How Can Capitalism Be Helped To Survive?

EXTENSION OF REMARKS
OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. HAVENNER. Mr. Speaker, I have received a letter from Mr. Frank C. MacDonald, general president of the State Building and Construction Trades Council of California, an affiliate of the American Federation of Labor, in which he directs my attention to an address delivered by Dr. Ira B. Cross, professor of economics at the University of California, before the Pacific Coast convention of the American Association of Advertising Agencies, recently held in Yosemite Valley.

This speech by Professor Cross has been recommended by the California Building and Construction Trades Council for the consideration of all of its officials and legislative committees. At the request of the president of this organization, Mr. MacDonald, I am glad to direct the attention of the Members of Congress to this notable address:

We live in a period when frank talking is necessary. American business must be awakened to the seriousness of the situation that exists both at home and abroad. Many of us thought that the end of capitalism had come in 1933 with all of the banks closed, 15,000,000 unemployed, and distress and discontent prevailing on all sides. But whether or not you as businessmen are willing to acknowledge it, Roosevelt and his New Deal measures gave capitalism another lease on life by placing a lot of props under it at strategic points.

Capitalism now faces an even more serious and a double threat, that is, communism abroad and a possible economic collapse or bust at home, either of which may spell its doom.

And what of a constructive character is being done about it? The answer is little, if anything. We all know that communism is the open enemy of capitalism. We thought that nazism and fascism would protect us against communism, but we had to destroy Hitler and Mussolini because we learned too late that they were just as greatly opposed to capitalism as was communism. Yet in our country today we find many fascistic elements that are using the same tactics and arguments that were employed in the dictator-controlled countries of Germany, Italy, and their satellites. We are actively suppressing all but the accepted ideas of pressure groups, so as to have only one position presented to the people. Practically all of our liberal commentators have been dropped from the air lanes. The National Association of Manufacturers, the National Economic Council, and other groups attempt to censor the texts that are used in our schools and colleges. I need not describe to you how our newspapers are controlled. Remember, in Russia only one set of ideas is laid before the people, and that was true in Germany and Italy. Then, too, we have our anti-Semitic, anti-Negro, anti-Catholic, antiunion, antidemocratic campaigns going strong. Intolerance is rampant, and intolerance sows the seeds for unrestrained, ignorant, rabble-rouser-led mob action. The future doesn't look too rosy.

We fear Russia in Europe. Russia aims to control Europe and Asia. Communism feeds on starvation and discontent. So Russia opposes the Marshall plan and united action by the United Nations. May I say, bluntly, that I am of the opinion that no matter how much food and money we dump into western Europe, we shall be unable to prevent the spread of the influence of the Russian bear. Russia, unlike the United States, knows what she wants and how she is going to get it. We are mere amateurs at playing the game of international power politics. As A. A. Berle, ex-Assistant Secretary of State, said over the air a few evenings ago, we have sadly bungled the handling of the European situation. We have no friends in Europe. Not only have many of the European countries come under the domination of communism, but even England and France are rapidly exterminating capitalism or private enterprise, and doing it to a great extent with the funds that we have loaned them. Now they are back for more money to do more of the same thing.

If the situation in Europe is hopeless, and I think that it is, would it not be wise for us to put our own house in order so as to more successfully withstand the attacks of communism? But some of you may say that communism and capitalism cannot live together. Maybe so, but I think that they can if we have a strong capitalism that has the wholehearted support of its people. Anyway, it is worthwhile to make the attempt. Otherwise, we too shall be swept into the whirlpool of communism.

Let us be frank with each other. We all know that all is not well here at home. Most of our employing and propertied classes still think in terms that were rampant 100 years ago, such as laissez faire, no governmental interference with business, individual rights, caveat emptor, free competition, and so on. I need not elaborate. Possibly many of you or your agencies have had a hand in writing some of the current propaganda along these lines appearing in the press and over the radio. The trade paper, Editor and Publisher, on September 13, 1947, stated that $3,000,000,000 is to be spent during the coming year by advertisers to influence the thinking of the American people. And you know that there is no easier way to influence an editor than to give him a big, juicy advertising contract. Practically none of this propaganda that we have had, or will have, has had, or will have, any appeal except to those whose property interests are concerned, and they constitute a very small proportion of our population. Possibly some of you have had your tongues in your cheeks as you have pounded out that sort of copy. But like newspaper men, you have to write what the boss and the clients demand.

Let us face the facts and not stick our heads in the sand.

First, what about governmental regulation of business? May I briefly dispose of that matter by quoting Mr. Shram, the president of the New York Exchange, certainly not in the pay of Moscow, who lately declared, "Businessmen are in favor of free enterprise until it works against them, then they rush to Washington and ask that the Government do something."

Second, what about free competition, which is the very basis of a belief in free enterprise? It has been interred along with the dodos. We are living in a highly monopolized economic society. You have all heard of the aluminum monopoly. One firm controls over 95 percent of our nickel, another controls about 90 percent, possibly more, of our cash registers. Only one telegraph company. Two banana importing companies. Five glass producers, and two control 95 percent of the product. Two produce all electric accounting machines. Two all railroad brakes. Three, 90 percent of our autos. Four, more than 75 percent of rubber tires and tubes. Four, all inlaid linoleum. Four companies produce over 75 percent of the product in typewriters, farm tractors, carburetor engines, acetylene, rubber footwear, dry batteries, power transformers, ammunition, cigarettes, firearms, sewing machines, chewing tobacco, milk bottles, steel rails, window glass, and so on. Ninety percent of all prime war contracts went to 200 corporations. One and one-half percent of all American businesses employ 55 percent of all of our workers. Who says that we are living in a competitive era, an era of free enterprise? But maybe we can fool all the people all of the time by the right kind of propaganda. Yes; business believes in free enterprise and competition so long as one is able to crush the other fellow and obtain a monopoly. Even organized labor believes in competition, for it also is eager to obtain a monopoly. Then, too, we must admit that there are many fields of economic activity which today are closed to the entrance of newcomers. They can't buck the monopoly.

Third, the Federal Trade Commission, in its 1946 annual report, uses seven pages to list the unfair and objectionable practices of business—unfair to competitors and to the public. I haven't time to enumerate them. A number of these practices concern false and misleading advertising. You are undoubtedly better acquainted with those things than I am, so I shall not enumerate them. Actually, the situation has become so bad that many of the consuming public no longer have any faith in printed or radio advertising. This attitude reacts upon the reputation of firms that are actually trying to play square with the public, and cuts under the foundations of capitalism. Advertising must be cleaned up, for it has the responsibility of building up the faith of the public in private enterprise.

Fourth, practically all of our public-relations advertisement, of which we are having so many at the present time, are ineffective and a waste of money. It doesn't do any good for an oil company to tell the public that John Doakes, an immigrant, has worked up to become a foreman, or for the United States Steel Corp. to radio that it loves its employees. Actions speak louder than words. Take the present wages-prices-profits situation. Cost of living goes up. It goes up first and not because the workers have demanded higher wages. Then the workers demand higher wages; then prices go up, and the workers are blamed for it; or workers strike, an increase is given, and then prices go up, usually more than wages do. During the past few years we have had many strikes; companies have said that they would go broke if they paid higher wages; yet the Wall Street Journal stated that "profits of the United States industry for the June quarter 1947 showed a whopping 84-percent increase over the year-ago level. The first half-year profits were the highest ever." The National City Bank of New York stated that the industrial profits in the first half of 1947 were approximately double those of the first half of 1946. Capital has not been willing to share its enormous profits with the workers, and so we have had a growing hatred of business by the working class. Do such things build up good will for capitalism

among the people? I have never met a pay roll, but I want to quote from a man who does it every day. Mr. Charles Luckman, president of Lever Bros., in an address before the Super Market Institute, asked and then answered the following question:

"Why is it that during the past 20 years American business has become identified in the public mind as opposed to everything that spells greater security, well-being, or peace of mind for the little guy? Why is it that scarcely a month goes by these days but that some trade association or other decides to embark on a crusade to save free enterprise for America?

"I think the answers are pretty clear. We got the reputation we have because, by and large, we earned it. How? Well, we declared war on collective bargaining. We actually opposed increased taxes for education. We fought health and safety ordinances. The record proves that we battled child-labor legislation. We yipped and yowled against minimum wages. We struggled against unemployment insurance. We decried social security, and currently we are kicking the hell out of legislative proposals to provide universal sickness and accident insurance.

"We did all of these things without making one single constructive suggestion which would assure the American people of our desires to achieve the same results for them on a basis which would be more businesslike and less political. Where on the record is there a single example to show that big business ever initiated a legislative program of benefits for the workers?

"We did all of these things, and then we sit back and wonder why people don't like big business. We wonder why it is necessary to start campaigns to save free enterprise from the 'damnation bowwows'."

If we are to retain capitalism, we must have a changed attitude on the part of our employers. Labor which has the votes, may some day, notice that I say "may some day," be led by a rabble rouser to overthrow our capitalistic system as is being done today in the European countries.

Finally, the greatest threat that capitalism faces is the next depression, which is just around the corner, if it hasn't already started. Many of us have forgotten 1933. With our economic life rent asunder, every sector of business and every other group rushed to Washington and yelled, "For God's sake save us from destruction. Do something for us." Practically everybody got something. Even some college professors got work on WPA. But that crash did something to the American businessman; it took some of the daring out of him. He had lost so much that he feared to take risks with his capital. And so until World War II, capitalism was pretty wobbly in the United States, but it perked up during the war because of war contracts and Government guarantees, and since the war, has been revelling in a champagne era of high prices and profits. But what about the future? There is every indication visible to the observer that we are headed for a bust, and in my estimation it will be a "beauty." And that's just what Russia wants.

The world is bankrupt. England, formerly the world's financier, is flat on its back financially. We are two hundred and sixty billions in the hole, where we had a debt of only fourteen billion after the First World War and the European countries, outside of Germany, were not really in bad shape. Hence, this coming depression is going to be a bad one.

What are the signs on the horizon?

We have always had a depression after great wars. After World War I it came in 1920, about 2 years after the Armistice.

The present extraordinary high level of prices is bad. The so-called law of supply and demand failed to work after business had killed OPA. The higher prices go, the farther they fall, and prices do not slide down slowly. This means a depression. Prices will not decline because of President Truman's pleas, but because of the lack of buying power on the part of the public. The Federal Reserve Board of 1946 announced that 50 percent of our people had only 3 percent of the buying power of the Nation. It is buying power that takes goods off the market and provides employment and profits. Savings have dropped from thirty-three billions in 1945 to sixteen billions in 1946 and to about eleven billions in July 1947. People are spending money for food and not for other commodities, with the result that inventories have piled up rapidly. Retail stores are fully stocked, some of them overstocked at present. Banks are refusing to make loans on inventories or are increasing the margins on such loans. Retail sales are off both in value and volume. Bad accounts are increasing. Industrial production dropped steadily from March 1947 to September, then rose to about where it was in May 1947. The number of lapsed life-insurance policies is a good indicator of business trends, and the number that have been allowed to lapse has been rapidly increasing.

The stock market is very wobbly. The situation doesn't look good to those in the market.

Exports have been off since May, dropping 20 percent from May to July. One out of every 12 industrial workers and 1 out of every 4 farmers is concerned with our foreign trade. The European countries are not buying from us as they did. They haven't the dollars to buy with. We won't buy from them because of our tariffs, so they can't get dollars in that way, but even so, they haven't very much that they could sell us at the present time. So we loan them money to buy from us—taxpayers' money—and rest assured that those loans will not be repaid any more than were the thirteen billions that we loaned to Europe after the First World War for reconstruction purposes. Yet you wonder why taxes are high. Without buying power at home and abroad where will we, where can we, find markets for our goods? And if we can't sell we shall have to shut up shop with a resulting depression, unemployment, discontent, and a rapid growth of radical agitation directed toward the abolition of capitalism, which will again have failed the great mass of the people.

There is no valid reason why we should have depressions under capitalism. We know what can be done to avoid them. We should increase wages to increase purchasing power; we should have adequate credit control; we should lower our tariffs so as to enable other countries to sell to us; we should stop supporting farm prices by Government controls; and we should enforce our antitrust laws so as to break up collusion in price fixing. But the power of the various selfish economic pressure groups makes the application of such measures impossible. Note how Truman's plea to use less bread, meat, eggs, and poultry has brought condemnation down on his head from various economic quarters.

What we do need most of all at present is leaders in the economic and political fields—men with vision to make life under capitalism a life of security and happiness for the people.

Bolshevism, nazism, fascism came out of the First World War. What will the Second World War bring us? Can we resist the world-wide swing toward the left? Which way will we go? Judging from the way things are going, and paraphrasing Mr. Cassady, of Allen's Alley, it looks as though capitalism isn't long for this world in the United States. If labor wins, the trend will be toward some sort of American communism. If capital wins, the trend will be toward some sort of American fascism.

We can build a better world here in the United States under capitalism. Let us have the sacrifices to make it work. But we must have less greed and selfishness on the part of employers, unions, and farmers. If capitalism is to be wrecked, it will be wrecked, not by the radicals and revolutionaries who oppose it but by the capitalists who control it. If it is to be saved, it can be saved only if those who control it recognize that economic power is a call to responsibility, a call to the service of humanity and to themselves.

Freight Forwarders Act

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. BLAND. Mr. Speaker, in recent weeks several problems have arisen concerning the position of the American freight forwarders under the foreign-relief programs. For the benefit of the Members of Congress who are not familiar with the functions of freight forwarding, let me say that these people pick up cargoes shipped to ports from all over the country, arrange for its unloading, prepare ocean bills of lading and consular invoices, arrange for cargo space aboard ships to carry the cargoes to their destination, and generally chaperone cargoes from their arrival at the port to their loading in the hold of the ship. During the early days of the war, Congress enacted the so-called Bland Freight Forwarding Act, which has been codified as section 217 of the Merchant Marine Act of 1936, as amended. Under that act, it was contemplated that the Maritime Commission and other Government departments would take all possible steps to protect and develop the freight forwarding industry, both during wartime and in the postwar period. Experience in the war demonstrated that private forwarders could handle ocean-going cargoes more expeditiously and cheaper than it had been possible for Government agencies to do.

At the present time there is some question as to the application of the Freight Forwarding Act to the present postwar period. In my opinion, both from a study of the act and from my recollection of the congressional intent in its enactment, there can be no question but that this was a postwar act and that its provisions are as applicable to present relief cargoes as they were to lend-lease shipments.

In order that the Congress may be fully aware of the Freight Forwarding Act, its purposes and its postwar operation, I am here inserting a copy of a speech recently delivered before the Freight Forwarding Panel of the American Merchant Marine Conference by Marvin J. Coles, formerly counsel to the Committee on Merchant Marine and Fisheries:

For decades many problems of the American merchant marine have been resolved through governmental assistance and regulation. The competitive disadvantages of Americans in our international competition with comparatively low-cost foreign ship operators have required constant Federal assistance to maintain our maritime industry in a reasonably healthy condition. Several

examples will show this Government assistance has covered all phases of the industry. For one, American shipbuilders have been aided through the grant of construction differential subsidies sufficient to compensate for lower construction costs normally available in foreign yards. Our ship operators in foreign trades have been assisted through the availability of operating differential subsidies and tax deferrals, while our coastal operators have been protected against competition in their trades by foreign vessels. American seamen have received both the indirect benefits of the subsidy and protection programs as well as direct governmental assistance through our safety laws designed directly for their benefit and protection. In short, every segment of the American maritime industry has been receiving Federal support in their day-to-day operations.

Like other parts of the industry, freight forwarding, too, has been the subject of beneficial legislation. For freight forwarding has been recognized by the Congress as an essential portion of our maritime industry and an important adjunct to the American merchant marine.

In substantial measure, the entire future of freight forwarding and the freight forwarders may depend upon this existing legislation for the development of the freight-forwarding segment of our marine industry. At the present time, with the problems arising from the huge shipment of relief supplies abroad, that simple statute may represent the difference between prosperity and bare survival. Yet, unbelievable as it may seem, in the many discussions I have had with people in the freight-forwarding industry as well as those in the Government, I have yet to find anyone who had thoroughly analyzed and studied the legal position of our freight forwarders so as to be able to understand and enforce the rights which have been granted them by congressional enactment.

Usually referred to as the Bland Freight Forwarding Act in honor of Judge BLAND, a long-time friend and proponent of freight forwarders, the basic statute embracing freight forwarding as a part of our merchant-marine industry and policy was approved by the President on March 14, 1942. Significantly, it has been codified as section 217 of the Merchant Marine Act of 1936. It is a short and comparatively simple piece of legislation. Nevertheless, so many conflicting opinions, arguments, and interpretations of its provisions have been given that it becomes important to analyze the statute and its legislative history most closely.

At the outset, let me read two sentences as they appear in this statute. The first sentence of section (a) states that:

"The Commission is hereby authorized and directed, through such administrative measures, agreements with other Federal departments and agencies, contracts with individuals or private business concerns, or other arrangements, as it may deem to be necessary or appropriate in the public interest, to coordinate the functions and facilities of public and private agencies engaged in the forwarding and similar servicing of water-borne export and import foreign commerce of the United States, for the efficient prosecution of the war, the maintenance and development of present and postwar foreign trade, and the preservation of forwarding facilities and services for the postwar restoration of foreign commerce."

Next let me read the first sentence of section (b), which adds that:

"Other Federal departments and agencies are hereby authorized and directed to cooperate with the Commission by entering into and carrying out such agreements as may be necessary to effectuate the purpose of this section."

Several minor provisions can be noted and largely forgotten. One provides that lend-lease shipments shall be included within the coverage of the legislation.

For practical purposes of analysis, we can confine ourselves pretty well to the two quoted sections. Simple as they may seem, they do require a break-down to understand their full coverage. Looking at the first section, it will be noted that the Commission is not only authorized, but "directed," to take certain types of action to accomplish certain specified purposes. The action directed to be taken includes (a) administrative measures, (b) agreements with other Federal departments and agencies, (c) contracts with individuals of private business concerns, or (d) other arrangements "as it may deem to be necessary or appropriate in the public interest to accomplish certain purposes." Looking at the purpose to be accomplished, we find it stated to be to coordinate the functions and facilities of public and private agencies engaged in forwarding and similar services to water-borne foreign commerce in order to provide for (1) the efficient prosecution of the war, (2) the maintenance and development of present and postwar trade, and (3) preservation of forwarding facilities and services for the postwar restoration of foreign commerce. As you will see from the second section of the act which I previously read, the work to be done under this act is not limited to efforts by the Maritime Commission. On the contrary, other Federal agencies and departments are both authorized and directed to cooperate with the Commission by entering into and carrying out such agreements as may be necessary to effectuate the purposes of the act.

From the break-down of the statute which we have just made, it is my opinion that the law clearly envisages not a temporary wartime measure, but also a postwar program for the preservation of freight forwarding as an adjunct to our foreign commerce and our merchant marine. Nevertheless, recent developments, particularly those relating to the shipment of foreign relief supplies, have raised serious questions concerning the coverage of the statute. These interpretations clearly suggest the advisability of examining the legislative history of the act.

In seeking to determine the intent of Congress in promulgating a statute which may be ambiguous in its terms, first resort is usually made to the debates on the floor of the House and Senate to determine what the Members of these bodies believe the legislation to cover. Unfortunately, little assistance can be found from the floor debates, as this statute was passed by both Houses under the unanimous-consent rule.

In the absence of enlightment from the floor debates, let us turn to the next best sources, which are the reports of the House and Senate committees. Our job is made easier, as the House report was adopted in toto by the Senate committee. Looking at the report of the Committee on Merchant Marine and Fisheries explaining the legislation's coverage, it becomes clear that Congress did not intend this act purely as a war measure, but believed that its operations should and would continue in the postwar period. Moreover, and most important, these reports demonstrated forcibly that, in the opinion of the Congress, freight forwarding is essential to the postwar development and continued health of the American merchant marine and our foreign commerce. As evidence of the latter opinion, let me read you two brief excerpts from the report. First is the statement that:

"It was clear to the committee that the work of freight forwarding is essential to the movement of goods in foreign commerce under normal conditions."

The importance of freight forwarders to the postwar merchant marine was demonstrated by the statement that—

"The freight forwarders and licensed custom brokers, in the opinion of your committee, are necessary and vital agencies in the promotion of an American merchant marine to such an extent that, if they should be eliminated and the business formerly done by them should be done only by the representatives of their competitors, the future of the American merchant marine in the postemergency period will be precarious in the extreme."

Other statements in the committee report demonstrate forcibly that it was the congressional purpose to extend the benefits granted by the then pending legislation into the postwar period. For example, the committee stated that—

"Your committee has been particularly concerned not only with the unsoundness of shunting aside American companies by any foreign government agencies (no matter how friendly such government or agency may be) but with the more serious matter of ascertaining and preserving the experience and ability of American firms for the benefit of foreign trade after the restoration of peace.

"Some coordination of forwarding both in carrying on the war and after the war is and will be necessary in the interest not only of American forwarders but of our foreign trade in general. To be effective this involves the correlation of functions and facilities of public agencies concerned and the private business firms engaged in foreign freight forwarding and the handling both of exports and imports."

At the very end of its report the committee described the steps to be taken by the Maritime Commission under the bill to include "development of plans for postwar coordination of foreign trade, ocean ports, transportation, and cargo forwarding and handling, to the best interests of the American trade and the American merchant marine."

The committee then stated that:

"Your committee believes that the last-stated objective is one of the most important points of this legislation. The measure is aimed not only at the current problems but at the vital problem of maintaining our merchant marine and our foreign trade after the war ends."

While I hesitate to belabor the point by adding additional authority for this opinion, I think it advisable to give the comments of the Maritime Commission on this legislation. These also demonstrate the then considered opinion of the Commission that this measure had postwar applications. In his report to the Congress supporting this legislation the following two statements were made by Admiral Land, then Chairman of the Commission:

"The proposed legislation would authorize and direct the Commission to coordinate the forwarding of water-borne exports for the efficient prosecution of the war, for the maintenance of essential foreign trade, and for the preservation of forwarding facilities and services for the postwar restoration of foreign commerce. While it is impossible at this time to forecast the extent of the problem of postwar restoration, it appears inevitable that the dislocations of normal trade already experienced will become even more extensive as a result of the spreading conflict. Consequently, it would appear to the Commission to be advisable to plan now for the continuation at least for a reasonable time after the end of the war of whatever supervision of forwarding may be undertaken as a part of the war effort.

"The coordination of the functions and facilities of public and private agencies engaged in the forwarding of water-borne exports (and imports) would appear to be a broader undertaking than the task of supervising and directing the forwarding of lend-lease and military supplies which the Commission has already undertaken. Such coordination would supplement the immediate supervision and direction undertaken as part of the war effort, and would provide the means for the continuation thereof after the

war ends, when the problems of postwar adjustments will become acute.

* * * * *

"The bill under consideration would provide coordination of forwarding 'for the * * * preservation of forwarding facilities and services for the postwar restoration of foreign commerce.' The Commission considers this to be one of the most important features of the proposed legislation, since authority exists without legislation to take such steps as may be required for the effective prosecution of the war."

In summary of the matters I have just mentioned, I should like to repeat three things. First is that Congress in the Freight Forwarding Act directed the Maritime Commission to coordinate and preserve the freight-forwarding end of our water-borne foreign commerce. Second, Congress intended this development and preservation to be a postwar project rather than limiting it to the war emergency. Third, Congress expressly directed other Federal departments and agencies to cooperate with the Commission to carry out the purpose of the act. In short, Congress has directed the Commission and all Federal agencies to cooperate in the development and preservation of the freight-forwarding business of today.

Let us now place this legal position against the background of certain practical conditions existing in freight forwarding today. At the present time and during the coming few years, huge cargoes of Government-owned supplies are being and will be shipped abroad for foreign-relief purposes. All of these cargoes must go abroad by ship and most of them require the same services as would be given to ordinary commercial shipments. In handling these cargoes, should private freight forwarders be used or should Government facilities such as those of the Army be availed of to handle them? That is the crux of the economic situation facing you today. Congressional intent seems quite obvious.

In determining what is most in the public interest, numerous factors must be considered. First is the question of cost. If it will cost the Government less to ship through use of Army facilities, that is an important consideration. If it will cost less to ship through private freight forwarders, that is an almost incontrovertible argument in favor of their use. But in addition to the dollars-and-cents aspects, substantial consideration must be given to the importance of maintaining the freight forwarder, the interest of the American merchant marine in their preservation and prosperity, and the future as well as the present services which freight forwarders will render to our maritime industry.

By the Bland Freight Forwarding Act, the Maritime Commission has received a congressional mandate to develop, coordinate, and preserve the freight-forwarding industry. To accomplish this purpose, it may well be willing to take the lead, if compelling reasons to do so can be advanced by the forwarders, to coordinate the shipment of all foreign-relief cargoes. Such action could well be used to assist the American ship operator as well as the forwarder. But the Commission must first be convinced by you of the necessity of undertaking the job and of doing so now. Moreover, in view of the Commission's lack of funds and personnel, the endeavor would have to be a joint job, having the active rather than passive assistance of the forwarders.

Looking into the future, no one of us can predict what the coming years will bring to our Nation, to its merchant marine, or to the freight forwarder. Looking at the latter's problems, though, I think that present indications are that we will find constant pressure to subordinate, and perhaps eliminate, the freight forwarder from the shipping picture. To avoid this, those of you in the freight-forwarding portion of our maritime industry must, I believe, provide an affirmative program. Should you fail to do so, I think there are serious questions whether there will be sufficient persons in the freight-forwarding business 10 years from now to require a panel of this kind at the 1957 Propeller Club meeting.

It seems to me that section 15 of the Shipping Act of 1916 offers the legal background and basis for an association of freight forwarders. An association formed under this authority, and with the approval of the Maritime Commission, could establish self-governing rules for freight forwarders which would insure the abolition of abuses. Of equal importance, through such an association, the views of the freight forwarders could be coordinated for presentation to the Commission, the other Government agencies, and to the Congress. The second action which the freight forwarders must prepare to take in the near future is the presentation of their views and needs to the Congress.

If the use of Government forwarding facilities will save the taxpayer money, your problem of combating denial of the Freight Forwarding Act will be difficult. People in the freight forwarding industry have assured me, however, that they can demonstrate that use of their services will save the Government large sums. To insure your continued position and the use of your services for the relief program, it will therefore be necessary for the freight forwarders to present their views and proof to the congressional committees involved. Those of you in the freight forwarding industry must be vigilant to see that all necessary information and proof of your views are given to the committees prior to their making their recommendations to the Congress.

One other problem remains. Over the long term, the freight forwarders must develop a program of how they can best assist American commerce and the American merchant marine. Additional future legislation for the benefit of the forwarders as a group, should this become necessary, cannot be expected unless such a showing can clearly be made. While the Congress has indicated its interest in the protection and advancement of freight forwarding, it has done so solely because of the importance of their functions to the over-all advancement of our merchant marine. The legislation so far granted is not a hand-out, but has been designed to accomplish a particular purpose of assisting in the development of our foreign commercial shipping operations. Accordingly, in coming to the Congress for any needed future assistance, I believe it necessary for the freight forwarders to show not only that they are experiencing certain difficulties, but that should the Congress legislate to resolve these difficulties, such legislation will substantially benefit not only the forwarders but the American merchant marine, American foreign commerce, and our Nation as a whole.

Twenty Million Children Share Europe's Misery and Fear

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. JAVITS. Mr. Speaker, the following article picturing the hunger and devastation of Europe's children should be read by every Member. This is a special problem apart from the hunger of Europe's adults. There will indeed be little hope for Europe if this devastation among the children continues. Continued support of the international children's fund and support of my bill, H. R. 2446, to permit the entry into the United States of war orphans for adoption free of the quota is clearly indicated by this report.

The article reprinted from the New York Times of December 8, 1947, is as follows:

TWENTY MILLION CHILDREN SHARE EUROPE'S MISERY AND FEAR—HUNGER AND DEVASTATION OF WAR'S AFTERMATH SHARPEST IN EFFECT ON THEM—NATIONAL AID EFFORTS SHOWN IN SURVEY

(By Michael L. Hoffman)

GENEVA, December 2.—The approach of Europe's third postwar Christmas finds 20,000,000 children on this continent living in squalor and misery, in cold and in fear.

As holiday shopping gets into full swing in the United States a world-famous doctor reports from Rumania:

"Hundreds of nearly naked children are roaming the countryside in an eternal search for food. Many were casualties of mine-laying and have lost legs and arms. Whole families are existing on cucumber soup and on bread made of dirt and straw."

Not all Europe is in straits so bad as Rumania's, but everywhere children in such numbers that the future of whole nations is at stake are underfed, underclothed, and living in a state bordering on savagery.

In no aspect has war so terrible an aftermath as in its devastation of the lives of children. The brighter side of the picture is that in no area of national and international recovery is so much being done to fight the consequences of war. Perhaps even more significant, in no other field is there so much honest nonpolitical activity that cuts right across the east-west barrier.

Correspondents of the New York Times in Europe have surveyed the status of Europe's orphans at the beginning of this potentially disastrous winter. The picture varies greatly from rapidly recovering Belgium, where nearly all orphans have been absorbed in the community and had a new start, to disturbed Greece, where 150,000 child refugees have been added to the 300,000 or more other orphans of World War II. Everywhere the reports show that governments consider children the No. 1 priority.

With astonishing rapidity, the International Children's Emergency Fund, an agency of the United Nations, has gone into operation to help stem the deterioration of child health. With only a little more than $38,000,000 to go on, the fund plans to see that at least one good meal a day is provided for 3,500,000 children in 12 of the hungriest and most devastated countries.

Within 90 days of the receipt of its first contributions, the fund had shipments on the way to Europe.

One of the gravest problems is that of orphans. More than 1 of every 10 Greek children have lost one or both parents. There are more than 500,000 war orphans in Yugoslavia, and probably as many in Italy and Poland.

SWITZERLAND'S HAVEN

GENEVA, November 29.—Switzerland, whose children mirror the healthy, prosperous condition of their country, has taken on heavy burdens in helping the children of her less fortunate neighbors.

Last winter 1,000,000 children in 7 countries received one meal a day from Don Suisse, an agency that has official and private financial support. This winter Don Suisse will pool much of its activity with the United Nations Children's Fund.

With a population of slightly more than 4,000,000, Switzerland in this activity alone contributed to Europe's children more than $1.20 a person. The equivalent contributed

in the United States would be nearly $170,000,000.

Even more characteristically, the Swiss contribution is in taking children directly into Swiss homes. Individual Swiss, at their own expense, have cared for more than 135,000 children for periods averaging 3 months during the war and postwar years. Since 1933 more than 5,000 refugee children have been received unconditionally into Switzerland. Four hundred children from the Buchenwald concentration camp are still here, awaiting permission to enter Palestine.

A more permanent rehabilitation job is being done in a child city named after the famous Swiss educator, Pestalozzi. While only a few can be taken, those lucky enough to be chosen are educated, trained, and allowed to stay in Switzerland or return to their homes when conditions warrant, as normal, healthy citizens. There also are two Pestalozzi villages in Greece, and one in Poland.

FIFTY PERCENT INFANT DEATHS IN ALBANIA

GENEVA, November 30.—According to child welfare experts who have visited all the Balkan States, Albanian children are in the greatest need.

No approximate statistics exist on the number of children suffering from undernourishment or tuberculosis or even on infant mortality. A competent physician estimated recently that the infant mortality rate was almost 50 percent, which is nearly double the worst rate recorded in any other European area.

There are fewer than 200 doctors for the country, which has a population of more than 1,000,000, most of which is thinly spread. There are a few good hospitals in Tirana, the capital, but only the most rudimentary facilities are found elsewhere.

Undulant fever and tuberculosis are common, as nearly all cattle are infected with both diseases. Diphtheria is reported to be bad because supplies of vaccine furnished by the United Nations Relief and Rehabilitation Administration have run out. No antitoxin is available for the winter. All medicines are short.

To bring Albanian children up to anything like adequate standards of diet and medical care is a work of generations. The most emergency aid can do is to keep alive some that would otherwise die this winter.

TITO NURTURES A GENERATION

GENEVA, December 1.—With more than 90 percent of all social-welfare institutions destroyed by the war, Yugoslavia is struggling to aid her more than 500,000 orphans and hundreds of thousands of undernourished, underclothed children who have parents but not much more.

The Government, through several ministries, is giving 112,800 children free meals in schools or kindergartens. More than 650,000 children receive other aid, such as shoes, clothing, and textbooks, when available.

Medical experts who visited the country recently report terrible ravages of tuberculosis and other postwar diseases. From 10,000 to 12,000 active cases of tuberculosis were reported. The rate of pulmonary tuberculosis is described as "enormous" among small children.

Throughout the country children with one leg or one arm can be seen struggling along with inadequate artificial limbs or none at all. Most of them are victims of mines that the Germans and Italians left in fields and along roadsides.

GREEK STRIFE HEIGHTENS MISERY

ATHENS, December 1.—Greece has about 250,000 orphans as a result of the war or the guerrilla fighting, according to sketchy statistics of the welfare ministry.

The ministry says that there are about 100,000 children under 14, most of them orphans in need of immediate and full support. Government, private and foreign institutions, and relief programs are taking care of only 25,000. This leaves 75,000 in desperate straits. American welfare agencies consider all these figures padded and think those facing the winter without care total about 20,000.

The problem looks much more serious than it was last year because the food that the UNRRA allocated for children is gone.

Many boys take to the road and emigrate to the towns without identification papers. They make a living selling cigarettes, candy, and newspapers, and shining shoes. They take occasional jobs. Some engage in petty thievery. Although the realistic police look the other way most of the time, inevitably some are arrested.

MAJOR EFFORT IN BULGARIA

SOFIA, BULGARIA, November 27.—"The greatest wealth of a nation is its children," is a theme basic in the Bulgarian Government's internal policy. All former private institutions and enterprises for children are now state undertakings and three ministries, those of Education, Health, and Social Policy, provide large sums for children's care and coordinate their efforts for radical reforms in the bringing up of children.

Under a new scheme, children are divided into three groups—infants, preschool, and school age.

Infants receive the highest proportionate milk, sugar, butter, and clothing rations. The preschool age group, from 3 to 7 years of age, is the object of a special education program which is superior to any previously tried in Bulgaria. Newly set up this year are 20 crêches, 700 kindergartens, 170 special summer kindergartens, and 2,000 village summer children's homes.

More than 1,000,000,000 leva have been spent this year on children's homes, orphanages for ordinary and war orphans, and nurseries. Another 1,660,000,000 leva have gone as aid to newlyweds and large families. School-age children from 7 to 14 years old are organized in state groups.

Shortages of food, clothing, medicines, and other basic articles—in large part the effect of three consecutive droughts—greatly hindered the government's scheme. Bulgarian children are still undernourished and the infant death rate is very high.

RUMANIA EXPANDING AID

BUCHAREST, RUMANIA, November 25.—Rumania emerged from the war with about 200,000 war orphans. Life is not easy for them or for any other Rumanian today.

Inflation and two successive years of severe drought, linked with heavy reparation payments and the costs of supporting occupation armies, have created great scarcities of foodstuffs and other necessities of life.

The Government's current effort to care for the children is a modest one, but it is being expanded as rapidly as economic recovery will permit. Authorities report that the delinquency rate among war orphans is not disproportionately high.

The entire State budget for orphans, widows, and disabled veterans for the period from August 15, 1947, to April 1, 1948, amounts to 1,162,000,000 lei, or $7,700,000. It is hoped that a special issue of stamps will raise another $13,300,000 for the program. According to Ion Clopetel, general director of the IOVR, which looks after the orphans, widows, and disabled veterans, no distinction is made in granting relief to those needing it because of the war against Russia or against Germany.

HUNGARY'S FUNDS LOW

BUDAPEST, HUNGARY, November 16.—There are 56,000 children in Hungary who were orphaned by the war. Most have been left with relatives or foster families. The Government pays $2.10 a month for the support of children who lost both parents; $1.75 for the care of half orphans. By law, all war orphans are entitled to one meal a day at public expense, and they pay no tuition fees.

The financial resources of the Government and communities for the care of war orphans are almost depleted, and foreign aid plays a large role, although lately United States willingness to grant such aid has fallen off. The Hungarian American Society began a token adoption scheme under which foster parents contribute $3 to $45 a month. About 3,000 orphans may eventually come under this scheme.

For orphans cared for in asylums the Government contributes $8 a month. Asylum facilities are limited and there is an urgent demand for accommodations. The delinquency rate is reported to be high.

CZECHOSLOVAKIA LOSS UNTALLIED

PRAGUE, CZECHOSLOVAKIA, November 24.—The Ministry of Social Welfare lists the names of 43,939 war orphans in Czechoslovakia, but the list is far from complete.

Many Slovak families were dragged away by the Nazis during the German retreat and the children neither are listed as dead nor have they returned. In Bohemia-Moravia alone one nonpolitical organization, the Association of Freed Political Prisoners, has on its lists 40,000 widows and orphans seeking financial support.

The Ministry of Social Welfare gives war orphans some financial help. Mostly, they have been placed with foster parents, and only problem cases are in state child welfare institutions.

In Slovakia, of 500 children who have lost a leg or arm or suffered other major injury by explosions of mines, 50 are being cared for in children's homes. The rest receive no rehabilitation training.

This year's poor harvest because of drought has already reduced food rations, especially of milk, eggs, and fats, which means that many of Czechoslovakia's children need to be constantly watched and helped or they will again approach the danger line in health.

POLAND'S 500,000 ORPHANS

WARSAW, November 29.—The war left Poland with nearly 500,000 war orphans, whose care and education has been made a primary concern of the new Polish Government. An extensive program for child welfare has been instituted over the last 2 years, and 10,000,000,000 zloties will be spent on it this year.

The orphans are housed in 1,000 special homes dispersed throughout the country, mainly in former palaces and manor houses on the estates of the aristocracy that were taken over by the government. The children up to 3 years come under the care of the Ministry of Social Welfare, those over 3, under the Ministry of Education.

Both Ministries try so far as possible to find foster parents, pay these for the upkeep of the children and make special financial allowances for their education. The foster parents are encouraged to adopt their charges officially, but the majority of the children remain under direct supervision of the state.

All the state institutions have medical and educational staffs and the children there, so far as food, clothing, and attention are concerned are better off than most of the country's children, who in many parts of Poland lack fresh milk and warm winter clothing.

AUSTRIA'S PROBLEM MIXED

VIENNA, November 28.—The war orphans in Austria who constitute a problem are those who are not only orphans but also displaced persons. These are either the children of slave laborers—often illegitimate because their parents were not allowed to marry—children brought to Austria to be nazified, or children brought here for slave labor.

Austria's own war orphans are being cared for either by relatives or in asylums. But non-Austrian orphans are under the care of the child-welfare section of the International Refugee Organization, which tries to trace parents or relatives, and to repatriate or settle the children.

The children of many slave laborers whose parents have long since disappeared, have been taken by Austrians, some of whom have passed themselves off as the fathers in order to be able to keep the children. The families of nazified children have been difficult to trace as these children received German names and were placed with Austrian families for adoption.

The physical condition of most of the children is fair, since they to a large extent live on farms.

Of more than 6,000 waifs handled by UNRRA and IRO in Austria, 782 have been repatriated, 561 have joined relatives elsewhere, 76 have been resettled, 21 have found permanent homes in Austria, and 32 have died.

ITALY'S AID RESTRICTED

ROME, December 1.—Financial stringency prevented the Italian Government from doing much for the 150,000 war orphans at present receiving state aid. Appropriations for this year amount to about the equivalent of $2.70 a child.

The orphans are entrusted to the Opéra Nazionale Orfani di Querra, which operates under the Ministry of the Interior and has branches in most provinces. It cooperates with the Vatican and with private relief and municipal welfare institutions and receives certain donations from private sources. For example, Augusto Bellanca, of the Amalgamated Clothing Workers of America in New York, raised funds to build two homes for Italian war orphans.

Scarcity of funds limits the Italian organization to the placing of orphans in private homes or institutions, medical care, and free schooling. Neither the Opéra nor most private welfare agencies are in a position to supply additional food and clothing.

Juvenile delinquency increased greatly after the war but is now returning to normal, thanks to economic recovery and to various Italian boys' town projects.

GERMAN YOUTH IN FLUX

BERLIN, December 1.—The problem of war orphans in Germany is a large one, but neither German nor Allied public welfare officials can say exactly how large it is. There are no accurate data on the numbers of children who lost their parents during the war; unofficial estimates put it at from 600,000 to 1,300,000. There seems to be a general agreement among teen age orphans and those in their early twenties that Germany offers little to them. German labor offices and Allied manpower officials frequently find themselves hard pressed to build up labor pools from youths who normally would be in some stage of apprentice training.

To cope with the problem in the United States zone, where the number of orphans is estimated at 100,000 to 300,000, there are about 900 public and private institutions.

Emphasis is placed upon putting as many children as possible in foster homes. However, this program is currently running into difficulties because foster parents cannot obtain clothing for children and welfare authorities are unable to provide it.

Officials concerned with Germany's future economy are seeking to set up programs to train the war orphans in mechanics, carpentry, cabinet making, farming and other types of vocational activity. But although, with the assistance of Catholic and Protestant welfare societies, many orphans get benefit of school feeding programs and some living facilities, it is estimated that thousands are wandering around on their own, ferreting out an existence in the many ways it is possible to do in a country to which stability has not returned.

SWEDEN AIDS FOREIGN CHILDREN

STOCKHOLM, SWEDEN, November 17.—Swedish homes and institutions have taken in children from belligerent and occupied territories.

From a peak of 43,000 in 1945 the number of these has dropped to 13,600, most of them Finnish, and a few Norwegian, Dutch, Belgian and French.

Except for some placed in sanatoriums for tuberculosis treatment, the children have been placed in homes for an average of six months before being returned to their parents. They attend Swedish schools and are generally treated as the foster parents' own.

DUTCH THOROUGH IN CARE

AMSTERDAM, THE NETHERLANDS, November 25.—The Foundation of 1940–45, caring for the families of needy members of the wartime resistance reports that financial aid is given to 5,500 orphans. It estimates the total number of children in the country without one or both parents is probably about 20,000.

Apart from orphaned Jewish children without father or mother, the group presents no great problem at present. Some difficulties are being experienced in placing 1,300 Jewish youngsters, each of whom requires special care as a result of the effects of wartime hardships.

The Netherlands has no war orphans awaiting adoption since they have all been either absorbed in their own family circles or assigned to guardians.

Social welfare experts in the Netherlands believe conditions as to delinquency, mortality, and general health, and outlook of the war orphans are no different from those of the average children of the wartime generation.

BELGIUM MEETING PROBLEM

BRUSSELS, BELGIUM, December 1.—It is estimated there are in Belgium about 20,000 youngsters under the age of 16 orphaned as a result of the war. The great majority of them have long since shaken off ill effects of the wartime period with regard to nourishment and general health.

The Belgian system of child care centers around the placement of orphans in the homes of relatives or friends without delay. In most cases this has been done.

Most serious is the plight of the about 800 Jewish war orphans who survived in Belgium. They are the remnant of 4,300 children of Jewish parentage whom the Nazis deported—39 of these children have returned—and about 2,100 children who went into hiding.

The problem of rehabilitating these Jewish children is grave. They are often obsessed with fear and the adolescents among them face the world without training. The Jewish population remaining in Belgium is for the most part impoverished and often incapable of meeting the needs of the children, according to Max Ansdacher, secretary of the Agency for Jewish War Relief.

Institutional treatment is the only solution here for the Jewish war orphans, Mr. Ansdacher says. About 600 of them are now in homes maintained largely by the American Joint Distribution Committee and ORT.

FRANCE SEES AN ADVANCE

PARIS, December 2.—In France there is no exclusive organization for the care and education of war orphans as a group. They are looked after by numerous independent organizations, including Assistance Publique, which is the Government-operated institution for orphans, relief agencies in devastated areas, religious orders, and numerous private institutions. Over-all figures are unavailable.

There are more than 10,000 orphans in the Paris area. Here those in private religious institutions get the required elementary schooling, but in many provincial districts this is still impossible.

Mortality has been high among French children since the war, particularly for the new-born and adolescents, but the situation is improving, according to the latest health reports.

Delinquency showed sharp increases during and right after the war. In 1939 French juvenile courts had 12,000 cases; in 1943 it was 39,000, and it has been about the same the last 2 years. Some improvement is now reported.

Public health services are making increased efforts in behalf of children and war orphans. One of the greatest problems is the deterioration in child mentality brought about by war conditions with the attendant lack of supervision, under-nourishment, and temptations of the black markets.

BRITAIN'S PROGRAM

LONDON, December 2.—Britain has 3,360 total orphans from the war, all of whom under the care of the Ministry of Pensions Administration. Of the number, 1,343 are orphans of service personnel, 390 of merchant marine personnel, and 1,627 the children of civilians.

Each child receives a basic pension of 13s 6d, or about $2.60 weekly, until the age of 15, after which it receives 20s. This covers living expenses. There are additional grants for clothing and medical attention when necessary.

The children where possible are placed in the homes of relatives; otherwise they are placed with fully investigated families on a non-adoption basis. If after a trial period a family wishes legally to adopt, the Ministry handles arrangements.

The children are visited regularly by the Ministry's welfare staff and inspected in matters of health and general well-being.

They must follow the British law of attending school until 15. For higher schooling there is special provision for financial aid.

Only isolated instances of delinquency are noted. The Ministry says morale is generally excellent; in cases of persistent personality clashes the child is transferred to another home.

The Potash Industry—A Western Product

EXTENSION OF REMARKS

OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. FERNANDEZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a statement made by Horace M. Albright, president of the United States Potash Co., before the subcommittee of the House Agriculture Committee, on fertilizer this morning.

Three significant facts appear from this statement: First, that potash during the First World War soared to as high as $500 per ton because of our unpreparedness in the production of potash; second, that production in my State was begun by Mr. Albright's company and two others in the thirties, and that this industry and its expansion have been financed entirely by private investment, no Government funds having been requested or provided; and third, that there has been no increase in potash

prices since 1937, the potash still selling f. o. b. Carlsbad, N. Mex., at $22.50 per ton. The statement reads as follows:

STATEMENT OF HORACE M. ALBRIGHT

Mr. Chairman, on January 31 of this year I appeared before your committee as a representative of one of the large American potash producers to provide you with information and opinion concerning past and future potash supplies in this country. At that time I emphasized the point that despite the fact that there was not sufficient potash to meet the demands of fertilizer and chemical industries, domestic production was, nevertheless, at an all-time high. This statement is still true. Demand continues to exceed supply—by just how much it is impossible to estimate—but domestic production has continued to increase and for the fertilizer year ending June 30, 1948, will once again reach a new high.

It is important to emphasize once again the extent of the increase in production of the American potash industry. The average annual prewar consumption (years 1935–39) of agricultural and chemical potash in this country was 375,076 tons of K_2O. Fully half of this potash was imported from Europe. Throughout the war American consumption increased annually and by 1942 the entire supply was the product of American industry. By 1946 consumption had reached approximately 915,000 tons of K_2O, an increase of around 144 percent over the 1935–39 average, and of over 300 percent over that portion of the 1935–39 consumption supplied by the domestic industry.

Naturally, figures for the entire year of 1947 are not as yet available, but it is encouraging to note that deliveries to American chemical and agricultural industry during the first 6 months of 1947 exceeded those in 1946 by approximately 57,375 tons of K_2O—an increase of slightly over 12 percent. It is to be expected that this increase will continue until the end of the year, indicating an annual increase of at least 10 percent.

So much for the past. We have the picture of an American industry—a new American industry at no time aided or protected by subsidy or tariff—developing from an average prewar tonnage of less than 200,000 tons of K_2O to a tonnage which this year may well reach the 1,000,000-ton mark. You all know the history of potash production in this country—the pre-World War I dependence upon France and Germany, the desperate struggle during the war to establish a domestic industry with pitifully inadequate supplies and prices soaring to as high as $500 per ton, the return of foreign potash and the survival of only one American producer, discovery in 1925 of a potash field in southeastern New Mexico with the opening of the first mine in 1931. That industry now comprises five major producers. Three of these are located in the New Mexico field: The International Minerals & Chemical Corp., the Potash Co. of America, and the United States Potash Co.

The other two companies produce potash from brines: The American Potash & Chemical Corp., at Searles Lake, Calif., and Bonneville, Ltd., at Wendover, Utah.

These companies have provided for the needs of agriculture and industry during the past 8 years, and have given ample evidence of their willingness to accept full responsibility for domestic requirements. Their expansion programs have all been financed entirely by private investment. Government funds were not requested nor provided for this industry.

We are all familiar with the alleged "shortage" of fertilizer and potash. A look at the production records of both of these industries should make it readily apparent that this shortage is a result not of a deficiency in supply but of an unprecedented demand. Farm prices are high and the farmer has learned the value of fertilizer as an investment, an investment estimated by the farmer himself to yield him anywhere from $2 to $10 for every dollar invested. Large sections of the country which before the war used little or no fertilizer are now using large quantities of high-potash fertilizer, and pleading for more. The Midwestern States present a good example. Percentage increases in tonnage in these States are tremendous. Throughout the rest of the country where the original base was higher, percentage increases have not been as great but tonnage increases have in many cases been greater.

Education and experience have taught the Nation the value of chemical fertilizers in the production of crops and conservation of the soil. Hence the tremendous demand for commercial fertilizer and potash.

Another factor affecting the future course of action for domestic potash producers is the uncertainty regarding large-scale resumption of imports. To date postwar imports have been in small quantities and at high prices.

In view of the uncertainties surrounding this whole question, any contemplated plant expansion involves considerable risk. The fact that 60 percent of prewar German potash production capacity lies within the Russian zone highlights the uncertainty. The increasing freight rates from sources of American potash in the West to the agricultural East makes the domestic industry quite vulnerable to cheap ocean rates from Europe. It is logical to assume that when their full productive capacity has been restored and their local needs more nearly satisfied, the European producers will seek to recapture a large share of the American market. The need for dollars dictates such a program, and it appears that the reciprocal trade program has always envisioned it.

It is, therefore, obvious that the willingness of the domestic industry to expand indicates a confidence in its competitive ability and a further confidence in a stable American economy as it is a known truth that the amount of fertilizer consumed rises and falls with the farmer's prosperity.

Now for the future. I know that you are primarily interested in plans for the increased production of potash in this country and I shall give these to you to the best of my ability. As for my own company, we produced approximately 9 percent more K_2O in the first 10 months of 1947 than in the corresponding months of 1946. Further improvements in our technology and additions to our plant should result in still further increases in our capacity during the 1948–49 fertilizer season.

Another of the large producers has announced a major plant expansion, the effects of which should be felt during the 1948–49 season. Projecting proposed increases into the fiscal year 1948–49 production expansions now planned and provided for should establish a production rate of some 1,120,000 tons of K_2O, an increase of 120,000, or better than 10 percent, over the expected output of the current fiscal year 1947–48.

At this point I should like to introduce a chart entitled "Potash Deliveries: Agricultural and Chemical, North America." The addition into this chart of the figures given for the fiscal years 1947–48 and 1948–49 will indicate its continued upward trend. It is anticipated that approximately 37,000 tons of K_2O will be imported during the present fiscal year and it is of course impossible to estimate imports for the succeeding year. These totals will be added to domestic production in projection of the chart.

There is great need for potash in the Orient, especially in Japan, the Ryukyus and Korea. House Report No. 1148 submitted on November 27, 1947, this being Preliminary Report 4 of the House Select Committee on Foreign Aid pursuant to House Resolution 296, states on pages 8 and 9 that 143,000 metric tons of potash is required by those countries in 1948, and that "it is expected that the above quantities can be obtained at a landed cost of about $21,037,500." This means that the Russians are charging the occupation authorities $1.33 per unit, or about $80 per ton.

The American market price is currently 37½ cents per unit f. o. b. Carlsbad, New Mexico, or $22.50 per ton, and at Atlantic ports the cost per unit, including freight, etc., is about 60 cents per unit, or $36 per ton. Of course, really most of the American users of potash buy at the discount rate of 12 percent for equal monthly deliveries, and this means 33 cents per unit at Carlsbad, or about 55 cents at most Atlantic ports.

There has been no increase in potash prices since 1937, the increased delivered costs being due to advancing freight rates; in fact, in early 1947 potash was reduced 5 cents a unit f. o. b. Carlsbad.

In considering and planning for increased production of potash as well as that of other fertilizer materials and mixed fertilizers, one limiting factor must be recognized. That is the Nation-wide shortage of boxcars. At present our company has approximately 760 carloads of material in storage—convincing proof of how the boxcar shortage is delaying deliveries of potash. Any increase in output can only augment this difficulty until boxcar supplies are more nearly adequate. Even this year it is probable that manure salts production was curtailed to some extent by lack of shipping facilities, as at the height of the boxcar shortage storage facilities were taxed to capacity.

The current expansion in production is designed as the potash industry's response to the Government's appeal for an expanded food production and for fertilizer wherewith to produce it. I am happy to have had this occasion to discuss it with you.

New Air Policy Seeks To Keep Nation Ready But Always Preparing

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the Appendix of the RECORD, I wish to include a newspaper article by Mr. John G. Norris, which appeared in the Washington Post, on Sunday, December 7, 1947, as follows:

LONG SIGHTS ON T-DAY—NEW AIR POLICY SEEKS TO KEEP NATION READY BUT ALWAYS PREPARING

(By John G. Norris)

A new American air policy—charting a costly but vital course into an uncertain future—soon will be put before the Nation.

Covering the broad field of national security as well as civilian aviation, its main outlines now are evident—though not yet down on paper. Two groups charged with writing the new policy—a presidential commission and a joint congressional committee, will present their findings this winter.

But the record on which their reports will be based is about complete. The President's board ended its hearings last week after two solid months of testimony and field investigations. It heard every one of the Nation's top defense leaders, Government civil air chiefs, aircraft industry and air-line executives and others prominent in the field.

In investigations like these, the judges—rarely expert in aviation matters—base their

verdict on logical conclusions to be drawn from the evidence presented by the experts. Here are the hard facts put before them—and the clear conclusions they have drawn—which will form the core of the new air policy:

MOAT IS USELESS

America's traditional national defense strategy is obsolete. No longer can we rely on a powerful navy to keep an enemy from our shores, and count on expanding a skeletonized Army, Air Force, and munitions industry after trouble starts.

With offensive weapons 'way out ahead of defensive weapons for the present at least, and no strong allies across the oceans to rely on, the "cushion of time," we had in World War II will not be available next time.

Complicating the situation is the fact that the scientific revolution in weapons is still going on—perhaps is just getting well started. We can't be safe by stocking up on present weapons.

So we must ride two defense horses—be as ready as possible for a war in the near future, and prepared for a far distant and more dangerous conflict which might come 5 years from now or later.

WICKED COUNTERPUNCH

In getting ready for the latter, we must set a target date. That date is the best guess as to when a potential enemy will have atomic or other new weapons in quantity and the means to use them against us.

By T-day then, we must be ready. Research and production programs, industrial preparedness plans and actual production of weapons will have to be scheduled with that date in mind. Defensive measures against atomic attack are a part, but only a small part, of the program.

The main string to our bow must be an ability to come back after an initial assault with such a paralyzing return blow that an aggressor will be discouraged.

That means a first-class air force in being—bombers able to lay waste the enemy's key centers and other forces to round out a fighting team. There must be troops, aircraft carriers, and amphibious vessels to seize advance bases and keep control of the seas. The old "first line of defense"—the Navy—also must be maintained.

That is the picture today. New developments—intercontinental guided missiles, possibly radically new naval craft—might change it. But the essential element of the defense of a democracy like the United States—unable to start the shooting—is the threat of instant retaliation in force.

STANDING STRENGTH

This preparation for a distant target date is expensive by itself. Research costs are high, and so is that of the gradual build-up to T-day strength.

At the same time, however, we must also ride the other preparedness horse. We must keep a sizable force in the interim in case the world blunders into a major war, and we must have fairly substantial forces to back up our international commitments and our new role as a world leader.

Then there's another important factor. We can't stop producing airplanes and wait for the scientists and engineers to come up with those supersonic jet planes and long-range guided missiles in time for target date. The plants that will make such weapons are today's aircraft factories. If we stop building '48, '49, and '50 models, or order too few of them to keep the companies going, the plants won't be there when we want them.

Evidence before the committee is that a minimum of 3,000 military planes a year must be built to keep the production machine healthy. We've been constructing aircraft at about half that rate.

ONLY HALF ENOUGH

Many people on Capitol Hill have looked upon proposals to build 3,000 planes as a subsidy. Air Force Secretary Symington, however, told the Presidential committee than an air force of 20,541 planes, including reserves and trainers, is required to give the Nation the protection it needs.

Navy Secretary Sullivan said naval aviation should have 11,500 planes now and 14,500 by 1952. Replacements to keep these forces modern would require a yearly production of 5,700 to 6,200 military aircraft. If this Air Force-Navy program were adopted, there would be no question of subsidy. It calls for four times the current rate of plane production and double the minimum necessary to keep aircraft builders in business.

These programs have not yet been approved by Defense Secretary Forrestal, but it is expected that the President's commission will endorse them as goals and urge that a good start be made this year.

BACKS OLD SET-UP

On the civil phases of the new policy being drafted, there is great divergence of opinion. Therefore the congressional board may take a different slant from that of the Presidential group. Present views of the latter may be summarized as follows:

1. Reorganization of Government civil air agencies: No major changes, such as the proposed Department of Civil Aviation, favored. More power over policy should be vested in the Secretary of Commerce, with higher rank for top civil air officials.

2. Air lines: Let the 1936 act largely alone and permit the CAB to continue present policy in passing on the air-line route pattern. Suggestions for a moratorium on new routes met with little favor.

Feeder lines should be given a longer period to get established.

Any legal barriers to the entrance of shipping companies and railroads into air transportation should be removed. Granting of routes to such companies should be left up to the CAB on the merits of each case.

Air Transport President Emory S. Land's proposal for a war reserve of 5,000 transport planes, paid for by the Government and available for lease to air lines in peacetime, met with little favor.

3. Development of an air cargo industry: Strongly favored, with specific recommendations likely for Government subsidy of both development types and operation of cargo routes.

4. Ground facilities for aircraft: The group agrees that aircraft have gotten ahead of their ground facilities and that major improvements in airports, airways, and landing aids will solve most of the ills of the air transport and manufacturing industries. This angle will be hit hard.

All of these recommendations—both on military and civil aviation—will cost money, big money. They would add billions to the defense budget. Yet the President's Air Policy Commission, largely consisting of hard-headed businessmen, feels that security reasons make them necessary.

The group, which will submit its report to President Truman January 1, consists of Chairman Thomas K. Finletter, New York lawyer; Palmer Hoyt, Denver Post publisher; Arthur D. Whiteside, president, Dun & Bradstreet; John McCone, industrialist, and George P. Baker, Harvard professor.

Iowa Undisputed

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. LECOMPTE. Mr. Speaker, in spite of the fact that this year the great State of Iowa suffered unduly from floods in the spring and drought in the summer statistics released recently show that Iowa is still the leading State both in farm production and income. An editorial appearing in the Ottumwa, Iowa, Courier of December 5, 1947, which I desire to include in the extension of my remarks, significantly points out that credit for the record achieved belongs to our stalwart farmers, whose intelligent planning, determination, and competent use of modern methods made the splendid results possible. In many cases crops had to be planted twice because of the floods and the yield was materially lessened on account of droughts that occurred during the late summer. Even so, Iowa still stands at the top in production and total value of farm crops:

The editorial follows:

IOWA UNDISPUTED

Iowa repeats in being the undisputed leader of the Nation in farm production and income.

Farm marketings of the State's crops and livestock reached record totals during the first 9 months of this year, Department of Agriculture figures from Washington show.

Total income to Iowa farmers increased 54 percent over 1946 while the average increase for the Nation was 21 percent.

Receipts from livestock and products were $1,387,071,000 as compared to $936,774,000 in the first 9 months of 1946. Cash receipts from crops this year total $309,892,000 against $160,125,000 last year.

Iowa and California have been running neck and neck for the No. 1 place in agriculture for a decade. The western State placed second this time. In the 10-year period, Iowa has been first five times; California five times.

Iowa is the unchallenged leader from the standpoint of productivity and income per acre because it has only about one-third the total acreage of California, yet tops the coast State in total farm income. Furthermore, California has the advantage of semi-tropical climate, enabling it to produce two or three vegetable crops a year.

There is no dispute either on Iowa's leadership in production of the seven basic foods most essential to adequate nutrition and good health. For many years Iowa has produced 10 percent of the Nation's total in the basic foods.

This information is enlarged upon in the current issue of the Iowa development commission. It is the proper medium for doing so. But the real motive power in all this is the individual—the farmer, whether he works a section of land or 10 acres. His endurance, his intelligent planning, his acceptance of modern methods, his careful conduct of essentials have made this record possible.

Railway Travel Is the Safest Mode of Transportation

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. VAN ZANDT. Mr. Speaker, despite the headline publicity given to railroad accidents, traveling by rail is by far the safest method of transportation.

According to recent figures, for every billion passenger miles traveled in 1946

there were 12.4 passengers killed by airplane crashes, compared to 1.8 passengers who lost their lives in railroad accidents.

The following commentary on the subject appeared in the November issue of the Missouri-Kansas-Texas Railroad Employees' Magazine. The M-K-T R. R., nicknamed "The Katy," and the M. K. T. Employees' Magazine is not only well edited, but has a wide circulation.

The article is as follows:

TRAINS, PLANES, OR BUSSES—WHICH ARE SAFEST?—FIGURES PROVE THAT THE RAILWAY IS STILL SAFEST WAY TO TRAVEL

Railroads, despite some propaganda to the contrary, still provide the safest of all transportation available to the public.

Proof of this was given the House of Representatives recently by the Honorable JAMES E. VAN ZANDT, of Pennsylvania, who cited facts and figures comparing the relative safety of air lines, busses, taxicabs, private automobiles, and railroads. The railroads won easily.

Congressman VAN ZANDT showed that in 1945, the last year for which figures are available, the railroads had one passenger fatality for each 633,285,193 miles traveled compared with one fatality for each 46,053,843 miles traveled by the air lines.

Busses were much safer than the air lines, with 464,000,000 passenger-miles for each fatality. Private automobiles and taxicabs, however, had a fatality for each 34,900,000 miles traveled.

RAILS FIRST IN SAFETY

Remember this the next time somebody starts telling you that railroad travel isn't as safe as it used to be. Here again the figures prove that this isn't true.

In 1935, when rail travel was at the depths of the depression low, the railroads had one passenger fatalilty for each 804,760,739 passenger-miles traveled. A better record than in 1945, to be sure, but let's take a second look.

In 1935, depression-ridden railroads operated trains only 18,509,497,000 passenger-miles. But in 1945, railroads operated trains 91,826,353,000 miles. So while the fatality rate per hundred million passenger-miles was .12 in 1935, the rate was only .16 in 1945 when the railroads were operating five times as many passenger trains as they were in 1935.

The greatest killer remains the private automobile. In 1945, 12,900 passengers died in automobile accidents. (This does not include pedestrians killed by automobiles.) But during 1945, only 145 railroad passengers were killed.

In 1945, the air lines operated only 3,500,092,064 passenger-miles compared with the 91,826,353,000 passenger-miles operated by the railroads. Despite the fact that railroads operated almost 30 times more passenger-miles than did the air lines, the air-line fatality rate per hundred million passenger-miles was nearly seven times greater than that of the railroads.

Does this sound like the railroads are unsafe?

ONLY HALF OF STORY

During the last year, there have been many news stories and editorials in the American press calling for greater safety precautions by the railroads. Railroads have been charged with refusing to adopt modern safety devices and with placing economy above the welfare of passengers.

These charges are, of course, untrue, and absolutely unfounded on fact. They have arisen because train wrecks always have been news, and when a wreck occurs, it is a page one story, usually with pictures. This publicity, ethical as it may be from the standpoint of news, nevertheless sometimes creates a false impression among readers that trains are becoming the least safe of transportation media.

If readers were told that while two persons were killed in a single isolated train wreck on a particular day, a total of three people were killed in automobile accidents in one medium-sized city the same day, then the picture would have a more proper proportion. And the public might not forget that automobiles killed more than 35 times as many people in the United States last year than have died in passenger fatalities aboard American railroads in the last 10 years.

PROUD OF RECORD

Railroad managements are proud of the safety record of their railroads and do everything in their power to maintain it. New safety devices are being developed and installed all of the time on American railroads and will continue to be. Railroads realize that they have an obligation to the public to protect the passengers aboard trains, and there is no evidence to support claims that this obligation has been shirked.

Railroads, despite the stories you've heard to the contrary, remain America's safest form of public transportation. The figures produced by Congressman VAN ZANDT don't lie.

State Secrets

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop, from the Washington Times-Herald of December 9, 1947:

STATE SECRETS

(By Frank C. Waldrop)

The State Department took a slugging on Capitol Hill yesterday from an expert who has slugged it before, and with results. The last time he went to work on the diplomats he got a promise from Secretary of State Marshall to clean house.

Now he's back charging that the house ain't even half way clean and that it must be if Congress is to be justified in trusting the State Department with more billions of United States money abroad.

The slugger is Representative FRED E. BUSBEY, Republican, of Illinois, and every State Department administrator knows him. He knows how to hit where it counts, as for instance:

"All present indications point to the fact that the President will select the State Department as the administering agency of the $590,000,000 provided for in this (rush foreign spending) bill.

"Did anyone ever hear of the State Department protesting or objecting to the maladministration—yes, criminal maladministration—of UNRRA funds when they were being used to subsidize the satellite (Russian) governments? The State Department officials abroad must have known the facts. I know of no State Department protest of record."

Come to think of it, who does?

Certainly it is true that at the time the UNRRA circus was on, plenty of other people raised questions as to whether the billions it was spending were helping Uncle Sap or Bloody Joe Stalin.

And plenty of evidence rolled in soon thereafter to show that it was Stalin who got the value from the spending of our money. But if State Department authorities did anything to protest or counteract that—where is the evidence?

Mr. BUSBEY yesterday called on Congress to force a clean-up by the State Department of some sinful secrets it continues to hide, before trusting it with a penny more. Among those secrets for which no reasonable explanation appears on record, is State's continued concealment of the facts concerning how Russia helped Germany destroy Europe in 1939–41.

It is an already publicly acknowledged matter that the State Department has captured records to show how Stalin's man, Molotov, and Hitler's man, Ribbentrop, were working together against civilization in 1939.

If the State Department really wants to use a big gun against Russia right now in the ideological war and not just grab off more United States tax money for building up its own self-importance, what could have a more powerful anti-Russian effect than to unveil that stuff? Said BUSBEY on the floor of the House yesterday:

"I hereby charge that if the State Department would release the complete text of the Molotov-Ribbentrop agreements with accompanying discussions both written and oral, subsequent to August 23, 1939, they would disclose among other things that Russia agreed to let Nazi Germany use Murmansk as a naval base for Nazi submarines which in turn were responsible for the sinking of many of our ships carrying supplies to England."

Certainly it is true there was a military agreement between Russia and Germany from 1939 to 1941 that blew up, according to ex-Secretary of State Jimmy Byrnes, only because Molotov kept demanding more and more and more every time Hitler tried to appease him.

And the State Department has even gone so far as to admit it has the facts in its possession concerning the length and breadth and depth of that military agreement. Why doesn't it uncork the story? No need of fear that it will be a flop.

Too much has leaked out already to show that it would rock the world if fully and officially told.

Why hold it back, then, since the official declaration of the Truman administration is to save Europe from communism?

But would too many State Department and administration reputations be damaged in the reaction, as truth about our foreign policy for the past 15 years comes home? For that, too, is tied in with the Ribbentrop-Molotov secrets.

Here's BUSBEY:

"I challenge the President to make public these (Nazi-Red) agreements before we vote on this interim-aid bill. I sincerely believe if these agreements were made public now this so-called emergency-aid bill which is supposed to stop communism would not have a chance of passage in this Congress.

"If these agreements are made public before we consider the Marshall plan I am willing to wager it would be impossible to muster 100 votes in favor of it."

Wonder why he thinks that? On the face of it you'd suppose it would be exactly the other way around—that exposure of Russian perfidy would add to the ordinary American's determination to face the Russians down, here and now.

But Mr. BUSBEY, whose record for speaking with facts in hand is already established, charges that the truth would smack down the Truman administration at least as hard as it would smack Stalin, and in passing save the United States taxpayers' conscience in refusing more billions for Europe.

This looks like deep stuff. If the State Department's secrets are not what Mr. BUSBEY says they are, here's a great chance for State to destroy one of its most feared congressional opponents. Will it risk the chance?

Fear Is Un-American

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 9, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oberlin (Ohio) Times of December 4, 1947:

FEAR IS UN-AMERICAN

Last week's action in the House of Representatives, where the Thomas committee's contempt citations against 10 alleged Hollywood Communists were upheld by a vote of 346 to 17, is symptomatic of something pretty unhealthy in the Nation's state of mind. It is hard to believe that the congressional vote accurately represents a cross section of American opinion. Assuredly it does not represent the opinion of intelligent Americans who have examined the issues involved. (Sunday's Plain Dealer report of the Gallup poll revealed that.) But it does show a disturbingly prevalent tendency to stay with the herd, to conform—no matter how great the sacrifice in personal judgment. (We are happy to report that WALTER B. HUBER, representing the Fourteenth District, was 1 of the 17 who refused to yield to the popular pressure and voted against the committee citations.)

Are we being true to American principles by permitting the existence of a committee which, in the words of the New York Herald Tribune, "operates in defiance of the way of life it seeks to serve"? Are we setting for the world a morale-building example of courage, faith in democracy, and regard for human rights?

Brooks Atkinson, New York Times columnist who won the Pulitzer prize for a series of articles on Russia (and for which he won no acclaim in the Soviet press), gave some answers to these questions in a recent article in the Times magazine. Although we should like to quote the complete text, the following portions must suffice.

"A vague kind of fear permeates the country now. It is eating away at liberal institutions and influencing our policies at home and abroad. It poisons our capacity to think clearly. We are afraid of Soviet Russia, which, ironically enough, is afraid of us. If the gods pay any attention to these flutters of panic that skip across the world, they must enjoy this foolish spectacle of two powerful nations shaking in their boots at each other and competing with each other in a tempest of rancor.

"Fear is a treacherous factor in situations that require decision and action. It wrecks normal judgment. If the Thomas committee wants to find a real adversary in its search for un-American activities, it might investigate the growth of fear in this country. On the evidence of history fear is un-American. America was settled by foreigners who were not afraid of work and danger. At crucial moments America has been inspired by men who were not afraid of freedom. * * *

"Action motivated by fear has recently appeared in another branch of the executive arm of the Government. * * * A few weeks ago Pierre Courtade, correspondent of the Communist l'Humanite, of Paris, applied for a visa to report the meeting of the Assembly of the United Nations. * * * After a mysterious delay, the State Department finally gave him a limited visa with the proviso that he must not peek at the rest of the United States.

"We spend a good deal of time wrangling with the Soviet Government about freedom of the press and the moral right of newspapermen to travel anywhere in search of information. But in the Courtade case the State Department, assuming authoritarian powers of discretion, applied to a foreign journalist the same attitude we condemn in the Russians. Every nation guided by fear inevitably ends up in the same blind alley.

"The Un-American Activities of the House Committee on Un-American Activities also come from group hysteria. Fortunately, they are legal, though unenlightened by the philosophy of the Bill of Rights. * * *

"People in high places in American life are scared, chiefly of Soviet Russia, and are willing to undermine American institutions by informing on their neighbors and recommending that an unpopular political party be declared illegal. * * * In fact, they are willing to try a little totalitarianism to preserve democracy.

"Why do we let Russia inhibit our freedom of action and poison democratic principles at home? For this is the time to be not less democratic but more democratic than ever, to have faith in our own system and eagerness for progress. And if we base action on fear of Russia we shall be just as guilty as Russia is of blocking the avenues to eventual understanding."

That last phrase, "eventual understanding," raises another question. How long will free expression be granted to the conviction that eventual understanding is possible? How soon must we expect that idea, also, to go on the "subversive" list?

It so happens that we have long considered international understanding and cooperation for peace not only possible but humanity's last hope as well. So—when the Times ceases to speak out for understanding, it will be much too late to run for cover.

Address of Hon. Harold Knutson, of Minnesota

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 9, 1947

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Representative HAROLD KNUTSON, of Minnesota, before the Associated Industries of Nebraska, At Hastings, Nebr., on September 18, 1947:

Mr. Toastmaster and fellow Americans, I am very happy to be at Hastings this evening to address this splendid gathering, and particularly so because Hastings is situated in the district of my good friend and coworker on the Ways and Means Committee, Representative CARL CURTIS.

As you know, Mr. CURTIS is now serving his fifth term in Congress and in that comparatively short period has attained a position of leadership in the House of Representatives. As a member of the Ways and Means Committee he has shown unusual diligence and has acquired a grasp of taxation second to none. In addition to taxation Mr. CURTIS has devoted much time and attention to irrigation matters, and as I recall, there are several projects now under construction in his district, all of which have been started since the war.

As a member of the Ways and Means Committee he has sponsored the following proposals:

1. The promotion of synthetic rubber through tax deferential.

2. To treat money spent by farmers and landowners for soil conservation as business expense and a proper deduction from income.

3. Extension of social security so that the self-employed may have old age and survivor insurance on an optional basis.

4. Extension of social security to cover public employees if the State so exercises an option.

Other distinguished Nebraskans to have served on the Ways and Means Committee are William Jennings Bryan, Charles H. Sloan, and Ashton C. Shallenbarger.

As chairman of the Ways and Means Committee of the House of Representatives, I am going to make two statements by way of my opening remarks:

1. President Truman, a captive of the Communist-dominated CIO, is not going to write the tax program for 1948.

2. Your Republican Congress will pass another tax reduction bill as soon as we reconvene next January and, with the help of the more constructive of the minority, we will pass the bill over the President's veto.

When we failed, by just a few votes, to override Truman's veto of the second tax bill in the Senate in July, some of us felt we would be required to take the issue to the American voters in November of 1948. But during the past few weeks the Members of Congress have been talking to their folks at home. Republicans and Democrats alike reach me almost daily with identical reports—the American people want relief from the terrific burdent of wartime taxes and they want this relief now. So we will give them action in January and apply the reduction to the entire year of 1948.

I expect President Truman to veto tax reduction for 1948. The CIO will demand it of him, and he is their man. If he deviates from the CIO-Communist line on fiscal policy, he knows Henry Wallace is prepared to take over the political leadership of the element on whose support he is completely dependent if he has any political future. That explains why, as stated, Truman is a captive of the CIO. The American people, and certainly your Republican Congress, do not intend to permit the CIO to dictate the Nation's fiscal policy.

I believe if Harry Truman were a freeman the American people would have had a substantial tax cut for the current year. Unfortunately he is not free. He must of necessity stay on the CIO line, and it is must unfortunate for our country that in doing so he follows the peculiar and disastrous CIO thinking on fiscal policies.

The Republican tax program provided 30,000,000 low-income taxpayers with a 30 percent reduction, almost one-third of their tax burden. It would give fifteen to eighteen million in the middle brackets a 20 percent reduction and to some 1,000 taxpayers in the highest brackets it would have given a 10½ percent reduction. These 1,000 taxpayers now pay 87 cents in Federal taxes out of every dollar of income, and under our program they would still give their Federal Government 76½ cents out of every dollar of income and, in addition, pay their local and State taxes.

And what was the objection to this program by the CIO and its Communist philosophers and economists? They mobilized their sympathizers in Congress—the remnants there of the New Deal rubber stamps—and their fellow travelers in private life, as well as their kindred souls on the Federal pay roll, and waged a great propaganda campaign of misrepresentation. They demanded the lower income groups be relieved of all their tax burden and even higher taxes be extracted from the middle and upper brackets. To some it was merely an opportunity for cheap demagoguery—and we have some people like that in public life. But to the Communists and the CIO it was basic to their true aims.

The Communists and some CIO leaders do not want our private enterprise and capitalist system to survive. They know our American system cannot endure without private capitalists. While the savings yielded by the lower income groups can be channeled into securities bearing a low element of risk, the high capital risks of expanding enterprise—that is to say, of progress—can only be assumed by individuals or institutions having the financial strength to withstand the losses that must inevitably accompany the profits of venturing capital. America today needs the stimulant of venture capital. But the pity is that President Truman—just because of the peculiar political fix he is in—played the CIO game all the way.

After the Congress had adjourned, the President belatedly confirmed the Republican contention that our surplus for fiscal 1948 will be billions greater than the estimate he stuck to from January until late August. Our congressional experts were right in their estimates. Truman and the CIO economists were wrong. We could have cut taxes for this year and made a substantial payment on the national debt, except for the CIO influence on the White House.

Last November the voters repudiated the CIO and its Communist appendages. This basic determination is more pronounced in this country today than it was a year ago. And in November of 1948, Truman—the CIO captive—will not carry as many States as Cox carried in 1920. You can't play the CIO-Communist song any more in these United States and expect the American people to sing for you.

This recess of Congress has been a very fortunate development for our country. Your Representatives and Senators are getting the feel of things at home and the results will be very astonishing to the creators of crises. That is why the top boys in the State Department are hurrying to Paris to dampen the expectation over there that Uncle Sam intends to turn over the United States Treasury to them. The American people are saying:

"We want to know the details of this so-called Marshall plan and what it is going to cost. We demand relief from our excessive wartime tax burden so that our economy can continue strong and dynamic. We want our assistance to other countries keyed to our own resources and the willingness of the peoples of the other countries to go to work. We don't believe 60,000,000 producers in this country can sustain the entire world."

That is what Congress is hearing first hand from the American people. Truman will appreciate that next January.

As you are only too well aware, the question of taxation cannot be divorced from that of public expenditures. The most difficult financial problem confronting us today is how to reduce public spending. Some of you may, like myself, be old enough to remember the denunciations for extravagance heaped upon the first billion-dollar Congress—one that spent a billion dollars, not in one year but in two. How times have changed.

If it is deemed desirable to reduce the budget to manageable proportions, we should look even more to the elimination of improper governmental activities than to the trimming of expenses in each bureau or department. Over and over again, we should ask the question: Are there not private organizations which could and would perform this service more efficiently and economically?

This question ought certainly to be raised in the case of all the agencies extending Government credit: The Farm Tenant Office, the Rural Electrification Administration, the Social Security Board, the Federal Works Agency, the National Housing Agency, the Railroad Retirement Board, the Tennessee Valley Authority, the Veterans Administration, the Federal Security Agency, the United States Maritime Commission, the War Shipping Administration, the Smaller War Plants Corporation, and various insurance and retirement funds.

At present, of course, the dominant item in the budget is the expenditure for national defense. Until this item of expenditure is reduced drastically, the Federal tax burden is certain to be oppressive. But, under present circumstances, we dare not disarm.

Are we not, however, faced with the unpleasant fact that, just as France spent 20 years and billions of francs strengthening the Maginot Line, only to see it collapse in one day, we may spend 10 or 15 billions a year for several years on our Army and Navy, and yet have our Nation destroyed in a single night in a terrific atomic holocaust? Does it not follow that an essential prerequisite to any sound financial program for the future is the establishment of effective international control of armaments, and especially of atomic energy?

If our enemies, by persistent stalling, can succeed in postponing for 2 or 3 years action in this direction, it is not improbable that few of those present will have any occasion to worry about terrestrial affairs, and the Government at Washington will be heard of only in history books—if the reading of such books is still permitted.

If, regardless of immediate expenses, we were wise enough to use our present preponderance of power to force the immediate establishment of international control of armaments, our future expenditures for defense might be safely cut to a fraction of the present budgetary allowance for that purpose.

Under such circumstances the most troublesome item in the budget would be payments on the public debt, both principal and interest.

We have a situation where we are now collecting 75 percent of all revenues from income taxes, corporate and individual. If we could be assured of a uniformly level degree of prosperity for a considerable number of years, the present arrangement would be ideal, but, unfortunately, in time of depression there is a rapid falling off in revenue from that source and it would be highly desirable if the Congress can work out a tax plan that will at all times produce the needed revenue.

In May the Ways and Means Committee began hearings on the very important subject of tax revision and revision of the entire revenue code. At the outset we named a tax study committee, consisting of 11 of America's outstanding tax experts, to help us in the great task, and I am happy to say that the progress already made is far beyond our expectations.

Early in the next session of Congress we hope to have ready for introduction in the House of Representatives a general tax bill that will mark a new milestone in the economic history of America. As a matter of fact, the job should have been done 10 or 15 years ago. So we will have two tax bills next year and we will pass a "quickie" in January patterned after the personal income-tax-reduction bill Truman vetoed twice. This will be followed by the general bill.

You will realize the great need for revision of the revenue code when I remind you that under the Roosevelt regime 18 tax laws were passed, each one slapped on top of the other until the whole thing looked like a suitcase that had traveled around the world.

Progressivity in taxation conflicts with American ideals of fair play. The theory of our competitive free enterprise system is that the rules of the game are set by government. Every individual is expected to do his best to win, while abiding by these rules. The most skillful players are entitled to their winnings, and what they do with their gains is not the business of anyone else—provided, of course, that such winnings are not used antisocially.

But, under our present tax laws, the Government is likely to seize the lion's share of the winnings. When it does so, it makes a travesty of the rules and, in effect, endorses the communistic doctrine that the whole institution of private property is antisocial and that outstripping one's rivals is criminal.

We are told that the free-enterprise system is outmoded and must give way to what the do-gooders are pleased to term the "new order." Their arguments are that the free-enterprise system is a failure and wholly inadequate to our times.

If their contentions be true, how does it come that in the darkest hour of the great contest to destroy nazism and fascism the world looked to us to become the arsenal of democracy, also the banker for the Allied side?

I cannot yet understand how it was possible for a decadent system of capitalism to convert from peace to war, almost overnight, and produce the endless and limitless quantities of planes and tanks, trucks and tractors, guns and shells, precision instruments, not to mention the required supply of food and clothing, all so desperately needed in the Battle of Armageddon.

We even had to step in and save Russia from being crushed and destroyed. If what those who would destroy our soul tell us be true, it should have been in the reverse, and Russia should have done the saving, but she couldn't do so because it takes free initiative to do that kind of job.

We are in general agreement, I think, that it is most fortunate for the world that there yet remains one country—the United States of America—which has its foundation in the free-enterprise system, and has the money to give and lend for the relief and rehabilitation of the less fortunate countries of the world.

True we put everything that we possessed into that war. We felt then, as we feel now, that no sacrifice was too great when made to preserve our liberties, our free institutions, and our way of life, to the end that our children and their children may enjoy the benefits and advantages of our historic and traditional institutions, our free-enterprise system, our representative form of government, and the many other blessings with which we have been so generously endowed.

You will recall that we had an election last November, when 50,000,000 voters marched to the polls and by an overwhelming majority issued a mandate to the President and to Congress that the Government of the United States should be returned to the people; and that the Constitution be reinstated as the organic law of the land.

Unfortunately, we failed to reckon with the bureaucratic lust for power, and individual stupidity, as witness President Truman's two vetoes of the tax-reduction bill and the labor measure. At the November election the American people, by a preponderant majority, declared that they wanted relief from the staggering tax load that had been imposed upon them as a war measure. They demanded a stop to wasteful spending; they also emphatically registered their will that the power of racketeering labor leaders be curbed, if not destroyed.

The Constitution of the United States has conferred upon the Congress the sole power to levy taxes, yet it was vetoed by a President who has little or no conception of his constitutional limitations. I charge that President Truman's vetoes were a usurpation of the sole authority of the Congress to impose taxes. His veto of the second tax-reduction bill compounded the wrong.

You will agree with me, I am sure, that one of the major causes for the labor unrest is the number of tax fingers that dip into the

pay envelope. The workingman naturally computes his wage as being what he takes home, after all deductions have been made. The result is a constant demand for increase in wages and every increase granted means an increase in the price of what we buy, and that creates a vicious inflationary spiral that can conceivably get out of control.

On the other hand, tax reduction will increase wages, but not prices.

I am reliably informed that a large midwestern manufacturer has figured that H. R. 1 would have been equivalent to an average 3½-cents-per-hour wage increase for his employees and that is not to be sneezed at.

Canada and the United Kingdom have already each given their people the benefit of a substantial reduction in personal income taxes and on July 1, a second decrease, amounting to as much as 29 percent, went into effect in Canada. But we, the richest people in all the world, are told by our President that it would not be safe to increase the income of the American people through tax reduction; that the better method is through wage increases. Have you ever witnessed a similar example of crass stupidity and unbridled demagoguery?

When it comes to spending there is little to choose from between Mr. Truman and Mr. Roosevelt, but if I were to award an accolade it would have to go to Mr. Truman because he has made Roosevelt look like an amateur when it comes to spending. I base that assertion on the fact that 2 years after VJ-day he sent a peacetime budget to Congress that is 400 percent bigger than any peacetime budget ever submitted by Mr. Roosevelt.

The President insisted, again and again, that his estimate of $37,500,000,000 is the rock-bottom figure for the fiscal year 1948. It is enlightening to compare this record of decline from the war peak with that established after the First World War. After that earlier war the maximum Federal expenditure was made in the fiscal year 1919, when the total was eighteen and one-half billion, or about one-half.

Now a word about the Hartley-Taft labor law which the Congress passed over Mr. Truman's veto. Not one of labor's legitimate rights will be denied by the law which the Republican Congress has enacted. Labor's right to strike for legitimate purposes will be preserved; so will its right to free collective bargaining by agents of its own choosing. But the law placed some much-needed restrictions and curbs upon union labor leaders—all intended for no other purpose than to protect the public against widespread abuses of power and the evils inherent in the exercise of that power. The new labor law returns to the rank and file of labor control of their union affairs.

You will agree, I am sure, that the need for corrective labor legislation was even of greater importance than tax reduction. We have had our fill of strikes since VJ-day and the need of the country is for labor tranquility and maximum production.

It took such strikes as the railroad tie-up of a year ago, John L. Lewis' several coal strikes, the New York truck strike, the Pittsburgh power strike, not to mention a multitude of lesser strikes, to convince Congress and the country that we were nurturing a government within a government, and I am not so sure that at times the inner government, made up of labor leaders, was not as strong, or stronger, than the Federal Government, and I say that because time after time labor leaders have defied the President and the Congress.

However, an aroused people compelled Congress to act. The Taft-Hartley law is deficient in several respects in that it permits industry-wide strikes and recognizes unionized shops. It will need some clarification.

Industry-wide strikes are un-American and indefensible. As a matter of fact, they constitute a canker sore on our economy. I need not go into detail with you people on that score because the iniquity of the thing is so flagrant as to be apparent to all. The union shop has no more place in our scheme of things than has the closed shop. Both are half brothers born out of wedlock.

I well recall during the late war constituents writing to me and complaining that they could not secure employment on war work until they joined a union. Many members of Congress tried to do something about it, but the labor leaders were so firmly entrenched in the administration that our efforts got us nowhere.

I ask you, fellow Americans, if this is still a free country? If it is, why should it be necessary for an American citizen to pay tribute to a labor union before he can secure employment? I consider the closed shop and the union shop a clear violation of articles 9 and 10 of the Bill of Rights.

If we are to maintain our economy on a sufficiently high level to meet all of our needs, we must have maximum production. For years labor leaders have insidiously worked to curb the output of the individual. Even during the war, when the cry was for more and more of everything, we found instances where union leaders were deliberately trying to slow down the production of their own coworkers with a remark something like this: "What's the hurry, buddy; are you trying to win the war alone? Take it easy, pal." I do not like to think of what would have happened to individuals who preached that kind of doctrine during the war had they lived in Germany or Russia, but under a representative form of government I suppose we have got to take it and grin.

All over the country building operations are retarded because of excessive building costs. Bricklayers, plasterers, carpenters, and other building-trade groups are not alone demanding wages so high as to throttle construction, but, to make matters worse, they are only turning out a fraction of the work that they did a few years ago.

The same holds true in industry. I seem to recall a statement by young Henry Ford to the effect that with 30 percent more workers employed, Ford production was down 25 percent.

The present high prices are in a large measure due to high production costs and excessive exports of nearly everything we need.

Fellow Americans, I ask you in all sincerity how long can this continue without bringing on economic paralysis?

God knows I want to see the workingman get as much money as he earns, and I rejoice with him in many of the gains he has made over the years. I, myself, have carried a card in the typographical union for more years than I care to recall, so I know somewhat of the benefits that have accrued for the workingman by being organized, but the situation has gotten out of hand.

The average union member has little or nothing to say about how his union is to be conducted, and indications are that the rank and file are getting fed up with their leadership. I think that was demonstrated at Detroit more than a year ago when Mayor Jeffery was reelected over a man named Frankensteen, a vice president of the Automobile Workers Union. You will recall that Mayor Jeffery was elected by a 50,000 majority, and to me that was most significant, because the automobile workers can elect anyone they wish in the city of Detroit.

In late weeks there has appeared in many publications of national circulation a most timely advertisement by Warner & Swasey, of Cleveland, entitled "You Don't Negotiate Wages—You Produce Them." This advertisement may have escaped some of you, so I am going to take a few moments to read it.

"If wages were a matter of negotiation we'd all negotiate ourselves a million dollars a year. But it isn't that simple.

"You produce something; it is sold. That selling price has to include the cost of the material you used; it has to includes taxes to support your Government; it has to include a small—a very small—amount needed to keep your company in business. The rest is your wage.

"If you produce more, there is obviously more for you. If you produce less, there is, of course, less for you.

"You decide your wage by your production. And you decide something more—the security of your job. The less you produce, efficiently, the more it costs. The more it costs, the fewer people there are who will buy it. The fewer people who buy it, the less demand for your work—the less secure your job. You are seeing that right now in this buyers' strike against high costs.

"Prices and wages and job security are a question of efficient production. And that is your responsibility."

I have gone into the labor question in some detail because I consider it the paramount question confronting us today. It involves the workers, who are being exploited, just as much as it does the employer and people in general, and it is unfortunate for the country as a whole that President Truman has failed to recognize and take cognizance of a situation that at various times has threatened our economic stability. If he thinks that his veto of the Taft-Hartley bill will win him support from the rank and file of labor, I fear he will become a very much disillusioned man when the votes are counted in November of '48.

For months the New Deal propaganda bureaus have frantically sought to sell the American people on the idea that the first session of the Eightieth Congress was a do-nothing Congress. Based upon my more than 30 years' service in the House of Representatives I say to you that this is a foul falsehood. I cannot recall a Congress that has accomplished so much in such a short time.

The Republican-controlled Eightieth Congress came into being on January 3 and our first act was to streamline the organization in conformity with the Reorganization Act passed by the late Congress. In the process it was necessary for us to squeeze 49 committees into 19 committees and at the same time give due regard to the seniority rights of the older Members.

We had to set up research staffs for the various committees and you people know that it was not an easy matter to pick trained and experienced men for the various staff positions. In the case of the Ways and Means Committee, we have not yet been able to find a suitable individual for one particular position, notwithstanding that the job pays $9,000 a year.

The first session moved carefully, but with as much dispatch as was advisable, to fulfill the Republican Party's campaign pledge to eliminate all that portion of the huge bureaucratic machine which is not absolutely essential.

Congress made much progress in that direction without impairing a single essential governmental function or service.

We promised the American people to drastically reduce the costs of Government which, under the New Deal, have assumed Frankenstein proportions. Despite the great lobbying activities of an entrenched bureaucracy, we saved you some $4,000,000,000. Truman fought us at every step.

One of our most important concerns must be the maintenance of existing and the creation of new jobs, dependable income, and well-being for the many by preserving and promoting the economic motives and incentives of the few.

At this point may I remind you that it requires an investment of over $8,000 to create a new job. The average person who receives a small income does not create the job through which he gets that income. Someone else has made that job possible through his decision to provide capital, or assume a business risk, or take on managerial responsibilities. Any plan of tax revision which does not give at least proportionate recognition to this basic reality of our economic system would be gravely deficient.

If our economy is not to remain static, we must provide proper incentives for expanding existing industries and businesses, and the creation of new ones, both of which would make more jobs, greater production, lower prices, and an expanded market for finished and raw materials.

I am one of those old-fashioned Americans who believes that in order to have a sound and expanding economy all investments should return at least 5 or 6 percent over and above taxes, cost of operation and depreciation. That should be true of the farm, the shop, the factory, the railroad, and all other activities.

Americans in all walks of life should cherish and cling to the principle that ours, being a free country, there should be the least interference on the part of the Federal Government in our lives.

We firmly believe in the law of supply and demand, which should at all times be permitted to operate freely, and only with such restrictions as are absolutely necessary to fair dealing.

We utterly and completely reject the theory that those with vision, courage, ambition, and energy should be held back to time their progress with those who have been less generously endowed.

Life in America should be geared to give one and all full opportunity according to one's talents. More than that no one can ask for, less than that would be un-American.

Above all, we reject the principal of government that would tax success to a point of diminishing returns.

Taxation for the necessary needs of government, yes; taxation to penalize success, a thousand times no.

Fellow Americans, I am greatly disturbed, as I am sure you are, over the loose talk that we hear about a prospective depression. Let me say to you with all the candor and force at my command that there is absolutely no foundation for such expressions. The situation today is wholly different from what it was back in the late 1920's. Then we had a run-away market and no backlog of orders. Our credit system was overextended and we were skating on mighty thin ice.

Today the situation is wholly different. Our banks are bursting with deposits. The manufacturer has a backlog of orders. We need everything from shoes to automobiles, household gadgets, watches and clocks, rolling stock, farm and factory equipment, and so I could go on and enumerate indefinitely.

If we get a depression it will be altogether due to the old New Deal defeatists in Washington and their irresponsible and malicious talk. A depression will only come when we lose our heads, our faith in America, and in the future. I believe that with intelligent leadership we can work out a program that will continue the present level of prosperity indefinitely.

Oh, we must have some readjustment, of course, but there is a vast difference between such readjustment and a depression.

Early in the New Deal we were told that we had reached the outermost horizon of our economy and that we need look for no further expansion or development. Now we know how loosely and ill-advisedly they spoke. Then our national income was about $40,000,000,000 a year. Now that income has increased to about $176,000,000,000, and while I am well along in years, I confidently expect to live to see a national income of 225 billions.

America is a land without present economic horizons. There is no limit to where we can go if we have the will and the industry. Today we stand on the threshold of the greatest era of development in all the history of mankind.

What we need, my friends, is a spiritual rebirth of the American people. We must recapture that fine old American spirit of self-reliance that made America what it is.

We must get over the idea that the Government owes us a living. I freely concede that there are certain fixed obligations to the people that are incumbent upon the Government and which should not be avoided. On the other hand, the people of America also have certain obligations to their Government. I have never conceded it to be the duty of the Federal Government to act as a nurse or Santa Claus to all and sundry and I feel, with my whole being, that the American people must stop looking to Washington to do the things for them that they should do for themselves.

America was not builded and made great by Washington bureaucrats and Government subsidies. Rather, our great and glorious country is the product of industry, freedom, opportunity and personal initiative.

The brave men and women of the East, who loaded all their worldly possessions into covered wagons and turned their faces resolutely and hopefully to the setting sun, braving the hidden dangers of the forests; who in 150 years transformed a vast wilderness into the richest empire on earth—they were the ones who builded America.

Not only did they wrest the empire west of the mountains from hostile Indians, they built roads and railroads, opened up farms, established schools and churches, and created thousands of modern and prosperous cities, villages, and hamlets where the standard of living is so high that it is the envy of all the world.

When the early pioneers set out on that great migration they cut all ties with the old home, and what they did and what they accomplished was done without Government subsidies, Government controls, or even governmental planning. In short, they gladly underwent the tribulations and the trials of their brave and hardy forefathers, who had landed on Plymouth Rock two centuries before.

While their worldly possessions were few, they had boundless faith in the future of America and a supreme confidence in God and in themselves. That is what America needs today.

They demonstrated to an admiring world what the American people can do if but given a free hand.

Today that area which we proudly call the bread and butter basket of the world holds as many opportunities as it ever did, but in order to bring these opportunities into fruition we must be released from the stranglehold in which we are held by a grasping and a thoroughly selfish bureaucracy which seeks to control our every act.

The venturesome spirit which made America now lies dormant, because the incentive to branch out has been repressed and suppressed by excessive taxation and oppressive regulations. The big job before Congress and our people, as I see it, lies in reawakening the spirit that was America in our earlier days, and this can only be done by permitting the American people to retain for themselves a fair share of the wealth that they create.

Fellow Americans, I have boundless confidence in the future and in the destiny of America.

I believe we now stand on the threshold of the most wonderful era in all the history of mankind.

Let us here and now resolve to break the last shackles that a bureaucratic octopus has fastened upon us. Let us recognize the necessity of mutual sacrifice for the realization of the "last best hope on earth"—the freedom and dignity of the individual man.

Let us also resolve that while Washington shall have every dollar that is needed for the necessary conduct of government, and for our national security, there shall not be 1 penny for extravagance and waste.

America no longer has money to throw away. Henceforth let us think of America first. Then we will again become a happy and prosperous people. Let us ever remember that only a prosperous America can help rebuild a war-devastated world. Indeed, a solvent America is necessary to the rebuilding of that world.

The issue is clear. Shall we cling to the blessings with which we have been endowed by a beneficient providence and to the institutions and traditions handed down from the founding fathers? In arriving at a decision it is well for us to remember that we are but custodians of the blessings and benefits that we have inherited, as they also belong to the generations yet unborn which are to follow us.

The issue is clear-cut, and let no one make any mistake about it. In short, shall we choose to remain a free people, whose roots are deeply grounded in the tenet that there can be no substitute for personal integrity, individual initiative, and collective industry, or shall we substitute therefor a philosophy that would destroy the soul and enslave the individual? The choice is ours to make, and I pray the God of our fathers that we will not repeat the same mistake that so many other peoples have made.

Perhaps I can best illustrate what I have in mind by quoting an Englishman, Herbert Casson, of London, on private enterprise:

"The power to choose the work I do;
To grow and have the larger view;
To know and feel that I am free;
To stand erect, not bow the knee;
To be no chattel of the state;
To be the master of my fate;
To dare to risk, to lose, to win;
To make my own career begin;
To serve the world in my own way;
To gain in wisdom, day by day;
With hope and zest to climb, to rise—
I call that private enterprise."

In Commemoration of the One Hundred and Sixtieth Anniversary of the Ratification of the Federal Constitution by the State of Delaware—"The First State"

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. BOGGS of Delaware. Mr. Speaker, to all Americans the date December 7 has a great significance which shall never be forgotten. On that date in 1941 the infamous attack was made on Pearl Harbor by the Japanese.

However, long before 1941, December 7 was a date of the greatest historical significance to the people of the United States. It was on December 7, 1787, that the State of Delaware ratified our Federal Constitution; and since it was the

first of the Thirteen Original States to do so, Delaware became, in fact, "the first State." In the intervening 160 years the State of Delaware and its citizens have cherished and protected this historical position and have continuously had a prominent part in the tremendous growth and development of this Nation.

Last week, in proclaiming December 7, 1947, as Delaware Day, His Excellency Walter W. Bacon, Governor of Delaware, stated in part:

Whereas on December 7, 1787, Delaware became the first State to ratify the Federal Constitution; and

Whereas in this year, which marks the one hundred and sixtieth anniversary of that historical event, the peace- and liberty-loving peoples of the earth are again engaged in a sincere effort to establish peace throughout the world:

Now, therefore, I ask the citizens of the State of Delaware to pay tribute to the part Delaware played in the establishment of the basic law of our Nation and to those men and women of Delaware who have contributed to the honor and glory of their State from the early days of the Colonies down to the present time.

As December 7 this year fell on a Sunday, official exercises commemorating the one hundred and sixtieth anniversary of Delaware's ratification of the Constitution will be held tonight in the capital city of Dover. At that time the principal address will be delivered by a prominent member of one of Delaware's oldest and most highly respected families, the Honorable Richard S. Rodney, a judge of the United States District Court for Delaware.

A leader in the early colonial and revolutionary periods, the State of Delaware remains today a leader in many phases of our national existence. In broad fields of agriculture and industry, Delaware's productive activities are known and heralded throughout the Nation—and in many specific fields throughout the world. In recognition of its position of leadership, wealth, and productive importance, Delaware is widely known as the Diamond State—small but of tremendous value.

It should also be remembered that within its boundaries there exists today one of the oldest institutions of higher education in our land. At Newark, Del., there is the University of Delaware, which had its inception as an academy in 1743 and which, in the 204 years since that date, has continued to be a center of knowledge and learning.

From the days of Charles Thompson, permanent Secretary of the First and Second Continental Congresses, and Caesar Rodney, whose historic all-night horseback ride from Dover to Philadelphia enabled Delaware's delegation to the Constitutional Convention to cast its vote for independence, to the present day, Delawareans have served this Nation nobly and gained renown in many fields of endeavor. Among such Delawareans, past and present, are: Dr. James Tilton, called the father of the Army hospital service; Commodore Thomas McDonough, hero of the battle of Lake Champlain in the War of 1812; John M. Clayton, who was Secretary of State under President Taylor and coauthor of the famous Clayton-Bulwer Treaty between the United States and Great Britain; Thomas Bayard, Secretary of State under President Cleveland, and our first Ambassador to England; John Bassett Moore, noted authority on international law who died only a few weeks ago; Gen. Thomas Holcomb, former Commandant of the United States Marine Corps and now Minister to the Union of South Africa; George Messersmith, former Ambassador to Argentina; Josiah Marvel, Jr., now Ambassador to Denmark; Howard Pyle, noted artist and author; Henry Seidel Canby, author, editor, and critic who founded the Saturday Review of Literature; and Emily P. Bissell, who inaugurated on December 7, 1907, the antituberculosis Christmas seal drive which is now a national institution. There are many others.

Today Delaware, the agricultural and industrial "diamond," is widely recognized as the explosives and chemical capital of the world. It is also the capital of the broiler industry in the poultry field, as well as the center for the manufacturing of vulcanized fiber. Eighty percent of the world's vulcanized fiber is produced in America, and 60 percent of that is manufactured in Delaware.

Other fields of industry in which the people of Delaware play a prominent part are: Leather; textiles; plumbing fixtures; castings of malleable iron, brass, bronze, and manganese; paper; ships; fish oil; and a variety of others too numerous to mention in such a brief accounting as this.

In addition to poultry production, Delaware is important agriculturally for its prosperous and expanding production of fruits and berries, grain feeds, vegetables, and dairy products. Delaware is also studded with canneries, specializing mostly in poultry and such truck crops as tomatoes and corn.

Widely known as a summer vacation and resort area, Delaware also has large commercial and pleasure fishing fleets.

Thus, it may be seen—from even such an inadequate summary as this—that Delaware, "the first State," although small in geographical size, has always been, and, I am confident, will forever continue to play, a large and important part in the history, development, and progress of the United States of America.

Out-Patient Treatment and Hospitalization of Disabled Veterans

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 9, 1947

Mr. BROWN of Ohio. Mr. Speaker, The Ohio Department of the Disabled American Veterans on December 6, 1947, adopted a resolution with reference to the deplorable conditions in connection with the out-patient treatment and hospitalization of wartime disabled veterans. This resolution is as follows:

Whereas the Veterans' Administration's out-patient medical service and hospital care for veterans who were wounded or disabled as a direct result of war service is nearing the point of collapse, the present projected work load interpreted in terms of money requirements, indicating a shortage in the Veterans' Administration of from 32 to 40 million dollars—for the out-patient phase of the medical program alone—the present instructions requiring the Ohio offices of the Veterans' Administration to further curtail the medical program—to the extent necessary to remain within the funds allotted; and

Whereas out-patient medical service includes medical treatment at home, treatment at the offic of a local physician, and emergency hospital care, medicine, prosthetic appliances, and so forth for war service-connected disability; also physical examinations which are necessary to determine eligibility to monetary benefits, and entitlement to medical and dental care; and

Whereas in order to keep within the limited funds available, this service is being provided on a priority basis, physical examinations which are essential to determine eligibility to benefits and service being at the bottom of this priority list; and

Whereas to further curtail this service, medical aid to veterans with pending claims is to be discontinued at the end of this month, regardless of prima facie evidence of entitlement; and

Whereas huge back logs are increasing; daily, veterans travel authority and even purchase of needed medicine sometimes being deferred—because of lack of funds; Ohio fee basis physicians by the score having withdrawn from the Veterans' Administration medical program because of red tape and the long delay in obtaining payment for service rendered, many of these physicians preferring to administer to war-time disabled veterans as charity patients without cost; and

Whereas the Veterans' Administration hospitals in Ohio are filled with waiting lists upward to in excess of one thousand at Dayton; many municipal and private hospitals in Ohio cities and notably Cincinnati, are refusing to accept wartime disabled veterans for treatment on Government authorization and are demanding cash guaranty by the veteran before admitting them, regardless of the emergency, this being due to the long delay in the payment of bills and the low Government hospital fee schedule which is outdated and does not cover current cost of medical care; and

Whereas it is a most unbelievable thing that this Government would single out America's service disabled, those who were wounded and disabled as a direct result of war service, and for the sake of economy deny these men and women the necessary medical care to relieve the ravages of disease and disability incurred by serving the Nation in time of war on the battle fronts of the world; and

Whereas this situation is a most serious one, and even grave, and is of much greater importance than the sending of billions of dollars overseas for the care and rehabilitation of Europe's millions: Now, therefore, be it

Resolved by the Ohio Department of the Disabled American Veterans—

(1) That an appeal be made to the President of the United States and to the Congress for a deficiency appropriation sufficient to maintain adequate medical service for the Nation's wartime disabled.

(2) That an appeal be made to the Administrator of the Veterans' Administration to consider temporary reallocation of funds pending action by the President and the Congress, and that the Administrator also consider closer supervision of the medical service with a view of improved efficiency; be it further

Resolved, That copies of this resolution be mailed to the President of the United States,

to the Administrator of the Veterans' Administration, to the Members of Congress from Ohio, and that a copy be given to the press.

Adopted by the executive committee, Disabled American Veterans, department of Ohio, this 6th day of December 1947.

ALBERT L. CROY,
Department Commander.

Mr. Speaker, the Disabled American Veterans, commonly referred to as the DAV, is composed exclusively of those who were wounded, or disabled as a direct result of war service, and is the only organization of its kind ever to receive a charter from the Congress of the United States. The DAV in Ohio has rendered a most valuable service to this particular group of veterans and to the widows and orphans for more than 25 years. During the last fiscal year ending June 30, 1947, the representatives of this organization at the offices of the Veterans' Administration in Ohio, arranged for 2,971 hospitalizations, obtained 4,745 physical examinations, received 27,571 letters from veterans regarding their claims, addressed 27,703 personal letters to veterans regarding their claims, personally interviewed 19,517 claimants, made 5,602 personal appearances before the rating boards of the Veterans' Administration for veterans, and reviewed 27,833 claims files.

The Ohio department of the DAV is leading all States in membership in the organization for the tenth consecutive year, has more members than the combined total of 23 States, and more chapters than the combined total of 15 States. Approximately 60 percent of the entire membership in Ohio, are either part-paid or fully paid life members. More than 30 percent of the entire membership in the State are fully paid life members. This is a record that is unequaled by any State organization in any State.

The officers responsible for this great record are Mr. Albert L. Croy, the present State commander of the DAV in Ohio, who, I am proud to say, is a fellow editor and publisher, publishing two newspapers in Van Wert County, and who has long been an outstanding leader in veterans' affairs; and State Senator Albert L. Daniels, the State adjutant and treasurer of the Ohio DAV, who has been the most able representative of my own State senatorial district in the Ohio Legislature, and has for many years served as an officer of the Ohio DAV, with great benefit to such veterans and honor to himself.

World Situation Regarding Nitrogenous Fertilizers

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish to include the following letter dated November 20 which I have received from Mr. C. Tyler Wood, Deputy to the Assistant Secretary for Economic Affairs, Department of State:

DEPARTMENT OF STATE,
Washington, November 20, 1947.

The Honorable HELEN G. DOUGLAS,
House of Representatives.

MY DEAR MRS. DOUGLAS: The following information concerning the present world situation as regards nitrogenous fertilizers is sent in response to your telephoned request of November 10 to the Department. Information concerning the present status of Government-owned plants in the United States is included.

The United States is a member of the International Emergency Food Council, which has a total membership of 35 countries. This Council, among its other functions, has found it necessary, in view of the obvious importance of nitrogenous fertilizers to food supplies and in view of the extremely short supplies of fertilizer nitrogen throughout the world, to establish a recommended world distribution of fertilizer nitrogen.

The Council makes its recommendations, of course, only after agreement is reached among the member countries on the basis of full discussions within the Committee on Fertilizers. As you know, the IEFC does not have powers to compel a given member to take action which is not acceptable to that member. In June of this year the IEFC recommended that the United States should receive 187,330 short tons of fertilizer nitrogen (this figure is expressed in terms of nitrogen content as a common denominator; the aggregate tonnage of the actual materials is much higher) during the 1947-48 production year (July-June) from countries having exportable supplies. It also recommended, with the concurrence of the United States, that this country export 57,860 short tons of nitrogen from commercial sources during the same period; this figure has been raised by the United States to 61,160 tons to include an increase of 3,300 tons of nitrogen in the form of solutions, which are in relatively good supply, to be exported to Cuba. The United States Government's decisions to accept the IEFC recommendation and to institute the increase were taken with the concurrence of the interested Federal agencies.

The guiding principle followed by interested agencies (the Departments of Agriculture, Commerce, and State) in determining the level of the commercial export program for the current fertilizer year was that the United States net import balance should be essentially the same as that during the previous fertilizer year, and that the increase in domestic production contemplated at the time the present program was established would be retained entirely for the domestic market. This means, of course, that larger supplies will be available to domestic consumers than last year. Comparative figures are as follows:

Short tons of nitrogen

[All figures rounded off to nearest hundred tons]

	1946-47	1947-48
Exports	61,900	[1] 61,200
Imports	186,300	[1] 187,300
Domestic production [2]	663,800	[3] 686,500

[1] IEFC allocation.
[2] Exclusive of Army Ordnance production.
[3] Recent developments now being investigated by the Department of Commerce may indicate whether this figure may be increased.

Following the IEFC's recommendations, it is the responsibility of member countries to establish individual programs for the import and export of nitrogenous fertilizers. Pursuant to the provisions of Public Law No. 188, Eightieth Congress, "Second Decontrol Act, 1947," the Department of Commerce is the agency of this Government authorized to provide for the fulfillment of such programs.

The nitrogen-export program for the 1947-48 production year, as originally established, provided for the export of 57,860 short tons of nitrogen. In establishing the program great care was exercised to minimize the impact upon domestic requirements. It was also determined that the composition of the total export tonnage as regards specific nitrogenous fertilizer materials (viz, ammonium nitrate, ammonium sulfate, etc.) should be arrived at in an equitable manner, so that no individual material would be compelled to bear an undue share of the burden. To this end, the projected program was fully discussed with and agreed to by representatives of the industry, whose recommendations were incorporated into the present program. The export program thus established was published as Direction No. 4 to Allocations Regulation No. 2, a copy of which is available from the Office of Materials Distribution, Department of Commerce. This regulation requires all producers of nitrogenous fertilizer materials to accept certified export orders for these materials up to stated percentages of their respective production of such materials in the 1946-47 production year. The subsequent increase of 3,300 tons of nitrogen is in the form of "solutions," which are not in short supply. This form of fertilizer is exported to Canada and Cuba in tank cars, by overland railroad, and sea train, respectively; long-distance water shipment is not feasible.

The world's commercial exportable pool of nitrogen is smaller than last year's; consequently, several countries will consume considerably less than last year. Recent IEFC data show that in 1947-48 the estimated world production of nitrogenous fertilizers (exclusive of Ordnance output in the United States and United Kingdom for Germany, Japan, and Korea) is 2,576,000 metric tons of nitrogen, as against total stated requirements of 3,500,000 tons, the deficit being more than 900,000 tons. In 1937 there were 12 countries exporting fertilizer nitrogen; now there are only 5 major exporters in the commercial sense. If the output and shipments from the United States Ordnance plants are taken into account, there are now 6 major exporters of nitrogen. The report of the House Committee on Agriculture, Eightieth Congress, first session, entitled "1947 Fertilizer Supplies" contains, among other things, the explanation of how the Army came to sponsor the operation of the United States Ordnance facilities for the production of fertilizer. The salient facts relating to the present situation are given below. You may desire to communicate directly with the Department of the Army for further details.

Upon assuming the responsibilities of occupation, the Army was faced with a net import requirement of considerable magnitude as regards nitrogenous fertilizers. Funds were appropriated by the Congress to cover the cost of the needed fertilizer. It was found, however, that the quantities required could not be purchased from commercial producers without seriously impinging on the supplies available to domestic consumers. It was subsequently decided by the Government to make available for the Army's program certain Government-owned plant facilities, some of which had previously been declared surplus, and others which the Army was retaining as stand-by munitions facilities. Actual operation of the plants is by commercial companies, on a contractual basis. Originally, the Army had 16 plants reactivated for the production of ammonium nitrate. Anhydrous ammonia was made in 4 plants, transported in pressure tank cars to another 6 plants for the manufacture of ammonium nitrate solution, then forwarded by ordinary tank car to 6 additional plants for finishing (graining). However, due to a shortage of available tank cars, it was found necessary to take some 5 plants out of production, thus reducing the available capacity for the production of finished

ammonium nitrate from 28,600 short tons of nitrogen per month (88,000 tons of material) to 21,125 tons (65,000 tons of material). During the 1947–48 production year the Army's program is understood to call for the production and shipment to the occupied territories of about 252,000 short tons (230,000 metric tons) of nitrogen. It is understood that about 20 percent of the total is programed for Germany, 48 percent for Japan, and 32 percent for Korea.

One of the plants released from the Army's program, for the reasons outlined above, was turned over to the Bureau of Mines for synthetic fuels research. This is the Missouri Ordnance Works. Recently two of the producing units ("trains") of this facility were declared surplus to War Assets Administration; the latter agency is proceeding to dispose of this capacity to a commercial bidder. The Department has recommended to War Assets that the facility be disposed of in such a manner as to assure its use for the production of nitrogenous fertilizer materials during the emergency period of world-wide nitrogen shortage. The capacity of the two units at Missouri, in terms of nitrogen, is understood to be 18,000 short tons a year on the basis of a 300-day operating year.

According to the best information available to the Department, additional unused capacity at Government-owned ammonia plants consists of 36,000 short tons of nitrogen a year at the Morgantown Ordnance Works and some 54,000 tons a year at the Cactus Ordnance Works. In the latter case the facilities necessary for the increased production are completely unassembled, and it is understood that a considerable capital expenditure would be involved. In the cases of both these plants, due to the continuing shortage of tank cars, the problem of integration would have to be solved—that is to say, the problem of bringing together in one producing area the facilities needed in the manufacture of finished nitrogen fertilizer.

The information furnished above is believed to be sufficient to indicate the complexity of the task of contributing to the alleviation of the severe world shortage of fertilizer nitrogen, and I trust that it will be of some assistance to you. However, it is appreciated that there may be many questions you have on this subject that could not possibly be answered in one letter. Please feel free to communicate with the Department whenever you have questions that you feel this agency is in a position to answer.

Sincerely yours,

C. TYLER WOOD,
Deputy to the Assistant Secretary for Economic Affairs.

The Unheard Cry of the World's Children

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish to include the following article from the New York Times Magazine of October 12, 1947, by Gertrude Samuels who is a member of the Sunday staff of the Times. To gather material for this article she interviewed Red Cross and former UNRRA workers returned from overseas and officials of the United States Children's Bureau and the United Nations.

The article follows:

THE UNHEARD CRY OF THE WORLD'S CHILDREN—THIRTY MILLIONS IN EUROPE, TWICE THAT MANY IN ASIA, MAKE THEIR APPEAL TO US FOR AID

(By Gertrude Samuels)

WASHINGTON.—Thirty million children in Europe and thirty to sixty million children in the Near and Far East—children on two-thirds of the face of the earth—are in dire need of help. They are living in caves made out of rubble, in areas where every dwelling has been destroyed by fire, in patched-up buildings and in wartime dugouts. Their faces—old, emaciated, green from deficiency diets—show the nature of the enemy. Thousands are mutilated for life, without arms, hands, legs, and lacking even the artificial limbs to replace them. Nearly all bear the deeper wounds of the spirit—the result of broken families, lost faith, and hunger.

These children don't complain. No one has ever seen them gather in angry, self-pitying mobs before some ambassador's house or military government headquarters with hunger placards. In fact, like the proverbial children, they aren't—diplomatically speaking—heard at all. But they are terrifyingly there—for all to see who want to see.

Their greatest problem is food. Some of the problem derives from the military war which, like any war, turns countries into battlefields and destroys farms, villages, and cities. That military phase of World War II took a grim toll. It not only mutilated children, it killed their families, robbing them of love and security; it cut into their means of existence, taking the basic foods, especially milk, which children must have for health and growth.

The other phase of the problem, particularly in Europe, stems directly from the amazing Hitler-Haushofer strategy to colonize the contient for Germany. This is the crime without a name, as Winston Churchill called it in his broadcast of August 1941, for which a name has since been coined—genocide.

Genocide, which comes from the Greek word genos (race, tribe) and the latin cide (killing), was the plan to win the peace even though the war be lost—by annihilating whole populations, whether of national, racial, or religious character, and so change the demographic picture of Europe in favor of Germany. This took several forms. In the case of the Jews of Europe and their children, it almost succeeded. That was by direct extermination in the gas chambers and crematories. In the case of the occupied countries, particularly eastern Europe and western Russia, the philosophy of Hitler, Goering, Keitel, Haushofer was expounded by Heinrich Himmler in October 1943:

"What the nations can offer in the way of good blood of our type, we will take. If necessary, by kidnaping their children and raising them here with us. Whether nations live in prosperity or starve to death interests me only insofar as we need them as slaves for our Kultur. * * *"

Thus in all the former occupied countries where the enemy looted the food stores and underfed the young, malnutrition and disease had a 6-year start before the end of the war.

As the Nuremberg indictment summed it up: "[The defendants] conducted deliberate and systematic genocide. * * *" While German babies and children waxed fat and healthy on balanced diets and German women faithfully carried on their "Kinder, Kueche, Kirche" role, enduring weakness ate away at the rest of Europe's child reserves.

This was the children's problem facing the allies as their liberating armies went into Europe—a problem which they met with imagination, trained workers, and with cash in the form of body-building supplies and medicines—from the International Red Cross, from the voluntary welfare agencies aided by the National War Fund, and from UNRRA.

To the occupied countries, UNRRA became a holy word and often meant the difference between life and death. It was never enough, but it did reach part of the children, and it did stave off epidemics. Now UNRRA is closed down. But the need is not only graver than ever—it is a matter of weeks to a crisis.

Perhaps the most crucial areas are Italy and those which were marked for death by the Nazis—Greece, Poland, Byelorussia. Most of their children can never remember what milk looks like. Hundreds of thousands are orphans who never had a chance. I saw some of this among the United Nations children in the miserable displaced persons camps of Germany this year. The children of the eastern European nations are, if anything, a hundred times worse. Here, from the grave, Hitler continues to win his demographic war.

In Greece, in a desperate plan to save pretubercular children (those who could not survive the winter without contracting TB) doctors helped by the Australian Red Cross have been going on mule or horseback into the mountains, picking out children here and there and accrediting them to rest camps for 3-week periods. Such a camp was Eagle's Nest at Karpenessi, northwest of Athens where the more fortunate children, trudging through the mountains for 9 to 14 hours, clad in rags and wearing pieces of old tires for shoes, for the first time saw what civilization could be like.

One child, Kosta, 9½ years, his father shot by the Germans, his mother dead of TB, made the journey with his grandmother. Washed down in a primitive shower, his head shaved, Kosta was treated for body sores and put into new clothes made from flour sacks. In the 3 weeks Kosta gained in height and weight. Now, say leading pediatricians, virtually no children can have even this care, because there is no food for them.

Nor will Greek children get their one 600-calorie supplementary meal. They can continue to meet in the rubble-heaped graveyards which serve as their schoolrooms—for how long as the living?

In Italy children are dying because they lack a few drops of cod liver oil, milk, and a minimum of nourishing food. Thousands of babies live in old, battle-scarred barracks which have walls but no floors, easy prey for TB, rickets, and scurvy. For the lack of milk, they are fed on bread ground in water. This brings another scourge—hunger edemas, their bodies swelling with water under the skin. Hundreds carried to the pediatrics clinic of the University of Rome are affected in the corneas; these children will be nearly totally blind for life. "Yet a few drops of cod liver oil * * *" goes the plea.

In Poland nearly 5,000,000 children, 200,000 of them orphans, lack every basic necessity of life. These are the children of the "inferior" race who were serfs of the "Herrenvolk." They are the children who witnessed an appalling human tragedy.

Their reward for having survived is the near-fulfillment of Hitler's genocide strategy. They live in many areas in dark, subterranean dwellings under the rubble of the cities, crucially dependent on outside help, their "potato fat" stomachs signifying the lack of milk, eggs, fresh fruits, bread.

A child-feeding center at Lodz gives a recent picture. Beginning at 11:30, about 1,000 children aged 6 to 14 years lined up for their main meal—a soup made of cabbage, potatoes, and water. Observers from the United States Children's Bureau and UNRRA were "mostly struck by their weary, ragged, stunted appearance. It was shocking to talk with Ludwik and Jerzy in the line, who looked about 7 years old, and discover that they were actually 13 years old." Is

Hitler to have his way with the Polish children?

The most desperate need in the whole picture—from England where children are at least getting a school lunch, to Poland, Italy, Rumania, Byelorussia—is milk. The simple truth is that children of all ages need milk for growth and development. Moreover, to be of real value it should meet the nutritional standards of cleanliness, quality, and be used as quickly as possible. And there is virtually no fresh milk in the war-devastated countries, while the powdered milk supply is nearly gone.

Germany presents a strange paradox. Milk is what most German infants, at least in the American and British zones, are apparently sure of getting. Dr. Rudolph Degawitz, chief of the Children's Department at the University of Hamburg, told me: "In the American and British zones the children are normally fit for the first 4 years of life. Infants up to this age are getting their milk regularly, although they don't get encugh of other foods. The school children look undernourished and those between the ages of 11 and 14 years are in bad shape because they need more food at that age to keep on growing fast. But these school children also get milk in their schools plus a 300-calorie meal."

Dr. Degawitz said that the "worst headache" was the Russian zone "where children are getting only about one-fifth of the milk that they get in the other two zones."

But if Europe is a continent of hungry children the Far East presents a stranger tragedy. At least before the war Europe knew a decent living standard. In the East traditional poverty and starvation are still complicated by war. In all China, there are two children's hospitals to care for, roughly, 200,000,000 children. Chinese children need everything—milk, food, cod-liver oil, medicines, clothes, shoes—and, equally important, some show by the rest of the world of human understanding. In the famine area of Honan province last fall, children lay down in the street and died and were buried in common ditches. Today the dying are seen on the streets of Shanghai.

Children carried into the Shanghai Public Hospital for Children (the other is in Peking) died within 24 hours of TB, meningitis. Sixty percent of the cases are malnutrition—"but how can we afford to buy even milk? One pound of milk powder costs one United States gold dollar or 60,000 Chinese dollars." Silent, orphaned, abandoned children clutch the only possessions they have left—a sandal or a wash cloth.

In the primitive villages of India, with their mud huts and spare water supply, children often live on a plate of boiled rice a day.

One canteen near Bombay, provisioned by voluntary agencies, served seven villages in a vain attempt to reach the children with one nourishing meal a day, "so whatever the United Nations can do for India will at least be a start."

This is the extent of the children's problem. What are the nations of the world doing about it? After faltering starts, four efforts are being made:

1. Nations are themselves doing what they can.

2. There is the substantial effort of existing voluntary agencies.

3. UNESCO, the educational and cultural agency of UN, will project a campaign against illiteracy and try to promote understanding among nations.

4. The International Children's Emergency Fund is beginning to operate. This last has the widest attention because it, above all, was expected to fill the immediate need. The UN member nations have badly let it down.

When ICEF was formed last December, composed of representatives of 28 countries, including the big five, the original aim was to reach at least 20,000,000 infants and adolescents in the war-devastated areas with a 6-cents-a-day meal. Enthusiasm for the plan was tremendous, a budget of $450,000,000 was set for the first year of which the United States—as a nation blessed with surpluses and undamaged by war was expected to contribute $100,000,000.

What happened to the emergency fund is what has happened to many another humanitarian plan—it sickened of a disease called lack of interest and support. At this writing, UNRRA has transferred $5,000,000 to the fund; the United States has contributed $15,000,000, and Canada $5,000,000; France has promised to contribute 6 percent of what the United States offers. Latin-American countries may contribute $20,000,000. The probability is that the most the fund can ultimately expect from UN members is $70,000,000. Meantime the money in hand is only enough to supply a daily ration for 1 year of 3 cents worth of powdered milk, cocoa, fats, and fish to 4,155,000 children in all the world. No medicines, basic foods, clothes, or shoes are now contemplated.

So hopeless is the situation that many feel that if governments refuse to respond to the need the people of the world must. The chief spokesman for this point of view is Aake Ording, Norwegian member of the Secretariat. Through his efforts the UN appeal for children is taking shape. It will take time for the international machinery to start moving, for national committees to be formed, for a campaign to stimulate the people into an act of world citizenship to save millions of young lives.

On a given day, in a given month, every adult in the world will be asked to give 1 day's pay or its equivalent in potatoes, wheat, fruit, rice, milk, cows. Much of the money raised will go directly to the Children's Emergency Fund. As Mr. Ording sees it: "The practical and emotional possibilities for good are tremendous. What use is the best of all worlds if the children don't exist?"

However, the earliest that the "Appeal for Children" can get under way is in 1948. But the crisis is now. And the biggest question is: How can this terrible gap be bridged?

It must be done in two ways: First, the Children's Emergency Fund must be immediately strengthened by its UN members with large-scale grants. Second, the voluntary agencies must triple their efforts which, while UNRRA existed, found them contributing supplies equal to 30 percent of the whole UNRRA program. They cannot do this without the people, and the fervent hope is that the American public will respond to the need for strengthening their services and to the coming UN appeal.

Americans would seem to have no choice but to respond. As a Nation, we are traditionally generous—and this is one catastrophe which has a personal meaning for everyone who loves children. Equally important, we are forced to see these children in terms of tomorrow's world—the hope or the threat of civilization.

Are they to have the chance to nourish their bodies and minds on the good foods of life, or are their broken bodies to breed a generation of neurotics? In short, are we to let Hitler's genocide plan succeed? The means are in the hands of nations with well-stocked larders. The answer depends largely on us.

Action on Fuel-Oil Shortage

EXTENSION OF REMARKS

OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. MACKINNON. Mr. Speaker, my attention has been called by many constituents to the shortage of fuel oil in Minnesota and the upper Midwest States. The unmatched severity of our winters in those areas makes any fuel shortage more acute for us than is the case in other sections of the United States. We know what acute suffering freezing temperatures can bring. It was for this reason that I have consistently supported amendments to the foreign aid bill to prevent the shipment of our fuel oil to foreign countries unless our supplies were adequate for our own needs.

To further prevent the development of an acute shortage of fuel oil in Minnesota and the upper Midwest States I have today wired the President, the Office of Defense Transportation, the Solid Fuels Administrator, the Association of American Railroads, and the American Petroleum Institute urging the allocation of additional tank cars and fuel oil to Minnesota and the upper Midwest States.

URGES STATE ACTION

I have also wired the Governor of my State, the Honorable Luther W. Youngdahl, urging him under his constitutional power to protect the health, welfare, and safety to appoint a State fuel administrator with authority to channel available supplies to those in need. Action by the States under their police power is the constitutional method of meeting such an emergency and I am satisfied will produce more satisfactory results than would the establishment of a Federal bureaucracy.

Copies of all telegrams referred to above are here inserted under leave to extend my remarks:

DECEMBER 9, 1947.

Hon. HARRY S. TRUMAN,
The President,
The White House,
Washington, D. C.:

This is to direct your attention to the severe early winter that has already descended upon Minnesota and the upper Midwest States. Present temperatures are below zero and snowfall is heavy. This unseasonable weather has required an unanticipated consumption of fuel-oil reserves and severe shortages of fuel oil are already being encountered. The severe winter indicates that these shortages will become more drastic as the season progresses. The basic cause of this shortage of fuel oil is a shortage of transportation facilities into these areas. It is respectfully urged that you communicate with the Office of Defense Transportation and the Solid Fuels Administrator and recommend the allocation of fuel oil and additional tank cars for the transportation of fuel oil into Minnesota and the upper Midwest States. Such allocations are absolutely necessary to prevent extreme suffering and distress in these areas. I urge that the unmatched severity of the winter in these areas entitle them to first priority in such matters.

Respectfully,

GEORGE MACKINNON,
Member of Congress,
Third Minnesota District.

DECEMBER 9, 1947.

Hon. JULIUS A. KRUG,
Solid Fuels Administrator for War,
Interior Building,
Washington, D. C.:

It is respectfully requested that you allocate additional fuel oil to Minnesota and the upper Midwest States. Severe winter with freezing temperatures below zero is presently being encountered. Acute fuel-oil shortages have developed and more will develop unless increased transportation facili-

ties and fuel oil are made available to these areas. In Minnesota and the upper Midwest States the severity of the winter is unmatched elsewhere, and for this reason it is strongly urged that this area should receive the highest priority for the necessary fuel oil and transportation facilities. Conformance with this request will be highly appreciated and will do much to relieve suffering and distress. It is suggested that you discuss this matter with the Director of the Office of Defense Transportation and coordinate your activities.

Respectfully,

GEORGE MACKINNON,
Member of Congress,
Third Minnesota District.

DECEMBER 9, 1947.

Mr. J. M. JOHNSON,
Director, Office of Defense Transportation,
Interstate Commerce
Commission Building,
Washington, D. C.:

It is respectfully requested that you allocate additional tank cars for the transportation of fuel oil to Minnesota and the upper Midwest States. Severe winter with freezing temperatures below zero is presently being encountered. Acute fuel-oil shortages have developed and more will develop unless increased transportation facilities and fuel oil are made available to these areas. In Minnesota and the upper Midwest States the severity of the winter is unmatched elsewhere, and for this reason it is strongly urged that this area should receive the highest priority for the necessary fuel oil and transportation facilities. Conformance with this request will be highly appreciated and will do much to relieve suffering and distress. It is suggested that you discuss this matter with the Administrator of Solid Fuels Administration and coordinate your activities.

Respectfully,

GEORGE MACKINNON,
Member of Congress,
Third Minnesota District.

DECEMBER 9, 1947.

ASSOCIATION OF AMERICAN RAILROADS,
Transportation Building,
Washington, D. C.:

You are respectfully urged to allocate additional tank cars for the shipment of fuel oil to Minnesota and the upper Midwest States. I believe this is necessary in order to prevent acute suffering and distress in that area and that this section of our country should receive first priority because the severity of the winter there exceeds that of any other section of our country. Your immediate consideration of this request will be highly appreciated. Some communities there are presently out of oil, in others an acute shortage exists, and others have no prospect except an eventual shortage, unless tank cars are made available immediately.

Respectfully,

GEORGE MACKINNON,
Member of Congress,
Third Minnesota District.

DECEMBER 9, 1947.

AMERICAN PETROLEUM INSTITUTE,
Washington, D. C.:

You are respectfully urged to prevail upon your members to make available additional fuel oil to Minnesota and the upper Midwest States. I believe this is necessary in order to prevent acute suffering and distress in that area and that this section of our country should receive first priority because the severity of the winter there exceeds that of any section of our country. Your immediate consideration of this request will be highly appreciated. Some communities there are presently out of oil, in others an acute shortage exists and others have no prospect except an eventual shortage unless additional fuel oil is made available immediately.

Respectfully,

GEORGE MACKINNON,
Member of Congress,
Third Minnesota District.

DECEMBER 9, 1947.

Hon. LUTHER W. YOUNGDAHL,
Governor of Minnesota,
State Capitol, St. Paul, Minn.:

You are undoubtedly familiar with the present and anticipated fuel-oil shortages in Minnesota. These are caused by the lack of transportation facilities and the increased consumption of fuel oil. The early advent of a severe winter has made it apparent that fuel oil is going to be in short supply in Minnesota this winter and many people are going to suffer cold and hardship if appropriate steps are not taken immediately by all governmental agencies. You are also undoubtedly familiar with the fact that arrangements have been made for the transportation of fuel oil on the Upper Mississippi River for more than 1 month beyond the normal close of navigation. This was made possible by the assignment of an ice breaker from the United States Coast Guard but this means of transportation will be closed in a few days. To fill in the gap caused by the discontinuance of river transportation I am presently requesting the Office of Defense Transportation and the Solid Fuels Administrator to allocate additional fuel oil and tank cars for the transportation of fuel oil into Minnesota and the upper Midwest States. If you also feel their action would be helpful I urge you to make similar requests. But I believe that an effective solution of the problem will call for additional action and leadership by the State of Minnesota which you in your capacity as Governor are authorized to take under the power granted to you to act in emergencies when necessary to protect the public health, welfare, and safety. I suggest you appoint a State fuel administrator and local subadministrators with authority to bring the problem home to the people, to urge economical consumption by consumers, to maintain a liaison office for the collection and dissemination of information on available fuels, recommend distribution to areas in need and with further specific authority to channel all available supplies to consumers who are in need. I believe the police power vested in the States gives this authority to you. I believe that if this program is set up immediately that it will be able to operate efficiently before the emergency becomes more acute and I believe such program would receive the substantial support of dealers and consumers alike upon which any program must necessarily depend for success. Your immediate consideration of this suggestion to meet an acute problem will be highly appreciated.

Respectfully yours,

GEORGE MACKINNON,
Member of Congress,
Third Minnesota District.

American Opportunity Program of United States Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 9, 1947

Mr. O'HARA. Mr. Speaker, my attention has recently been called to a press release regarding a program for American opportunity through advertising, initiated by the United States Chamber of Commerce.

The proposed program set out in the press release is indeed a comprehensive one and is noteworthy in its scope. So that my colleagues may be advised concerning this matter, I wish to quote a copy of the press release. Under leave to extend my remarks in the RECORD, I include the following press release:

NEW YORK, N. Y., November 18.—A vast volunteer effort employing facilities of many existing associations to achieve a unity of purpose among all groups in America for the preservation of our free competitive system was announced today at a meeting of the insurance division of the United States Chamber of Commerce by Leonard W. Trester, chairman of the chamber's newly created committee on advertising.

Because of the importance attached to this activity, known as the American opportunity program, the chamber's board of directors has just authorized the establishment of an advertising committee, Mr. Trester revealed for the first time.

The new committee replaces the former advertising subcommittee of the chamber's domestic distribution department, which began work on the program some months ago. The group, which will devote its major attention to this broad campaign, is being considerably enlarged. It will be comprised of leaders drawn from newspaper and other media groups, as well as from trade and industrial associations, especially those which represent utilities, retail stores, and other key factors at the community level.

Mr. Trester, a director of the United States Chamber and director of public policy of General Outdoor Advertising Co., has been named chairman.

Through chambers of commerce and other local outlets, the committee plans to release guides and other materials for use in the implementation of this theme by business establishments and community action groups.

"The open house, employee meetings, local speakers' bureaus, and discussion forums are among the methods available to employers and community leaders for getting across the fundamental facts about our system, its advantages and possibilities for improvement," Mr. Trester said.

"In the local community we can talk with fellow citizens within the framework of their everyday experience. We can translate the significance of their own particular jobs and their local free institutions in a way that is meaningful to them.

"Every available source will be tapped to give substance to this program. It calls for the most expert skills from many specialized fields, both in contributing materials for local distribution and in helping to carry out the program in the cities and towns of the Nation.

"In spite of all that has been done so far, this program is still in fluid form, subject always to modification and revision. I trust this will continue to be so. We learn as we progress. The more groups involved, the sounder will be our basic premises as well as our techniques.

"The umbrella of American opportunity is available to cover all who sincerely want to advance this cause. The chamber is performing its well-established function of acting as a common platform for all business groups. It also offers its facilities for the widespread dissemination of materials designed to aid in this effort.

"Already we are exchanging information and ideas with a similar organization in England. Known as Aims for Industry, it has recruited scores of regular speakers for civic

groups, is publishing many pamphlets and a monthly magazine, and is serving as a research center. This foundation has but a single purpose—namely, to make known 'the part played by free enterprise in sustaining the position, welfare, and integrity of Great Britain and its citizens.'

"With materials already produced under chamber auspices, many businesses—ranging from Thomas A. Edison, Inc., in Kearny, N. J., to the Van de Kamp Bakery Chain on the west coast—are already going ahead with advertising and employee programs. Among the outstanding examples of community action is the program of the Grand Rapids Chamber of Commerce. In that city all types of businesses are systematically bringing the benefits of the American way to the attention of customers, employees, and stockholders.

"Truly we are beginning to demonstrate that American business is preparing to accept its social responsibilities and to assume its proper role in the preservation of our free society."

The Citizen in Today's World

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address entitled "The Citizen in Today's World," delivered by Dr. Malcolm W. Davis, of the Carnegie Foundation for International Peace, at the 1947 session of the South Carolina Conference of Social Work on November 5. I urge the attention of the Members of the Senate and other interested citizens to this outstanding discussion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Such a conference as this has a great significance, in addition to all the constructive efforts that it represents, because it is a voluntary movement of free individuals dealing with their own problems on their own initiative. Although this fact may appear obvious, it is worth emphasis because in many parts of the world such action has been or is being replaced by government as the directing and controlling agent. In some countries, a conference such as this would necessarily mean that the gathering was under the domination of the government. Here, the conference is recognized by the government, as a body of citizens with the dignity of independence and with liberty to model their society according to their own thought and in their own way. It shows in the finest light that confident and free relationship between the people and their government which has been our source of strength and which is now more than ever valuable and vital—not only to us but also to other nations. It is the standard that we uphold.

The beginning of liberty is to believe in people, as individuals with capacities for growth and for intelligence in mastering their problems and measuring up to their responsibilities. This faith has been at the heart of the long struggle against arbitrary authority. And the maintenance of liberty, too, requires continuing belief in people, despite their mistakes and their shortcomings, belief in each other as well as in ourselves, confidence in each other, reliance on each other. Further, it calls for an immediate challenge, always, to any person or any party laying claim to complete knowledge or exclusive power. This simple recognition that anybody or any group may be mistaken at any time is an essential safeguard of liberty. That is why, under a system of liberty, the right must rest with the people to change administrations, correct errors, and above all control their own lives. It implies a balance of power in society. We are familiar with the balance of power among nations, so that no one power can dominate the earth. Liberty means a balance among groups within a nation so that no one party can automatically be in command of the government. What we in America call democracy is the embodiment of these principles into a form of government. We sometimes fall into a habit of talking and thinking as if the form of government itself, rather than the principles and purposes for which it exists, were the important thing. But it is the principles, not the form in which they are expressed, which are the essential foundations of a people's respect and responsibility for themselves.

The forms vary widely throughout the world, but whether they are republics or constitutional monarchies the different representative systems have this principle in common—a belief in individuals and in their right to rule themselves. Unless that idea is truly there, the government cannot be really representative but is instead a screen for a minority holding the people in restraint.

The people's rule of themselves naturally implies another risk because with that privilege goes a prerogative of rulers—the right to be wrong. We insist on an opportunity to make our own mistakes and learn from them, rather than be compelled to endure the mistakes of an autocracy or a dictatorship. So democracy as we understand it necessarily means that any majority will always keep open for their opponents an equal opportunity to speak their minds, to publish their ideas, to organize parties, to elect legislators, and in turn by persuasion if they can to form a majority and to constitute the executive government. The indispensable condition is that no opposition may advocate or attempt to gain and hold power by force.

That recognition and protection of minority opinion is freedom's balance of power. It is the assurance of good faith and fair play in the political struggle. We as members of such a society have to guarantee to each other the privileges and safeguards that we all together want. And precisely because we do insist on rights for opposing groups among the first of these privileges and safeguards we need the certainty that whatever programs or reforms one group or another may seek, the appeal will be to reason and never to violence, that there will be acceptance of decision by a majority and orderly and peaceful procedure by social understanding.

The fundamental freedom is the freedom to modify opinions and policies, by speech and study and writing. This is of more significance than any particular program. It is the method inseparable from intelligent judgment and indispensable to individual freedom of action, by which all programs may be tested. All our discoveries come from experiment and proof; all our enlightenment has had to be achieved progressively in this way. In the search for solutions to our problems, we need to expose all ideas and proposals to criticism and comparison. Refusal of the opportunity to do this, under any system, whatever its merits in other regards, amounts to refusal of the right to think. Without this liberty of the mind, no other rights can be safe.

More often than not in the past, democracies have had to hold their ground against odds. The evidence of their soundness was their ability to survive in a struggle with more powerful opponents. Now the odds are on the side of the democracies, and the question is how well and how worthily we shall use our control of the greater reserves of strength and sources of supply in the world. The democracies have already had an earlier opportunity of leadership—after the First World War. At that time also they held for a period the power to control the course of events. But they differed among themselves about the treatment of their defeated enemies and they allowed their differences to drive them along diverging lines of policy. In the end they were menaced again with the peril of subordination by war, and only at ruinous cost the strongest saved themselves and rescued others who had been overwhelmed. At the present time there appears no certainty that our use of victory will prove to be any wiser. We of the United States have the position of main influence, since we are the country with undamaged productive capacity, but with all our power and resources we cannot by ourselves provide prosperity and preserve peace in the world. The outcome must depend on the extent to which we keep in touch with all the other countries where most of the people believe in freedom as we do—particularly England and the countries of western Europe—and work together with them.

Unlike dictatorships democracies are not designed for isolation. On the contrary, democracies have thrived on cooperation, on free exchange of ideas among their peoples, on a growth of liberty in all realms. A community of thought and an interchange of knowledge belong to the enterprise of freedom. They are part of its nature, and freedom has always developed through the interplay of minds. We have nothing to fear and everything to gain from such relationship with other like-minded peoples.

Moreover, in our world today any democracy is less isolated than ever before, and the degree of its isolation is growing steadily less. The airplane and jet propulsion have made that certain, and the nations are interlinked by the almost instant communication of news, good or bad, reliable or unreliable. Here we begin to get at the heart of the dilemma for democracies. We as citizens can no longer concern ourselves with our own localities and let concern with other people and places go. It would be simpler and often pleasanter if we could. But our life is now more affected by what happens in other parts of the world than the life in one of our States used to be affected by what happened in another State.

The pressing demand on governments, whatever their political system, is to provide for national safety and social welfare. Just as the days of local solutions for problems are gone, for better or worse, science and modern industry have made it impossible for any one nation to assure its own safety, and they have made every nation look partly to others in maintaining its own standard of welfare. There is no self-sufficient country. Despite the illusion of some of our people that the United States has everything it needs to produce everything it wants, the war taught us that if we could not get some supplies from abroad we could not go on living as we normally do. Many articles of daily use—our telephones, our automobiles, to note but two examples—are made out of materials coming from many parts of the world; and our daily diet, from breakfast through dinner, comes partly from other lands. We can all find international trade in our neighborhood stores, if we look at the products and learn where they came from. So we can agree that social welfare in any nation calls for more than its own resources—even the most richly supplied—for no nation has all that it

requires. Here the issue for the democracies crosses the frontiers of their homelands, reaches out into the rest of the world, and brings them into contact with other ways of dealing with social problems and political issues. The citizen finds his community linked with other communities around the globe.

The countries that did not believe in what we mean by freedom and democracy have sought social welfare by other methods, by collectivized economy, and state supremacy. The individual had none of the importance and freedom that we assign to individuals, and that makes our way of life what it is to us. In place of the idea that individuals build the community and the nation and form governments to represent and serve them, leaders in those other countries set up the idea that individuals exist for the state as an end in itself and as the supreme value. We had to defeat such systems in Germany and Italy and Japan, which we called totalitarian, in order to defend ourselves and our society from their threat. Now we find ourselves facing another kind of totalitarian system in Soviet Russia, based on different concepts from those others and operated for different purposes, but just as surely subordinating the individual to the one-party state and by this method seeking social welfare. The issues between us meet most passionately and persistently in the field of ideas, as they did with those others which were vanquished in the war, and the contest is first for the minds of men. This is the great challenge to free citizens in today's world, but it need not mean war.

We seek our social welfare by our faith in individuals and their initiative in our popular sovereignty. Therefore, our system must hold out to a large majority of our people a practical prospect of reasonable satisfaction for their wants. The stability of our system has been and is in the fact that almost all of us prefer it to any other even when we disagree entirely with the party in power. So long as this is so, our system cannot really be undermined from outside. Only if we should get into a situation in which a large proportion of our people would feel that the odds were against them, that they had no prospect of reasonable satisfaction through their own work, only then would our system be endangered, and from inside. We operate not by the grip of fear but by the force of hope. Our methods and programs cannot be imposed. We are not a police state, but a political society whose leaders constantly turn back to the sources of power among the people and rally support from them. That is our main reliance and safeguard. Our peace and prosperity and strength spring from this trust and understanding among us. That is the example we set, which exerts its influence throughout the world. It depends on the citizens and on their activities in their own communities.

In all our talk and thought about democracy, let us remember that the defense of freedom and human rights depends on citizens who are active. Indifference and passivity on the part of the people can rapidly turn a democracy into a bureaucracy in which the most determined will grasp power, straitjacket public opinion, and rear a pressure group as the government. An active citizen is more than an active individual. The active citizen considers and includes the interests and rights and welfare of his fellow citizens along with his own. In work he recognizes the duty to give a fair exchange in goods or services for what he receives in return. In social and public affairs he also recognizes a responsibility. He receives the benefits of the established laws, of order and peace, and of mutual protection; and in return he takes his part in maintaining them. The creation of these benefits have been as hard as winning a war. Freedom is the heritage of a long struggle which must be continued. A vote from time to time in elections is not enough. Good institutions and laws are the outcome of patient and renewed teamwork. The citizens who take part in it, locally or nationally, not only contribute their own ideas, judgment, loyalty, and persistence; they not only gain in knowledge of the social, political and economic conditions in the community; they not only help to keep their own democracy healthy; but they also strengthen it in the world. The fitness of any democracy can be measured by the proportion of its active citizens. They are the red corpuscles in the bloodstreams of the body politic. The others, the passive citizens, have to be carried along, but it is the active ones who keep democracy alive and alert. The success of America has been due in large measure to the numbers of our people who have developed and exercised this capacity for making the democratic way work and in doing so have learned to rely on their fellow citizens as well as on themselves. They are the basis of the contribution we can make to order and peace and welfare in the world.

There never was a time when it was more important to make the American way work well. That used to be a problem primarily for ourselves. Now the results of what we do are observed and the effects are felt everywhere. So, also, there can hardly have been a time when it was more stimulating to be an American. This task of making the American way work rests on individuals and groups acting in whatever way they can. It cannot be done from any one center. The nature of the American way is that it has to be operated by many people and from many places. All together they maintain the well-being of the Nation and its standing in the world. They make it possible for our representatives to act effectively for peace and security in other regions from which they might otherwise be a threat to our own position in the American hemisphere. They make it possible for our influence to count for order and the gradual adjustment of disputes and conflicts. We have won a war triumphantly, but victory has not yet yielded security or real peace. Agreement on the terms of a treaty for Germany still seems far away, and a beginning has not been made on negotiation of terms for a treaty with Japan. Along with the trials of reorganizing our own life and meeting the costs of the struggle, we face also another obligation. As the only untouched and unweakened power, we must assist the nations of western Europe to get their people and their productive systems back effectively to work, so that they may clothe and feed themselves and heat their houses and avoid the distress that might produce revolution and social strife. This is urgent, for shortages and suffering are likely to be worse this winter than last winter.

We are still under hostile pressure, and we are more than ever dependent upon each other, both as economic groups and as individuals. Yet many Americans assume the existence of liberty and opportunity as they assume sunlight and air. They want to take freedom easy. We need a wider rediscovery of the spirit which can make our country an encouraging example, proving that men and women can govern themselves and share prosperity equitably, an example to be followed. It is the spirit which you demonstrate in the South Carolina Conference of Social Work. Your members act, as naturally they have to do, where they are and in the circumstances that they know. But your action does not stop there. Whatever improves conditions here, whatever increases contentment here, whatever heightens hope here, helps to make the American way work, aids the Nation as well as the State, adds to our importance and influence in the world. That is one answer to the people who look at the troubles beyond our borders and say, "But what can I do about it all?" We can first do something where we are, and then try to connect what we do with like efforts in other places.

We are in one world with other peoples, whether or not it can be unified; so, in any case, we have to face the fact. Because of our size and strength, we have a greater capacity to determine events for good or ill than any other people. Our ability to produce is about equal to the combined abilities of all the other peoples of the earth. What we decide and do will count tremendously either to advance the conditions of peace or to increase the tendency towards war. We took a chief part in establishing the United Nations and its agencies; we are the leading member of the United Nations; it is the central field for our foreign policy. Yet, already many of our people are asking, "Will the United Nations work?" The answer is, "Yes—if enough people of the member nations, in whose name it was set up, want it to work, insist that their governments do everything in their power to make it work, and first of all the people of the United States." The international need is just what it is in community and social work, to develop in enough people the sense of responsibility to find the facts they must know and to cooperate with others in working out practical agreements based on those facts. This does not mean that we have to give up principles which from our point of view are fundamental, for the sake of an apparent agreement which would not be an actual agreement. It does mean patience in negotiating with those who hold other points of view, willingness to regard other proposals as contributions to the thinking through of common problems and to analyze them impartially, and observance of the pledge not to use force or the threat of force against the independence or integrity of a neighbor or member nation, together with insistence that others observe it likewise. We have promised also, under the Charter of the United Nations, to advance standards of living and to promote understanding throughout the world. The responsibility for honoring these engagements starts with us, in our families and communities. We have to be ready to combat prejudice among ourselves and promote understanding of other nations and their problems, and we have to be ready to accept and aid the plans that may be necessary for relief of suffering and for reconstruction in the war-damaged countries.

The future of our civilization seems to me to depend on the outcome of a contest between forces for undermining its social structure and forces for understanding among the peoples of the earth. Men and women of good will are seriously troubled over the desperate plight into which the world has been brought by total warfare, and over the prospect that there might be another war with still more terrible means which would be even more ruinous and would directly strike the United States. Since the immediate future is clearly in the hands of the adult population, the importance of their action for understanding is manifest. As citizens their field of influence, in most cases, is in the community in which they live. Still, their conduct as community citizens can be related, as we have seen, to the larger problems that press on their communities from outside. That relationship starts with their own education as adults, and extends to their fellow members of the community. As they learn, they become effective as groups. These groups, by States, by regions, and nationally, surely if slowly become effective in forming a world public opinion. We have only to prevent one war, the next war, long enough to give us time to apply our modern knowledge to the tasks of reconstruction and our negotiating power to the problem of security. That means, first of all, an informed public sentiment, a will that these possibilities be pursued resolutely, and a faith in our ability to act effectively through the United Nations. Against the forces pulling back towards despair and conflict, there are forces pulling forward towards the world we want.

The free nations, that think and vote with us, hold by far the larger share of natural resources and technical skills, despite their losses in the war. An extending network of trade treaties is bringing them closer together. They are consulting and cooperating with each other more and more on the problems of security and welfare. There is no doubt that the unsatisfactory world we have made for ourselves so far holds the elements and energies capable of furnishing a good life in the world as we want it. Yet there is no doubt that these energies can be directed as we wish, that these elements can be moved to our purpose, only as the freedom-loving people in all lands—and in our own land first of all—carry on the conscious effort of developing the institutions for justice and the instruments for the overcoming of privation and the spread of welfare throughout the world.

The United Nations and its agencies can represent at the world level the kind of means that we use in national government and in community affairs. If it has inadequacies and faults, they can be improved and the charter can be amended. What makes the organization seem strange is that it is made up of different nations and unlike-minded peoples, but that is also its significance. The agencies are there to be used and to reinforce what individuals and groups can do. In whatever field you work, you have the prospect that an international organization is available to give assistance and advice and that an increasing number of people are working your way. You are not isolated, but are actually part of a movement that is growing and extending its effectiveness.

If you are doing something about public health, you have as part of the United Nations system the World Health Organization, devoted to the same task and prepared to cooperate with your work. If you are interested in improving agriculture and nutrition, you have the Food and Agriculture Organization acting to extend programs for that purpose throughout the world. If you want to better conditions of labor and industry, you have the International Labor Organization in which representatives of governments and industries and labor all cooperate. If you want to enlarge trade, you have the prospect of the International Trade Organization for which a conference is meeting this month in Habana. If you want to increase understanding, to advance the exchange of ideas and knowledge and the enjoyment of the arts, you have the United Nations Educational, Scientific and Cultural Organization, meeting this month in Mexico City to outline its plans for next year. These and other agencies are available to be used by the people and their governments to do anything that they can agree upon doing. Backing them all, you have the United Nations Assembly, the public forum of the world where the members stand on an equal footing to consult and debate with each other. And in none of these agencies is there the possibility of one nation blocking action by a veto. They can come to decisions by a majority or at most by a two-thirds vote, and then the recommendations go to the member nations. That is where the test comes, since one member nation may decline to follow a recommendation, while others that are prepared to act together may carry it out.

So you can see the importance of public opinion, of getting people to understand the connections between their problems and world problems and then to support cooperative plans through the United Nations to solve these parts of the problems together. The United Nations cannot work by itself, but that kind of popular support can make it work. And in this regard what we can do is more important than what any other nation can do because we operate from stability and strength.

I close with a quotation from a book recently written by my wife:

"There are three aspects to this United Naions world idea. Educational—we have to understand the United Nations, our world and America's part in it. Political—we should act on what we understand. Practical—we must, if only in our own interest, help other nations back to normal. If you want to learn and then act, first look around in your own community. What is the church, the school, your society, or your club doing for peace, educationally, politically, or practically? If nothing, start something, affiliated with a going movement. If something, join it, get your friends to join, and give all the time and thought you can spare. Every time you join with a social-minded group to urge upon your Government an important bill about lowered tariffs or a foreign loan or reestablishing some food control, you are swaying your own and your children's destiny. Every time you send food, clothes, or books to needy foreign countries, you are promoting American and world prosperity. If we Americans, men and women, pull together for peace as we did for war, then we are all that much safer from the atomic bomb, the unknown enemy, and the war that must never happen" (World on My Doorstep, by Harriet Eager Davis).

Report to the People—Part 4

EXTENSION OF REMARKS

OF

HON. W. LEE O'DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. O'DANIEL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD my fourth report to the people, broadcast on September 25 last from Stations KPRC, in Houston; WBAP, in Fort Worth; and WOAL, in San Antonio.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

How do you do, ladies and gentlemen, and hello there, boys and girls. This is your United States Senator, W. LEE O'DANIEL, Democrat, of Texas, speaking in the fourth and last of a series of Reports to the People, from the studios of WOAI, 1200, San Antonio, Tex. I want to again say that copies of all four of these radio broadcasts will be mailed free to anyone in Texas, or any other State, who will write me and request same. My address is Fort Worth, Tex.

My main purpose in making these radio reports to the citizens of my State is to sound the alarm of approaching destruction that is facing your Nation and mine.

America has reached the cross-roads, and far beyond the cross-roads, and is still traveling in the wrong direction.

I am not an alarmist, but instead I claim to be a realist.

Other great nations of the past have fallen, and in most cases the destruction was wrought from within, and not from without.

This great Nation of ours has been wrecked from within by a gang of old fogies whom you folks have worshipped and kept in power too long.

Your Government at Washington is filled up with stagnant senile old men who have become vain, jealous, conniving, and imbued with the obsession that their long tenure in office has endowed them with intelligence superior to the intelligence of the people who placed them in power.

During this series of radio broadcasts I have pointed out specific acts of these tyrants which have undermined the foundation of your Government.

When this fourth and last broadcast is concluded I intend to get in my car and cover as much of this State as I possibly can in order to visit with you folks, and to say to you some of the things which might not be permitted on the radio.

It is time for plain talking.

I do not intend to polish up anything I say to you folks in Texas during my trip.

The crisis facing this Nation is so serious that there are several subjects for discussion of far greater importance than the subject of whether or not I will offer myself as a candidate for reelection to the United States Senate next year.

When Father Time's eternal clock reaches the fateful hour and the good trusting people of this State and this Nation come to the sad realization that the hour has already struck, and that it is then too late to recover our great American system of government, and our great American system of private enterprise, you will remember the warnings that I have been sounding throughout this State and this Nation. I want you to know that this Nation is facing a crisis. I want you to know that the truth about our awful condition is being withheld from you. I want you to know that you are being propagandized by the most elaborate governmental propaganda machine that ever existed. I want you to realize that you are being deceived. I want you to know that your own public officials in Washington are picking your pockets and using the loot to buy razzle-dazzles and opiates for the purpose of entertaining you and lulling you to sleep. They believe they are forced to do this to cover up the tragic blunders they have been making for the past 14 or 15 years.

I want to tell you that official Washington is at this moment in a dither. These politicians are completely at sea and floundering. The only thing they have ever known to do to cover up their blunders or solve any problem is to appropriate more millions or billions of dollars they do not have. They are in a dither today because the appropriating committees of Congress cannot function because Congress is not in session. Your weak-kneed leaders in Washington are completely helpless when the Appropriation Committees are out of their sight. They are as nutty as an opium addict who runs out of dope.

Now before some of you folks in the twilight zone of this false prosperity era reach over to tune me out because you think I am unduly alarmed, I want you to know that I am not the only public official who knows what the score is.

I want you to know that I am not foolish enough to expect many of you to believe what I am saying.

I am perfectly rational.

I know how absurd it would be for some long-faced bug expert to rush into a dazzling ballroom filled with gay and carefree guests and scream to them that termites were boring into the foundation of the building in which they were having such glorious fun and expect to stop the dance. Maybe you are having too much fun to heed my warning, but I am going to make this report to you. That is as far as I can go. One reason why our Nation may fall is because the truth seems so ridiculous that the average honest American citizen cannot believe it, even when told to him by his most trusted friend.

The good citizens of France placed explicit confidence in their mangy mummy politicians who ruled them so long that the people ceased to think for themselves. They did not come to the sad realization that their

professional politicians had sold them down the river until one sad day they found themselves being driven down the highways like droves of cattle, their country destroyed, and their government gone.

Now I want you folk to know that I am not going to cry "Wolf, wolf" and quit there without telling you what I think you can do to save your country.

You will note that I said I intend to tell you what you can do to save your government—not what I can do.

Nobody has a higher opinion of our constitutional form of government than I have, but that Constitution lying in the Congressional Library at Washington alone cannot save us—our success or failure lies in whether or not we all follow the mandates of that Constitution to the letter.

It was patterned after the holy word of God, and the teachings of Christ. For many years after it was written and adopted our forefathers, including the public officials, considered it to be a road guide to the happiness and prosperity of our people.

Now the guiding lights in your administration at Washington employ the smartest attorneys they can find to figure out ways and means of by-passing the Constitution so they may carry out their peculiar philosophy of government. Yes; we still have the Constitution, but it is now looked upon by the Washington smart boys as an antique heirloom. I also want to restate my faith in the good judgment of the rank and file of the good citizens of this Nation. I believe that the majority of them will find the right solution to every one of our problems, providing they are in possession of all the facts at the time they make their decisions.

But friends I tell you frankly the truth is being willfully withheld from you, and all you are permitted to read or hear is the distorted facts, half-truths, and bedtime stories.

There is a passage in the Holy Bible aimed straight at the people of this Nation. It says: "Ye shall know the truth, and the truth will make you free." Now before I tell you what I think you folks can do to save your Nation, I want to make a few other observations.

I want to call your attention to the fact that your lawmakers have stifled production during the past 14 years by passing every law they could think of to stop or retard production. By the Wagner Act, nobody is permitted to work more than 40 hours per week, except by the imposition of a tax on the consumers of the Nation of 50 percent of the wages paid to these workers. There are 70,000,000 people now working for wages in this Nation. If they worked 50 hours per week instead of 40, production would be increased by 700,000,000 hours per week. At an average of $1 per hour, that would put into the pockets of the laboring people of this Nation $700,000,000 per week. It would also give to the consumers of this Nation 25 percent more houses, food, automobiles, farm machinery, refrigerators, and other necessities of life for which the people are crying and for which they have the money with which to buy. But your impractical lawmakers have a different idea of how to bring on prosperity * * * they like the easy money-printing-press method, so they passed the law that forced the laboring people to quit work each week after they have put in 40 hours, and thus not be able to have more money with which to buy food, houses, and other things they need. Then the lawmakers wanted to contribute their bit to child delinquency, so they prohibited everybody from working until they are 16 years of age, but those strong young boys and girls still do their bit at eating all they want at the family table at the expense of dad and mother who both have to work now to make a living for their families. Then the long-haired lawmakers pass more laws prohibiting everybody from working for wages after they reach the age of 65, or deduct the amount such people earn from their old-age pensions, so as a result not many of these people have a burning desire to work for wages when they can get the same amount of money in the form of pensions for not working. So you can see that the do-gooders and up-lifters and soft-soapers in your Federal Government have hogtied all the able-bodied citizens 16 years of age and under, and all the able-bodied men and women over 65, and 70,000,000 of the men and women in between those ages, and by law have stopped them from working and increasing production.

Then on top of this method of slamming the brakes on production of goods and services, this gang of New Deal theorists have failed completely to alter or amend God's laws of baby production, and as a result the population of this Nation has increased during this 14-year period of New Deal nightmare from 120,000,000 people to 143,000,000 people, so here we have 23,000,000 new mouths to feed, and bodies to clothe and house, and not a single one of these 23,000,000 newcomers are permitted to produce a single thing, because none of them are 16 years of age yet. So the only thing under the shining sun that has enabled us to keep up the limited producing we have are the new inventions and labor-saving devices which some of our inventors and scientists have devised to increase production by machinery. And the New Deal Congress has not overlooked this interference with their plans of destruction because they have passed laws to curb the activities of inventors and scientists.

Now on top of all this, these big brains in Washington have continued wartime taxes in peacetime economy for more than 2 years after all of our enemies surrendered unconditionally. This means that they are sapping such a large proportion of everybody's earnings that they have practically destroyed the desire of real producers to increase their production. The plague has gone so far that there are many actual cases existing where some large producers of consumer goods will earn less net profit, after taxes, by increasing their production than by holding their production down to a lower level.

There are thousands and thousands of cases where the risk of loss involved in building new facilities for increasing capacity is so great that the venture is not undertaken—and the potential production never materializes. I am only pointing out to you folks some of the monumental blunders that your lawmakers and administration leaders have made which has brought us right up to the brink of a terrible crisis. Time does not permit to explain all of them. But on this last issue of taxes, just think of the expansion in producing facilities that could be built each year with the twenty or twenty-five billions of dollars that your Government is syphoning off from the people each year, and taking it to Washington to spend foolishly, squander, or give away. If these twenty or twenty-five billions were permitted to remain in the hands of the people, as it used to be before the advent of the New Deal, it would be spent for enlarging production facilities, building homes, schools, and churches, improving farms and ranches, highways, and our towns and cities. Instead of the people building up their communities with their earnings as they used to do, the Government is taking those earnings and distributing them all over the world, and then borrowing money to send back to the States, cities and counties to build schools, airports, dams and other public improvements.

By this process the Government is placing large groups of our voting citizens under obligation to the administration for the purpose of retaining itself in power. And in addition to this it is taking this money from the taxpayers to pack around two and one-half million flunkies on the Government pay roll, most of whom do little more than get into each other's way. And with our Constitution abandoned, our people taxed nearly to extinction, production stifled, and our whole economic structure on the verge of one of the worst depressions in history, these big-headed Government officials in droves are flying all over the world in warplanes and battleships at taxpayers' expense trying to show-off how rich we are and how smart we are, and trying to stick our noses into the internal affairs of every other nation on earth and tell them how to run their own affairs. And I can tell you folks now, before they all get back and make their speeches in Congress, and over the air, that not a single idea will be advanced by one of them, except to spend, or squander, or give away more of our borrowed money, and keep running this Nation further into debt.

One of the most silly propositions ever propounded by the ruling dynasty at Washington is the fallacy that this Nation must keep on increasing the exportation of more and more of our food, clothing, and other things to foreign countries, even if our Government has to give those nations the money with which to pay our people for these products. I have the official figures put out by our own United States Department of Commerce showing that for the 10-year period preceding the recent world war, only 3.2 percent of our total business was for export. We also imported more than we exported. The life of this Nation does not depend upon exports, as these dreamy New Dealers in Washington tell you. The statistics prove this point. And certainly any schoolboy or girl could figure out that absolutely nothing can be gained in exporting our goods when we have to give to foreign nations the money with which to pay for the goods we export. That is silly rot. And there is even a darker side to this export picture. Every businessman and woman knows that when this Nation produces more wheat, cotton, meat, or other product than is needed, the market goes down, but if we do not produce enough, the market goes up. If more people take more eggs to town than the buyers want, the price goes down, but if there are fewer eggs taken to market than the people want, the market goes up. That is common knowledge. So with that in mind I want to point out to you that your Government officials are entirely responsible for the runaway prices on these markets of food products. They are responsible because they have given to foreign nations enough money to buy enough of our products so that a shortage exists here at home, and that has run the prices up. Now you can have your own opinion about this, but I, myself, am definitely convinced that your own gang of New Deal officials in Washington did this very thing for the specific purpose of running our food prices up so they can have support in the next Congress to reimpose price-fixing on the people of this Nation. With prices skyrocketing like they are, a lot of good people are going to petition their Representatives in Congress to reimpose OPA upon you. I know how hard the administration fought to retain OPA, and I know how determined they are to regiment and control and dictate to the people of this Nation. Knowing all of this convinces me that they deliberately planned and put into effect this process of running up food prices in order to get support from the people for renewal of OPA, or price controls under some other less offensive name.

You just wait and see what happens about price control as soon as Congress convenes, and remember what I am telling you.

Now while I am discussing these fundamental problems, I do not want anybody to get the impression that I am heartless and that I do not believe in helping poor starving people. Nobody believes in helping the poor more than I do, and I practice what I preach. I do not want to see any human being suffer of hunger, or from cold, or disease, and I will

do my share to relieve their misery. But I also believe in the Constitution of the United States, and I took an oath to uphold and defend it. I have studied the Constitution carefully, and I fail to find therein any delegation of power granted by the people to any of their public officials to take money out of the people's pockets by taxation or any other process, and give that money away to anybody for charity. In other words, our wise forefathers set up a government and not a charitable organization when they established the United States of America. The people retained unto themselves the right to practice charity in their own individual ways. And in my opinion that was a wise policy because anybody knows how free and easy most people can be in giving away the other fellow's money. I also believe that when the Lord urged all His people to be charitable that he did not intend to encourage pocket picking as a means of charity. So, until the people of this Nation amend the Constitution of the United States so as to provide for charity by taxation, I shall continue to oppose the giving away of the people's treasure and goods by public officials. Let us look at the propcsition from another angle—the practical angle. Our Government does not have to go to Europe to find people who will stop sowing and reaping, and working and producing as long as somebody else will sow and reap and work and produce the food for them and hand it to them free on a silver platter. Those people over there are human, and they will never work and produce for themselves as long as we give them food and clothes. And when we come to the place where we can no longer give to them, they will become our eternal enemies. That is only human nature. And now time does not permit me to continue reciting the blunders which your New Deal do-gooders and self-admiring plutocrats in Washington have made, and are still making. As I travel through the State in the weeks to follow, I will tell you many more things they are doing that is wrong. But now I am going to tell you how to save your Government. The first step in saving your Government is to find out what is causing all the trouble at home and abroad. I have told you what has caused it, and is still causing it.

As proof of my statement that the Congress is causing all the troubles this Nation is encountering I refer you to the Constitution of the United States. That document plainly places the policy-making responsibility of this Nation on the Congress. Our forefathers set up a government of law, not a government of man. No man in this Nation, regardless of whether he is a public official or not, has the right to compel any other man to do anything, except by law. Our wise forefathers wanted to get away from government by men. They had seen enough of it. So they set up this government of law. Every citizen of this Nation is free to do anything he desires to do, except as he is forbidden by law to do such and such. Our whole policy is formulated and written into the statute books by the Congress. The office of the President is a minor office. Our wise forefathers knew that if our President, or any other man, or woman, got enough authority, he would become dictatorial. That is human nature; so they wrote into the Constitution all the duties that a President could perform. They then provided for Congress to write the laws without any assistance from the President, when two-thirds of the Members of Congress got together on a policy. All the President is empowered to do under the Constitution is to see that the laws which are enacted by Congress are faithfully executed. He must see that they are faithfully executed whether he likes the laws or not. The framers of our Constitution did not care one whit whether any President of this Nation liked any certain law or not. It was still his duty to have all laws enforced. Lately the people of this Nation seem to have become hero worshippers, and are looking at our President as some high mogul, who has super-duper intelligence, and who is supposed to get on the radio every so often and tell everybody just how he is going to make your life a bed of roses without any effort on your part, except to keep on voting for him at reelection time. During this era of President-worshipping the people have paid less and less attention to their selections of Senators and Congressmen. Too often they have placed in the Congress of the United States stooges who were roosting on the coattail of their hero, the President. So when these stooges, or "yes" men, got into Congress they commenced to transfer the powers delegated to Congress over to the President until Congress became principally the tool of the Executive branch of the Government, and, in turn, delegated powers to the President that were not given him by the Constitution.

In appreciation of these powers the President paid off his congressional benefactors by giving to their relatives and friends big profitable war contracts, radio station licenses, or pleasure trips around the world. He could also assure them that if the voters back home caught up with them and defeated them, he would appoint them to a job in his department which would pay them more money, last longer, and not cost them the time and expense of running for reelection. Friends, by this process you have built up in Washington a dynasty, a one-man government, a dictatorship.

But here is the way the people of this Nation can whip this dynasty, providing it is done before it is too late:

The people in each congressional district and in each State still have the right and privilege to put anybody you please on the ticket as candidates for Congress. Thank goodness the professional politicians have not yet taken that right and privilege from the people. Here in Texas next year you will have the right and privilege to put anybody, and as many candidates on the ballot as you please for the place of Congressman in each district, and for one Senator. The people of this Nation can change every Member of the House of Representatives next year. They can change 32 out of 96 Senators. Our wise forefathers gave you a Constitution by which you can govern yourselves if you will but exercise your rights. If you are satisfied with the conditions that exist, just reelect the present Members of Congress who have voted to bring about this condition. If you want conditions changed—if you want your Government to get back onto the Constitution—if you want to regain and preserve your original form of democratic government, elect men and women to Congress who will withdraw the powers which Congress has given to the President. Elect men and women to Congress who will repeal all the class legislation and who will take the Government out of all business in competition with the people. Elect men and women who will build up our defenses so that no nation or combination of nations will dare attack us, and let the other nations run their own business. If you get enough of the right kind of God-fearing men and women in the Congress, they can repeal the rotten laws and enact new laws they deem necessary to turn this Government completely around and face it in the right direction within 30 or 60 days, and they will not need any help from the President. They can enact legislation and repeal legislation without the aid of the President, providing you have two-thirds of them inclined to do so.

The Congress of the United States is the greatest organization on earth. Your Congress is entitled to the best brains produced in our entire Nation. You do not have many men of that character in Congress. Mostly you have old fossils who never had but slight experience in business or professional life. You have some men and women up there who you would not hire to work for you at over $250 per month. If this Nation is to continue as the greatest nation on earth, you have got to put our greatest men and women in Congress because that is the policy-making body of this Nation. This Nation will not run itself. You businessmen cannot stay at home and send men and women up there who you would not hire to run your own business, and expect them to save your Nation and your business. If our Nation goes down, all businesses will go down with it. We are going down. There are only two ways out. One is the way we are going and the other is to build up your Congress with a better type of people. There are thousands of good men and women in this Nation who are honest, experienced, successful, God-fearing, and have proven that they have common sense and are not theoretical. This type of people do not want to make the sacrifice of running for public office and take all the abuse and ridicule and criticism that is now being heaped upon every honest Member of Congress who tries to do what is right. You are going to have a terrible time to get honest men to run for Congress. You will get plenty of the other type.

My advice is to forget about who is going to be the next President, but get busy and draft some sound, honest, experienced, successful, God-fearing American citizen in your district or State as a candidate for your Congressman or Senator. Please get busy in every section of this State right now. Don't wait another day. Unless the good Christian people get busy, everything we hold dear to us in America will be lost. Time is running out. This is no trivial matter. It is the most important thing that has ever been called to your attention. The men and women who are elected to the Congress of the United States next year will determine the fate of this Nation, and perhaps the fate of the world for centuries to come.

This broadcast is the last in the series of four in my Report to the People. All four of these broadcasts may be had by writing to me in Fort Worth, Tex. Monday, September 29, I will visit the towns of Boerne, Kerrville, Fredericksburg, Mason, and Brady; Tuesday, Brownwood, Coleman, Ballinger, and San Angelo; Wednesday, Bronte, Abilene, Baird, Eastland, and Ranger. This is your United States Senator, W. LEE O'DANIEL, bidding all of you a pleasant good night.

Rentals Charged by the Government

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. WILLIAMS. Mr. President, a few weeks ago it was brought to my attention that the Government of the United States, as a landlord, was violating the rent-control laws. I made a little investigation of that particular charge, and I ask unanimous consent that a report on it be printed in the Appendix of the RECORD. The report is in the nature of a letter which I addressed to the Senator from South Dakota [Mr. GURNEY], chairman of the Committee on Armed Services, suggesting that action be taken.

It is disclosed in the report that in the operation of certain housing projects lo-

cated near naval bases, the Government of the United States has increased the rent and is collecting today, in some cases, as much as 300 percent over and above the rents being charged for similar houses as late as 2 years ago.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DECEMBER 10, 1947.

Hon. CHAN GURNEY,
Chairman, Committee on Armed Services,
Senate Office Building,
Washington, D. C.

MY DEAR COLLEAGUE: Since 1940 wages have gone up approximately 100 percent, while rents have gone up only 8 percent. Rent, therefore, is a smaller portion of the family budget than in 1940. In spite of this startling fact, on June 30, 1947, the President of the United States in signing H. R. 3203, the Housing and Rent Act of 1947, severely criticized the measure and said that, "It is clear that this legislation marks a step backwards in our efforts to protect the tenants against unjustified rent increases arising out of war conditions," and in condemning the 15-percent rental increase allowed to the landlords he said, "Many landlords will press for rent increases whether or not there is any need for adjustment. Severe hardship will thus be imposed on many tenants. The hardship will be particularly acute in the case of veterans, who comprise such a large portion of those seeking rental housing accommodations."

In view of this unjustified condemnation of the landlords by the President, I am at a loss to understand the record of the operations of one of our Federal housing projects since the war.

It was brought to my attention that one of these projects known as the Homoja Housing Unit at Annapolis, Md., was completely ignoring the rent-control laws as passed by Congress. Since receiving this complaint from a reliable source, I have not only visited this project personally, but I also conducted some research regarding its development and operation.

This housing project known as the Homoja Housing Unit at Annapolis consists of three developments of quonset huts (each of which contains two housing units), as follows: The first development consists of 180 units at a cost of $727,771.76. The second development consists of 120 units at a cost of $661,000. Both of these developments have been completed and are now occupied. A third development is under construction, which will consist of 160 units. The average cost per housing unit of the two completed developments is $4,629.23.

During the war these homes were rented to transient officers and enlisted personnel attached to a ship in port for repairing damages or general overhaul on a temporary basis at a rental charge of $1 per day for the time occupied. At the end of the war, these quonset huts were made available to permanently stationed personnel in addition to transient officers. The monthly rental for these homes since the time of construction until November 1946 had been at the rate of $1 per day or $30 per month.

Effective November 1, 1946, without giving any consideration whatever to the national rent-control law, these rents were increased 25 percent, making the new monthly rental $37.50 per month. This rate remained in effect until September 1, 1947, at which time another decision was made that since these officers were living in Federal housing units, the Government had a right to deduct from their checks as payment for rent the maximum allowance as prescribed by their classifications. This was the equivalent of a second increase in the average rental of these units from $37.50 per month to approximately $95 per month or nearly 300 percent.

I have made a detailed check of 156 of these units and found that under the original rental scale of $30 per month, which existed prior to November 1, 1946, the average monthly income from these 156 units was $4,680.

During the period between November 1, 1946, and September 1, 1947, which was the period in which the 25-percent increase was in effect, the monthly income was equal to $5,850; but under the new schedule which was placed in effect September 1, 1947, my visit to these same 156 housing units disclosed that the Government was collecting a monthly rental of $14,797.50, or an average of approximately $95 per home, or, as I have said, a 300-percent increase. It is interesting to note that under this new rate which is now and has been in effect since September 1, 1947, it will only take approximately 4 years for the Government to recover all of its original investment costs.

In view of the fact that John Doe, an American citizen and a landlord who owns property in Annapolis adjoining this Government housing project and renting that property to similar naval officers, is forbidden under the law to increase their rent in excess of 15 percent, and, remembering that we as Members of Congress were severely criticized when we granted to the landlords the right to increase rents even 15 percent, it is just inconceivable that we should find a Government agency itself increasing their rents as much as 300 percent and doing that by taking advantage of men in uniform.

Apparently, these Federal housing projects were the greedy landlords whom the President of the United States had in mind last June when he said that, "Many landlords will press for rent increases whether or not there is need for adjustment," or it could be possible that we are witnessing a restoration of that old adage that the Government is a sovereign power and can do no wrong.

I might say that this is not the first time that a Government agency has willfully violated the law. During the OPA period, I remember a situation where the Commodity Credit Corporation openly paid 30 cents per bushel over established ceiling prices for corn, and it was excused on the basis that one Government agency cannot enter suit against another Government agency for violating the law.

During the recent years, we have witnessed a determined effort to launch this Government into the many fields of private industries; this is particularly true in the housing industry. The time has come when these Government agencies who are competing with private enterprise should be forced to comply with the same laws and regulations that are placed upon their competitors.

These men who are living in these homes with their families were encouraged to enlist in the Navy, and at the time of their enlistments were told of the availability of these homes at the $30 or $37.50 figure. It was only after their enlistment and assignment to this station that they were notified of the increased charges.

I understand that the same conditions which I found to exist at Annapolis are comparable to those existing in all Federal housing projects of quonset huts located near Naval bases, both in this country and in the Pacific.

This breach of faith on the part of our Government has had a serious effect upon the morale of our Navy. These men, unlike individuals employed in private industry, cannot resign and move elsewhere. They are forced by their employer, the Government, to remain in Annapolis or these other bases; and since no private homes are available, they are forced to remain in these quonset huts and pay the additional rent.

I am of the opinion that this increase, if not a direct violation of the Federal rent control law, at least amounts in principle to the same, and the tenants should be extended the right to hold the Federal Government responsible for the overcharge, even to the extent of the treble damages, the same as they could do under similar circumstances from a private landlord.

I strongly recommend that your committee give early consideration to this unjustified discrimination discussed herein, and in the event that there is no relief available under existing laws that your committee take immediate action to recommend whatever legislation might be necessary to correct this rank injustice, with the specific recommendation that whatever legislation might be further necessary be made retroactive to September 1, 1947, in order that these men might at least obtain the refund of these excessive and outrageous overcharges.

Yours sincerely,

JOHN J. WILLIAMS.

The Real Struggle: The Battle of Ideas

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me last evening before the Association of Oldest Inhabitants of the District of Columbia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE REAL STRUGGLE: THE BATTLE OF IDEAS

"Grow young, friends, with me,
The best is yet to be.
Man's spirit at noontide stands,
Reflecting the intelligence of that hand
That shaped the spheres.
So man, through the years,
In mind, whole, complete,
Remains immortal, with powers replete.
And though mortal anchors slip away,
Man lives forever and a day."

My friends, this little stanza points up the subject of my talk: The Real Struggle: The Battle of Ideas, which I am privileged and honored to submit to you tonight. In the stanza that I have related there is the idea that man's spirit at noontide stands, reflecting the intelligence of the Almighty. In that language, there is the concept that man is immortal—not a temporary bit of human clay, not a creature without a soul. As you know, the ideas of the material and the spiritual have been in conflict throughout the centuries.

THE FOUNDING PHILOSOPHY

The other day at Union Station I passed (as many of you did, I am sure) through the Freedom Train. I stopped reverently before the Declaration of Independence. I read: "We hold these truths to be self-evident, that all men are created equal, and that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

In that paragraph is a granite idea that has come in conflict with the Fascist and Communist concept. This language of the founding fathers, when interpreted as they meant it—(remember "the letter killeth, the spirit maketh alive")—this language is in agreement with the dynamic words of John: "Now are we the sons of God."

THE CHOICE BEFORE US

Unfortunately, some of our alleged liberal friends cannot see in these words of the Apostle, or in the words of the Declaration of Independence, the true spiritual meaning that they possess. We here today, you and I, looking back through the years, rejoicing in our finest traditions of the past, realize that we are at a turning of the road, just as in 1776 our fathers found themselves at the crossroads. They took the right, that is, the correct turn, and it is for us to take the right turn.

Yes, today the battle is on in this struggle of ideas. You may call it the battle between Christianity and paganism, between the things of the spirit and materialism, between the democratic way of life and totalitarianism, or you may call it a battle between capitalism and communism. At any rate, the time for straight thinkers has come.

Every man's mind is an arena and in that arena are exponents of these various concepts. Every nation is an arena and the conflict is waged therein between the exponents of the various ideas. Yes, even behind the iron curtain the love of liberty burns, though dimly. Within the human soul, there are the well springs for better things, though, of course, in Russia and in the other police states, there is very little opportunity for minds to get constructively into action—in a democratic fashion.

RIVAL CONCEPTS THROUGHOUT WORLD

On one side of these arenas—in the states of the earth and in the minds of men—there is the idea or exponent that elevates the individual, that gives him the dignity of a thing of the spirit—on the other side, man is considered as mud, as mere material substance.

In our own land, this conflict is reflected in various minor conflicts. One is between the concept of a planned society, wherein the state is master, and the concept of free enterprise, where man is a free builder and creator. You know that the exponents of a planned society and of the police state fill men with fear. They put to the fore the issue of security, wherein men are asked to surrender their freedom for what is alleged to be economic security guaranteed by the state.

Yet, as we look around Europe and the rest of the world, where the police state obtains, we see that the freedom which men had under the free-enterprise system has been bartered away for the freedom to starve, and for the supposed freedom to be ruled like animals. In this conflict of ideas, we who are exponents of the American way must not permit the shouting and the tumult to detract us from the line of attack. In spite of our economic recessions and a certain instability, in spite of, in particular, the world collapse in the thirties involving America, we ask: What other nation can be compared with our own? Where else do people have the income, the comforts, the standard of living, that we have here?

THE PROPER AREA FOR GOVERNMENT

But you hear someone say: Is there no place for the intervention by the state? Lincoln answered that, and I quote his words:

"The legitimate objection of government is to do for a community of people whatever they need to have done but cannot do it all, or cannot do so well in their separate or individual capacities. In all that people can individually do for themselves the government ought not to interfere."

Instances where the State can act best are, of course, illustrated in times of great depressions or panics or war. In such cases, the intervention of the arm of the state functions as the arm of the people. But it should be only temporary so that it doesn't give opportunity for the servants of the people (who are the officers of the state) to become the masters of the people and the masters of the state.

We realize that the challenge to America's enterprise system is principally that it has not always provided economic stability. We recognize that, of course, our system is run by men, human beings, with human shortcomings. We recognize, too, that the world has been shrunken and that what happens in the rest of the world automatically affects ourselves. We have seen that now in two world wars when the war fever has crossed the oceans. There was no iron curtain to prevent it. And with the war came a disarranging of our whole economy, and what is more, a tremendous spending of our material wealth. We have been on a material jag which has left us with the jitters—high prices, shortages, and so on.

GETTING AT THE CAUSE OF OUR FEVER

Now it is recognized by the medical profession that a fever is not a sickness, that it is a result—not the cause. And what human being must do is to get at the cause of these fevers—wars, depressions, and so forth. The American enterprise system is a result of our American way of thinking. And when we experience a fever which interferes with the American enterprise system, we should not destroy the system, but get at the cause of the fever.

If we follow this idea, we will not permit the exponents of the Fascist or the Communist ideas who are battling in these arenas to take our minds off the value of freemen, going forward and meeting the challenge successfully on every front. You and I know that those who would destroy our American way of life which includes the free-enterprise system, say that it is inefficient in producing wealth, and it is inefficient in the distribution of what it has produced. And so they argue for the police state, for a so-called regulated economy, for the withdrawal of the economic freedoms that have made America great. These folks want the job planned and executed by a chosen few whom we call bureaucrats. They want the Government to allocate labor, materials, and resources.

Now let us demolish this fake argument that the free-enterprise system is inefficient.

UNITED STATES' TREMENDOUS EFFICIENCY

Studies recently released show that American productivity has increased at the rate of 3 percent a year over the last 50 years. President Truman said that American farm production is at present 30 percent above the level of 1929 and that the current industrial production is 65 percent over the 1929 level. And he said that in terms of actual purchasing power, the average income in the United States after taxes has increased 39 percent between 1929 and the present. And you and I know that more people are receiving more things—in other words there is a more equitable distribution—than ever before. And the facts show that the so-called depressed one-third of the Nation made greater progress during the war than the other two-thirds.

EXPERIENCE ABROAD WITH SOCIALIZATION

We know, too, that where governments—national and State—have engaged in planning, that it hasn't brought about the millennium. You and I know that in Britain, where industry has been nationalized, it hasn't increased the productivity potential. There simply is no substitute for work and production. We have seen politicians seduce the workers by saying they could be paid more for less work. And we have seen the evils that followed in the wake of such falsehood.

We also know from what has taken place in Great Britain that when the state nationalizes its industry, it doesn't make for better working conditions or better relations with labor. No; the planning by the State is just another fake term, like this term "streamlining" which is so often abused. There is no magic in mere words so that they can constitute a substitute for work and production. The industry in Russia has been state controlled for over 30 years. Yet a recent report of the Department of Labor indicates that the Russian standard of living is only one-tenth of that of the American. And this, my friends, after Russia has had four successive 5-year plans and regimentation and sacrifice under rigid state planning.

Yes; the idea is the thing, as Knute Rockne used to say—the right idea. As a man thinketh in his heart, so is he. As a Nation thinketh in its heart, so will it be. And it is time that we do some straight thinking and kick out from our own minds the exponents of the wrong way of thinking—the wrong concepts and wrong ideas.

VALUE OF INCENTIVE

One other thought, I want to bring to you. As long as we are human beings, in order to get results, it is well that there be a proper incentive. One of the great weaknesses of the so-called planned economy is its failure to provide people with adequate incentive. If people are supposed to share equally, there is no motive, there is no desire to excel. The result is depressed production and depressed standard of living.

CONTEMPLATING RIGHT IDEAS

Yes, the real struggle is the battle of ideas, and it is up to the American people to get ahold of the right ideas. I know you people, you leaders, you builders, have them. Was it not Paul who said:

"Whatsoever things are true; whatsoever things are honest; whatsoever things are just; whatsoever things are pure; whatsoever things are lovely; whatsoever things are of good report; if there be any virtue and if there be any praise, think on these things."

PRESERVING AMERICA'S FREEDOM

I have stressed the political and economic angle of this struggle because it is going on in the arena of the nations today. What of the educational angle? Here we are confronted with a step that we Americans must take. We must see to it that our educational institutions are cleaned of any insidious and irresponsible teachings—teachings of mere materialism, teachings that reject America's founding philosophy.

The other night in New York I heard Stanislaw Mikolajczyk, former Vice Premier of Poland, who had just escaped from that stricken land. He made a deep impression upon the people who listened to him, and it was because I heard him that I chose the subject of my talk tonight, The Real Struggle—the Battle of Ideas. Poland, as you know, was once gloriously free. The citizens of Germany, even under Frederick the Great, the Germanburgers, were once free men. How these and other once free peoples have suffered from lack of freedom.

After we became a nation, after our Declaration of Independence and our Constitution came into being, the ideas they represented were carried by countless foreigners filled with the passion for freedom. These ideas circumnavigated the globe. But the flame and the fire of these ideas were allowed to die down. As a result, the ancient evils have returned, garbed in flashy new clothes, the evils of absolutism and absolute monarchs. They have come back into the arena, under the guise of communism and fascism and totalitarianism, the police state; and so the world is in the mess that it is today. But right ideas and right concepts are still right, and freemen and free enterprise are the result of the minds of men being filled with right ideas.

CONCLUSION

My friends, I am grateful for the opportunity for having been with you tonight. It has been a real pleasure over the years to

know the friendship of your splendid organization. I know that in this real struggle before us, in this battle of ideas, you will be counted among those who will stand with the forces of freedom and justice. You know the meaning and the glories of America's past and of her present, and it is for this reason that you, like countless others, will strive to maintain that meaning and those glories unimpaired in the future.

The people of this great city look to your group and others representing the best in Washington's traditions for continued leadership, guidance, and inspiration. I am sure that you will continue to lead them on the right path, the right way.

The Atomic Energy Issue in the United Nations

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a notable speech made by Ambassador Warren R. Austin, the United States representative to the United Nations, which was delivered in Richmond, Va., on December 8, 1947, before the Public Forum Committee, Richmond Council on Adult Education. This address, dealing with the atomic energy issue in the United Nations, made a very profound impression upon the audience, and should be read carefully by every American citizen.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One of the most dramatic acts of any government unilaterally made for the purpose of peace was the offer of the United States at the first meeting of the Atomic Energy Commission of the United Nations. Thereby, the United States offered to transfer its vast manufacturing plants to an international agency capable of maintaining a fully effective, enforceable system of control. Within 45 days after that, the Congress of the United States, acting upon the report of a Special Legislative Committee, of which Senator BYRD and I were members, adopted the Atomic Energy Act of 1946. Americans must keep this act in mind because it represents the public opinion of the United States officially expressed after exhaustive Nation-wide consideration. For our purposes two provisions are important today.

Section 10 A-1 states: "That until Congress declares by joint resolution that effective and enforceable international safeguards against the use of atomic energy for destructive purposes have been established, there shall be no exchange of information with other nations with respect to the use of atomic energy for industrial purposes." This section also provided for the subsequent dissemination of scientific and technical information relating to atomic energy.

Secondly, the act declared in section 8-B that the provisions of any subsequent international arrangement should supersede any conflicting provision of the law or action of the domestic Commission.

The transfer of a great measure of sovereignty from the United States to an international agency was prepared for by act of Congress. The United States was aware of the probability that the Soviet Union would be represented in such agency.

The Atomic Energy Commission of the United Nations was established by the General Assembly resolution of January 24, 1946. That resolution gave to the Commission certain specific tasks. It called upon the Commission to develop specific proposals:

(a) For extending between all nations the exchange of basic scientific information for peaceful ends.

(b) For the control of atomic energy to the extent necessary to insure its use only for peaceful purposes.

(c) For the elimination from national armaments of atomic weapons and of all other major weapons adaptable to mass destruction.

(d) For effective safeguards by way of inspection and other means to protect complying states against the hazards of violations and evasions.

Meetings of the Commission began in June 1946. Its membership included the 11 members of the Security Council, plus Canada. Because of changes in Council membership, a total of 15 nations have now studied intensively the problem of atomic energy control. The Commission and its committees have held more than 200 meetings in an earnest endeavor to solve the problems placed upon it. From its work has emerged two reports. The first of these was approved on December 31, 1946, by a majority of 10 members, with the Soviet Union and Poland abstaining. The second report was approved on September 11 of this year by a vote of 10 in favor. The Soviet Union opposed and Poland abstained.

The eminent scientists who participated in the work of the Commission reached agreement early in the negotiations on one fundamental fact. It is one that must always be remembered in considering any proposal for atomic-energy control. This is the fact that the nuclear fuels made from uranium and thorium by whatever process can be used either to make power or to make bombs. It is therefore the nuclear fuel and the facilities for producing it which we must control if there is to be any security from atomic warfare.

The character of effective control is dictated by this identity of production processes and the dangers inherent in nuclear fuel itself.

It is evident that decisions as to production of nuclear fuel cannot safely be left in the hands of nations. To do so would mean a terrific accentuation of national rivalries, each nation being impelled to secure all the raw materials that it could to build production plants as quickly as possible in order to secure advantages over other nations in this field. National rivalries that we have known in the past for other world commodities would be child's play by comparison.

The majority has, therefore, determined that security can be afforded only through the establishment of a truly international agency with broad powers, under terms to be specified in a treaty, to control atomic-energy processes throughout the world on behalf of all nations. Realizing the ease with which nuclear fuels in the possession of an aggressor nation could be made into atomic bombs, the majority has determined that this international agency must itself own, operate, and manage all facilities which contain or can produce sizable quantities of such fuels. It has determined also that this agency must own and possess all uranium and thorium ores from the moment they are taken from the ground and all nuclear fuels as they are produced. A point to be remembered is that 13 nations hold this conviction and it can no longer be regarded solely as a United States position.

The field of atomic energy is a new one in which there will be constant advances in knowledge. The majority has, therefore, determined that the agency must have means of keeping in the forefront of scientific developments throughout this field. The agency would possess research facilities and would be charged with the duty of conducting researches in the fundamentals of nuclear fuels. It alone would be authorized to carry on research on atomic weapons. The agency must know what it is looking for—what the shape and scope of its problem is at all times.

Certain nondangerous atomic-energy activities, particularly those having to do with research on a small scale, can be left in the hands of nations, provided, however, that the international agency is given full information concerning, and full access to, such activities.

By placing in the hands of the proposed agency all dangerous activities—dangerous in the sense that they can lead to the production of atomic weapons—the problem of control is reduced to manageable proportions. By giving the agency constructive responsibility for fostering the beneficial uses of atomic energy, one can create a viable organization which will attract able people—not only scientists and technicians, but administrators as well. Such a system makes possible, and the majority proposals so provide, for the complete elimination of secrecy and full access to information in the field of atomic energy.

Security also demands that the agency be given broad powers of inspection. However, inspection is reduced and made less onerous by the fact that the agency itself would own, operate, and manage all dangerous activities. Inspection is needed primarily to make certain that no nation and no person is carrying on any atomic activities contrary to the treaty which establishes control. Inspection forces would be concerned with searching out any illegal activities and for preventing any diversion of nuclear fuel from authorized operations and would carry on their work in connection with positive, constructive operations.

Good government demands safeguards against undue and arbitrary interference in the affairs of individuals. The majority, therefore, in working out proposals on inspection, has exercised great care in providing such safeguards. It would give the agency adequate powers of inspection, but at the same time establish procedures for warrants and appeals which are designed to prevent the agency from abusing its powers or carrying on inspections in any improper manner.

The majority recognizes that effective control also requires that violations of the treaty would be a most serious matter, punishable with swiftness and with certainty.

No nation can be permitted the obstruction of a veto.

We come now to the question of stages, in other words, steps whereby international control would be put into effect. This problem has not yet been worked out in full detail. It is the view of the majority that no useful purpose would be served by working out this question in detail until there is agreement on the system of control which we seek. On the other hand, the Soviet proposal insists that the first stage be that of prohibition and that a system of control shall not come until later. The majority rejects unequivocally this formulation. Both the majority and the minority agree that the production and use of atomic weapons should be prohibited. The majority insists, however, that prohibition can be effective only if it is a part of an over-all and thoroughgoing system of control through an international agency. On this there can be no compromise whatever.

You have heard, perhaps, the Soviet Union's charges that the proposed control system of the majority would invade national sovereignty sufficiently to destroy their independence. This is an absurdly exaggerated charge. I say to you that the majority

which has put forward these proposals is fully aware that all the nations hold dear their particular national prerogatives. They are equally aware, however, that no effective solution to this problem can be found without some delegation of sovereignty. They know that the need for security against atomic warfare cannot be met without deputizing an international agency of control to make decisions in this matter. The highest aim of national sovereignty is security. Each member state of the United Nations is already committed to exercise its sovereignty collectively in the interest of the common security. If national sovereignty is put up as a barrier against international control it is a foregone conclusion that no effective control can be devised. Even the Soviet proposals, inadequate as they are, call for some delegation of sovereignty.

The Soviet proposals reflect the attitude generally taken by them toward collective-security measures. Throughout these 15 months of negotiations we have had a minority view persistently held by the Soviet Union. What is their view?

First. Is the idea of prior prohibition of the production, possession and use of atomic weapons Only after such prohibition would any system of control be established.

Second. The Soviet proposals do provide that there should be an international agency. This is of no great consequence unless that agency has effective powers of control. Such powers are not provided for in the Soviet proposals. They add up to continued national control.

Third. The Soviet proposals provide that the agency should carry on certain research activities by its own personnel and in its own facilities. However, they make no provision for control of national research or development activities involving nuclear fuel in dangerous quantities. Thus, they would legalize the possibility of destructive use. Indeed, the international agency is asked to assist nations in acquiring dangerous quantities of nuclear fuel.

Fourth. The Soviet proposals suggest that the international agency should have the right of access to mining facilities, should investigate periodically the activities of such facilities, and check existing stocks of such materials. However, the Soviet proposals fail to recognize the basic principle that only the international agency can be permitted to use large quantities of source materials. The Soviet proposals leave these materials in national hands, thereby accentuating national rivalries, whereas security requires full control of all raw materials by the agency.

The Soviet proposals do not give the agency effective powers to obtain and maintain accurate information on world supplies of source materials, namely, uranium and thorium.

Fifth. Production and distribution of nuclear fuel, as in the case of raw materials, would be subject to a system of periodic inspection, verification of accounting, and the checking of existing stocks of atomic materials. In addition, the proposals state: "There shall be established strict international control simultaneously over all facilities engaged in production of atomic materials and atomic energy." Just what is this "strict international control"? Apparently, inspection would be conducted by the international agency over atomic-energy activities carried on by nations, but control over most phases of atomic energy would remain in national hands. Moreover, the Soviet proposals provide that the agency should make recommendations to governments on questions relating to production, stock piling, and use of atomic materials and atomic energy, and should make recommendations on enforcement to the Security Council, where the veto would prevail.

From this evidence, it is clear that no effective method of enforcement is provided in the Soviet plan. Individual nations would determine for themselves policies for the production of nuclear fuel. This would mean a world of national rivalries in all fields involving atomic energy, and exposed to ever-increasing danger of sudden atomic warfare.

Now as to inspection. The Soviet Union has long evidenced interest in this question. The majority had hoped that the Soviet views on inspection would be fairly close to theirs. But the Soviets have refused to divulge their views on inspection. Their proposals contain only vague and general statements on this point. The kind of inspection contemplated would seem to apply only to facilities which nations themselves reported to the international agency. There does not seem to be any definite requirement for nations to make such reports. The question of clandestine or unreported facilities appears to be virtually ignored in the Soviet proposals. Wholly inadequate provision is made for international surveys or inspections to locate unreported deposits and mines or to detect clandestine plants and activities. Complying states would not be protected against the hazards of violations and evasions, as called for in the terms of reference given us by the General Assembly.

In summary, all the members of the Atomic Energy Commission except the Soviet Union and Poland believe that the Soviet proposals are completely inadequate in their provisions. Obviously they are based on the concept of predominantly national control of what is generally recognized as the most dangerous field of activity in the world today. They provide just enough of an appearance of control to delude the uninformed, and give rise to a false sense of security. Such a situation is far more dangerous than the honest, though grim, acceptance of the fact that no international control exists. No responsible statesman or government can honestly participate in such a fraud, not only on the people of the United States, but on the peoples of the entire world.

Months of study have led all but two of the members of the Atomic Energy Commission to the basic conclusion that to leave activities involving dangerous quantities of source materials or nuclear fuel in national hands is entirely inconsistent with world security. The need for effective international control transcends the claims of national sovereignty.

In dealing with this grave problem, we should not be concerned with who is right but what is right and necessary. We are confronted with certain scientific and technical facts that must be faced and their demands satisfied. The majority has developed painstakingly a series of practical measures that deal with the facts of the case. The answer it has sought—and found—is one that would be effective. This is not an issue on which people can choose up sides on the basis of idealogies. One must choose on the merits of the proposals and their effectiveness in meeting the challenge of the atomic problem.

Soviet spokesmen claim that the United States and the majority stand in the way of securing agreement on atomic energy control. This is utter nonsense.

Let's look at the record. It was the United States in concert with the United Kingdom and Canada which first proposed the steps to be taken to secure international control. Very shortly after Hiroshima, the President of the United States, the Prime Ministers of the United Kingdom and Canada, joined in an agreed declaration to the world that they were willing and eager for the United Nations to take up this problem and to seek an effective solution. The proposal for a United Nations Atomic Energy Commission was made by the United States and the United Kingdom. At the Moscow Conference in December of 1945 the Soviet Union joined them and the three invited France and China to participate in sponsoring a resolution to establish such a body in the United Nations. The resolution establishing the Atomic Energy Commission was sponsored by these five and was unanimously agreed to on January 24, 1946, at the General Assembly session in London.

Between that time and the first meeting of the Atomic Energy Commission in June, the United States Government undertook an intensive study of the problem of international control. It produced the Acheson-Lilienthal Report which recommended a scheme of control on which were based United States proposals presented by Mr. Baruch on the 14th of June 1946. The majority plan for atomic energy control is an elaboration and development by all but two members of the Commission of these original proposals.

This is, necessarily, a sketchy statement of the situation which now exists in the United Nations in regard to atomic energy. But it reveals some highly significant things.

First, it shows that great progress has been made by the majority. The successful collective effort embodied in the two reports of the Atomic Energy Commission is an important achievement.

Secondly, it shows persistent effort by the minority to legalize national control of source materials, of nuclear fuel and of the plants producing them. This, we have seen, would endanger rather than protect the world.

Thirdly, and perhaps most importantly, it reveals the nature of the problems encountered by the vast majority of the members of the United Nations in their relationships with the Soviet Union.

The suspicion, the distrust and the fear which dominates the Soviet approach to the problem of atomic energy are present in nearly all of the other issues that have arisen in the short life of the United Nations. This is true whether the issue is Greece, Korea, the veto, the Interim Committee, the jurisdiction of the International Court, or any one of a score of such diverse problems. The implications of this general situation I intend to discuss at greater length in a speech next week in Chicago. Tonight, I will only say that disappointment awaits him who thinks the causes of Soviet obstruction can be easily or quickly removed. Years of determined and patient effort may be required.

Debates alone will not do it, nor will protestations of our good faith and peaceful purpose do it. Deeds alone can have the probative force to convince the Russian people that our strength and the strength of the other members of the United Nations is not a threat to her national existence and welfare. We believe that collective action is the best guarantee of security and progress. As we translate that belief into proof, the foundations on which present Soviet policy is based should disappear. Then, we could look forward to a United Nations that will function with all the vigor, with all the promise, with all the hope that animate the Charter of your United Nations.

American Railroads

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day Wednesday, December 10, 1947

Mr. HOEY. Mr. President, on Monday, December 8, I obtained unanimous consent to have inserted in the Appendix of the RECORD ar article by Mrs. Eleanor Roosevelt in the New York World-Telegram of December 2, giving facts with

reference to the operation of the United States Railroads, which indicated that they were operating more successfully under private ownership than under Government control.

Another article by Mrs. Roosevelt appeared in the New York World-Telegram on December 3, giving still further information on this subject, which I ask unanimous consent to have printed in the Appendix of the RECORD. This probably follows the first article, and gives added information.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAILROADS PROBABLY RUN CHEAPER UNDER PRIVATE OWNERSHIP

(By Eleanor Roosevelt)

GENEVA, SWITZERLAND.—Perhaps one of the most interesting subjects to be considered in discussing the question of nationalizing American railroads is how they are now regulated and how their taxes are distributed.

They operate under both Federal and State regulations, and they are also affected by city ordinances. The first regulatory Interstate Commerce Act was passed in 1887. Its purpose was to prevent discrimination. Laws and regulations are now concerned with freight and passenger rates, the publication of tariffs relating thereto, hours of service, safety standards, minimum wages, accounting, working conditions of employees, and so on.

No stocks and bonds can be issued, no railroad can acquire other railroads, new rail lines cannot be built and old ones cannot be abandoned without Interstate Commerce Commission authority. Railroads are still regulated as a monopoly even though they now compete with many other types of transportation.

So much for regulation.

Railroad taxes may be divided into three general groups: Federal normal income, surtax, and excess-profits taxes.

Taxes for pensions, social security, etc.

State and local taxes on physical property, franchise taxes, excise, license, and miscellaneous taxes, as well as State income taxes.

The annual tax bill of the railroads depends upon earnings. The taxes of class I railroads prior to World War II varied from $237,000,000 to $396,000,000 a year. Naturally, during the war their taxes soared, but even in 1946 they were only a little short of $500,000,000. In many counties, railroads are the largest taxpayers. In 1946 class I railroads paid $2.13 in taxes for every $1 paid in dividends.

There is a trend toward consolidation of railroads just as there is in every other business in our country, but it goes on under careful regulation.

It is easy to see it is competition which is the incentive for improvement of all private enterprise. If the railroads were owned by the Government, this incentive would disappear. And operation under the Government would be bound to have some political taint.

The main reason why I have chosen to look into railroads is because, obviously, nationalization in this field would be the entering wedge to widespread nationalization of industry. The Government would not be likely to permit competition from other forms of transport and would therefore be prone to nationalize not only transportation but some of the essential elements which enter into the functioning of transportation.

Our country is very large, and we still have conditions which make it seem probable that, under private ownership, the railroads can be better and more cheaply run and can furnish the Government—Federal, State, and local—with a substantial amount in revenue. In a later column, however, I shall cover the arguments in favor of nationalization, as presented by a labor leader.

Inflation: The Cause and the Remedy

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. THOMAS of Oklahoma. Mr. President, one of the many problems confronting the Congress is that of inflation. I am in receipt of a communication from one of the leading citizens of Oklahoma on this question, in the form of a statement by J. K. Wells, of Oklahoma City, Okla., entitled "Inflation: The Cause and the Remedy." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INFLATION: THE CAUSE AND THE REMEDY

(By J. K. Wells)

Any effort to curb inflation by reenacting the OPA law, rationing of basic commodities, price and labor controls and urging the public to cease eating meat on Tuesday and eggs on Thursday are the very height of folly and will accomplish nothing toward reducing prices. The whole idea is but an insincere political gesture to gain popularity among certain classes, losing sight, altogether, of the serious harm these false panaceas will produce.

Before trying to correct a serious maladjustment in our economic life, let us first analyze our present inflationary condition and ascertain the cause thereof.

The high cost of living, or inflation, which are synonymous terms, is caused, primarily, by the unbalanced relation between supply and demand. Basically, when the supply of the necessities of life far exceed the demand, prices are low. Contrarily, when the demand far exceeds the supply, prices are high. When the supply equals the demand, prices are fair and reasonable.

Inflation is sometimes caused, yet only in a minor degree, by an unusual amount of money in the hands of a great many people passing in rapid circulation between buyer and seller even though there is a normal supply of practicaly all the necessities of life available. When money is plentiful a great many people buy in larger quantities and, also, many things they do not need. This increases the demand and causes inflation. When money is scarce, naturally, consumers buy less, resulting in the accumulation of large supplies which, invariably, depresses prices. From the foregoing definitions it is apparent to any thinking person that inflation, or the high cost of living, can be practically and materially reduced by one, or two, or both, of the following methods: One, by stepping up the available supply of consumer commodities; two, by reducing the amount of money in general circulation. The Government is primarily responsible for the latter and same can be corrected and prices reduced if the Government in Washington really and honestly wants to curb inflation.

The simple formula necessary to successfully combat inflation can be stated in the following 4 words: Produce more, spend less.

1. The most practical and effective way to reduce prices is to increase the available supply. This can be accomplished by repealing the 40-hour-work-week law in its entirety and then encourage, request, and urge greater production of all the basic materials and commodities that are in short supply, especially steel, coal, farm machinery, building material, commercial fertilizers, and railroad rolling equipment, by instituting three shifts per day, 8 hours each, around the clock, 5 or 6 days per week in all industrial plants. This method is now followed by the oil business, both drilling and refining, and in the flour milling business, which has proven successful for many, many years. This method was also followed in all defense plants in this country during the last war which alone enabled us to win even though we were in short-supply of all war equipment at the beginning of the war. It will now help us win the economic war against high prices. This plan should increase production by at least 25 percent, or more, in a reasonable length of time and thereby decrease the cost per unit of each article manufactured.

2. Our exports should be reduced from $20,000,000,000 annually to a maximum of $12,000,000,000, in value on the present market, which amount would be 100 percent more than our annual exports prior to the last war. Obviously, this would leave more commodities in this country for home consumption. This would help to alleviate the short supply of which we so justly complain.

3. Congress should reduce the annual National Budget from $36,000,000,000 to a maximum of $24,000,000,000 which is ample for all legitimate purposes. This reduction would, obviously, necessitate a reduction in our Federal civilian pay roll of many bureaus and multiplied useless employees who render no practical and valuable service to the public and would stop the wanton waste of vast sums of money on worthless and altogether unnecessary projects. This would decrease the amount of money in general circulation, and, incidentally, help reduce prices.

4. The law authorizing the Government to guarantee the farmer minimum prices on his corn, cotton, wheat, oats, barley, soybeans, prunes, peanuts, and potatoes, together with the law authorizing subsidies on hogs and cattle should be repealed. The sole purpose of these laws, at the time of their enactment, was to boost prices above the cost of production. Surely, the need for higher prices does not exist today. Competition, free enterprise, and the inexorable law of supply and demand should be permitted to fix the price of everything without the interference of impractical, expensive, and unworkable laws.

5. The number of Federal civilian employees should be reduced from 2,200,000 to a maximum of 1,000,000 which would be ample for all legitimate purposes and far in excess of the number so employed in 1939 and prior thereto. These employees produce nothing in the way of material necessities of life, but when discharged would then find employment in the production of many basic commodities and materials now in short supply.

6. Aid to Europe: There is a growing belief among a great many people that the so-called Marshall plan, or aid to Europe, involving the expenditure of some $16,000,000,000 to $22,000,000,000 of our money is but a scheme of big business to siphon off the surplus commodities in order to further continue shortages in the domestic market, thereby continuing existing high prices and unconscionably high profits at the expense of all the people of this country.

Be that as it may, aid to Europe should be limited, for the present, to extending only

such aid as is absolutely necessary to relieve suffering and hunger in the distressed nations in Europe not under the control of Russia, with the understanding and agreement that they go to work, abolishing the 34-hour workweek in England, France, and Italy, and devote themselves industriously to working out their own salvation by hard work, 8 hours per day, 6 days per week.

Further aid should be limited to sending them grain for seeding crops successfully grown in each country, together with sufficient fertilizer, if available, and the necessary farming machinery commonly used in those countries to cultivate and harvest their crops. They should be taught the principles of self-reliance and self-maintenance. When this shall have been accomplished a great many more articles and commodities will be available for home consumption which will materially reduce prices.

Politics is largely responsible for the deplorable economic conditions in which we find ourselves today. If the national administration and the Congress would forget the 1948 election and forthwith enact the necessary laws that will solve this controversial question, without any thought as to how their action or vote will affect them or their party in the next election, the problem can be effectively and practically solved in a reasonable length of time and prices will immediately begin to decline.

Exportations to Russia

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the New Hampshire Morning Union, entitled "An Insane Policy," which is an able discussion of the policy we are following today in exporting goods of certain types to Russia, the only potential threat to the peace of the world and to our own country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN INSANE POLICY

Supposing you had a boy, and he used his air rifle to shoot the neighbor's cat, smash the windows in a church, and to break the glass on insulations on electric-light poles? Supposing you then called him into the house and gave him a severe lecture on his misbehavior, after which you not only let him keep the air rifle but on top of that you gave him a dozen new boxes of ammunition?

What do you think the lad would think of the seriousness of the lecture and of you? He would not think you meant what you said, or that he should mend his ways. And he would also think you were a dope. And could you blame him?

Does not the same apply to the United States' policy of allowing the shipment of heavy machinery and machine tools to Russia? What is the point of lecturing Russia on her noncooperation with the rest of the world and her refusal to help rebuild Europe, when on the same day of the lecture we allow her to buy, in this country, the intricate and complicated machines she needs to become strong? Which will impress Russia the most, the words or the deeds?

As Harold Stassen said recently, in a telegram protesting President Truman's statement that the President saw no reason for curbing shipments to Russia, what is the use of refusing to share the atomic secret with Russia because she will not agree to abide by the United Nations' plan for world-wide atomic control, and allowing the export to Russia of precision machine tools and intricate instruments which will aid Russia in making atomic bombs?

Why should we export to an unfriendly Russia the machinery which is desperately needed to rebuild the rest of Europe, which we are trying to save from the Communists?

How can we impress Russia that we mean what we say, if we keep helping to build Russia up?

This is the exact blunder we made with the Japs before Pearl Harbor. During the 1930's, even after Japan had invaded China and it was quite clear that Nippon had entered on a ruthless course of conquest of its neighbors, the United States allowed private firms in this country to ship to Japan thousands upon thousands of tons of scrap iron, steel, oil, aviation gas, aviation motors, machine tools, and any number of items used in the making of weapons.

How utterly horrible is the realization that those materials, furnished to Japan by America, were used subsequently to kill Americans, and that the scrap iron and steel came back to America, where it was made, in the bodies of American boys.

Must we forever go on repeating these errors at terrible cost?

The shipment of heavy machinery, machine tools, or anything that can be used to develop weapons, of food, anything the rest of the world needs to help it get on its feet should be banned, as far as Russia is concerned, until such time as the Soviet changes its warlike attitude and cooperates with the civilized world.

W. L.

Economy in Government

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. WILEY. Mr. President, the November 22 issue of the magazine Commercial West, the financial weekly of the West, contained an article which I prepared on the subject of Economy in Government. I ask unanimous consent that the text of this article be reprinted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LOST ART OF ECONOMY

(By Senator ALEXANDER WILEY)

If you were to ask in what single art the Federal Government and its employees are least proficient, you might answer, it is the art of economy. Although thrift is a great American ideal (was it not Ben Franklin who said, "Beware of little expense; a small leak will sink a great ship?"), the United States Government manifests little of that ideal.

Our fabulous expenses in two world wars and in a depression (in which we unsuccessfully tried pump-priming) have resulted in a prevalent disease which might be called "spenditis" which afflicts most bureaucrats. It is the tendency to spend recklessly, heedlessly, and then to crow about it in the mistaken belief that he who spends most is most entitled to prestige and to high salary classification; and that he who spends most fastest, is performing his job most efficiently.

This can in no sense be described as a universal phenomenon in the Federal Government, but it is sufficiently widespread to be objected to by every American taxpayer and to merit the continuous extensive investigation and condemnation not only by the Congress (through its Joint Committee on Reduction of Nonessential Federal Expenditures and other committees), but by appropriate instrumentalities in the Executive branch. Among those instrumentalities are the United States Bureau of the Budget, which is ostensibly supposed to husband the resources of the Government by eliminating waste through its Administrative Management and Budget Divisions, and the United States Civil Service Commission, which is also vested with the responsibility of conserving personnel and man-hours.

Although Government has become quite well known for its orientation courses for new employees, few if any of such courses have given instructions in economy either in office supplies, personnel time or in the use of funds for project purposes. Perhaps, therefore, this quotation from Henry Clay in a speech of 1820 might become a standard part of every Government orientation course:

"Government is a trust, and the officers of the Government are trustees; and both the trust and the trustees are created for the benefit of the people."

Whoever heard of a private trustee spending the resources of a trust like a profligate? Yet that is what Government servants do with impunity. It has been well stated that most Government functions which are necessary are treated too luxuriously and that Government services which are luxurious are treated as necessary. Perhaps a contributing factor to this lack of frugality in government is the fact that we are overly impressed by our wealth in relation to the rest of the world, particularly in these times. Every Government servant might recall these words of Halliburton:

"No man is rich whose expenditure exceeds his means; and no one is poor whose incomings exceed his outgoings."

The words of President Calvin Coolidge might also stand recollection at this time:

"After order and liberty, economy is one of the highest essentials of a free government. * * * Economy is always a guaranty of peace."

It is not enough, however, that bureaucrats be informed of the urgency of economy, they must be equipped with standards of economy and instructed to adhere to those standards. Definite yardsticks as to the amount of money that should be spent in the handling of given types of government projects should be established wherever possible. We have recently learned of one instance in the 1930's where the Government Agriculture Department disbursed in administrative expenses $115,000,000 for the purpose of expending a farm project sum not five times as large—a fantastic administrative ratio. Surely, if standards had been established, no such ratio would have been tolerated. We might add, had there been appropriate Government servants handling the program originally, neither the outrageous administrative expenses nor the project expenses would have been indulged in.

Samuel Johnson said: "Without frugality, none can be rich and with it very few would be poor." Without frugality, the United States Government cannot be rich, which means the United States people cannot be well off. With frugality, we will not founder on the rocks of insolvency. Even so eminent a cynic as the great George Bernard Shaw has stated: "Economy is the art of making the most of life; the love of economy is the root of all virtue." Only when the taxpayers

of the United States are vigilant and industrious enough to insure that the art and the love of economy becomes more widespread in Government will we attain standards of economy in the management of Government business to as high a degree as private enterprise attains it in the management of private business.

National Security

EXTENSION OF REMARKS
OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address on the subject National Security, delivered before the Chicago Kiwanis Club on December 9, 1947, by Hon. Alf M. Landon, of Topeka, Kans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Most Americans today are interested in the elemental things of a place to sleep—something to wear—and something to eat. Soaring prices of food, clothing, and housing are of immediate concern to most of us.

But important as the elemental problem of a place to sleep, something to wear, and something to eat are to many of us, there is another even more vital elemental problem that we must not lose sight of—our national security. That is particularly true as the Big Four in the London conference seem to be following the customary pattern.

Of course, national security involves a sound national economy. That means a reversal of the unsound fiscal policies we have been following. But I propose to discuss specifically today the questions involved in military preparedness. Marshall plan or no Marshall plan we have got to gird our loins forthwith.

The little guys are in a heck of a fix. But bad as their fix is today, their fix would be infinitely worse if America lets her defenses down and becomes involved in another world war.

There is no question that we must maintain our defenses to the utmost of our ability and resources. It would be suicidal to do otherwise. At the same time, the equally important problem confronts us of what is the best way to maintain our military defenses. And in saying military defenses, I mean economic as well. Because the crux of military strength is economic and industrial strength and political unity. It isn't going to do us any good to have a large Army and great Navy, if we are weak economically and politically. France is a very recent and graphic illustration of that. France had the greatest standing army in the world, but when the showdown came in 1940, she lasted less than 2 months.

All the power of Government propaganda is being turned loose in favor of compulsory peacetime universal military training as a prerequisite of national strength and security. Now, I do not intend to say today that compulsory military training may not be necessary—provided it is done through the National Guard. But I do say that the American people should not make up their mind emotionally on this question of military preparedness, and that we should also consider other factors of national security before reaching a final decision.

There are outstanding authorities in the professional military group who are very much opposed to universal military training, as obsolete and wasteful expenditure of money.

Both the Marshall plan and universal military training are being presented to the American people with emotional propaganda. The danger in such emotional appeals is that it causes us to believe that we have the answers to our problems—when the question is decided—just as we were led to believe that we were approaching the millenium with the British loan, the Bretton Woods agreement for the International Monetary Fund, the United Nations and Yalta. Right or wrong the emotional appeal is not the right way to settle any vital long-range problems.

Just look at the record for a minute of how repeatedly wrong Government-inspired mass propaganda has been in recent years, beginning with the New Deal theory in 1933 that America was a failure and had to be revamped and have its face lifted.

We were told that if we made the English loan that that would carry her for 5 years and get England on her feet again. Now, it is all gone in a little over a year, and the Government of that country is back for more money.

Anybody who objected to the International Monetary Bank created at Bretton Woods was hysterically denounced as a dirty little isolationist. Yet that bank has not done the job promised us. The administration of UNRRA was sold to the country as a glittering success when it was a fantastic failure. We were told that the United Nations was the answer to a peaceful world, and that the only reason we got into World War II was that we did not have the League of Nations. The ineffectuality of the United Nations in major disputes can no longer be concealed from the American people.

We were even told by many sources that we had to get into the last war because our security depended on Great Britain. How ridiculous that statement was in the light of events. But no wonder all those gross deceptions, including the Atlantic Charter, have left the American people punch drunk with something of an inferiority complex despite our unparalleled military achievements.

A quotation from one of Theodore Roosevelt's speeches fits our present situation.

"Speak softly and carry a big stick—you will go far. If a man continually blusters, if he lacks civility, a big stick will not save him from troubles; and neither will speaking softly avail if back of the softness there does not lie strength, power. In private life there are few things more obnoxious than the man who is always loudly boasting; and if the boaster is not prepared to back up his words, his position becomes absolutely contemptible. So it is with the Nation. It is both foolish and undignified to indulge in undue self-glorifications, and, above all, in loose-tongued denunciation of other peoples."

I don't pretend to pose as a military expert, but I have made it a point for some time to study the question of a well-rounded and adequate military system.

Here are some of the conclusions I have come to:

1. That any war of the future will move incredibly faster than the last war. If the last war was a blitz—the next one will be supersonic.

2. That we have no longer a two-ocean front, but a third front—the Arctic Circle.

3. That bases in the Arctic Circle are of prime importance. Also, continued and consistent expeditions testing out equipment, material, and men under conditions existing in that area.

4. That maintaining an efficient and constantly improving air force is imperative. Any future war will certainly be an air war. All you have to do is to look at a new air map and the whole story is right there in front of you. Topeka, the approximate geographic center of the United States is closer by air route to Moscow than it is to Santiago, Chile.

5. That the biggest navy in the world is not out of step with warfare of the future. I don't mean by that simply a lot of massive battleships and piling up of deep sea armament. We need plenty of floating air bases—carriers—submarines, and lighter escort and consort vessels.

6. A Regular Army four or five times the size of our prewar Army.

7. A bigger and more efficient National Guard and Organized Reserves.

8. Proper and efficient intelligence facilities are of crucial importance. We are now spending a great deal of money on intelligence but there is a very serious question as to whether it is being spent properly. We have too many intelligence agencies squabbling among themselves to be top dog and to build up their own empires. CIG, which was supposed to be a sort of correlating outfit, is now engaged in collecting intelligence itself. Our intelligence is not being coordinated or meshed together by one alert chief such as we must have.

9. That most important of all—we stay ahead of the procession in nuclear physics and strengthen our research, particularly basic research. Very little is being said about bacteriological and other scientific developments in that field. That is just as terrible and as fearful as atomic weapons. In fact, we could have superiority in the atomic field and be destroyed by bacteriological warfare. The Russians probably have as much in that field as we have.

The Army says it wants a trained and disciplined population to meet any sudden attack. But a trained and disciplined population has always proven, in the end, to be the destruction of any republic.

Neither am I impressed with the argument that the Army camp training, no matter how beneficial, is necessary for a boy because of mounting adolescent delinquency.

The reason for adolescent delinquency is lack of parental responsibility. We have too many baby sitters in this country, and not enough parents who stay on the greatest job of all, and that is making good homes. We already have too many parents who shove off on the schools and churches the job of raising their youngster. And I think it is a fallacious argument that we must have still a third agency—the Army—to help raise our youth.

Don't misunderstand me. I believe that military training serves to inculcate a valuable sense of personal obligation to the Nation. That is something to be desired in a political system that has been too prone to emphasize the take and not the give on the part of its citizens.

The main question in my mind is whether national universal military training will do the job needed to be done under modern conditions of warfare. As I have said, I fear that we are not considering other phases of military preparedness of even greater importance. We might come nearer to meeting our problems by seeing that more youths entered the fields of science and research. We should be concentrating our military preparations on air power and scientific developments.

What a nation needs now to keep itself strong militarily is great technical resources—scientific resources and developments, air power, radar, remote-control weapons and devices, atomic energy, bacteriological familiarity.

I believe it is necessary to have a reservoir of manpower trained to an extent to meet sudden attack. I favor keeping it at the community level through the National Guard and Organized Reserves. At least every possibility should be exhausted for keeping it at that local level before we embark upon the uncertain long-run course of universal military conscription.

There is no question in my mind but that we must take some steps to increase the national security. But peacetime conscription is a whale of a change for us to adopt without the most careful consideration. It is a grave national decision. To many nations it has led to disaster and not to security.

The National Guard has always been the poor relation in regular Army circles. It has never received the credit due it for its work in our last two world wars. It has always had to take the leavings in any military preparedness program. Yet it is profoundly an American institution. The Regular Army does a lot of bleating about the National Guard but has heretofore done little to help build it up. However, it is now supporting a provision in the Universal military training bill whereby a boy may, after 6 months training in the Army complete his service period in the National Guard. Of course, if the Guard is to be efficient it has to have vast appropriations for new armories and modern equipment. I believe, that with proper support and backing by the Congress, the National Guard could be made a sound and effective and very American alternative to universal military conscription by the Regular Army.

The National Guard has always heretofore shown its ability to contribute a sizeable military force in the event of war. There is no reason to believe it can't do better if properly supported by the people.

It is still too early to say that mass armies will not be employed again, but the important thing is to have some reservoir of manpower trained to an extent that a sudden attack will not bring complete disaster. I believe that the bulk of the training should be done within the framework of the National Guard. Those who wish to continue on in the regular branches could do so on a voluntary basis—the remainder, and by far the greater number, then to continue their intensive training in the Guard. Then they would pass on into reserve units and be available for active duty, upon call in national emergency, for approximately 5 years longer. That would be about the limit of really effective preparation of the individual soldier.

In any event, this issue of national preparedness is the most elemental question confronting us today. The next Congress should decide it one way or the other. In light of world conditions we can no longer let the matter of national security drift.

Nor will it do us any good to have guns, ships, airplanes, and bombs if we are bled white at home by an extravagant free-spending national administration. A sound fiscal policy is the essence of national defense and one of the ways we will stop these soaring prices is to cut our wasteful and extravagant national expenditures and apply the savings on our national debt.

For instance, before World War II there was one Army civilian employee to four soldiers. At the peak of this war there was one Army civilian employee to six soldiers. The budget for 1948 plans for one Army civilian employee to each two soldiers.

Today there is more or less undeclared war going on between Russia, western civilization in general, and the United States of America in particular. Russian agents are actively and determinedly attacking America at home and all over the world. So far the battles are being waged on economic and political fronts although some minor combat skirmishing has sporadically occurred since Yalta. The French and Italian labor troubles are a part of the Communist storm breaking on this harassed world. A more or less undeclared war went on between Britain and Russia for 300 years. I don't think it will go on that long between Russia and the United States of America. Things move faster today than they did in the seventeenth and eighteenth centuries.

There are two essential differences that ought to be borne in mind between the undeclared war going on today on the part of Russia with the United States, and the 300 years of more or less undeclared war between Russia and Great Britain.

(1) The background of the trouble between Russia and Great Britain started with Britain's seizure of India—in what Russia considered to be her sphere of influence. Whereas we handed Russia, on a platter made of American money and blood, vast territories she has been seeking for centuries.

(2) The Czars had no fifth column in Great Britain. Today the Russian Soviet has an active, disloyal, and traitorous fifth column composed of Americans who are taking their orders directly from Moscow.

Can you imagine Eugene Dennis and W. Z. Foster, who are secretary and chairman of the American Communist Party living in Russia and sabotaging the government of that country as they are the United States of America. They might live a short time. But not very long.

Can you imagine Henry Wallace as a Russian making speeches in Russia—siding with America as against Russia—and living very long?

I do believe we have to face the fact that for some years we will be teetering on the abyss of another war, and we have to prepare ourselves accordingly. The best way to do it deserves the most thoughtful and thorough attention of every American citizen.

The destruction of Germany shifted the center of European gravity eastward. The destruction of Europe and Japan shifted the center of the world's gravity westward. The center of the world's gravity today is the United States of America.

We must resolutely and wisely rally all the forces of western civilization. That can best be done as investing partners by requiring Government policies that will increase production.

Above all, the American people must not get the idea that the Marshall plan means a peaceful world. Rightly handled it can be a contribution toward restoring order and stability in the world. A stable world contributes toward a peaceful world. But we don't even have a stable Marshall plan. The President's committee recommends one figure, Secretary Marshall a much higher one.

The greatest debate since the Lincoln-Douglas debates is going on today in the American Congress. That debate, which will cover not only our position in the world, but our domestic policies as well, will bring before the American public, particularly in the campaign of 1948, the issue of how America is meeting this undeclared war by Russia. The debate may not fully develop all the measures necessary. But increasingly the real world situation will become known to the American people.

We seek neither satellite countries nor reparations. We seek only a prosperous and peaceful world.

The time is here when we must adequately and intelligently organize our own forces for our own security. How we do it demands the thorough consideration of every patriotic American citizen.

Mike Kirwan Reports to His People

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. MANSFIELD. Mr. Speaker, under date of Sunday, November 9, 1947, the Youngstown Vindicator, one of the Nation's outstanding newspapers, carried a story on the report of his European investigation trip by our colleague, the Honorable MICHAEL J. KIRWAN, to the people he has the honor to represent.

Mike did not make this report from Washington, but immediately on his return from abroad he hurried home to Youngstown, Ohio, and reported personally to his constituents. He gave his own people the story of what he saw and what he thought should be done. As usual, he minced no words, but spoke straight from the shoulder. The Youngstown Vindicator is to be complimented for giving this report such wide publicity and Congressman KIRWAN is to be complimented for having made such a thorough study, giving such sound recommendations, and making such a fine first-hand report to his district.

Mr. Speaker, under unanimous consent, I am inserting in the RECORD the story carried by the Youngstown Vindicator of MIKE KIRWAN'S report to his people. I sincerely hope that the Members of the House will find the time to read what Mike has to say because there is much food for thought in what he recommends:

"LAST CHANCE TO SAVE EUROPE," KIRWAN—SAYS ACTION IS NECESSARY THIS WINTER—SUMS UP 6-WEEK TOUR WITH PRAYER THAT UNITED STATES WILL ACT IN TIME—CITES STARVATION—ASKS FOOD, MACHINES, BRAINS, AND "FACING UP TO RUSSIANS"

This winter the United States has its third, and probably last, chance to win peace in Europe.

That is Representative MICHAEL J. KIRWAN'S summation of a 6-week tour of the war-devastated Continent. America, the Congressman said, must act quickly, and he added with characteristic frankness:

"I humbly pray we may act in time."

Youngstown district's Congressman backs his prayer with facts gathered from every European who could command even a smattering of English and from his own observations from the air, from railway car, from jeep, and afoot in the back alleys. He returned home last week with voluminous notes. He will take his place in the special session of Congress next week armed with these facts to plead for speedy approval of the Marshall program of aid to Europe.

KIRWAN will propose that we send help in three major categories:

1. Food: Starvation is dogging the steps of virtually every European, and many will fall, aid or no. The masses can be saved only with American-provided food.

2. Machinery and supplies: It will take many years to clean up merely the rubble, let alone rebuilding with bare hands.

3. Brains: Europe, aptly illustrated by the four-power confusion in Berlin, vistally needs the organizational and constructive know-how of hard-headed American leaders.

"WE MUST FACE UP TO RUSSIA"

KIRWAN would add one further vital ingredient.

"We must," he said, "face up to Russia."

The Congresman recalled his disgust when he observed in Berlin that Russia has control of the largest and strongest radio station on the continent. With this station, the Russians were blasting out their anti-American propaganda 24 hours a day. But the "pay-off" to KIRWAN was the fact that the equipment was in the British zone.

"Why," KIRWAN asked, "don't the British take it over?"

"The Russians would tell them to go jump in the lake," his military guide replied.

To this KIRWAN declared:

"Now I say most sincerely it's about time someone told the Russians to go jump in the lake and stopped this business of their grabbing everything they feel they can hold onto without too much trouble."

"But don't let anybody get the idea," he added in the next breath, "that this is an easy chore. I've seen samples of the 2,000,000 slaves that Russia has been working the life out of. They come back home worn out completely, good for nothing but to lie down presently to die."

But this is getting ahead of the legislator's practical recommendations for relief and rebuilding Europe. He feels that the program is not at all one-sided. The United States, he agreed, must take the initiative and prime the pump. After that there will be a flow to, as well as from, America. And he feels that it will be a healthy economic flow. For instance, he reiterated his statement that America could use very handily some of Europe's millions of tons of scrap.

MAHONING VALLEY INCLUDED

"This is a matter vital to my own district. It means something to the steelmakers of the Mahoning and Shenango valleys. Steel scrap is selling at $40 a ton. Steel production is already hampered somewhat for lack of it," he said and added:

"I saw millions of tons of steel scrap in Germany. I don't mean wrecked automobiles in which there are 50 different kinds of metal from bearings to body. I mean No. 1 scrap, uniform scrap—the kind of scrap our open-hearth foremen are yelling for."

KIRWAN reached into his notes and pulled out a couple of pages of description of the scrap he saw with his own eyes. He told of wrecked bridges on navigable waterways where all that is needed is welders to cut the steel into pieces and pile it aboard barges for shipment to America. He told also of the twisted girders of huge buildings needing only to be cut for first-grade scrap.

"These cities," the Congressman explained, "aren't off in the wilderness somewhere. They sit squarely on Germany's waterways, and these waterways lead directly to the sea. Youngstowners who have been pleading so long for a waterway of their own know well how easily this scrap can be shipped out.

"In addition, a program of removal of this heavy scrap would be of direct benefit to the people seeking to rebuild. In many cities, they can't make a move because that heavy twisted steel is in their way," KIRWAN stated. Taking it out not only would help clear their ruins but would make way for the labor that is now grubbing the streets.

LABOR PLENTIFUL THERE

"Labor is one thing they have plenty of. I know they would jump at a chance to get that labor usefully employed. All we need to do is to send over the torches and some supervision, and they'll cut up that scrap and get it out and ready for shipment to us," he explained.

Railroads, he pointed out have very little rolling stock, but their roadbeds are in excellent shape.

KIRWAN insisted that it requires only American know-how plus a minimum of machinery to get sufficient scrap for both American and German mills. He was especially astounded with the lack of elemental tools for rebuilding in Germany.

"I didn't see," he said, "a single steam shovel in all of Germany that I visited. And I was looking for one, too."

This lack of machinery, the Congressman believes, accounts for the failure of Germany to come back as Japan has come back. He said bombed-out Hiroshima is now largely rebuilt, and he commented that Gen. Douglas MacArthur must have been able to get equipment for the Japanese to do it.

"Of course, that brings out another fly in the European ointment," he added. "MacArthur is in supreme command. In Germany there are four commands. I don't see how they get anything done. Our Army bans the shipment of cigarettes in quantity to our soldiers, but they can go into the French zone and deal all they want to."

WHAT'S "THIRD CHANCE"?

"But, Mike," his interviewer asked, "what do you mean when you say this is America's third and probably last chance to win the peace?"

Mike replied that the answer to that one involved some of his observations in Europe and some conditions in America that flashed through his mind when he looked into the pinched faces and hollow eyes of Europe's children. Mike's voice became a little husky when he told about the children. He didn't see so many children on the streets. Someone explained that thousands had insufficient clothing to let them emerge from their hovels. Mike carried pocketfuls of mints, bought at the Army post exchanges, and gave them to children whenever he saw them.

"The expressions on their faces almost broke my heart, but I just couldn't pass them by with an empty hand," he said.

But, to get back to the third chance to win the peace: Congressman KIRWAN said we passed up the first chance entirely when we did virtually nothing in coordinated aid the first winter after the war's end.

The second winter, he explained, we sent over tons and tons of potatoes, and they froze on the way over.

"WE MAY BUNGLE IT"

"Now we have our third chance, and we are fairly well along toward bungling it also," he added. "You would think we should learn from our own experience. Remember, in the dark days of the depression, President Roosevelt said our only enemy was fear. We feared the terrible debt of twenty-eight or thirty billions. And many of our citizens fought tooth and nail against the expenditures necessary to bring about recovery. Then we feared the developing militarism of the Nazis, the Fascists, and the Japs. So a majority of us at times feared to build up our strength or to spend for fortification and defense. We feared to offend. So we faced Pearl Harbor, and we found we had to spend and build."

"Now our fear mongers are at it again," he continued. "They fear to spend the money to feed Europe. They fear to send machinery. They fear to build up our Army and Navy. Their fear has delayed us so long that we are already late; I hope not too late. Congress doesn't meet until December. Our fears will be debated a week or so. It will take time to round up ships and get the program going. I hope and pray it won't be too late."

The Youngstown Congressman had definite ideas also about what will happen if the United States program fails.

DANGER OF RUSSIA

"The Russian hordes," he said, "will sweep over the rest of Europe and perhaps into England, too. Only a definite program with plenty of manpower backing it up will stop them. This isn't kidding or seeing nightmares or battling windmills. Anyone who's been in the Russian zone knows that the Russians mean business. Anyone who's seen the terror on the faces of Austrians in Vienna knows that the Russians aren't kidding."

"Why did I find five Russian soldiers on the border at Vienna to every one American?" he asked and continued, "Because Russia is getting ready to move on in further and make slaves of all the rest. If Germany collapses, it will be only a few years before Russia can amass and equip an army of 50,000,000 men, all her slaves. I just want to ask what chance we should have when we can't even get enough recruits now for our limited forces."

KIRWAN explained that the key to Europe is the Danube waterway and that Vienna, where 80 percent of the people voted to the right, must be withheld from the Reds. He recalled Lt. Gen. Geoffry Keyes, in command at Vienna, explaining the position vital to that sector. The Danube, he said, is the key to Europe.

But KIRWAN found communism by no means confined to zones near Russian territory. He arrived in Rome on election day.

REDS PLASTER ROME

"The Communists," he said, "had plastered the whole city with paint. Their signs were everywhere. They had even painted 'Vote communistic' on the wall of the Pope's summer home. They had killed a young Christian Democrat and it took the best of American troops present to protect the funeral procession to the church. I tell you, this menace is real and terrifying all over Europe today."

To this end KIRWAN advised an immediate rebuilding of the United States Army and Navy. He said both need manpower for their present limited strength, and both should be enlarged. The Congressman also took issue with the type of army personnel sent to Europe as occupation forces. He said more than 400 American soldiers were brought back as prisoners on the transport on which he sailed back to America. Further, he was informed that the next army transport would bring back 300 more Army prisoners. Of the first batch, more than 50 were general court martial cases. The others were headed for dishonorable discharge.

"We should have better men than that representing America abroad," he observed. "We should select the best for overseas duty."

While on the subject of defense, KIRWAN had a barb or two for his own colleagues in Congress and for the press and radio of the Nation. He told of being invited, with nine other Congressmen, to hear Secretary of Defense James V. Forrestal and other top-ranking military minds outline the Nation's defense situation. He said seven of the Congressmen excused themselves and left after only a few minutes and that only three remained for the entire meeting.

BLAMES PRESS, RADIO

"The press and radio are to blame for our military might reaching the vanishing point," KIRWAN added. "They urged and urged the quick demobilization, and our forces are now inadequate for our needs."

All of this, the legislator asserted, has had a direct bearing on the attitude of Russia and certainly has kept us from winning the peace. In the scramble of the victors, especially Russia, for parts of Germany, he likened the situation in Germany as he saw it to the early days of Jack Dempsey, former world heavyweight champion.

"Berlin," he remarked, "has four nations in control, just as Jack Dempsey once had four managers. Jack got himself into that mess, and the managers took all his earnings and left him nothing. It wasn't until the court straightened it out that Jack got anywhere. Now, we must straighten things out in Germany, or continuing to get nothing, they'll invite communism."

Aside from the political and economic aspects of his trip, Mike noted many interesting things. He was amazed at the way Russia is stripping its section of Germany of everything that can be carried away.

"Why, they even took the marble out of Hitler's palace. They took cattle, food, everything."

HIGHWAY IS STORAGE DEPOT

The Congressman was also surprised at some things he saw in the British zone of Germany. In one case, the party had to turn off one of Hitler's prized highways because the British had used 40 miles of it as a dry base on which to store supplies.

KIRWAN admits rather hesitatingly that he bought at the Army posts and distributed over the territory hundreds of packages of cigarettes. Cigarettes, he pointed out, still claim top place among all commodities or paper that passes for legal tender. A carton is worth $100 in Germany, and several cartons guarantee a full year's food and living for a family. German farmers will gladly trade food for cigarettes while they eye the mark dubiously. A pound of potatoes costs 6 marks, and the Germans have survived so far on their potatoes.

But KIRWAN'S cigarettes went mostly one pack at a time to disabled war veterans.

"Whenever I'd see a man with a leg or an arm gone, I couldn't help giving him something. He fought for the cause he thought was right," the Congressman explained.

Besides the cigarettes and mints, KIRWAN also carried bars of soap in his pockets. German women accepted them most eagerly.

A Better Deal for Brooklyn

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Edwin B. Wilson, executive editor of the Brooklyn Eagle, over Station WHN on November 12, 1947:

A BETTER DEAL FOR BROOKLYN

It is a fine idea to celebrate in an appropriate fashion the fiftieth anniversary of the formation of Greater New York as we know it today. This is of special interest in the Borough of Brooklyn, for the central fact in the creation of the vast metropolis of five boroughs was the consolidation of the old city of New York and the city of Brooklyn—then the third largest municipality in the country.

Out of it all has developed the mighty world capital which New York is today—a city of over seven and a half million souls, over 2,700,000 of whom are from Brooklyn, which is now by far the most populous of all the boroughs.

However, it should be made perfectly clear at the start that great numbers of dyed-in-the-wool Brooklynites do not think that the fiftieth anniversary of Brooklyn's surrender of her individuality is a fit occasion for celebration. Some even feel that it should rather be marked by the donning of sackcloth and ashes. For these enthusiasts believe that consolidation was a great mistake, that it should never have occurred.

It should be remembered that when the consolidation idea came up in 1897 it was defeated in the city of Brooklyn proper, although approved by Kings County as a whole, by a plurality of only 277, or two-tenths of 1 percent. When the bill was passed by the State legislature, it was vetoed by the mayors of both Brooklyn and New York and had to be passed over those vetoes by the legislature. Such was the popular attitude here at the time.

BROOKLYN-MANHATTAN RIVALRY

There had always been this strong rivalry between the two communities situated on the opposite banks of the East River. When they became coequal boroughs in the new greater city, this rivalry was, if anything, enhanced. At any rate, the feeling grew with the years that the central city government was not doing right by Brooklyn, that far too large a proportion of the available funds raised from taxation were being expended for improvements in Manhattan.

This feeling seemed especially strong in 1941 with the result that the Eagle decided to do something about it. The publisher of the Eagle, Frank Schroth, went to his old friend, the president of Princeton University, Dr. Harold Dodds, and asked if Princeton surveys would make an investigation to seek the answer to the question, "Should Brooklyn Get a Divorce?" Thus it came about that an historic inquiry was undertaken at the Eagle's initiative and expense.

If the result had been to produce evidence that it would be to Brooklyn's best interests to pull out, the Eagle was prepared to lead a campaign for Brooklyn to secede from Greater New York. But Princeton surveys found that this would be inadvisable, reporting that it would probably cost independent Brooklyn a substantial increase in its tax rate or a marked decrease in its services.

BROOKLYN—ORPHAN BOROUGH

At any rate, we are still a part of New York City; and yet we are Brooklynites as well, with an intense pride in this vast borough. For Brooklyn's personality and individuality were not swallowed up by consolidation. Meanwhile, Brooklyn remains a sort of orphan borough, making it necessary for us from time to time to fight stubbornly for the sort of square deal to which we feel we are entitled.

The tendency of the city fathers has always been to take care of Manhattan's needs first. She got her new supreme court house, her new jail to take the place of The Tombs, her new express highways, and so on down the line. Here was Brooklyn, the famous city of homes or city of churches or city of industries or the city of docks—whichever you wish to call it. Yet it has often been treated like an orphan.

BROOKLYN'S FAME

Brooklyn is one of the best known place names in the world today. The bridge which bears this community's name is the best known bridge in the world—and in our opinion is unexcelled in beauty. The baseball team which bears this community's name is the best known in the world—and came within a hair's breadth of proving itself to be the best in the world. Here is the best known playground for the masses in the world—Coney Island. From here went during the recent war the largest number of Army and Navy fighting men that ever rallied to the colors from any single comparable community at any time in history, over 325,000. Wherever Americans fought throughout the world, the news dispatches invariably revealed Brooklyn men distinguishing themselves in battle. In Brooklyn's great navy yard some of Uncle Sam's finest warships have been built.

Brooklyn's water front is unexcelled. Over its miles of docks from Greenpoint south, along the East River and the bay, products manufactured here and elsewhere in the United States move onto ships to be taken all over the world.

But it is the people who make Brooklyn. Here we find a true melting pot in the great American tradition—people of every blood strain in the world living together, working together, playing together.

It is because of the concentration of wealth and power in Manhattan that its spokesmen seem to feel that it has certain vested rights in the use of the city's tax money which give it precedence over all other parts of the city.

So it is that in spite of Brooklyn's great tax-producing manufacturing plants and docks and warehouses, this borough has had to fight with the leaders of the central borough of Manhattan to secure its just share of the public funds for improvements. And more often than not it has failed to get them.

BROOKLYN EAGLE CAMPAIGNS

And so the Brooklyn Eagle has felt that its prime mission—after presenting the news of the day—is to fight for the things that this community needs. We fought for the elimination of the Fulton Street elevated structure from the borough's principal shopping thoroughfare. And it came down. We fought for the creation of a Brooklyn civic center and it is now in process of being created—slowly, because of the intervention of the war, but, I think, surely. We fought for the construction of a vehicular link between the two major boroughs and the Brooklyn-Battery tunnel is now well under way.

Because of the neglect of the past, however, and particularly because of the jump Manhattan got in many vital fields, Brooklyn's essential needs today are still numerous and varied, such as the following:

Construction of more subway extensions and improved service on trolley and bus lines in various parts of the borough.

Elimination of motor bottle-necks and improvement generally in the traffic and parking situation.

Elimination of the antiquated, inadequate supreme court house and old, unsanitary Raymond Street jail.

Increased facilities for the high and elementary schools, additional modern hospital facilities, completion of the beautiful central library, and provision for new branch libraries.

We could go on and on.

Most of these needs were listed in the 10-point program for Brooklyn which the Eagle presented on the first page of its one hundredth anniversary number, published October 26, 1941. Also listed was the rehabilitation of the older sections of the borough. In no community in the country is the need for new housing greater. The tenth and concluding point was the revival of a real Brooklyn spirit. We then felt, and still feel, that this is the heart of the whole program. For when Brooklyn lost its independence, there was the danger that it would also lose that intangible something which is generally spoken of as community spirit. Due to the unselfish efforts of many Brooklyn leaders in various walks of life, that spirit which for a time seemed to be waning has, in recent years, been newly aroused. In it lies one of the chief hopes for Brooklyn's future.

But things do move, and under the leadership of Borough President John Cashmore, Brooklyn seems to be in the way of getting a considerable number of vital improvements sewed down pretty effectively. Of course we have to make full allowance for the inability right now of getting various materials needed for any sort of construction work. But if Brooklyn can get its share of these materials, it can have no justifiable complaint.

At times it may seem regrettable that the differences between the five boroughs of the greater city are given as much emphasis as they are, but pride in one's own community is a natural thing, and there should be no reason why a person can not be a loyal Brooklynite and, at the same time, proud to be a New Yorker. For the combination of the contributions of the five boroughs has made New York City a metropolis and, indeed, the capital of the world today.

Much as the Manhattanites at times decry these borough differences, it has been the constant attitude of spokesmen for that borough which has emphasized the situation. Manhattan writers have talked of New York as a Balkanized city and have deprecated what they liked to describe as the less glamorous nature of the other boroughs. Their references to the Brooklyn accent have bordered on the absurd, when it is realized that the same little oddities which they pretend to laugh at are found just as frequently among the denizens of Manhattan as in any of the other boroughs. Brooklynites, however, have

long become inured to this sort of thing and take the laughs in their stride.

BROOKLYN'S CONTRIBUTIONS

Over the years Brooklyn has been making more than its share of contributions to the greater city in terms not only of personal service but of economic and even spiritual values.

It is noteworthy that the first public guaranty of freedom of worship was included in the Dongan charter given in 1643 to Lady Deborah Moody and her little group of English settlers in Gravesend, who came here after they had been driven out of several points in New England because they would not conform to what was then the established religion of the colonies there.

This was a pearl without price, for the principle of religious freedom is one of the cornerstones of American liberty which has made possible the continued success over the years of our form of government. And nowhere is it more important than right here in Brooklyn, where men of every creed worship according to their own lights, while maintaining the friendliest communal relationships.

A BETTER DEAL URGED

The disposition of Manhattan to treat Brooklyn as an orphan has always been hard for us to understand. For in spite of their separate origins and their original development as rival cities, and their present organization as separate boroughs, although within the one great metropolis, each depends on the other to an unusual extent.

To mention only one of Manhattan's debts to Brooklyn, a large proportion of our people work in Manhattan, most of them as trusted employees, but a considerable number running their own successful businesses. It would be difficult, indeed, to determine Brooklyn's share in the success of the hundreds of industrial, commercial, banking, and other enterprises which go to make up the wealth of Manhattan Borough, which, in turn, provides a big share of the tax money which makes public improvements possible. But it is unquestionably a very big share.

So as the fiftieth anniversary of the consolidation of the greater city approaches—and we hope it is celebrated in a dignified fashion, appropriate to the times—Brooklyn as a community looks forward to a fairer apportionment of the city's funds which it has so large a part in creating. We can think of no better news for our borough on this historic and gala occasion than assurance that the sister boroughs of Manhattan and Brooklyn will hereafter be treated as exact equals in the municipal family of Father Knickerbocker.

Rights of Certain Minorities

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, December 10 (legislative day of Thursday, December 4), 1947

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the Appendix of the RECORD an abstract of a Statement on the Denial of Human Rights to Minorities in the Case of Citizens of Negro Descent in the United States of America, which statement was presented to the United Nations on October 23, 1947, at Lake Success, N. Y.

The statement is a product of careful and objective research which consumed more than a year in assembling, editing, writing, and revising. It was prepared by a group of individuals highly competent to deal with such materials, including Dr. W. E. B. DuBois, present director of the NAACP Department of Special Research, who wrote the introductory chapter and edited the document; Earl B. Dickerson, Chicago attorney and president of the National Bar Association; Milton R. Konvitz, an associate professor in the School of Industrial and Labor Relations of Cornell University; William R. Ming, Jr., associate professor of law in the University of Chicago Legal Institute; Leslie S. Perry, administrative assistant of the NAACP, Washington, D. C., bureau; and Dr. Rayford W. Logan, chairman of the department and professor of history, Howard University.

There being no objection, the abstract was ordered to be printed in the RECORD, as follows:

A compilation comprising some 150 pages of historical material and recent facts relative to the discrimination practiced against Negroes in the United States, was presented officially to the United Nations on October 23, 1947, at Lake Success, N. Y. The presentation was made to M. Henri Laugier, Assistant Secretary General for Social Affairs, and Dr. John P. Humphrey, Director, United Nations Division of Human Rights, Social Affairs Department, by a small delegation from the National Association for the Advancement of Colored People headed by Dr. W. E. B. DuBois, director, department of special research, and Mr. Walter White, executive secretary of the Association.

In receiving the document, Dr. Humphrey said that under the workings of the Commission on Human Rights at the present time, "it has no power to take any action in regard to any complaints concerning human rights." However, he explained, that the Commission is now in the process of formulating an international bill of rights, and he asked the association to continue its efforts for human justice, being mindful of the coming meeting of the Human Rights Commission in Geneva, beginning December 1.

In the first section of the document the terrible cost of race discrimination in this country is clearly and precisely pointed out. Emphasizing the lack of complete biological unit among Negroes, their variation from black to white in color, and their descendance from both white European and red American Indian stock, as well as black African, it is shown that prolonged policies of discrimination and separatism have involuntarily caused Negroes to become practically an enclaved national entity. Thus they are to a large extent provincial, introvertive, self-conscious, and narrowly race-loyal. Yet on the other hand, this segregation has impressed upon them the necessity of constant effort to achieve; to deserve, and to prove to the world their capacity to share modern civilization, so that in nearly every facet of American life they have made creditable showing. But it is upon white America that color prejudice has prevailed at such a high price.

It has repeatedly led the greatest modern attempt at democratic government to deny its political ideals, to falsify its philanthropic assertions, and to make its religion to a great extent hypocritical. A Nation which boldly declared "That all men are created equal," proceeded to build its economy on chattel slavery; masters left a mulatto progeny which neither law nor science can today disentangle; churches which excused slavery as calling the heathen to God, refused to recognize the freedom of converts or admit them to equal communion. Sectional strife over the profits of slave labor and conscientious revolt against making human beings real estate led to bloody civil war, and to a partial emancipation of slaves. Poverty, ignorance, disease, and crime have been forced on these unfortunate victims, and a great nation, which today ought to be in the forefront of the march toward peace and democracy, finds itself continuously making common cause with race-hate, prejudiced exploitation, and oppression of the common man. Its high and noble words are turned against it, because they are contradicted in every syllable by the treatment of the American Negro for 328 years.

An outstanding characteristic of a democracy is the right to vote. But following the conclusion of the Civil War, by a "gentleman's agreement" with the North, the Negro was disfranchised in the South by a series of laws, methods of administration, court decisions, and general public policy so that today three-fourths of the Negro population of the Nation is deprived of the right to vote by open and declared policy. The effect of this disfranchisement on democracy in the United States is vividly seen when we consider the relative political power of three parts of the Nation; the North and West, where in 1946 each Congressman was elected with an average of 100,225 votes cast in the election; in the border States (Delaware, Maryland, Virginia, North Carolina, Kentucky, Tennessee, Arkansas, and Oklahoma), an average of 43,288 votes elected a Congressman; while for the southern South (South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas), only an average of 15,785 votes were necessary to elect a Congressman. Thus according to political power which each actual voter exercised in 1946, the southern South rated as 6.6, the border States as 2.3, and the rest of the country as about 1. Thus it is understandable that a national Republican committeeman from Illinois could declare, "The Southern States can block any amendment to the United States Constitution and nullify the desires of double their total of Northern and Western States."

Today racial discrimination in America has superseded its national boundaries and expanded into an international problem as the nations draw together. It is overly important to the United States, since the United Nations is located here, and since the vast majority of the people of the world are more or less colored in skin they render themselves liable to insult and discrimination in being mistaken for American Negroes. It is evident that this may make the functioning of the United Nations more difficult, if not in some cases impossible. Thus, in the attempt of the world to find common ground and to maintain peace, it is quite appropriate that the more than 14,000,000 American citizens of Negro ancestry—a group numbering as many as the inhabitants of the Argentine or Czechoslovakia, or the whole of Scandinavia, including Sweden, Norway, and Denmark; a people nearly the size of Egypt, Rumania, and Yugoslavia; larger in number than Canada, Saudi Arabia, Ethiopia, Hungary, or the Netherlands, or Portugal, or Peru, or Belgium, or twice as many as Australia, Switzerland, or Greece, and half as many as Spain—should appeal to the United Nations, asking this body to recognize fully a situation which deprives a large group of humanity of their rights as people and citizens.

From 1787 until 1914 the legal status of the Negro had declined until on the eve of the First World War the colored American found himself enmeshed in a pattern reminiscent of that which existed before the Civil War. For example, in 18 Northern and Western States, civil-rights acts were adopted after 1884 to protect Negroes from discrimination. But these laws suffered the vicissitudes of legal interpretation, and their present effectiveness is actually a reflection on the race attitudes in the States rather than on the sense of justice in the courts. On the other hand, it is significant that in the Southern

States, where legal rights of Negroes have been completely distorted and abused, no civil-rights statutes have been adopted.

This fact portrays the fallacy inherent in the argument that the legal rights of American Negroes can be entrusted to the States. It is almost idiotic to expect that States where the citizenship of Negroes had to be established by force would later honor that citizenship by law. As a complement to the doctrine that the Federal Government could not protect civil rights in the States, the Supreme Court developed the doctrine that private action condoned by State inaction was not within the scope of the fourteenth amendment. It was in this peculiar quagmire of incapacity and inaction that the American Negro found himself in his search for justice within the framework of American law.

Since 1914, the legal position of American Negroes has become more solidly defined. Congress has refused to pass laws to declare the poll tax illegal; to make lynching more effectively subject to Federal law; to make discrimination in private employment in interstate commerce a crime; to define and guarantee civil rights in the District of Columbia. The Supreme Court has failed to declare Jim Crowism in intrastate commerce unconstitutional; to outlaw segregation in schools as a denial of due process or equal protection of the laws; to outlaw the restrictive covenant in the sale or rental of property; to declare the poll tax an unconstitutional tax on a federally guaranteed right or privilege. The Supreme Court has placed the Negro at the mercy of the individual States; they alone have the power to define and guarantee civil rights. The Negro is a citizen of the United States, yet the thread that ties him to the Federal Government, when it is a question of protecting his life, liberty, or property, is so thin that the Government is compelled to admit its impotence.

Today, the socio-legal status of the Negro is best seen by contrasting the breadth of rights guaranteed by law to every person and the few which Negroes are allowed to enjoy. Although the thirteenth, fourteenth, and fifteenth amendments to the Constitution were promulgated in legal and ethical consonance with the American creed of "Equal justice under law," the practical result is far from consistent with their intentions. The independence of State law and the technicalities of the rules as to unrepealed but obsolete legislation, have led to efforts to enforce the legal codes of the pre-Civil War period in the South under present-day conditions. Under all these circumstances the legal and social status of Negroes in the United States can best be described as that of a minority whose physical presence is tolerated and whose rights receive lip-service, but who rarely secures the protection the Constitution and laws of the United States guaranteed to all within its jurisdiction.

Considering this toleration existence under which the Negro lives, it follows logically that the social framework of the Nation would shape up differently for him from that in which the dominant group moves about. Thus, although the fundamental human rights which the United States, like all other members of the United Nations, is pledged to promote include education, employment, housing, and health, the Negro is victimized widely in each of these rights.

In a country where education counts for so much, the denial of equal access to facilities finds 10 percent of all Negroes 25 years old and over having had no formal schooling, as compared with 1.3 percent of all whites; 82.7 percent had no formal schooling or failed to complete more than 8 years of elementary training, as against 53.1 percent whites.

Color-crazed America has erected employment barriers that generally keep the Negro beyond the limits of decent wages, job satisfaction, union benefits, and economic security. In 1940 the last census year, 64 percent, or the vast majority of Negro employees were unskilled; less than 3 percent were skilled and foremen, while only 2.6 percent were professionals. The rest were mainly semiskilled workers, farm tenants, and the like. These employment barriers extend into Federal service, so that personnel practices in Federal agencies closely parallel those in private employment. In 1938, jobs in custodial classifications constituted less than 3 percent of civil-service jobs. Yet 90 percent of all Negroes employed by the Federal Government in Washington were designated as custodial. The highest paid Negro employee in the Washington office of the Department of State, for example, was the chauffeur to the Secretary. With slight modifications this is the Negro labor picture today, both in private and Federal employment.

The ghettoes known as Black Belts, are traditional in the housing pattern of America. The multitudes among dark Americans are found living in these urban and rural slums, and forced to remain in these blighted areas because of the decisions of courts, intimidation, actual use of physical force and violence, and the collusion of organized government with vested interests. According to the last census, 35.1 percent of all homes occupied by Negroes needed major repairs, as against but 16.3 percent for whites. Almost a third of Negro occupied urban units lacked running water, as compared with 4.2 percent for whites; and 13.3 percent had no flush toilets, as against 7.9 percent for whites. In regard to overcrowding, for the Nation in 1940, it was three times greater in Negro homes than in those of whites.

Discrimination by health services is general, and both private and public agencies refuse the Negro adequate and proper care—even when he can afford to pay for it. Consequently, his tuberculosis mortality rate is more than three times that for whites; syphilis occurs six times more often than among whites; and he contracts pneumonia twice as frequently as white people. This is due to no inherent susceptibility on his part, but rather to the low economic and social status to which he is confined and kept. Hospitals frequently refuse and exclude him altogether, and some white physicians adopt an attitude toward him that borders on criminal neglect. Thus in view of all of these factors, the combined impact of economic and social discrimination in America casts a shadow over the Negro which extends from the maternity bed to a premature grave.

Precedent and the language of the United Nations Charter provide the basis on which this appeal is made. Provision by international treaty to protect and guarantee human rights was such a failure, and the adamant opposition of some statesmen to include a provision guaranteeing rights of minorities in the Covenant of the League of Nations, impelled the drafters of the UN Charter to establish and guarantee basic human rights, such as the American Negro is denied. In six different places—the Preamble, and articles 1, 13, 55, 62, and 76—the Charter indicates that it is the obligation, the purposes, and principles of the United Nations "to achieve international cooperation * * * in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion." To supplement its nonequivocation on this point, the Charter designated in article 13 the General Assembly as the agency to inplement this protection of rights.

It is a well-known fact that the implementation of Nazi racial theories and discrimination against minorities were important causes in bringing about World War II. Thus the racial theories and discrimination against Negroes falls into the same category and remains no longer a purely internal matter, but rather assumes international aspects that are a threat to world peace. Although article 2, paragraph 7 of the Charter provides that nothing in it authorizes the United Nations to intervene in matters essentially domestic in jurisdiction, the last clause of this same section adds, "But this principle shall not prejudice the application of enforcement measures" to correct abuses. The Charter then stipulates that the Security Council is empowered to determine the existence of any threat to peace and decide upon the measures to be taken to maintain or restore world peace and security.

In this respect, the National Association for the Advancement of Colored People urges that these petitions on behalf of minorities anywhere be received by the General Assembly because all members of the United Nations have the right to speak in the General Assembly, and that the Assembly, "the sounding board of the conscience of mankind," be given the fullest opportunity to discuss petitions on behalf of minorities. The General Assembly, except insofar as it is limited by article 12, could then make a recommendation to the Security Council, which in turn, according to the view presented above, could take action in cases where the violation of human or minority rights constitutes a threat to international peace and security.

Some Social Implications of Natural Resources

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. CLASON. Mr. Speaker, at a time when the Congress of the United States and the American people are being called upon to pass judgment upon great plans for the rehabilitation of foreign governments at our expense, I believe that it is most timely for us to have in mind information concerning our national resources. We ought also to consider our own national wealth in the light of the future. Today we have at our disposal more useful products, both industrial and agricultural, than the people of any other nation. Therefore, we have the highest standard of living ever known. For that very reason, it is important that we consider the extent of our material resources and those of other nations. We should give thought both to our future and to their future in determining the extent of our gifts of money and overseas shipments of materials. We must not only look out for the welfare of those presently in need abroad but we must give earnest consideration to the American boys and girls of coming generations for whom we are acting as trustees in the handling of our Nation's resources.

I believe that every thinking American will gain much food for thought by reading the following article on Some Social Implications of National Resources by Dr. Howard A. Meyerhoff, professor of geology and geography at Smith College, Northampton, Mass. Dr. Meyerhoff is a businessman well known in western Massachusetts. He has also made extensive surveys in foreign coun-

tries in the service of their governments and private corporations. His conclusions are worthy of careful consideration. His article is as follows:

[From the Annals of the American Academy of Political and Social Science, January 1947]

SOME SOCIAL IMPLICATIONS OF NATURAL RESOURCES

(By Howard A. Meyerhoff)

(Howard A. Meyerhoff, Ph. D., is professor of geology and geography at Smith College, Northampton, Mass., on leave to serve as executive secretary of the American Association for the Advancement of Science. In addition to an interest in natural resources and a specialty in Caribbean geology, he is chairman of the board of directors of the Propper-McCallum Hosiery Co., was a mediator and chief hearings officer on the National War Labor Board, and is chairman of the arbitration board in a large ship repair concern. He is author of The Geology of Puerto Rico (1932) and wrote the chapter on the status of natural resources in the Science of Man in the World Crisis.)

In a country as richly endowed with natural resources as the United States, it is difficult to persuade our statesmen or our politicians—or, for that matter, the public—that raw materials have been so vital in shaping our development and history that they must be a primary consideration in the determination of domestic and foreign policies. Even historians, whose function it is to view historical factors in proper perspective, have underestimated the resource factor in their struggle against the so-called economic interpretation of history. But our civilization is predominantly industrial and from the moment the industrial revolution started, certain key resources predetermined the destinies of nations, though many other factors have modified the rate and the quality of progress which individual peoples have made. A brief analysis of the ingredients of industrialism will support this premise, which is basic in the thesis that I have undertaken to develop.

The industrial revolution started in England, and it was some time before it spread to other countries. Its beginnings in England are complex, but several factors in its development can be isolated. Basically the discovery of coal as a substitute for water in the generation of power and as a substitute for charcoal in the manufacture of pig iron and steel gave the industrial revolution its technological start, but no less important was the presence of commercial deposits of coal and iron ore in the Midlands of England. The political integration of the country minimized such problems as labor and taxation, while geographic compactness made domestic transportation a negligible item of cost. The incentive to industrialize was the growing and populous Empire, served by the merchant marine and policed by the Navy. Here was a market that offered the lure of endless profits with comparatively little competition.

There are six ingredients in this brief analysis: raw materials, technology, labor transportation, markets, and protection; and they are still the basic factors in the complex industrial civilization of our day. Among them, however, raw materials have been the sine qua non of industrial expansion, and no national effort to industrialize has yet been successful where it has not been adequately supported by domestic or proximate supplies of fuel and iron. The early collapse of Italy and the exhaustion of Japan in the late war are definitive commentaries on the failure of the two most ambitious attempts to offset the inadequacy of native resources. The gravitation of industrial power to the comparatively few large deposits of coking coal demonstrates that, until atomic energy has actually achieved a greater diversity of application than is now in sight, industrial and political might are moored to the world's bituminous coal reserves. A sketch of the geography of coal and industry will make this point clear.

TO HIM THAT HATH

In the United States the major industrial regions lie upon, or within easy access of, the two largest deposits of high-grade bituminous coal—the Appalachian and the eastern interior coal fields. Except for local centers of light industry, the remainder of the country is concerned with agriculture, pastoral activities, mining, and forestry. In Great Britain, the manufacturing districts are localized on and near the coal seams of the Midlands and the Scottish lowlands. In central Europe the dominant industrial position of the Ruhr made it the main target of bombing attacks. It is the major problem of postwar Europe, for its excellent coking coals, which extend into Belgium, the Netherlands, and northeastern France, make the Ruhr inevitably the economic hub of continental Europe. Coal has converted the Silesian and Bohemian Basins into secondary centers of industrial activity while, similarly, in prewar Russia the coal of the Donets Basin made the eastern Ukraine and Rostov sections of Russia the industrial heart of the U. S. S. R. One of the principal objectives of the three 5-year plans was the establishment of a second industrial area in and marginal to the newly developed bituminous coals of the Kuznetsk Basin in the west Siberia region. Smaller industrial centers nourished by smaller coal-mining developments have grown up in Manchuria, coastal China, the Calcutta district of India, and New South Wales in Australia, but elsewhere heavy industry either is nonexistent or maintains a precarious economic hold on a local market or a nationalistic dream of self-sufficiency, rather than on handy energy resources.

Large hydroelectric installations have in recent years modified the industrial pattern to a minor degree. Yet even here it is evident that "to him that hath shall be given," for the most ambitious programs of water-power development have been instituted in countries already endowed with supplies of industrial coal, or in those which have ready access to nearby coal in neighboring countries. Some of the latter have attempted to balance deficiencies in coal by full utilization of hydroelectric energy, but the effect is usually to extend the margins of the highly industrialized regions which are based upon coal rather than to increase the number of these regions. In Europe, for example, Italy has fully developed its water resources, and there are large power installations in France, Switzerland, Norway, and Sweden. When plotted in relation to central European industry, these developments appear in proper perspective as peripheral extensions of the Ruhr industrial area. The same is true of Canada, which ranks second to the United States in developed water power. Most of the power has been harnessed in the St. Lawrence lowland and the Laurentian upland, marginal to the lower Great Lakes industrial area.

More fortuitously, two of the world's greatest industrial nations—the United States and the Soviet Union—are its largest producers of oil and natural gas, but with these two exceptions, nature seems to have placed oil in out-of-the-way places where there is little interest in its production and use. Under these circumstances, nationals of the industrial countries have discovered and recovered it, and nearly all of it finds its way to the industrial areas for processing and consumption. The geography of oil production may reflect the whims of nature, but the geography of oil consumption is essentially the geography of industrialization. Only a few enterprising districts have succeeded in building a partial industrial economy on local oil production, but even such communities as Los Angeles and Houston have no illusions of industrial self-sufficiency.

FROM HIM THAT HATH NOT

What applies to oil applies with even greater force to the earth's commercial minerals, for they, too, must make their way to the sources of heat and energy to be processed. In the Midlands and in Alabama, coal and iron ore are neighbors; in the Ruhr, in the Donets Basin, and in the Calcutta district these two complementary raw materials lie within reasonable distances of each other; but in the remaining industrial areas the problem of bringing the two together has taxed man's ingenuity. Lake Superior iron ore travels far down the Great Lakes to Gary or Detroit or Cleveland or Buffalo, and even overland to Pittsburgh and Youngstown. Chilean ore moves through the Panama Canal to the furnaces at Sparrows Point, Md., where it meets ore from Cuba and Lake Superior, and sometimes from Bilbao, Spain. And in western Siberia, magnetite from the southern Urals journeys 1,200 miles overland to Novosibirsk and Stalinsk in the Kuznetsk Basin, while coal makes the return journey to keep furnaces busy at both ends of the line. Only here is the normal movement of iron ore to coal reversed, and the exception has been made solely to reduce the all but prohibitive costs of long-distance rail transportation.

Not only does iron ore move to coal, but manganese, molybdenum, nickel, chromium, vanadium, tungsten, and the rarer ferrous alloys make the same journey, commonly from remoter parts of the earth. Nonferrous metals tend to follow suit, though for more complicated reasons. The smelting of copper, lead, and zinc is relatively inexpensive, but these metals find their readiest markets in the industrial centers. Bauxite moves to fuel for calcining or dehydration, but as a rule the alumina thus produced must go still farther to cheap hydroelectric energy for the final process of reduction to metallic aluminum. Like a magnet, coal draws metallic and nonmetallic raw materials to it because it furnishes heat, power, and byproduct gas, as well as many of the raw materials employed in the chemical and synthetic industries.

We are, then, confronted by the spectacle of mineral raw materials, agricultural raw materials, population, and food being drawn in increasing quantities into a dozen industrial areas which are endowed with the most basic raw material of them all—bituminous coal. We may talk about the decentralization of industry, but man can do little more than decentralize the light industries. The heavy industries can be spread within very limited geographic districts, but hardly decentralized. Herein lies one of the principal social problems of our industrial era, although there are others with more far-reaching implications. The dozen industrial areas of the world are partially competitive, and their competitive activities are beset with domestic and international questions of vital economic and sociological import. Upon the successful solution of these problems depends the economic and political security of virtually every one of the world's peoples.

FULL EMPLOYMENT

Economic security has become a fetish of popular governments, labor unions, and farmers as a direct consequence of the depression of 1929–37, but it would be folly to claim that any of these groups uncovered the means of achieving it. It was the threat of war in 1937 that provided a fuller measure of industrial employment and the grim fact of war in 1939 that ultimately created the manpower shortage and the full employment of the war years. Full employment is momentarily being maintained, in part by the

military establishments of the victorious nations, and in part by the unsatisfied demand for civilian goods. Thanks to this temporary respite, we have a brief opportunity to survey and assets the requirements of full employment and to determine how best to meet them.

Labor unions and farmers have come up with the right answer but not with the right method. Purchasing power adequate to buy the products of factories, the produce of farms, and the services of other working groups is fundamental to high production and full employment. But in this country it has apparently been forgotten that we possess resources and production facilities which far exceed domestic requirements and which make us dependent upon foreign markets for a sizeable fraction of our production. Before the war this fraction was estimated to be 10 percent, but now it is higher. Full employment in the United States depends, therefore, upon purchasing power abroad. Failure to sell our surpluses abroad will clog the American industrial machine and unemployment will follow.

EUROPEAN POLICY

Britain's industrial economy has been predicated from the outset on the need of a world market, and her methods of meeting the need stand in startling contrast with ours. Until comparatively recent years she has focused upon the multiple aspects of costs, starting with raw materials and extending through such politico-economic policies as free trade to the distribution of manufactured products by an efficient merchant marine. Some British economies do not stand up under scrutiny, but others may profitably be studied and emulated.

Britain has assiduously developed the native raw materials available within the Empire as well as those within her own tight boundaries. Endowed only with coal, iron ore, and tin, she embarked upon a program of exploration which still continues in the colonies and the Dominions. When the tin mines of Cornwall were exhausted, the tin ore of Malaya and the East Indies kept Britain dominant in the production of ore, and her monopoly of smelting and refining techniques gave her such complete control of this metal that no substitute facilities were available when the Malaysian mines fell to the Japanese early in 1942. Comparable monopolistic controls have been established in other fields—for example, nickel, diamonds, and rubber (with the Dutch). And monopoly in other forms has been a characteristic feature of British imperialism notably the exclusion of non-British capital and management from certain colonies and the acquisition of exclusive concessions in non-British countries. In the latter category is the well-known d'Arcy concession in Iran, with its long chain of consequences, the last of which was the Azerbaijan incident in northern Iran.

Although British policy in the development or acquisition of raw materials was dictated by British industry, it has long been closely identified with Government policy in a way that is foreign to the American system. Official Government representation in the management of the affairs of the Anglo-Persian Oil Co. is an instance which was given prominence about two decades ago, but it was by no means an exceptional instance. The British Government and British industry and trade were indissolubly linked, and in combination they created international friction which at times became acute. The uneven struggle between semipublic British and private American interests for oil in the period following World War I is a matter of record.

It must not be concluded that the British policy in regard to raw materials is peculiarly British. On the contrary, the only national designation which can be given it is that it is non-American. The Dutch, the Belgians, the French, and the Russians have practiced it in one form or another, and, with the exception of the Russians, nationals of these several countries have formed international cartels to exploit monopolies which could not be confined within national or single colonial boundaries. The Dutch-British combination to restrain production and trade in rubber boomeranged twice, and the second time it adversely affected the conduct of World War II and—possibly—wrecked forever a mainstay in the economy of the East Indies.

Although any statement regarding the ultimate competitive positions of natural and synthetic rubber would be premature, it can definitely be said that the artificially created shortage of rubber in 1942 greatly accelerated development in the synthetic field. Although American capital was permitted to participate in the copper developments along the boundary of Northern Rhodesia and the Belgian Congo, the control is closely held, and had it not been for the enormous, though temporary, demand for this metal during the war, Chilean and American copper production could not have met anticipated competition from African copper in foreign markets. Protected by a 4-cent tariff, American copper producers will survive by supplying the United States market, but South American producers face extinction, for basic production costs are roughly 2 cents a pound higher in Chile and Peru than they are in Africa.

PRODUCTION MOVES TO LOW-COST AREAS

There is no need to multiply examples, for it makes little difference whether we touch oil, rubber, copper, nitrates, radium, or food, the historical trend has been the same. Production of raw materials or of finished goods moves to low-cost producing areas. High-cost producers survive only if the low-cost producers cannot meet world demand, or if their governments protect them by tariff or subsidy, and the domestic consumer pays the price. Thus Americans pay 2 cents extra for every pound of sugar to keep domestic beet and cane sugar producers in business; 4 cents a pound to keep American copper miners at work; and approximately as much to enable cotton producers to raise four to six million bales of cotton more than this country normally needs. But in general, the locale of production has followed the lure of low costs—rubber moved from Brazil to the East Indies, copra forsook the West Indies for the East Indies, quinine likewise changed hemispheres as did cacao, despite the retention of a feeble hold in Ecuador and the Caribbean countries. Radium moved from Colorado to the Belgian Congo, and it may be on its way to the Arctic Circle in Canada. Nitrate production has partially deserted Chile for widely scattered synthetic plants, and rubber may now be headed in the same direction.

Some of these movements are worth a brief analysis. In the cases of rubber, copra, quinine, and other forest and agricultural products which were successfully introduced into the Malaysian-East Indian region, three vital factors were involved—capital, management, and labor. The history of rubber affords an illuminating example. Rubber was native to the Amazon basin, where it grew without cultivation. The British and the Dutch transplanted it to Ceylon, Malay, and Sumatra, but it was some time before the managerial genius of the Dutch evolved the plantation system of cultivation. Then followed the development of large plantations, kept scrupulously clean by cheap and abundant native labor. Brazilian producers, harassed by a scarcity of labor, could not emulate the Dutch system, nor could they match in quality the rubber which the Dutch and the British placed on the market. The demise of the industry in Brazil was rapid and so complete that the combined efforts of the United States, Brazilian, and Peruvian Governments and a corps of experts, backed by unlimited capital, were unable to revive it, even under the grim requirements of war.

LABOR

The moral of the story is clear. In the case of rubber and of other products requiring laborious cultivation and other manual operations, low-cost production depends upon labor when other factors are equal. Recognition of this fact was basic in Dutch colonial policy, and it was evidently the cornerstone of German military and administrative policy in the new order of Europe and of Japanese policy in the new order of the Far East. In a less spectacular way, it was the cheap and abundant labor available in the South that led so many textile manufacturers to abandon mills in New England and set up operations in the Carolinas, Tennessee, and Alabama. The same factor took the needle industry out of New York and into Puerto Rico, and when the wage-and-hour law equalized labor costs in Puerto Rico, the industry moved as far afield as China, Italy, and Czechoslovakia.

Labor is a primary resource to those who need it, but it has not yet achieved comparable importance to those who have it. Germany and Japan had a momentary vision of its importance en masse but no comprehension of the prerequisites to its successful exploitation. Mussolini, with one of the most crowded countries in Europe, was so obsessed by the stupid illusion of Italian self-sufficiency that the military significance of 45,000,000 Italians meant more to him than their economic and political value.

If the British have learned officially that manpower is an economic asset, they have scrupulously refrained from revealing the knowledge, although the industrialists of Britain have long exploited British labor. Conditions in the coal-mining districts of England and Wales were publicized during the depression years, but somewhat less has been said about working conditions aboard ships of the much vaunted British merchant marine. Any disinterested study of the industrial situation will reveal that the British have been maintaining a favorable competitive position for British goods in world markets primarily at the expense of labor. Domestically, labor governments have effected social reforms, but chiefly to counteract or partially offset the abuses and inadequacies of the British industrial system—if it can be called a system. Abroad in the Empire no policy can be discerned, but here too there has been local exploitation of labor by industrial interests. The mines of Africa are not a worker's paradise and plantation conditions in many of the colonies leave much to be desired, but in general the natives in the colonies are left to their own devices and to the vicissitudes of local conditions.

Only the Dutch have evolved a well-ordered administration of native labor in the colonies, but its admirable order and efficiency have not endeared the system or its administrators to the native population. The current uprisings in Java and other islands of the Netherlands East Indies are more than manifestations of racial and nationalistic unrest. They are protests against the most efficient—and humane—system of labor exploitation that has thus far been devised.

In review, labor appears to be an unreliable factor if one is seeking low costs. The textile manufacturers who move South found it impossible to hold wages at low levels, although it is true that wage differentials between North and South are still marked and are so well established that a rather idealistic National War Labor Board gave them formal recognition and sanction. But it is evident that the densely populated nations of the earth, like Italy, Germany, Belgium, the Ukraine, England, India, Java, China, and Japan, have a labor potential which will exert a critical influence on costs and on world economy. Whether these

labor pools be utilized for the production and processing of raw materials—mineral or agricultural—or for the use of the raw materials in manufacturing, the law of migration of work will inexorably operate. Any operation requiring a large amount of manual labor will migrate to these populous regions, and to those which also possess industrial fuel will go the raw materials that nourish, or draw nourishment from, coal and the heavy industry founded on coal.

It behooves United States labor, United States politicians, and the United States public to ponder this important trend before United States costs are jacked up beyond the reach of world markets, upon which full employment is dependent. How much money a worker makes is far less significant than how much he can buy, and to buy anything at all he must stay in competition with the rest of the world.

TECHNOLOGY

Labor, however, is not the only factor involved in costs, and to some extent high labor costs can be counterbalanced by technological ingenuity and invention. At times inventive ingenuity has been charged with the high crime of creating technological unemployment, and the charge may soon be heard again as war-inspired devices, designed to save manpower, increase production with fewer employees. But over the years technology has revolutionized industry, and it is likely to repeat the performance. It has certainly revolutionized the sources of raw materials.

In the field of mineral raw materials, geographic exploration has turned up many a new deposit of ore, but not a few of them have remained unused for years, and even for decades, until technological discoveries enabled man to exploit them. The development of techniques whereby the low-grade copper ores became available to commercial processes of recovery; the application of electrolysis to the reduction of alumina to metallic aluminum; the design of more efficient equipment, like the boats and the loading and unloading facilities that handle Lake Superior iron ore; the uncanny selectivity of flotation in the concentration of ores of metals and even nonmetals—these and many other equally familiar developments have transformed the mining industry and have freed us from dependence upon a comparatively small number of high-grade mineral deposits and a limited number of metals. Even so, mining, milling, and metallurgical progress has barely kept pace with an insatiable industrial demand that has called for larger quantities of a greater variety of metals during the past generation than the human race consumed in all preceding history.

Indeed, technology has been called upon, not alone to devise production facilities, but to "invent" raw materials. Currently the processing of wood bids fair to transform the industries based on forest products. Within a comparatively few years plastics have been produced more rapidly than names have been found to designate the many varieties. As if by magic, despite the cumbersome equipment employed, the air is made to yield nitrogen for nitrates, and coal is changed more readily to nylon than nylon is to a pair of precious stockings.

As applied to natural resources, technology has so altered the geography of raw materials as to precipitate social revolutions in many parts of the earth. We think of the profound effect of the discovery of gold at Sutter's Mill in opening up California and ultimately, with the construction of the first transcontinental railway, in binding the far-flung corners of this country into a closely knit national unit. But do we realize what the development of oil in the steamy Maracaibo Basin has done to and for Venezuela? or what the exploitation of oil may do in Saudi Arabia?

Not all the consequences of new developments are beneficent. For many years the nitrates of the Atacama Desert made Chile the most solvent of South American countries. Then, in 1913, Germany perfected the nitrogen-fixation process, freeing itself from dependence on Chilean nitrates as it waged World War I. The nitrate supply was a sore trial to all other contestants, all of which set out to develop their own nitrogen-fixation facilities as soon as the war was over. Copper saved Chilean economy for a time, but African copper and depression ended that, and the country has had hard times ever since. As a current example, following the bitter experience of highly localized and monopolistic production of rubber, the United States may develop synthetic rubber to the point of impairing the economy of the East Indies.

Technology brings changes that are both profound and kaleidoscopic. It transplants civilization to the wilderness and to the desert; it makes and breaks economies in regions and in nations with limited resources; it creates problems of obsolescence which wreck investments; it brings necessities and luxuries within reach of more people. It is an undiscriminating social force which, thanks to the atomic bomb, our politicians and statesmen are confusedly trying to direct and to control.

But we are dealing with technology as a factor in costs, and it must be evident that, like abundant labor, it causes the migration of industrial demand to the cheapest source of raw material. In following technological applications, industrial demand has migrated widely over the face of the earth, and its peregrinations should hold one important lesson: supplies of raw materials have no political or national affiliations—they are international. Freedom of access is vital, at least to the industrial nations. Freedom to supply native resources is equally vital to any nonindustrial nation or colony, for the time to dispose of native resources, particularly in the mineral category, is at the figurative moment when industrial demand and technological developments give them their greatest cash value and their maximum utility value. The notion of conserving irreplaceable raw materials for some hypothetical future use is pointless in a world whose needs are changing rapidly, and particularly is this true in countries which lack the energy resources to process their own mineral resources.

Technology is thus leading industrial demand over the face of the earth, shopping for industrial raw materials in those places where, at each given stage of technological progress, they may be acquired most economically. Each major industrial region may seek the same raw material from the same region, just as the Midlands and the Ruhr sought high-grade iron ore from the Kiruna district of northern Sweden in the days before the war. No nation can supply all its needs at home, and in the competition for raw materials abroad the successful competitor will be the one that offers in trade the best-priced products, rather than the best price for local products. Again the need to stay in competition with the rest of the world is self-evident.

LAND

Although industry uses many irreplaceable raw materials, replaceable products are playing an ever increasing role, not alone in feeding the human race, but also in providing it with industrial employment. Technology has greatly changed land use in such a variety of ways as to defy listing. Modern transportation has opened up remote regions and has led to specialization and regionalization of land use that was unthinkable 100 years ago. Refrigeration has transformed the tierra caliente of Caribbean countries into banana plantations and, in combination with irrigation, has converted a desert such as the Imperial Valley into truck gardens. Mechanization has greatly enlarged the economic land unit for many crops and has encouraged—and has itself been encouraged by—migration of population from farm to city. Laboratory techniques have developed new uses for old products, new products from old crops, and new products from new crops. Experiment has evolved hardier or more prolific plants and animals, and chemistry coaxes higher yields from every acre, until the dismal predictions of Malthus seem remote in a far more populous world than the one in which he lived, though their theoretical validity may still be sound.

Through all the changes which have occurred, a clearly defined order can be discerned. The geography of forests, crops, and animals has steadily become a function of climate, which in turn is a function of latitude, precipitation, topography, and elevation. The result, though logical, borders on the phenomenal, for regions in different hemispheres have developed startlingly similar characteristics, and even their peoples show tendencies to evolve comparable habits and outlooks. The wheatlands of the Argentine are scarcely distinguishable from those of Canada; and the members of Roy Chapman Andrews' third Asiatic expedition so reacted to the wheat-raising country beyond the wall in north China that they named their first camp North Dakota. The Gaucho of the pampas has been likened to the cowboy of the Great Plains, and the sheep rancher of South Africa or Australia has much in common with the sheep rancher of Wyoming or Texas.

LAND CULTIVATION

There is a temptation for the geographer and the historian to conclude that these striking similarities in land use reflect the normal transition of any new country from the pioneer to the mature stage of development. The agricultural history of the central United States, which finds recent parallels in Canada, Argentina, and Australia, appears to support this view. In accordance with this interpretation, only countries in which land is cheap and population scant can afford to use land for extensive agriculture. As population increases there is—it is claimed—an irreversible trend toward intensive agriculture.

The interpretation cannot be convincingly supported. China, India, and central and eastern Europe, with their dense agricultural populations, evolved agriculturally before modern techniques were evolved. Only in the Ukraine has a serious effort been made to modernize the agricultural pursuits of the farming population, and much as one may question the arbitrary methods employed by the Soviet Government in "collectivizing" the farms, it must be concluded that mechanization, coupled with drastic reduction in the rural population, has definitely resulted in more effective use of land and of manpower. Perhaps no other government has the "nerve" and the power to take similar steps, but comparable results could be achieved in the Danubian Basin, and perhaps in Poland. In Poland such a possibility may be presented as a postwar program, for the acquisition of the coal deposits of Silesia will provide the Poles with the basic raw material of industry and with the means of employment for displaced farmers.

In China and India similar steps could be taken, but more slowly. In both these countries there are extensive alluvial plains on which the cultivation of rice could be mechanized, as has been done in Louisiana; and in both countries there are the mineral raw materials, including coal, to provide work for displaced agriculturists. But the numbers of people that would be involved in such a change are staggering, and the program would succeed only if carefully and cautiously planned.

A critical appraisal of the agricultural situation throughout the world leads inevitably to a revision of the dubious dictum that in a country with a growing population the land will be used more and more intensively. The fact is, land seeks the most economical use, and this means the highest yield of the most valuable crop with the minimum expenditure of manpower.

This is an economic law that is not well enough known or observed, but its inexorable effects are evident enough—sometimes painfully so. As has been noted, we pay 2 cents a pound extra for sugar which Cubans can grow more cheaply, solely to keep our sugar producers growing sugar rather than some other crop. It becomes increasingly expensive to support our cotton farmers as good cotton-growing lands in Brazil, Egypt, and southwestern Siberia enter production and either compete in the world market or cut down demand from former customers like Russia. The situation will not improve as the "cotton belt" of Brazil, Argentina, and Paraguay expands to its full climatic and agronomic limit.

Plainly the renewable raw materials—food, agricultural raw materials, and animal and forest products—obey the same economic law that governs all other natural resources: production moves to regions of low cost. Production can be maintained elsewhere only by subsidy or tariff, or the inability of low-cost producers to meet the full demand. Insofar as domestic food supplies are concerned, proximity to market will ordinarily equalize costs with more distant competitors; but with foods for foreign markets and agricultural raw materials for industry, competition makes the cost factor paramount. Ultimately, therefore, the farmer finds himself in the same box with labor—in a type of competition that makes high farm prices a major hazard to his prosperity. His concern is rightly with the purchasing power of his money but wrongly with gross income.

SOCIAL SIGNIFICANCE OF ECONOMIC TRENDS

Our industrial civilization is founded on six major and seven or eight minor deposits of industrial coal. Two of the major deposits are in the United States, two are in the U. S. S. R., one is in Great Britain, and one is in the Ruhr and its environs. The minor deposits are domestically or regionally important chiefly to the nations which have them. The belated development of the Kuznetsk coal field of western Siberia and the belated modernization of the Donets mines, not to mention internal problems, have thus far kept the U. S. S. R. concerned primarily with domestic demand, but Soviet coal reserves are ample for the country to enter into international competition.

As of 1946–47, however, the United States, Great Britain, Germany, and Belgium have an energy potential in excess of domestic requirements, and at the moment this Nation and Great Britain have industrial production facilities in excess of any conceivable domestic demand. These resources alone make them inevitable competitors for foreign raw materials and for foreign markets. Until war terminated all normal international trade, Germany was also in the competition and could have been a more formidable rival had she not been so preoccupied with rearmament. Given a chance to achieve complete industrial recovery, Germany and her neighbors will feature once more in international trade.

War has seriously depleted our mineral resources: our supply of high-grade iron ore is perilously low; we are no longer self-sufficient in bauxite; copper production can be maintained only if protected by a tariff totaling 50 percent of foreign mining and refining costs; we never have had sufficient stocks of the ferrous alloys, tin, antimony, and other lesser minerals; the adequacy of our oil production is in doubt. More and more we must enter the open market for raw materials, and our chief competitor and all our prospective competitors are nations that have never practiced freedom of access to raw materials.

With production of manufactured goods migrating to low-cost producers we shall find ourselves in competition with nations whose social legislation may be advanced, but whose wage policies, working conditions, and cost of living fall far short of United States standards. With technology and mechanization also tending to move production and processing of mineral and agricultural raw materials out of this country to areas of lower costs, we are pursuing political, labor, and agricultural policies which threaten to hasten these movements and so to reduce the available employment as international trade slowly seeks a postwar norm.

WORLD COMPETITION

Technology and the productivity of land are factors which man may control, if only because they are calculable and finite. Paradoxical as it may seem, the human factor in production costs is the only one beyond human control. While United States labor insists on the highest wage in industrial history, it may be matching its ambitions against the policy of another nation willing to get business at the expense of labor; or against a war-torn country bent on rehabilitating itself by underbidding all competitors for the sake of getting work. People are easily manipulated, as was demonstrated by the fanatical patriotism of the underpaid and undernourished Japanese, or by the blind hope of the Germans in the ultimate security which the New Order would provide.

Under conditions which now exist, it is dangerous for any group to commit the United States to a policy or to place it in a position that will handicap it in international competition. We may believe that the control of prices is vital, and it is. But prices cannot be divorced from costs of production, and it is the height of stupidity to delude ourselves with low prices when we subsidize producers who cannot make ends meet because of high costs. Our industrial, economic, and social future must be guided by several elementary facts:

1. We have the principal raw materials of industrial production—coal, oil, water power, and a modest but incomplete and exhaustible stock of mineral, forest, agricultural, and animal products.
2. We need freedom of access to those raw materials we lack.
3. We are in competition not only for these materials, but also for world markets in which to sell our surpluses.
4. Our competitors never have had a policy of free competition.
5. Our competitors have a larger supply of labor in their industrial districts than we, and their labor has never enjoyed a standard of living comparable with ours.
6. Our economic and social standards depend entirely upon our ability to meet this competition.
7. Our ability to compete depends upon sound foreign and domestic policies, but chiefly upon the genius of American workers, farmers, and industrialists to produce efficiently what the world needs at a price it can afford to pay.

Foreign Aid and High Prices

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent:

LA CROSSE, WIS., *December 8, 1947.*

Hon. W. H. STEVENSON,
United States Congress,
Washington, D. C.

DEAR CONGRESSMAN: Permit me to register my opinion against the movement now before Congress to make a loan of billions in dollars to European countries.

The first duty of our Congress is to see that the people—American citizens—are fully housed and fed. There are many American citizens now living in trailers, cellars, garages, and unsanitary quarters, that are deserving the support they are not getting. Some families are even evicted because the landlords want an excuse to raise rents.

One other reason for my objection to this movement is that I have no confidence in the men who are behind this loan. Who can say that the total amount or even a part would go to charity? History will not support it.

There is another angle of our economy that has been ignored, and that is the question of our aged in America. Knowing our economic system as I do, I cannot believe there is any excuse for the present plight of the American people in general. I claim it is due to plain stupidity and greed.

I want to be as humane as anyone can be, but I refuse to be used as a sucker and a victim of coercion when I know the facts.

The enemies of the American people will stop at nothing to snare and defeat us. But they are not doing it without our knowledge and protest.

The American people today are taxed to unreasonable limits and gouged to the core with unreasonable high prices. In the final transaction the consumer pays the whole tax bill.

Our economy may destroy itself unless there is a change for the better. To accomplish the better we must get rid of the buccaneers.

Very truly yours,

W. A. D.

Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, on April 22, 1947, the House, by a vote of 356 to 2, cited Leon Josephson, a Communist, for contempt of the House of Representatives for refusing to be sworn or to testify before a subcommit- up the House Committee on Un-Ameri- Activities. Leon Josephson, on October 15, 1947, was convicted in the Federal Court for the Southern District of New York. The jury deliberated 5 minutes. He was sentenced by Judge Albert C. Coxe to the maximum sentence, 1 year and $1,000. Mr. Josephson appealed to the United States Circuit Court of Appeals and challenged his conviction on the grounds that the resolution setting up the House Committee on Un-American Activities was so vague as to make it unconstitutional.

Yesterday the circuit court of appeals, in a 2-to-1 decision, affirmed Josephson's conviction. The majority opinion was made by Judge Harrie B. Chase, and concurred in by Judge Thomas W. Swan.

I have here the article from the New York Times this morning, December 10, in which the majority and minority opinion are given rather fully. There was a dissenting opinion by Judge Charles E. Clark.

Judge Clark, in his dissenting opinion said that there had been no definition of the "keyword Un-American" in the resolution setting up the House committee.

Mr. Speaker, in a recent speech I said that the power of Congress to investigate was historical and as untrammeled as is our Constitution. It is this very independent authority and prerogative of the legislative branch that constitutes one of the essential elements of our system of government, for without this authority to explore, to inquire and to secure the facts and knowledge requisite to determining whether or not legislation is needed, or not needed, how could we long function as an organized government.

There is a determined and organized effort on the part of the Communists to destroy the Committee on Un-American Activities by any means. They would like nothing better than to have the committee's authority so limited and so finely drawn, that their subversive activities could not be investigated or exposed, and when Judge Clark refers to there being no definition of the "keyword Un-American" I am reminded of a six-line editorial which recently appeared in the Thurston County Independent, in the State of Missouri, a weekly newspaper. This editorial was sent to me by my colleague Russell V. Mack. To my mind it contains more common sense and truth than the wishy-washy palavering which you can find against the Committee on Un-American Activities on the editorial page of the Washington Post almost daily.

Here is the editorial:

UN-AMERICAN ACTIVITIES

The congressional and legislative committees on un-American activities have been attacked on the grounds that no definitions exist as to just what is meant by un-American. No one has ever fully defined love, honor and decency either, but most of us are quite satisfied that we know what these things are—and what they are not.

I am sure that this editorial expresses the sentiments of the vast majority of the American people.

The article from the New York Times is as follows:

CONVICTION OF JOSEPHSON IN RED INQUIRY IS UPHELD

The United States circuit court of appeals affirmed yesterday in a 2-to-1 decision the conviction of Leon Josephson on charges of having refused to be sworn and testify last March 5 before a subcommittee of the House Committee on Un-American Activities.

Josephson, a former Trenton (N. J.) lawyer and an admitted Communist, who was sentenced to a year in jail and a fine of $1,000, challenged his conviction mainly on the contention that the resolution setting up the House committee was so "vague" as to make it unconstitutional. That position was supported in a 20-page dissenting opinion by Judge Charles E. Clark.

The majority opinion, written by Judge Harrie B. Chase and concurred in by Judge Thomas W. Swan, declared that "the power of Congress to gather facts of the most intense public concern such as these is not diminished by the unchallenged right of the individuals to speak their minds within lawful means."

The majority went so far as to say that Congress could and should curtail freedom of speech where "there is a 'clear and present danger' that its exercise would, as by armed rebellion or external attack, imperil the country and its constitutional system, including, until amended, the peaceful process of amendment."

Judge Clark's dissenting opinion declared that the resolution setting up the House committee had the vice of "vague and ambiguous authority."

"It invites and justifies an attempt to enforce conformity of political thinking, to penalize the new and original, to label as subversive or un-American the attempt to devise new approaches for public welfare, in short," Judge Clark asserted, "to damn that very kind of initiative in experimentation which has made our democracy grow and flourish."

The decision was the first ruling by an appellate court on the constitutionality of the House Committee on Un-American Activities. Two similar cases, involving Gerhardt Eisler, Communist agent, and Eugene Dennis, secretary of the Communist Party, have been argued in the Circuit Court of Appeals in Washington, but the decisions still are pending.

In all three cases Josephson, Eisler, and Dennis took the tack of attempting to get lengthy statements upon the record of the House committee and refusing to be sworn for purposes of giving testimony.

GRATIFIED BY DECISION

United States Attorney John F. X. McGohey, who prosecuted the Josephson case before Judge Alfred C. Coxe and a jury, expressed gratification at the outcome of the appeal. While it is expected that the decision will be taken to the United States Supreme Court, Mr. McGohey said the split decision did not necessarily make certain that the higher court would review the case.

The majority opinion rejected every issue raised by Josephson in an effort to get a reversal of his conviction. As to the sufficiency of the indictment, Judge Chase said the indictment was "a good example of 'a plain, concise, and definite written statement of the essential facts constituting the offense charged.'"

The evidence, too, he found, "was ample for the jury to find with the requisite certainty that the appellant appeared before the subcommittee and refused to be sworn or to testify." Nor could he find any fault with Judge Cox's charge and instructions to the jury.

The majority rejected Josephson's contention that the resolution authorizing the House committee is so vague as to make it unconstitutional. The resolution empowers the committee to investigate the extent, character, and object of un-American propaganda in the United States, the diffusion of subversive and un-American propaganda of both foreign and domestic origin that attacks the form of government as guaranteed by the Constitution, "and all other questions in relation thereto that would aid Congress in any necessary remedial legislation."

Josephson's indictment was under another statute that makes it a misdemeanor to refuse to answer any question pertinent to a matter under investigation by Congress.

"Having refused to answer any questions whatsoever," Judge Chase said, "he (Josephson) cannot now claim that the authorizing statute is invalid merely because it did not furnish him with criteria that were sufficiently definite to permit him to determine the pertinency of some question that might never have been asked him."

The subject matter for the committee, the majority said, "was sufficiently broad in scope so that the information sought to be gained for the use of Congress would be comprehensive and adequate; but was nevertheless confined to certain types of propaganda about the potency of which there can be little doubt."

"If this propaganda takes the form of, for example, advocacy of the overthrow of the Government by violence," Judge Chase continued, "it is rightly called 'un-American' and a sensible regard for the self-preservation of the Nation may well require its investigation, with a view to the enactment of whatever remedial legislation may be needed or to the amendment thereof.

"One need only recall the activities of the so-called fifth columns in various countries both before and during the late war to realize that the United States should be alert to discover and deal with the seeds of revolution within itself. And, if there be any doubts on the score of the power and duty of the Government and Congress to do so, they may be resolved when it is remembered that one of the very purposes of the Constitution itself was to protect the country against danger from within as well as from without.

"Surely," Judge Chase continued, "matters which potentially affect the very survival of our Government are by no means the purely personal concern of anyone. And investigations into such matters are inquiries relating to the personal affairs of private individuals only to the extent that those individuals are a part of the Government as a whole."

As to the appellant's argument that the purposes of the committee are not to prepare legislation but to "expose the political beliefs and affiliations of individuals and groups," the majority referred to the statement of the President's Committee on Civil Rights, which said:

"The principle of disclosure is, we believe, the appropriate way to deal with those who would subvert our democracy by revolution or by encouraging disunity and destroying the civil rights of some groups."

RIGHT TO SIFT PROPAGANDA

In a discussion of the right of free speech, Judge Chase said that the first amendment of the Constitution (guaranteeing free speech and a free press) can be construed to prevent Congress from investigating propaganda, then "the Constitution itself provides immunity from discovery and lawful restraint for those who would destroy it."

Legislation curbing free speech when that speech imperils the country, Judge Chase said, might ultimately be the only means for the preservation of free speech.

Judge Clark said in his dissenting opinion that "no more extensive search into the hearts and minds of private citizens can be thought of or expected than that we have before us," and added, "If this is legally permissible, it can be asserted dogmatically that investigation of private opinion is not really prohibited under the Bill of Rights. In other words, there will then have been discovered a blank spot in the protective covering of that venerated document."

Judge Clark said that there had been no definition of the key word "un-American" in the resolution setting up the House committee. Attempts to explain the meaning, he continued, have been avoided or opposed. The committee has been continued without restrictions on its scope until it has become as characterized by one of its members the most powerful committee of Congress.

No definition of un-American can be determined from the activities of the committee, Judge Clark said, nor from contemporary thought. "Since this is a penal statute we are called upon to enforce," he added, "standards so vague and doubtful should be adjudged insufficient under the settled requirement that prohibited conduct must for criminal purposes be set forth with clarity."

Judge Clark declared that when Congress attacked "not merely dangerous propaganda, but in effect all argumentation departing from the then norm, there is no justification

for the wide reaches of its claim of authority." "In truth," he added, "it seems not a matter of great difficulty to provide for an investigation of proper scope which would impress all as being constitutionally justified."

Friends and supporters of the Congressional power may well fear its present exercise here Judge Clark asserted, and find the application of a proper restraint a source of strength in the long run. "For," he said, "a widespread belief that the committee is acting in an un-American way to even an American end will destroy the committee's usefulness in the eyes of liberty-loving people."

Foreign Aid and High Prices

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from one of my constituents:

RICHLAND CENTER, WIS.,
December 8, 1947.

WILLIAM STEVENSON,
Member of Congress,
Washington, D. C.

DEAR BILL: Got your letter and was glad to be informed as what some Members of Congress are thinking.

It looks to me like we are in a bad spot. If future loans (gifts) are to be dissipated by the debtors using the money for consumers' goods, movies and other nonproducing purposes, then it looks to me like we are pouring money down a bottomless rat hole. If the money provided by the so-called Marshall plan could be used for capital outlay, for example, if money allocated to England would be used to modernize her obsolete mining equipment so that once again England could export coal and thus help build up a favorable balance of trade or exchange, then it would appear that the money might be well spent. Apply the same principle to other countries so that they might begin to be self-supporting and not be looking for endless handouts at the expense of the American taxpayer. There should be some guaranty as to just how the money is to be spent and definitely for what purposes. I see there is some bellyache that the recipient of such loans (gifts) would be sacrificing some degree of sovereignty. Well, if I want to go to the bank and borrow a large sum of money, the bank as a matter of course inquires and is entitled to know how and for what purpose I propose to spend the money. It ill befits the begging nations to cry about loss of sovereignty. However, I think we should extend constructive help but draw the line if we are to be continually blackmailed with the threat that unless we come through all the time the said debtors will embrace communism. * * * We will stop bleeding ourselves white and prepare to set our own house in order by retiring the debt, lowering our own taxes, and in general be prepared to repel communism when and if it threatens our country. I feel like old John Adams when he said "millions for defense but not one cent for tribute." We can't continue indefinitely to drain ourselves for their benefit.

Now about the high prices. The answer does not involve any complicated economic theories or solution that any person of ordinary intelligence cannot comprehend at least in part.

Anyone should know that if we hand over billions of money to European nations without consideration and those countries use this money to compete in our markets that it will raise prices here. There are only so many goods and if one of the bidders does not have to provide the money except through gifts no wonder the prices go up. If Santa Claus furnished me the money and you and I needed a suit of clothes and we wished the same suit, who do you think would be the succesful bidder? To talk about lowering prices while this process continues is like trying to lift ourselves by the boot straps.

In my mind the present high prices are in a large part at least due to United States furnishing the money for foreign bidders to compete in our own markets against the normal American bidders who have to find their own cash. The whole proposition is as simple as that—in large part, I say. You can't in essence give away millions and millions of tons of foodstuffs, meat, grain, besides steel, machinery, trucks, automobiles, and everything else and expect the price here not to go up. When and only when we stop this economic drain we may expect normal surpluses here and a consequent lowering of prices due to normal supply and demand.

What I have said reflects my own thinking but I can say to you that you won't find one person in a hundred who does not believe exactly as I do in this part of the United States.

Well, Bill, I seldom sound off by writing to my Congressman or anybody else and I am sure that you know the score as well as I do. I won't say any better because the truth should be obvious to all except harebrained New Dealers who, thank God, are on the way out. I think that Senator TAFT, from what I have read, has about the same ideas as I have mentioned and there have been some editorials in News Week along the same line.

With best of luck and the season's greetings, I remain,

Yours very truly,

F. E. F.

Poland

EXTENSION OF REMARKS
OF
HON. CLAUDE I. BAKEWELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. BAKEWELL. Mr. Speaker, by virtue of permission to extend my remarks, I would like to include herewith a copy of a resolution adopted by the National Committee of Americans of Polish Descent, Inc., at their sixth annual convention held in Philadelphia November 8 and 9, 1947.

No country has had a more tragic history of partition and unsurpation by foreign powers than has Poland, and yet no country has, despite such obstacles, retained its national identity, culture and traditions as has Poland. Truly it is a national history of which the Polish people and the people of Polish descent living throughout the world can be proud.

Now, once again, a foreigner dominates the daily lives of the great Polish nation and seeks through force to impose alien ideas, and to wean the people away from the heritage of culture, religion and national unity which is theirs. It should be a cause of genuine sorrow to every American to know that during the late World War our leaders by their acts were responsible, at least in part, for this melancholy state of events. This knowledge should impel all Americans, whether they are of Polish descent or not, to dedicate themselves to correcting these grievous wrongs which have been done to a proud and courageous people who were our allies.

The resolution follows:

A CALL FOR THE INVESTIGATION OF THE YALTA AGREEMENT

From the very beginning of its activity the National Committee of Americans of Polish Descent has warned the American public to be on guard lest America and the democratic world betray the causes for which they waged the war. We pointed out that a betrayal of those causes would lead to trouble in the democratic group and that despite the defeat of Hitler, America would not in the end stand in the role of victor but of the defeated.

During the various phases of our struggle we have had many proofs of the rightness of our warnings. At the same time, mistakes made by the United States and Great Britain—countries upon which depends the fate of world civilization and culture—multiplied. We believe that failure to see the dangers threatening America and the world is the reason for the present state of affairs and that this blindness must be cured. We look upon the Yalta accord as the most outstanding evidence of the correctness of our position. This accord was positive proof to us that the democracies were not cognizant of the danger resulting from the betrayal of their principles and ideals, that they were not really aware of what they were fighting for, and that they were blind to the fact that their Soviet ally is their worst enemy.

When all our protests, together with those of the Polish-American Congress, against the Yalta accord came to nothing 2 years ago at the fourth annual meeting of the delegates of our organization, we accepted it as a fundamental principle that only an investigation of the Yalta agreement could check the disintegration of American political life.

That occurred at a time when the American Congress was devoting itself almost wholly to the Pearl Harbor investigation. In a resolution passed at that meeting of our delegates, November 24, 1945, we declared that "the moral responsibility for the crimes committed by the Soviets against the Polish Nation rests equally upon the United States." The resolution concluded with the following appeal:

"We are calling your attention to the necessity of an investigation of the secret commitments undertaken at Yalta because, in our opinion, they jeopardize the safety of the United States and of the world."

A year later, at the fifth annual convention of the National Committee of Americans of Polish Descent, a telegram was sent November 17, 1946, to Secretary of State Byrnes, in which again we stated emphatically that: "if American public opinion demanded an investigation of Pearl Harbor—even after our victory over Japan—it was far more essential to investigate the secret, unconstitutional Yalta commitments and the pernicious effects which caused catastrophic setbacks to our American prestige and are jeopardizing the safety of the United States and of the civilized world."

If it was the purpose of the Pearl Harbor investigations to examine the circumstances responsible for the catastrophe in the Pacific, canceled out by the bravery of our

Army, Navy, and Air Corps, together with the great devotion of the entire population—as we wrote in our resolution—an investigation of Yalta is imperative to reveal the source both of the defeats we have already sustained and of those which loom in the future. The Pearl Harbor catastrophe was washed out by later victory. Yalta brings one setback after another. These can neither be checked nor rectified and they open the way to unforseeable and indescribable catastrophes.

Yet the American Congress remains blind. Month after month and year after year it has been learning of the secrets of Yalta, learning of the partitioning of Poland, of the handing over of half of Europe to Soviet control, of the cession of the Kuriles to Russia, of the granting of three votes in UNO to the Soviet Union, of the right of veto, of giving Manchuria, half of Korea, and part of China to the Soviet sphere.

Much has been written and spoken about all this, and at last we have the documents themselves in the memoirs of Byrnes, who was present at Yalta and later the executor and defender of the agreement.

To date, however, not one American speaking with authority has come out with the declaration that to rectify the blunders, to turn from the road of treason and capitulation, to abolish the sentence of death given world freedom, and the honor and security of America, the Yalta Agreement must be repudiated. On the contrary, the Yalta accord executor, Byrnes, revealing the secrets of this disgraceful betrayal as he had them in his stenographic notes, concludes that the evil lies not in the death sentence for the western democracies implicit in the Yalta accord, but in the fact that this death sentence is not carried out by the Soviets according to the regulations. Byrnes again attempts to deceive America and the world with the idea that if the Soviets would conduct the execution of Poland, half of Europe and China in proper form, then everything would be in order and the American war objectives would be attained.

And so we say again as we declared in earlier years that until we return to those purposes for which America fought the war and which led to the principles of the Atlantic Charter and the four freedoms, until we understand what the struggle is about, until we lay bare the plans of the Soviet Union, aiming at world domination, just so long our political as well as our military decisions will be erroneous, incomplete, unsuccessful, and ending in disaster.

It was disastrous giving Russia two and a half years time to win Europe and Asia and thus to weaken America. A year intervened between Munich and Hitler's invasion. Almost 3 years have passed since Yalta. This was a period of uninterrupted disasters for America and Poland and of triumphant crimes of the Soviets. Hence this year as in years past the National Committee of Americans of Polish Descent demands that the execution of the death sentence according to the Yalta agreement cease; that instead there be an investigation, followed by a repudiation of these criminal agreements, which have thus far served as the basis of United States foreign policy.

Central Valley Project

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mrs. DOUGLAS. Mr. Speaker, in answer to many requests for an investigation as to the reason for discontinuance of work on Central Valley projects after November 30, 1947, I have this to say:

No investigation is needed to discover the reason for the work stoppage on dams, canals, and power plants in Central Valley.

There is not any more money.

The President, in his Budget message to Congress for this year, requested $20,000,000 for Central Valley in order that work authorized by Congress could go forward on schedule.

The Eightieth Congress, in the name of economy, saw fit to reduce this amount to $9,141,288.

A few Representatives from California warned that this appropriation was wholly inadequate and that it would force a shut-down of work before the year was over. We pointed out that having to stop and then start work on dams, canals, and transmission lines is no economy, but will cost more to complate the same work. It is sheer insanity.

Well, what we predicted has come to pass. The Interior Department has run out of money to carry on work in Central Valley and is forced to notify contractors that work must stop.

As you remember, an amendment offered to provide the necessary funds including the Central Valley project was defeated by a vote of 197 to 140.

Of the 197 who voted against necessary funds to continue authorized construction, 186 were Republican votes—11 were Democratic.

Of those voting for the funds, 130 were Democrats—only 9 were Republicans.

In other words, nine Republican Congressmen in the entire country voted correctly in the all-important matter of Interior Department appropriations.

The story in California is equally unattractive for the Republicans of the State. There were 11 votes cast by California Congressmen for the funds—8 of those votes were by Democrats. There were 10 votes cast by the California Congressmen against the funds—all 10 votes were Republican.

Congressman GEARHART called a meeting on December 3 of the subcommittees of the Appropriations Committees of the House and the Senate in the hopes, I suppose, that he could persuade his Republican colleagues to do something about this situation which was created by Republican leadership and Republican votes, and yes, more the shame, by California Republican votes.

The whole business is disgusting and senseless. It is the kind of political economy that the Eightieth Congress has been legislating the entire session.

I have here, Mr. Speaker, a factual report on work stoppage in Central Valley at the moment. It is a letter from Mr. Michael W. Straus, Commissioner of the Bureau of Reclamation. With this letter was enclosed a copy of the Bureau's letter of November 26 to the chief engineer and the regional director. These letters are as follows:

BUREAU OF RECLAMATION,
DEPARTMENT OF THE INTERIOR,
Washington D. C., December 3, 1947.

Mrs. HELEN GAHAGAN DOUGLAS,
House of Representatives.

MY DEAR MRS. DOUGLAS: In response to your telephone request of yesterday the situation with regard to construction on certain features of the Central Valley project may be summarized in the following manner.

The available funds for construction have been exhausted for work on construction of the Friant-Kern canal, the Shasta power plant, the Friant Dam, the Contra-Costa canal, and the Shasta Dam and reservoir. It is probable that funds for completion of Keswick Dam and Keswick power plant may be exhausted during the second or third week in December. Furthermore, it appears that funds for the Delta-Mendota canal will be exhausted during the latter part of December. There are sufficient funds available for continuing construction on certain power facilities including the switchyards at Shasta and Keswick Dams and transmission lines from Shasta Dam to the Shasta substation, and Oroville to Sacramento.

This situation has arisen because the Congress has in its appropriations for the Central Valley project in past years specifically earmarked funds for certain features. It is impossible, therefore, to transfer available funds from one of these features to another where shortages have developed. There are 31 specific appropriation accounts, none of which are transferable one to the other. These occurrences were predicted and explained to the Appropriations Committees during our hearings last spring.

You will recall that the President's budget indicated that the fund requirement for Central Valley project was $20,000,000. This 1948 fund requirement was based upon our best estimates of contractor performance in 1947 and 1948. The contractor performance in fiscal year 1947 was disappointingly slow because of labor and materials difficulties. Those difficulties were overcome during the latter months of fiscal year 1947, and the performance in fiscal year 1948, with the aid of exceptionally good construction weather has far exceeded the contractors' expectations.

The amount appropriated for fiscal year 1948 was only $9,141,288. The fiscal year 1947 carry-over of $21,104,800, together with the 1948 fiscal year appropriation, made up a total of $30,246,088 available for expenditure in the 1948 fiscal year for specific features. Although this sum is approximately equal to the total anticipated contract earnings, as stated before, the total for the fiscal years 1947–48 period is $10,858,712 less than the amount estimated to be required for this period, and in view of the contractors' accelerated progress described above, the result has been that the available funds for construction on the irrigation and joint facilities have been exhausted.

In order that you may be fully informed on the details concerning the various limitations and the administrative action that has been necessary, I am enclosing a copy of our letter of November 26 to the chief engineer and the regional director concerning the subject of carrying out the construction program on the Central Valley project in fiscal year 1948.

Sincerely yours,

MICHAEL W. STRAUS,
Commissioner.

BUREAU OF RECLAMATION,
DEPARTMENT OF THE INTERIOR,
Washington, D. C., November 26, 1947.

To: Chief Engineer, Denver, Colo., regional director, Sacramento, Calif.

From: Acting Commissioner.

Subject: Policy determination concerning establishment of fiscal year 1948 Central Valley project-program schedules in light of appropriations.

1. Pursuant to the authorizations granted by the Emergency Relief Act of 1935 (49 Stat. 115), the Central Valley project was established on December 2, 1935, when the President approved a finding of feasibility submitted the Secretary under the provisions of the act of December 5, 1924, (43 Stat. 701). Additional authorizations were granted by the First Deficiency Appropriation Act, 1936 (49 Stat. 1622), and the entire project was reauthorized by the act of October 17, 1940 (54 Stat. 1198, 1199), and declared to be for the purposes of improving navigation, regulating the flow of the San Joaquin River and the Sacramento River, controlling floods, providing for storage and for the delivery of the stored waters thereof, for the reclamation of arid and semiarid lands and the lands of Indian reservations, and other beneficial uses, and for the generation and sale of electric energy as a means of financially aiding and assisting such undertakings and in order to permit the full utilization of the works constructed to accomplish the aforesaid purposes. The administration of the project is governed by the provisions of the act of June 17, 1902, and acts amendatory thereof or supplementary thereto, including the aforementioned statutes, collectively known as the reclamation law.

2. Pursuant to the aforesaid authorizations, the Bureau formulated plans and inaugurated the necessary activities to effectuate the aforesaid objectives. During the war many features of the project had to be deferred, but with the restoration of peace the full-scale program was resumed. The overall program for the fiscal year 1947 contemplated an expenditure of approximately $32,000,000 but because of deferments of contemplated contract awards occasioned by the Presidential "freeze" order in the early part of that fiscal year, and because of curtailments in work resulting from strikes and labor and material shortages which continued until the spring of 1947, the full execution of that program was not realized, and at the end of the fiscal year there remained a carry-over of unobligated funds among the several features of the project, aggregating $21,104,800. The aggregate appropriation for the 1948 fiscal year amounted to $9,141,288, making a total of $30,246,088 available for expenditure in the 1948 fiscal year. The 1947 and 1948 fiscal years' appropriations, as well as the appropriations made for some other prior years, were made for specific features of the project, while, in some of the other prior years a single appropriation was made for the entire project.

3. As a result of the manner in which these appropriations were made, it was necessary to carry the project's funds in 31 "limitation accounts." Of these only 12 are of concern for the purposes of this memorandum, as described below:

14x607.001. All other expenditures: This constitutes the balance of prior year appropriations made for all purposes of the project. The unobligated balance in this account, as of June 30, 1947, was $2,575,574.

14x0607.024. Irrigation facilities: This constitutes the balance of prior year plus fiscal year 1948 appropriations for irrigation facilities. This account may be applied to any or all irrigation facilities in the project. The total available in this account for expenditure in the fiscal year 1948 was $9,372,522.

14x0607.006. Friant-Kern canal: This constitutes the balance remaining from fiscal years 1944 and 1946 specific appropriations for the Friant-Kern canal. The amount available from this account for the fiscal year 1948 was $4,295,165.

14x0607.008. Contra Costa canal: This constitutes the balance remaining from the 1944 appropriation for the Contra Costa canal. The amount remaining available in this account for expenditure in 1948 was $1,274.

14x0607.015. Delta-Mendota canal: This constitutes the balance of the 1946 appropriation for the Delta-Mendota canal. The amount remaining available in this account for expenditure in the 1948 fiscal year was $4,567,562.

14x0607.017. Friant Dam and Reservoir: This constitutes the balance remaining from the 1946 appropriation for Friant Dam and Reservoir. The amount available for expenditure in 1948 from this account was $18,377.

14x0607.018. Shasta power plant: This constitutes the balance of the 1946 appropriation plus the 1948 appropriation for Shasta power plant. The amount available for expenditure in 1948 from this account was $920,432.

14x0607.019. Keswick Dam: This constitutes the balance of the 1946 appropriation plus the 1948 appropriation for Keswick Dam. The amount available for expenditure in the 1948 fiscal year from this account was $669,521.

14x0607.020. Keswick power plant: This constitutes the balance of the 1946 plus the 1948 appropriation for Keswick power plant. The amount available for expenditure in fiscal year 1948 from this account was $380,850.

14x0607.014. Shasta Dam: This constitutes the balance remaining from the 1946 appropriation for Shasta Dam. The amount remaining available for expenditure in 1948 from this account was $64,775.

14x0607.027. Joint facilities: This constitutes the 1948 appropriation for Shasta Dam and Reservoir. Moneys from this account may be applied only for the purposes set forth in the justifications submitted to the Congress with the request for 1948 appropriations under the subheading "Joint facilities."

14x0607.011. Shasta Dam and Reservoir—Relocation of secondary roads: This constitutes the balance remaining from the 1946 and 1947 appropriations for this purpose. The amount available for expenditure in the fiscal year 1948 was $795,548.

4. In furtherance of the general objectives and purposes of the Central Valley project, the Bureau, in the fiscal year 1947 and prior years, and pursuant to the provisions of section 12 of the Reclamation Project Act of 1939, entered into many construction and supply contracts which contained "contingent on appropriations" clauses. The progress under these contracts, after the difficulties above mentioned were overcome, was proceeding at an exceedingly high rate at the beginning of the 1948 fiscal year. It was apparent that work could not continue at that rate throughout the 1948 fiscal year within the amount of funds available. It was administratively determined that the best interests of the Government required the continuance of the work under those contracts to the full extent of the funds that would be available therefor after making adequate provision for the purchase of such services, work, materials, and supplies as were needed to support the existing construction contracts, and after providing for the necessary administrative contingent and facilitating services. In making this determination it was recognized that construction work on certain features of the project could not continue throughout the entire fiscal year. It appeared that four irrigation features and three power features would be thus affected, namely, Delta-Mendota canal, Friant-Kern canal, Friant Dam, Contra Costa canal, Shasta Power Plant, Shasta Dam and Reservoir, Keswick Dam and Keswick Power Plant, including the joint facilities of Shasta Dam and Reservoir.

5. It was also determined that an early and disorderly stopping of construction work would most probably result in substantial losses to the Government occasioned by deterioration of uncompleted work and the inability to properly maintain partially completed works and structures because of the ravages of weather and waters. Consequently, it was determined that all work should be continued as long as possible within the funds available so that the Bureau of the Budget and the Congress might be afforded an opportunity to look into the matter, it being understood, however, that under no circumstances would obligations be incurred beyond the amount of funds available.

6. As indicated above, there was available, at the beginning of this fiscal year, the sum of $4,567,562 for the Delta-Mendota canal. Because of the indicated inadequacy of funds for the several features, as herein mentioned, it was administratively determined that no additional money should be made available for this purpose from either account .001 or account .024. As of October 31, 1947, it appears that the potential earnings under the existing contracts on this feature, if continued throughout the year would far exceed the funds available therefor.

7. It appears, as nearly as can be estimated at this time, that the funds remaining available for payment of construction and supply contracts on the following features of the project will be exhausted as indicated below:

Delta-Mendota canal, December 31; Friant-Kern canal, November 30; Shasta power plant, November 30; Keswick Dam, December 15; Keswick power plant, December 15; Friant Dam, November 30; Contra Costa canal, November 30; Shasta Dam and Reservoir, November 30.

8. In keeping with the desirability of continuing construction as long as possible within the limit of the funds available, and recognizing that the inevitable, at least partial, cessation of construction work because of exhaustion of funds will occasion some reductions in the expenses for administration, facilitating services and other contingencies, as originally contemplated in the apportionment of the funds for such purposes, every effort shall be made to adjust the apportionment made for these purposes so that whatever savings can be made thereby may be applied to payments for contract earnings. The regional director shall, accordingly, ascertain what portions of the moneys which have been set aside for low-cost canal lining investigations, weed control investigation, expenses of the Denver office in connection with the project's activities, force account work, and other administrative, contingent and facilitating services, can be made again available through their restoration to the respective limitation accounts from which the amounts were taken. Any such unobligated, available funds when so restored to their original accounts shall be used for contract earnings to the extent that expenditure for that purpose is within the purposes for which such accounts are properly chargeable.

9. In ascertaining the approximate dates when available funds will be exhausted, the regional director shall first provide for the payment of those contracts made in this fiscal year under which the Government's liability for earnings during the fiscal year is not limited by a "contingent on appropriations" clause, except those involving work or supplies not needed because of anticipated work curtailment. As to those of the latter class which cannot be suspended or terminated without additional cost to the Government, by voluntary agreement or otherwise, the regional director is requested to report to the Washington office with his recommendations the full details including the basis and estimated cost of possible suspension or termination.

10. He should then provide for the payment of such "hold-back" moneys as will become due for payment out of current funds by reason of contract completion within such funds. In this connection, it is pointed out that "hold-back" money under contracts made contingent upon appropriations does not become payable until the work has been completed and accepted. Thus, where work under a contract ceases by reason of exhaustion of available funds, the "hold-back" money would not be payable until after work under the contract is resumed, completed and accepted. Likewise, "hold-backs" on contracts not scheduled for completion until fiscal year 1949 or later should not be treated as obligations payable out of currently available funds.

11. As pointed out in my letter of November 21 to the Chief Engineer, the regional director for region 1 and the district manager, Coulee Dam, Wash., in the matter of fiscal year 1948 Columbia Basin project program schedules, the best interests of the Government, as well as fairness to the contractors, requires that the contractors be kept informed as far as practicable, as to the status of the funds from which their contract earnings may be paid. Accordingly, such notices shall be issued without delay. Forms of letters, to be prepared and signed by the contracting officer or his authorized representative, are attached. Detailed instructions in this respect will follow.

KENNETH MACDANIEL.

Scrap From Europe

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the following letter I have received from Mr. David Bruce, Assistant Secretary of Commerce. Indeed, it is my hope, since the price of steel is so important and basic in our economy, that we shall be able to get scrap from Europe:

DEPARTMENT OF COMMERCE,
Washington, December 8, 1947.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: Your letter of November 25 requests comment on the suggestion made by a friend of yours that it might be desirable to bring scrap iron or steel from Europe to this country in some of the boats now being used to carry goods to that area. Since the implications of such a proposal are international and involve the whole question of the scrap supply, domestic and foreign, I should like to review some of its more salient aspects for you.

During and since the war the domestic production of steel has been impeded by the shortage of scrap. Even today's high output could be still further increased if more scrap was available. Stocks in steelmakers' yards are small and will dwindle still further during the coming winter months when seasonal factors will curtail collection. In fact, many producers anticipate having to scale down their operations because they do not have enough scrap on hand or in prospect to enable them to continue to make steel at present levels of operation.

Additional scrap might be had from either or both of two sources—from within this country by more intensive collection or by importing it from Europe or elsewhere. At this writing the former would seem the more practicable if for no other reason than that there is a "scrap" industry already established in this country on a national scale. This industry has the knowledge, facilities, and the physical equipment needed to get at this scrap. It seems probable that, although all the more accessible, more obvious sources have long since been tapped, and despite our large prewar exports and the several wartime scrap drives, there are considerable quantities remaining scattered throughout the country which might profitably be collected.

As to the foreign side, among the recommendations contained in the Paris conference report of the Committee on European Economic Cooperation was one calling upon the United States to supply the participating countries with scrap in amounts ranging from 1,399,000 metric tons in 1948 to 2,231,000 tons in 1951. These quantities were held to be required to give effect to the Marshall plan tenet that the participating countries should utilize all existing steelmaking facilities to the maximum extent possible. In the light of our domestic shortage, such a recommendation could not be accepted, especially since it is possible that there are in western Europe quantities of uncollected, unsorted scrap sufficient to satisfy all their needs.

Whether this scrap is actually there and where and in what quantities are moot questions to which no one, in this country or in Europe, may be said to have the answer. However, both because there is some possibility that there is scrap in Europe which might be brought here to ease our own shortage and because of the heavy scrap requirements set forth by the Marshall plan countries, this Department has been directed and is currently engaged in organizing a group of experts from the steel, foundry, and scrap industries, as well as from within the Government, to survey the European scrap picture on the site.

However, even if this group found large tonnages of scrap, it would not necessarily mean that it could be made readily available to steel makers either in Europe or in this country. One very great obstacle is the absence in Europe of national organizations comparable to the American scrap industry capable of collecting, processing, and transporting any quantity of scrap. Another is the inadequacy of existing equipment to carry on the above and to load scrap on board ships for carriage overseas. Solutions to both these problems would have to be found if any very great tonnage in addition to that now being used is to be brought out.

Finally, as far as bringing European scrap to this country is concerned, there is the problem of arranging for its purchase. Only scrap generated by the American Army—demilitarized matériel of war for the most part—is actually the property of the United States. All the rest, including rubble scrap in the American zone of Germany, is the property of the countries in which it is located. Any of this last would first have to be purchased from its present owners before it could be brought to this country and since most of the countries of western Europe consider scrap an expendable national resource they are understandably loath to permit its exportation.

This whole, highly complex problem is under constant study by the several Government agencies concerned to insure, as far as possible, that the greatest economic advantage is taken of this important raw material wherever it may be located—for the benefit of the United States and in the accomplishment of the purposes of the Marshall plan.

I trust that you will find this discussion to be of value and that we may have other opportunities to be of service to you.

Sincerely yours,

DAVID BRUCE,
Assistant Secretary of Commerce.

Mr. Speaker, as a member of the House Interstate and Foreign Commerce Committee, for some 30 days, in the months of September and October, I was privileged to visit 13 countries in Europe and the Near East.

As is often indicated and said, economic and political conditions in Europe are very serious. There are hunger, devastation, destruction, disorganization, and discouragement in many of the sections we visited. In my opinion, some plan or program of aid is justifiable for the peoples of Europe, recognizing the greatness of our country, are looking to America for leadership. I feel the legislation which has been presented to the House to aid Europe—the legislation we are considering as a stopgap measure—is warranted. I shall support it. It is my hope that the assistance we give the people of Europe will aid them to do something for themselves. Much good has been done when assistance enables a man to do something for himself—to make for himself and family a living. The same is true with reference to individuals within a country.

However, we should be reasonably sure that any help we give Europe will aid the cause of liberty, freedom, and democracy, and the ideal of us all—world peace. Moreover, we should be certain the people we help are endeavoring to help themselves by demonstrating the proper willingness to work. Furthermore the extent to which we endeavor to help Europe must be determined by our ability to help, our resources, and so forth.

Whatever course of action we follow, I am sure and certain America must remain strong, economically and otherwise. The hope of the world lies in the strength of America, in my opinion. As a Member of Congress during the past 9 years, I have voted measures to strengthen and keep strong America. This I expect to do in the future.

Agricultural Program

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Stanley Faul, of Stewartsville, Mo.:

STEWARTSVILLE, MO., *December 4, 1947.*

Representative WILLIAM C. COLE,
House of Representatives,
Washington, D. C.

DEAR SIR: I am a farmer, living in De Kalb County, a member of the American Legion, also a member of the veterans agricultural class at Maysville, Mo., under Bob Hubble.

I have been deeply interested in the Government-bungling agriculture program. Last year, as an example of the bungling, the Government went on the market and purchased corn and wheat for export to the old country. Corn went up and up. Millions of sows went to town—lots of them had pigs in the stockyards—because the farmers couldn't see a possible chance of a gambling hope to make money in the hog game. A few of us held on. We have our fall pigs. Now we are paying $2.80 a bushel for corn, and wheat is out of this world to buy. Corn is going to $3, but where are hogs going? The Government caused the scarcity of meat by their policy of high grain exports. Now what is happening? Corn at $3 a bushel and, because of the narrow, short-sighted policy, meat is scarce. They want to roll meat prices back. I am warning you to warn the men in charge of this bungling policy to go slow on meat price roll-backs. Meat is scarce because of last year's short-sightedness. Now a roll-back will send millions of sows (bred sows) to market, and the meat-consuming public will starve for the delicious steak and ham steak. It will be like a dream that you have meat and awake to find you are starved for meat—but, alas, no meat.

I have 23 bred sows that I will gamble on if they allow the market to go up like, for example, the prices of cars, rugs, farm machinery have gone up. Why should the politicians take their spite out on the farmers. Most city people spend more money on shows and gasoline than they do on meat anyway. Men at the Ford Co. or Sheffield Steel Co. at Kansas City, Mo., make $11.35 a day. If we paid our men those wages, they would soon own the bank and the farm. I am not kicking on their wages but on the paternal love the Government has for these people. I recently asked a lot of farmers what they would do if corn went to $3 a bushel and the Government held prices of meat down, and the answer was unanimous—"we'll sell our sows." You know that would be the general situation over the country, and why wouldn't it? You say we would ration feed and sell it so farmers could make a profit. Mr. COLE, you are smart enough to know that would not work. Corn is scarce and there is enough demand to take care of all corn that is for sale—to keep their stock from starving, they'll pay black-market prices for grain. That's what happened under OPA—only the sucker got stung by selling his grain at OPA levels. Mother sold her corn under OPA while down the road they paid 20 cents a bushel more. A high trucking bill, I'd say.

Whatever you do on this price roll-back, do it now; be fair so we can save our shirts. Three-dollar corn and $25 hogs is a pants-losing proposition. I want to buy cattle but not until I know what you men in Washington are going to do—you might cause me to be in debt the rest of my life.

Why doesn't Secretary Harriman roll back freight rates and passenger ticket fares? They hiked their rates and fares almost 20 percent recently. In all his hate for meat and steel prices, he never mentioned his beloved railroad and how it contributed to inflation. Charity begins at home. The Government caused these high grain prices and now is trying to cover up on paper by rolling prices back.

The lug is not caused by farmers, at least not by the ones in your section, but by the city business itself. My sister purchased a new car recently. The dealer of one popular make car sells one out of ten legitimately—on the rest the price is hiked either by buying a later model car for $300 or $400 and selling it for $1,200 to $1,400 or by making more than the legitimate profit on the new car sales. People in Government don't holler about this, but let the farmers break a little ahead and the sky is blue with hot air. We still take an awful gamble to get what we get. One of my country friends went to the city to work. The first week he made $130 laying rugs. There must be a lot of velvet in rugs. The old hen wouldn't know her egg after the city guy got his lug out of her cheap egg and the same is so with anything we sell.

I believe you as our Representative should fight this roll-back as it will hurt the city fellow hard in the long run. Farmers can't raise free stock.

STANLEY FAUL.

National Reclamation Policy

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. PHILLIPS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an article taken from the Salt Lake Tribune of November 22, 1947.

Our colleague the gentleman from Utah, Hon. WILLIAM A. DAWSON, has called to our attention some obvious misstatements of fact regarding the action of the Eightieth Congress on reclamation appropriations.

The article follows:

DAWSON ANSWERS CHARGES BY MAW ON RECLAMATION

(By Harry J. Brown)

WASHINGTON, November 22.—"Judging by the speech he made before Oregon Democratic State committee at Portland, November 15, our Governor seems to be following the lead of Reclamation Commissioner Michael W. Straus and his chief in attempting to make a political football of our national reclamation policy," Representative WILLIAM A. DAWSON, of Utah, said Saturday.

The Congressman's comments were based on reports of Gov. Herbert B. Maw's speech which appeared in the November 16 Tribune. "If correctly reported," Mr. DAWSON added, "Governor Maw certainly was reckless with the use of both facts and figures, for what he said at Portland will not stand up when compared to the records of the Bureau of Reclamation or of Congress, which are official and presumably authentic."

Governor Maw, Mr. DAWSON recalled, told the Oregon Democrats that the people of the West know they have fared better in reclamation appropriations while his party was in control of Congress than they did at the past session, when House and Senate were both in Republican control.

PURE BUNK, NONSENSE

"Such a statement is pure buncombe and nonsense; it simply won't stand up," continued Mr. DAWSON. "As another good Democrat was fond of saying, 'Let's look at the record.' The Interior Department appropriation bill that was passed last session by the Republican Congress carried in new appropriations for reclamation a total of $93,367,038. In addition to that, according to the Appropriations Committee, there was a carry-over of unexpended reclamation money's amounting to $111,878,000, making a total available for expenditure during the present fiscal year of $205,245,000.

"What happened during the long years the Democrats were in control of all branches of the Government, including Congress? For answer I quote from figures supplied to Congress by the Bureau of Reclamation. In 1934, the first full New Deal year, the Bureau of Reclamation spent all told $24,651,833; the following year, when President Roosevelt began allotting relief funds to expedite reclamation work, the total expenditures for the year rose to $40,882,912."

WHAT IT TOLD CONGRESS

"Let's look at the remaining years of Democratic control of reclamation appropriations. Here is what the Reclamation Bureau told Congress it had spent, year by year:

1936	$49,849,120
1937	52,379,804
1938	65,405,810
1939	79,329,428
1940	96,365,934
1941	85,596,484
1942	91,438,942
1943	69,287,440
1944	54,587,242
1945	50,376,076
1946	64,362,683
1947 (estimated)	146,893,971

"Let Governor Maw contrast these figures with the $205,245,000 which is available for expenditure by the Bureau of Reclamation during the current fiscal year, by a decree of a Republican Congress, and explain how he substantiates his charge that the present Republican Congress has been niggardly, while Democratic Congresses have always been generous with reclamation funds.

"I'm afraid the Governor will have to eat his words. It should be noted in the figures here given that never under a Democratic administration did reclamation expenditures in any year get as high as $100,000,000 until last year, while more than double that amount is at the disposal of the Bureau this year."

Representative DAWSON also recalled that soon after President Truman went into the White House he issued his famous "freeze order" that forbade the Reclamation Bureau from spending all the money the last Democratic Congress had appropriated for reclamation; that this order stopped work altogether on most projects and slowed down operations on the few that were favored.

WHY IGNORE "FREEZE"

"If the Governor wants to inject reclamation into politics, why does he ignore the Truman freeze order and the set-back it gave reclamation during a year when the Democrats were in undisputed control of all branches of the Government?" queried Mr. DAWSON. "It was only when western Democratic Senators and Congressmen sat down heavily on him that the President, just before election, modified his freeze order. Was that playing politics with reclamation? Maybe Governor Maw will answer."

Looking to the future of reclamation, Representative DAWSON thought it appropriate that his governor should declare himself on the now widely advertised Krug 7-year plan. "Is Governor Maw in favor of the Krug plan? If so, is he aware of the fact that the Bureau of Reclamation assured Congress during hearings last spring that it would complete the Deer Creek project in 1951, while the Krug plan, according to the Secretary of the Interior himself, would postpone completion of that Utah project until 1954? Does Governor Maw favor slowing down construction of the Deer Creek project by 3 years? This is what the Krug plan would do. The Secretary's own data, made public at Phoenix, shows exactly that."

ONE MORE QUESTION

"I would submit one more question to Governor Maw," continued Mr. DAWSON. "Does he favor the early approval and adoption of the Central Utah project? It is not embodied in the Krug plan; that plan makes provision for no new project. On the other hand, when Secretary Krug was before the House Public Lands Committee on the 3d of last April and was discussing the feasibility of some projects, he argued strongly that interest collected on power sold on multiple-

purpose projects should be credited to the project on which the power was generated; that unless that were done certain projects would not be feasible. I asked the Secretary whether the Central Utah project, in his opinion, would be feasible unless it received the interest on deferred power payments. 'I am quite certain the project would be unfeasible if you could not use the interest component as a credit against the project cost,' he answered.

"Secretary Krug is a Democrat," said Mr. DAWSON in conclusion. "Governor Maw is a Democrat. If reclamation is to be dragged into politics, where it has never been heretofore since the reclamation act was passed in 1902, Governor Maw should not only disprove the official figures I have given, but he should, to Utah at least, explain which party is holding back further reclamation developments in Utah. Reclamation should never become a political issue, but if our Governor and his friends insist upon it, we are ready to meet the challenge."

Stalin, Good Fellow, Our Expense

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. WEICHEL. Mr. Speaker, with winter upon us thousands of people throughout the United States are unable to purchase coal because of the high prices and the shortage caused by shipping coal to foreign countries, especially the past shipments to England where the miners are not working hard like those in America. The Times-Herald, of Washington, D. C., just carried an item that the Department of Commerce is still postponing the date of banning exports of coal, even though poor people, old-age pensioners, and others who heat their homes with coal are unable to buy because of the high prices and shortages caused by exporting coal from continental United States. Yet with all of this the State Department approved and permitted on October 13, 1947, the Russian-named ship *Kapitan Vislobokov*, on October 25, 1947, the Russian-named ships *Akademik Krilov* and *Sukhona*, on October 29, 1947, the Russian-named ship *Michurin*, to leave the United States with cargoes of coal and coke for Stockholm. With the shortages at home and our people being short of fuel, yet two of these ships owned by the United States Government and paid for by the taxpayers of the United States, are being used by the Russians to carry coal from continental United States to other countries.

Mr. Speaker, by such conduct, Mr. Stalin is able to make himself a good fellow with other countries of the world in his effort to spread communism with the aid of the President of the United States giving the use of the United States Government-owned ships to carry coal away from continental United States when it is badly needed here at home. Surely, the Russians must smile to themselves when they can use the ships of the United States on which they fly the Red Russian flag to take away short commodities from the citizens of the United States and carry them to Europe as one of the favors of communism.

Mr. Speaker, I ask you, is that the common-sense method of stopping communism, while the President has called a special session of Congress demanding untold millions be given other countries to stop communism?

Progress Report to Members of the Joint Committee on Housing From Congressman Ralph A. Gamble, Chairman

EXTENSION OF REMARKS
OF
HON. FRANK L. SUNDSTROM
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. SUNDSTROM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a progress report to members of the Joint Committee on Housing from the Honorable RALPH A. GAMBLE, chairman, delivered at a dinner meeting at the Army and Navy Club, Washington, D. C., on December 8, 1947:

PROGRESS REPORT TO MEMBERS OF THE JOINT COMMITTEE ON HOUSING FROM CONGRESSMAN RALPH A. GAMBLE, CHAIRMAN

I. REALISTIC APPROACH

(a) Although the Joint Committee on Housing was authorized, under the concurrent resolution, to explore every ramification of this complex subject, limitations in time made necessary a simple, realistic approach.

(b) This approach was to ask each of you to give special consideration to a certain topic.

Senator WAGNER, who, I am sorry to say, was unable to be with us tonight, reports that, out of 500 questionnaires distributed by him in order to gather opinions on slum clearance, 20 replies have been received from governors, 30 from mayors, and 60 from prominent individuals. Mr. WAGNER's assistant feels that he will need until the middle of January to complete his study.

Senator FLANDERS has had two assistants working for weeks on the costs of building materials. This may well be the heart of our problem. I understand that the Senator has drawn heavily from his experience in investigating the entire problem of inflated prices.

Although his absence in Europe prevented an early start, Senator CAIN has vigorously taken up the question of the effect of existing housing legislation on shortages and costs.

In practically every one of the cities in which we have held hearings, we learned that the municipality owns considerable areas of nonproducing land, with utilities brought to the curb. Some cities have assisted in solving their housing problem by donating this land, from which little tax revenue is obtained, to home builders, together, of course, with utilities. This points up the vital relationship of real-estate taxes to the housing problem. Senator TOBEY and I learned in Boston that the tax rates in New England have passed the prohibitive point, and you will be glad to learn that the Senator has written a treatise on how, in his judgment, we can best bring about, or at least make a start on, tax reduction.

From the outset, Senator SPARKMAN has been most helpful in developing the phase concerning disabled veterans, and I understand that he not only has specific suggestions but will supply witnesses for us at our forthcoming hearings in Washington.

I understand that Mr. TAYLOR has had a long-standing engagement to deliver an address in New Brunswick, N. J., tonight, and consequently will be unable to be with us.

Mr. MCMILLEN joined with Senator MCCARTHY in the first attack we made on building codes. Mr. MCMILLEN in his preliminary comments states that while codes may not at the moment be interfering with construction under Federal grants, they certainly are adding to the costs of private construction, and that if we can clean up codes, we can reduce building costs.

Like others of us who have been on the road, Mr. FLETCHER learned that there is a tremendous need for rental housing in urban areas and that multiple-unit construction is of fundamental importance as a means of meeting such needs.

As you have heard me say before, the three elements in our problem are men, materials, and money, and we turned the subject of money over to Mr. SUNDSTROM. He and I met with representatives of private capital in New York, and Senator MCCARTHY and I met with others in Chicago. Within the next week or so those of you who desire to do so are invited to join with me in conferences with representatives from some of the big insurance companies in Hartford.

I believe Mr. SUNDSTROM is convinced that we must find the incentives that seem to be necessary, not only to attract private capital in greater quantities, but also to interest it in rental housing, particularly for the low-income classes.

Mr. BOGGS undertook a study of the distribution of materials and I think must have proved his point in the first two or three cities in which we held hearings. It would appear that the supply lines have not yet been filled, let alone the stock piles.

Mr. PATMAN was perhaps the first to give us an impressive report on the need for rural housing, which he later amplified in hearings in which he participated.

Mr. RAINS was requested to look into the effects of purchaser pressure in driving up prices and increasing the demand for high-priced labor.

On the conclusion of my over-all report, I shall ask each one of you gentlemen to amplify my remarks about you and to give us the benefit of your thoughts as to where we should go from here. I shall then ask Senator MCCARTHY to sum up.

Just one more thing. In adopting the conference method, instead of the usual formal procedure, we substantially strengthened our cooperative approach. We have received many expressions of appreciation from the cities we visited.

(c) I have taken the position from the time you elected me chairman that a primary objective of our investigation and study is facts. There are reports and studies galore on housing and its various phases. If possible, I would like to have the Committee make a housing report to end housing reports.

At your place, you will find a folder which contains some of the material that has been gathered and prepared by our staff between times when they have been working on arrangements for hearings.

This includes a preliminary draft of an economic interpretation of the housing situation, some statistical data, copies of questionnaires which have been sent out and copies of questionnaires which it is now proposed that we send out.

I would appreciate your reaction to the proposed questionnaires within 24 hours because it will be necessary to revise and mail them almost immediately if we are to be able to present you with the results of the cross-check they are designed to provide.

One of the outstanding findings from our hearings to date is the divergence of opinion on the part of each of the major interests concerned with housing.

A conspicuous feature of testimony at hearings in 25 cities was the similarity of viewpoints presented by the local groups representing the same interests in each city. Each seemed to have a position derived from a common source. To a considerable extent each seemed to make a plausible case. Yet the divergence of views in most cases as between the different groups was conspicuous. I don't think we can say that we found a consensus.

The additional questionnaires we now contemplate sending separately to two or three persons of the principal groups directly concerned with housing should enable us to picture and present this diversity and lack of substantial unity on the basis of returns from about 150 cities.

II. HOME BUILDING ACCELERATED

(a) There is reason to believe that the very creation of this committee, the hearings it has held in 25 cities, and the scores of conferences held individually by committeemen or members of our staff, in all parts of the country, already have resulted in accelerated home building.

(b) Whereas on adjournment of the first session of the Eightieth Congress, it was doubtful whether 750,000 new dwelling units would be started in 1947, it now appears that starts by December 31 will total 860,000.

(c) This would be impossible were it not for the fact that the supply of materials is increasing and that the cooperative spirit shown by building trades union leaders is being reflected in increased productivity.

III. FIVE-YEAR MINIMUM PROGRAM

(a) As this figure of 860,000 units will not even meet our normal national housing expansion requirements, it probably will have to be increased by at least 50 percent for a minimum of 4 or 5 years, particularly in the multiple-unit rental field, if adequate shelter at lower than prewar costs to tenant as well as to owner is to be achieved.

(b) The housing need would appear to be so obvious that the only thing to do is to build and build until the condition is self-adjusted by the economic law of supply and demand.

IV. COOPERATION, NOT COMPULSION

(a) Testimony at our hearings indicates that more private capital, more materials and more productive labor, are necessary in order to overcome the housing shortage.

(b) Members of the committee were in general agreement from the outset, we believe, that we could make more progress through cooperation than through compulsion. At all the subcommittee hearings thus far held members, regardless of party, made it plain that while this Joint Committee on Housing is to be no witch hunt, neither is it to be a whitewash.

V. LABOR THE MOST IMPORTANT ELEMENT

(a) Of the three essential elements—money, materials, and men—labor, in the long run, is by far the most important. Although the index of union wage rates now stands at 147.4, as compared with 100 in 1939, labor costs in a six-room frame dwelling unit are now 69 percent of the total cost, as compared with 56 percent in 1939.

(b) From testimony and from personal observation by committee members, it is imperative that on-site labor productivity be increased. To this end Senator McCARTHY and I have been working with international officers of the AFL building trades, while in every city where hearings have been held subcommittees have discussed the problem with local union heads.

(c) Proof that this approach, predicated on friendliness and mutual respect, is sound, is found in a progressive reduction of defensive restrictions, in "the American will to work to produce," rather than simply to jack up pay through monopoly and cultivated overtime. Impressive evidence of the sincerity of labor's approach came from various quarters. In Cleveland, for example, a lathers' local which had barred Negro apprentices, even though there was a shortage of lathers, reversed itself at the insistence of the head of the Cleveland Building Trades Council and now conforms to the nondiscriminatory policy of the AFL building trades department in Washington. In supplementing his testimony at the New York hearing the head of the carpenter's local specifically stipulated anti-feather-bedding practices in the use of time-saving machinery, such as power saws. In Chicago the head of the building trades council went on record as to the willingness of painters to use spray guns and of all trades to erect prefabricated houses.

(d) Further proof is seen in the appointment by the president of the AFL Building Trades Department, at our request, of an AFL committee of six, bipartisan, and representative of various parts of the country as well as of principal home-building trades. The appointment of this AFL committee may be one of the most significant developments thus far apparent in our investigations.

(e) Highly skilled on-site labor merits commensurate high wages; high productivity justifies high wages. High productivity of on-site skilled labor will assure the success of a 4- or 5-year housing program, even though the other elements—money and materials—may fall somewhat short of the challenge which confronts them.

(f) It is the belief of Senator McCARTHY and myself that the same cooperation, through special committees, should be sought among the financial interests, material producers, and home builders as has already been established with labor, and I am taking steps toward this end.

VI. PRICES AND SHORTAGES OF MATERIALS

(a) Shortly after our election, Senator McCARTHY and I took up building-material shortages in the order of their relative importance.

(b) That the critical soil-pipe shortage was due to a protracted dispute between War Assets Administration and the Republic Steel Corp., as to which should bear the cost of repairing the blast furnace from which pig iron for much of our soil-pipe production was obtained, is beyond question. That this committee's intervention brought an adjustment within a few hours, encourages us in the belief that bureaucratic red tape can be cut and commercial interest subordinated to the public interest when Congress, as the body closest to the people, takes an active and direct hand. But this problem is not yet solved.

(c) In soil pipe, however, as in most other short or excessively high-priced building materials, our national export policy is involved. Pig iron cannot continue to be exported without lessening the supply available for soil pipe manufacture for domestic construction. A balance must be determined, else shortage in this one item alone could block our dwelling construction recovery.

(d) We have the promise of the nail-manufacturing industry that production in 1948 will be stepped up from 16,000,000 to 18,000,000 kegs. Hearings have revealed widespread black markets, drainage through legal and questionably legal exports, and what appears, to say the least, to be an astonishing confusion of War Assets Administration policies, whereby surplus nails either go first to the black market, then to the builders, or, if the builders get them first, it is only through outbidding the black marketers. If the committee can obtain the cooperation of War Assets as well as the manufacturers, black-market traffic in nails, at the expense of homeless American families, can be quickly stopped.

(e) The third most critical shortage was found to be in gypsum products. Investigation revealed it to be due to (1) export leaks, (2) black markets involving cleaning out retailers' stocks and diversion of carlot shipments en route, (3) accumulated demands for building repairs. Conferences with the industry stimulated production, and it is expected that the output in 1948 will be increased at least 25 percent over 1947—assuring ample supplies for an expanded home-building program.

(f) At this writing we have no satisfactory evidence that the situation in heating, piping, and plumbing fixtures has improved either as to prices or available quantities. The subject should be thoroughly investigated.

(g) Only in the lumber industry have we thus far failed to obtain either from the manufacturers and retailers or from our own investigators a satisfactory answer to the question, Why has the wholesale price index of lumber risen to 285.7 since 1939 (1939=93.2), whereas the price index of all building materials has risen to only 183.3 (in 1939 it was 90.5)? It may be necessary to examine our entire lumber-export checking machinery. It may be desirable—in the public interest—to look further into the profits of lumber manufacturers and also to establish to the committee's satisfaction that a retailer's service is necessary to mass construction of housing, particularly where some manufacturers own or control their retail outlets. We are personally convinced that the price of lumber can be reduced.

(h) On the east coast I was told, out on the west coast Senator McCARTHY was told of alleged export leaks, implying down-grading. It was also stated to us that logs from which a heavy percentage of No. 1 lumber would be obtained are bought at premium prices by the plywood manufacturers, and that the Army is one of the heaviest current buyers of plywood for home construction.

(i) As soon as Senator McCARTHY and I checked our views by phone, I called into my office Under Secretary Foster and Assistant Secretary Bruce, of the Department of Commerce, and also Dr. McIntyre, who has charge of export controls. At my request they held in abeyance plans which they had for the immediate dropping of all lumber export controls.

VII. IMPERSONAL CULPRITS

(a) The construction industry, next to agriculture, is our No. 1 business. Upon it rests all manufacture. No food can be processed, no material object fabricated, no labor can be housed, without a building of some sort first having been erected.

(b) Yet this giant is nonintegrated. It is not a science, in the laboratory sense that steel or textiles may be so regarded. And it still appears to be helpless in the face of two of the most variable, yet adamant, aspects of the human mind—prejudice toward mass housing production and indifference toward restrictive building codes.

(c) Local building codes, municipal ordinances, and certain state laws, unquestionably constitute the "impersonal culprits" in the housing shortage. Our investigations reveal that these archaic statutes or regulations, which should be everybody's business, too often have been only the "business" of some materials manufacturers, and some local labor unions. It should be said to the great credit of some of the unions that they are moving far more quickly than some of the manufacturers to remove from themselves the possible stigma of obstruction.

(d) The committee has made a fair start by encouraging the immediate substitution of performance codes for specification codes. Performance codes will place a premium on the development of new materials and more economical processes. They will at least

discourage some monopolies, and they certainly should encourage home construction and decrease its cost.

(e) In this work the committee has the helpful cooperation of numbers of organizations such as the American Municipal Association, the National Association of Building Officials, the National Association of Home Builders, and the Building Trades Department of the American Federation of Labor. It also has requested the cooperation of governors and mayors.

VIII. PUBLIC HOUSING

(a) We believe we have discovered the first steps out of the controversy over public housing. They are to be found in facts. Our committee has been directed by the Congress to help it lick the housing shortage. Public housing is a part of the problem, and consequently a part of the answer.

(b) We have called on the Bureau of the Census and the Bureau of Labor Statistics, which together constitute the most reliable sources of government information at our command, to supply us with the record of normal requirements for housing based on the number of families. They have projected the increase in the number of families up to 1960. On this basis of reasoning, it is possible to arrive at a defensible estimate of the economic shortage in housing, regardless of social standards.

(c) Public housing for social betterment of the lowest income classes is quite a different matter. The need for differentiation has required us to insist that witnesses make it clear what they are advocating and that they define the words they employ.

(d) At those hearings attended by the chairman or vice chairman, there appeared some earnest and sincere people who seemed to think that it was the Federal Government's responsibility to house the middle-class workers as well as the lowest class made up mostly of the indigent. In effect, some regarded housing and public housing as being synonymous.

(e) Some witnesses as well as some members of our subcommittee expressed themselves in favor of pending housing legislation. These views were placed in the record for your consideration.

(f) Speaking for myself only, it would not appear to me that there is any inclination to reject the proposition that some sort of housing assistance should be given in urban communities to the indigent and to the lower income group. And if this is true of urban populations, it is logically true of rural populations. The question is not so much one of a housing shortage as it is one of social betterment.

(g) In numbers of places, notably Los Angeles and Detroit, abuses of public housing were brought to the attention of subcommittees, and, in my opinion, should be investigated further.

(h) At our hearings and conferences there was evident a widespread conviction that, if public housing is to be paid for by Federal taxes, there will come a time (if it has not already arrived) when competition by cheap Federal loans, 100 percent insured loans, or outright Federal capital grants, will have a deadly effect on private capital and individual enterprise in the construction industry.

(i) In Indiana, Illinois, New York and elsewhere there were visible signs of the conviction that, as there is only one place from which Federal monies can be drawn, namely, local taxes, it follows that real responsibility for public housing should rest, not on the Federal Government, but on the municipality, or the State, or a combination of the two.

(j) Comment on public housing would be incomplete without reference to the fact that, in city after city, Communists were boisterous in their advocacy of more and more public housing. Public housing, rural or urban, on a sound basis, has nothing to fear from this committee, I believe, but it has much to fear from the ardent activity of the Communists.

IX. INDUCEMENTS TO PRIVATE CAPITAL

(a) If, among the three essentials of housing—money, materials, and men—men are the most important, it is nevertheless true that nothing can be done without money. The question is: Shall the money be Federal (obtained by taxes drained from earnings) or shall it be private capital created out of the savings of producers? I hope that the committee can be in no disagreement that, in furtherance of our Nation's role as defender of individual rights vs. State socialism, private capital is more desirable than public in emergency as well as permanent housing.

(b) Our hearings and investigations thus far disclose that:

1. There is an abundance of private capital.
2. Large amounts are going into speculative building for sale to owner-occupants.
3. Much smaller amounts are going into rental housing.
4. Virtually none is going into housing for the lower income groups.
5. Private capital could be induced, under certain conditions, to finance emergency low rent housing as well as housing for the lower income classes.

(c) It has been pointed out to us that:

1. No sound and permanent financing policy for housing is possible without first scrutinizing our national monetary policy.
2. If the Federal Government continues indefinitely its program of cheap money on an approximately 100 percent loan basis, the danger of inflation is extreme.

(d) Asked for suggestions as to what emergency inducements might be offered by the Federal Government to private capital, local officials, capitalists, mortgage bankers, etc., proposed among other things:

1. Accelerated rate of depreciation.
2. Abatement of Federal Corporation income taxes up to 2 or 3 percent.
3. Some form of yield insurance above the tax abatement figure.
4. Provision by the municipality of land and utilities.

(e) I offer no suggestion that local taxes be abated. To do so would be to further imperil the finances of many municipalities. At the same time consideration must be given to the lowering of local real-estate taxes, else other inducements to private capital may be largely nullified.

(f) Given the foregoing inducements, we were told, private capital could be substituted for Federal grants or subsidies, even in the lower-income field of renters.

(g) Extension of loan insurance under section 608 of the Federal Housing Act seems to be favored because a lapse in building at this stage of the emergency would have demoralized many dwelling construction projects. Nevertheless, the inflation potentialities of 608 are a threat which must be eliminated or guarded against at the earliest possible moment.

I earnestly request your judgment in this matter.

X. SUGGESTIONS

(a) Further hearings should be held between now and the end of the year, in 5 to 10 more cities.

(b) Opportunity should be given to materials manufacturers and dealers to bring about price reductions before full committee hearings are held in Washington early in January 1948.

(c) Further investigation should be made into certain situations, which are allegedly responsible for monopolies and black markets.

(d) Our export practices should be investigated further in the light of interim and long-term foreign aid.

(e) Cooperation similar to that now in effect with the A. F. L. building trades department should be sought with other elements essential to housing, such as finance, materials, producers, and home builders.

Developments Spell Doom for Truman's Economic Plan

EXTENSION OF REMARKS
OF
HON. ROBERT N. McGARVEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. McGARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by J. A. Livingston from the Business Outlook:

DEVELOPMENTS SPELL DOOM FOR TRUMAN'S ECONOMIC PLAN—ANTI-INFLATION PROPOSAL EVEN LACKS SUPPORT OF LEADING MEMBERS OF PRESIDENT'S CABINET

(By J. A. Livingston)

WASHINGTON, December 6.—You can now write off the President's 10-point anti-inflation program. Senator TAFT attacked it, but Truman's own team laid it low.

No legislative program could survive the mauling Secretaries Anderson, of Agriculture; Snyder, of the Treasury; Harriman, of Commerce; and Schwellenbach, of Labor, gave it in testifying before congressional committees. In addition, there was Chairman Eccles, of the Reserve Board, who brought forth a program all his own.

The Cabinet members talked like unbelievers. Not one was willing to pound the table and declare: "This is what the country needs. It's beyond politics. And if you don't give it to us we're in for a time."

BOUGHT, BUT NOT SOLD

Perhaps the fault runs back to the White House. Seven weeks ago, President Truman told a press conference that price control was a police-state tactic. Yet only 4 weeks later he was to ask Congress for authority to impose price controls, if necessary. Assumably, in the interim, the President bought a bill of goods from some one. But apparently he wasn't sold. And, apparently he didn't sell the men who had to sell Congress.

The President, himself, didn't work for it. When Truman wanted emergency aid for Europe, he called in congressional leaders, talked it over. He didn't call in the leaders to talk over the anti-inflation measures. The first they heard of it was when he delivered his message to Congress on November 17.

Not one administration representative was able to pull the President's 10 points into an understandable, unified whole. Edwin G. Nourse, Chairman of the Council of Economic Advisers, might have been able to do that job. Harriman wanted him to. But Nourse declined—on principle.

He argues that he is a professional adviser on economics, and therefore that he should not be put in the position of advocating a politico-economic program, even though, as in this case, the Council provided the basic ideas in the President's program. So, the program went to the Capitol unbefriended.

No bills had been prepared 2 weeks after Truman called for legislation. That never happened before. It hasn't happened in the past when Truman wanted legislation. Nor can Democrats beg off on the ground that this is a Republican Congress, that it's up to the majority party to provide the legislation. You can bet that if the Democrats

were enthusiastic, bills would have been offered, with sponsors aplenty.

The antiinflation program constitutes the first full-dress test of the Employment Act of 1946. And it's certainly not coming off well. Here was a law designed to put economics above politics, to bring the President and the lawmakers together on boom-and-bust matters. But both sides seem as far apart as ever. Is that always to be the Nation's fate when the President is of one party, the majority of Congress of another?

BILL OF PARTICULARS

When Congressmen questioned administration witnesses: "When would you feel it necessary to impose price controls or rationing; what standards would you apply?" replies were vague. Yet if the administration had a clear idea of what it wanted and why, such standards could have been stated. Not precisely, but at least specifically enough to give Congress a feeling of what was intended. A statement such as this might have been appropriate:

"We would not like to see wheat at $4 or steers at $45. We would not like to see the cost of living index, now around 164, at 175. If we saw those levels approaching, we'd certainly want to act. But we don't want to be hasty. So, in the legislation we're proposing, we want to set up a board representing the public, labor, industry, and agriculture.

"It would be something like the advisory board set up in the War Mobilization Act. We would take counsel with the board before reimposing price controls, wage controls, or rationing." That, at least, would have been reasonable and sensible—something that TAFT and other Congressmen couldn't kiss off as vague or authoritarian.

The administration witnesses had no monopoly on economic uncertainty or contradictions. Bankers who testified on the program declared that what the country needs is more production. Admittedly. But where are we to get it? The basic bottleneck is steel which is already at capacity. If we could rapidly expand steel output, which we can't, that would only expose other bottlenecks—in copper, lead, transportation, machinery capacity, etc.

STRIKE SLACK TAKEN UP

We've taken up production slack. We haven't lost many man-hours due to strikes this year (see chart). The ITU walk-out in Chicago is the exception rather than the rule. So with manpower operating virtually full tilt, along with steel, coal, electric power, and the railroads, the cry, more production, is unreal.

Somehow, at the end of the fifth decade of the twentieth century—only 14 years removed from the great depression—you'd think that we'd get around a table like mature men and try to work out a way to solve our economic problems.

We have the machinery for it—the Joint Economic Committee and the Council of Economic Advisers. I guess we haven't yet learned to use it. Or maybe, it's just that we elect a President next year.

The Wages-and-Hours Law Should Be Flexible

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. HORAN. Mr. Speaker, during hearings on various appropriations bills before the first session of this Congress, I was amazed to learn that hundreds and probably thousands of Government employees were taking advantage of the shortage of labor and their 40-hour week to hold down additional part-time jobs. At the same time, the Government was forced to pay overtime charges to many of its employees in order to get the Nation's business done.

At that time, I expressed the feeling that the wages-and-hours law should be made more flexible so that, in times of extreme labor shortage such as we now experience, full production might be maintained without undue increase in the labor cost of production. This principle, I consider, should apply to private business as well as to Federal employees.

I fully appreciate that the wages-and-hours law was passed at a time when equity demanded that available employment be shared among as many workers as possible. We do not have such a condition today. The health and welfare arguments for a short workweek do not pertain when a man sees fit to work 10 or 20 hours at another job after finishing 40 at his regular stand.

Let there be no mistake about it—I do not by any means advocate the repeal of the wages-and-hours law; I consider the basic legislation very necessary for the welfare of the thousands of unorganized workers who have no collective-bargaining power. At this time, also, I feel that a rise in the minimum wage is in order.

I do believe, however, that no such law should be so rigid that it will not allow for adjustment to meet changing economic conditions. For that reason I am very pleased that the Committee on Education and Labor is considering means of adjusting the provision of this law so as to make it more flexible.

One of the better analyses of the problem is contained in an article by Mr. David Lawrence, as published in the Washington Evening Star for December 9, 1947, which, if there be no objection, I should like to include in today's RECORD.

It is also to me quite apparent that any lengthening of the maximum workweek probably will have to be accompanied by a reasonable increase in the minimum wage provision which would be reflective of the increased cost of living in a reasonable state of health and comfort for the average family. I hope the proper committees and the Houses of Congress will be fully prepared to act on these problems very early in the next regular session.

The article follows:

CONGRESS TO BE ASKED FOR PROGRAM TO CURE WORK SHORTAGES—MANY MEMBERS SEEK WAGE-HOUR LAW CHANGES TO AID OUTPUT GAINS

(By David Lawrence)

Congress soon will be called on to adopt a program to cure the work shortage which is one of the basic causes of present-day inflation.

Many Members of Congress are proposing that the wage-and-hour law be reexamined in the light of current conditions. When it was adopted in 1937, the Nation was still suffering from the effects of depression. The spread-the-work movement therefore was popular and the 40-hour week was adopted with all time over that limit to be paid time-and-a-half rates.

This was in the nature of a penalty against longer hours but it did not work always in the direction of compelling the employer to hire men on a new shift. Many jobs required only 1 or 2 or sometimes 3 hours more and it was not practicable to hire a whole shift for 8 hours. Where overtime was paid, it increased costs. As hourly rates rose, it added sharply to costs and forced prices higher.

PENALTY ON PRODUCTION

Today, with everybody crying for goods, the law penalizes increased production. It is an anomaly that has been allowed to go on because political courage to tackle it is lacking. The Truman administration, for instance, which has been excessively timid about proposing any reforms whatsoever in labor matters, has not come to grips with the overtime problem at all.

Actually labor unions are not too fond of the wage-and-hour law. Some of them opposed its adoption in the first instance. This is because labor-union tradition places the subject of the length of the work week as properly one for collective bargaining between employer and union in specific industries.

The answer made to this was that labor unions were still free to agitate for and strike for a shorter work week. In some industries, like printing, for example, there has been a 35-hour week and in some cases a 37½-hour week. The shortening of the work week has long since been separated from the idea of the health of the workers. It is a transparent device for getting wage increases. In Akron, Ohio, where 6-hour shifts are worked at the instance of the unions, many workers go from their jobs at the rubber factories to part-time jobs in other fields.

The Government has never taken any steps to insure that the health of workers be protected by limiting working hours and, so far as is known, no labor union has done so either—the worker can work at one job for 40 hours and at another for 12 hours more. Fifty-hour weeks are not the rule but it is surprising how many people work at two jobs—that is, for two different employers.

COULD AID UNION ORGANIZING

The unions would not lose much sleep if the present law were repealed. It would help them tremendously in their organizing strategy. As a matter of fact, an argument has often been made that the exercise of the power to fix minimum wages and maximum hours on a particular job prevents unionization. For the law takes care of the vast number of workers who do not belong to any union. Whenever the law can do things for workers that unions usually do, it makes the unions less essential.

A few advocates of a repeal of the wage-and-hour law have arisen but they are mistaken in their approach. The placing of a floor under wages is an effective way to prevent exploitation of a large number of unorganized workers. But the determination of what shall constitute the work week is something else. This could very well be left to collective bargaining but with a limit on the number of hours that could be worked before overtime rates would apply.

If Congress changed the law to make a 44-hour week permissive, it would enable unions to enter into agreements for 42- or 40- or 35-hour weeks dependent on changing needs and fluctuating conditions. If the spread-the-work principle is sound, it is important that flexibility be retained because a boom in one industry sometimes occurs at the very moment when there is depression in another.

The present law is too rigid and needs better definitions of the classes covered. The minimum rate could well be raised, too. It ought to be possible also for the rates of overtime pay to be adjusted so that those who want to work longer hours at straight

time may do so voluntarily and thus earn more money at the same job rather than be forced, as at present, to go to a second employer and work in a different trade.

Revision of the wage-and-hour law is essential to meet the shortage of manpower and work shortage today.

Camouflaged Relief

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. BREHM. Mr. Speaker, if a bill guaranteeing direct aid to those needing it is reported to Congress with no strings attached, I will most certainly vote for it just as I have always voted for previous legislation which had as its objective the relief of human misery.

I charge that the vast majority of our present relief supplies are not going direct to hungry people unless those hungry people buy them. They are being sent to the politicians who run the various governments and they, in turn, either sell them through the stores to the people or they are side-tracked into the black market.

Just last year Congress appropriated millions for relief and we know that over $300,000,000 of this was used in Yugoslavia to mobilize and equip Tito's army. Tito is a Communist leader of a Russian satellite nation.

In order for a government to get American relief, the nation so aided must operate as a police state, the very thing which we are trying to prevent in America.

Is it not just a little ironic that Congress should be called upon to support a program of this kind under the guise of stopping the spread of communism in Europe, or anywhere else for that matter?

There is nothing new regarding Russia's technique in securing converts to communism or building up good will on the continent. She simply invites the folks of the countryside to a party of free sandwiches and free beer. They eat, they drink, they dance, and then go home in a happy frame of mind. Millions of dollars were not spent on propaganda to tell the peasants what a wonderful system communism is. I doubt if the word was even used at the party. Nevertheless those who attended, go home with something in their stomachs, and naturally they become sympathetic with such a program.

Our State Department on the other hand sets up a multimillion dollar program to broadcast the Voice of America. Its purpose is to convince hungry people that America is their friend. If you were hungry would you rather have canned speeches or canned food?

A cup of hot coffee or a glass of milk keeping company with a sandwich in the stomach of some hungry, discouraged individual, will do more to win him over to America's position than all the speeches, canned or otherwise, which have been or which may yet be made in behalf of some recipient politician.

No one is more willing to share his goods with hungry, destitute, friendly people than I am. However, when magnified relief needs are used to camouflage the real purpose of perpetuating a political party in power, as well as the granting of military loans, and I am asked to swallow it under the guise of helping cold, hungry, and homeless people, then that is laying it on just a little too thick.

I refuse to subject those whom I am honestly and conscientiously trying to represent to further and continued hardships of high prices and high taxes under the false premise that it is necessary to win the peace, when I am convinced that it is the highway to war.

We have learned from long and bitter experience that politicians will not administer relief supplies to the needy without injecting politics into their actions. Remember WPA and surplus commodities? Sure you do.

Why will not this administration agree to employ the various church groups, the Society of Friends, the Red Cross, the Salvation Army, or other capable and competent charitable organizations who are experienced in this type of relief work, to administer the program? Why is it necessary to maintain on the Federal pay roll thousands of persons to administer a program of this type, unless it be for political consideration.

It has been reportedly stated that Russia could take over the whole of Europe within 24 hours and also that Russia and her satellites have over 5,000,000 men under arms who could move at a moment's notice. Now if that be true, then I wish someone would explain how the passage of this bill or any bill proposing any method short of total war might deter Russia from moving, providing she decided so to do.

President Truman has stated in substance that our foreign-aid program is aimed primarily at defeating or destroying communism in Europe, and yet in the same breath he approves the program which permitted his administration to export almost $10,000,000 worth of supplies to Russia and her satellite nations in 1946, and a like amount during the first 7 months of 1947. No one has yet explained to me how we intend to defeat communism if we continue to send supplies and materials to the breeding ground of communism. This will only increase its potency for begetting a more powerful war machine.

If one is sincere he does not choke a person with one hand and attempt to administer artificial respiration with the other. Either this administration is for or against communism, and it should be consistent and not follow a program of appeasement one time and then later pretend to be tough, just because political expediency seems to indicate that it would be popular at the time.

Anyone who is so naive as to believe that the so-called Marshall plan will destroy communism is ignoring historical facts. Communism can only be uprooted and destroyed by righteous indignation and an uprising of the people against it. If we are going to lull nations to sleep on the false premise that by sending American dollars and American relief supplies to their country communism will be destroyed, then they will deliberately sit back and wait for it to happen. Only when they know that the salvation of their country depends upon their taking action will they act, just as France is now acting to throw the Communists out.

The nations of Europe should be taught how to help themselves. We will only make weaklings out of them and make them more dependent upon our generosity if we continue our present unrealistic program.

In my opinion, a strong German economy holds the greatest hope for the stabilization of Europe. I am sure that no one wants Germany to ever again become an aggressor military nation. However, when this administration permits German industrial plants to be wrecked and the equipment utterly destroyed instead of converting those factories to peacetime production, then it appears to me that they are formulating a plan which is bound to keep taxes high and goods scarce on our own domestic front. If ever the opportunity presented itself to literally beat swords into plowshares that opportunity exists in Germany today, but is being completely ignored.

The nations of Europe which need financial help should be granted that help so far as possible through loans from the World Bank, as well as from private sources, rather than out of taxes collected from the American public. They have assets and resources. Let them use this collateral to help themselves.

Mr. Speaker, in my opinion Congressman BUCK, of New York, properly inspected Europe during the past summer. He drove in his own car at his own expense a distance of 5,500 miles along the highways and byways of France. He did not talk to French officials but instead he talked with hundreds of ordinary people: storekeepers, farmers, mechanics, waiters, laborers, industrialists, white-collar workers, and so forth, who constitute a fair cross-section of the people who make up the French Republic. He was not met and entertained or wined and dined by royalty. He was not just shown the sights which they wanted him to see, but rather he saw with his own eyes, conditions first-hand, and from his own report I quote briefly as follows:

> When President Truman told this Congress that food in France is near the vanishing point he was badly misinformed. That statement just is not so. The fact is that food supplies there are adequate but not properly distributed.
>
> But as long as the United States continues its blind, heedless giving, no French Government will take the politically unpopular measures necessary to the solution of France's interior problems. Reliance on rich Uncle Sam is a far easier course.

Congressman BUCK discusses wheat, milk, oils and fats, petroleum products, cotton, and so forth, and gives what I consider the most concise, first-hand report that has been attempted on the floor

of this Congress. The President of France recently stated that there are more livestock in France today than there were prior to the start of World War II. Why then, you ask, are the American taxpayers called upon to contribute $23,000,000 as provided for in this bill, to furnish milk products, fats and oils to France? Congressman BUCK'S answer is readily understood. The farmer does not want the French franc because it has dropped too low in purchasing power. He wants things such as fertilizer and equipment. His government offers him only unstable francs, so the French farmer refuses to sell his food to his own countrymen. Should the American taxpayers subsidize a program of this kind?

Mr. Speaker, it is impossible to vote for this particular piece of legislation unless one is willing to obligate and bind himself to vote for all those steps which will follow, including the Marshall plan. It is impossible to take one without accepting all, and I for one refuse to obligate the American citizens to a scheme of this kind.

I realize that charges and countercharges have been hurled and will continue to be hurled regarding this legislation. The one of isolationism is pretty well shopworn, but still it has been and will continue to be bandied about by those internationalists who seem to be more concerned with foreign problems than they are with taking care of some of our own worthy and needy improvements, such as, improved welfare institutions, increased payments for the aged, blind, and handicapped, greater and more equal educational opportunities for all, improved highways, increased flood control, more adequate housing, and so forth.

Isolationism died forever in the middle of the Atlantic Ocean when Mr. Churchill apparently induced Mr. Roosevelt that America should again hop into Europe's war a second time.

Americans have the greatest record for charity of any people in the history of the world. Anyone who brands as isolationists those of us who are simply attempting to keep our own economy sound in order that we might lead the world to a better day, is simply trying to confuse the issue. We as a Nation are too warm-hearted and I may say gullible for anyone to brand us as isolationists and make it stick.

Remember our relief program in China wherein 75 percent or more of all the supplies which we so generously sent went into the black market and only those with money could get them? The same old group will still have their fingers in the pie.

I feel that if and until a program is offered which I know will put food into the stomachs, and clothing on the backs of hungry and cold men, women, and children, as well as bind up the wounds of the afflicted, that I just cannot permanently commit my people to such a nebulous hypothesis.

If the success of our present or any proposed foreign policy requires a regimented and planned economy in America, then it just cannot be an American foreign policy, bipartisan or otherwise.

I cannot help but feel in the final analysis that instead of thanking us for what we have done, that the nations involved will follow the pattern set after the First World War, and only condemn us for not having done more. This bill was certainly not drafted with the idea in view of how to win friends and influence people for America.

Mr. Speaker, for reasons given, and many more which I could cite, based on the experience and bitter disappointment of the past, I just cannot support H. R. 4604 and still keep faith with those who sent me to Congress.

American Merchant Marine

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to Mr. Frank J. Taylor, president of the American Merchant Marine Institute, Inc., under date of December 5, 1947, by Judge John J. Burns, general counsel of the American Merchant Marine Institute, Inc.:

AMERICAN MERCHANT
MARINE INSTITUTE, INC.,
New York, December 5, 1947.

HON. FRANK J. TAYLOR,
President, American Merchant
Marine Institute, Inc.,
New York, N. Y.

DEAR MR. TAYLOR: In view of some recent developments which may seriously affect the present and future status of member companies who now have or may in the future have operating subsidy contracts with the United States Maritime Commission, I am writing this letter for the information of the Institute's officers and members. A very brief review of the Merchant Marine Act, 1936, and operations thereunder, would appear to be relevant.

Passage of the Merchant Marine Act, 1936, followed a half century of unsuccessful attempts in this country to build up the American merchant marine. We had found both our merchant fleet and our shipbuilding facilities woefully lacking at the outbreak of World War I, and by 1935–36 we saw an ever increasing proportion of our foreign trade being carried in foreign bottoms. American seamen had less and less chance of employment on American flag vessels; American shipyards had practically no new vessels on the ways; shipyard labor, highly skilled, was drifting into other fields.

In section 101 of the Merchant Marine Act, 1936, Congress enunciated the following policy:

"SEC. 101. It is necessary for the national defense and development of its foreign and domestic commerce that the United States shall have a merchant marine (a) sufficient to carry its domestic water-borne commerce and a substantial portion of the water-borne export and import foreign commerce of the United States and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign water-borne commerce at all times, (b) capable of serving as a naval and military auxiliary in time of war or national emergency, (c) owned and operated under the United States flag by citizens of the United States insofar as may be practicable, and (d) composed of the best-equipped, safest, and most suitable types of vessels, constructed in the United States and manned with a trained and efficient citizen personnel. It is hereby declared to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine."

This policy has been reaffirmed, in almost identical language, in the Merchant Ship Sales Act of 1946 (Section 2).

In the Merchant Marine Act, 1936, Congress recognized that an American steamship company, operating under the American flag and with citizen crews, faces costs far in excess of those met by its foreign competitors. To help offset the competitive advantage in favor of the foreign steamship operators, Congress granted financial aid both in the construction and in the operation of American flag vessels. In both cases this aid or subsidy is measured by, and cannot exceed, the difference between American costs and those of foreign competitors, and to a very great degree, all subsidy payments go, directly or indirectly, to American labor. The construction-differential subsidy may equal, but not exceed, the excess of American construction cost over the estimated cost of building the proposed vessel in a foreign shipyard. However, this construction-differential subsidy may never exceed 50 percent of the American cost of the vessel. The operating-differential subsidy may equal, but not exceed, the excess of American costs for certain items of expense over the estimated cost of such items if the vessels were operated under the registry of a foreign country whose vessels are substantial competitors of the American operator. The items of expenses normally considered in determining the amount of an operating-differential subsidy are: wages and subsistence of officers and crew, insurance, maintenance, and repairs not compensated by insurance.

In order to qualify for either construction or operating assistance an American steamship company must enter into a contract with the Maritime Commission whereby the company undertakes numerous obligations and subjects itself to numerous limitations and restrictions. While these obligations, limitations, and restrictions are set forth in Annex A, attached hereto, a clear understanding of the philosophy and function of the 1936 act cannot be had without an explanation of the statutory system under which subsidized operators must maintain reserve funds.

A steamship company receiving an operating differential subsidy must maintain a "capital reserve fund" and a "special reserve fund." In the capital reserve fund the operator must deposit an amount equal to the annual depreciation charge (figured on a 20-year life expectancy) on vessels on which subsidy is being paid. The operator must also deposit in this fund the proceeds of sale or other disposition of a subsidized vessel or the proceeds of insurance on her loss. From this capital reserve fund the operator may make disbursements to purchase new vessels or to pay notes secured by mortgage on existing vessels. The fund can be used for no other purpose.

In the special reserve fund the operator must deposit all annual earnings in excess of 10 percent. Moneys in the special reserve fund may be used by the operator (1) to reimburse his general funds for operating losses, (2) to make the required payment to the Commission of one-half of the operator's profits in excess of 10 percent over a 10-year accounting period (not to exceed the subsidy paid to the operator) and (3) with the approval of the Commission, after having reimbursed the Commission as in (2) above, to place money in the operator's general funds or to make a distribution to shareholders or employees.

On occasion it is not clearly understood that if a subsidized operator makes profits

in excess of 10 percent over a 10-year period, he must use such profits to reimburse the Government for subsidy payments received. In truth, of the 12 steamship companies holding operating-differential subsidy contracts with the Government, 7 companies now have in their special reserve fund, subject to recapture by the Government at the end of the 10-year accounting period, an amount equal to all subsidy received; the other five companies now have in their special reserve funds sizable amounts subject to such recapture. The gross amount of operating-differential subsidy paid to all companies holding such subsidy contracts since the enactment of the 1936 act is $49,000,000. Present official estimates show that of this amount approximately $28,000,000 will be reimbursed to the United States at the end of the respective 10-year accounting periods of the companies. The first accounting period for most companies will terminate on or before December 31, 1948. While the period may be considered abnormal, operating results pay tribute to the plan set up by the 1936 act by which aid is made available to assist an American-flag operator to meet competition from lower cost foreign operators, while any portion of such assistance found unnecessary over a 10-year period is reimbursed to the Government. The plan may well be considered national insurance against reverses which have in the past emaciated our merchant marine.

Pursuant to the 1936 act, holders of operating-differential-subsidy contracts entered into construction and replacement programs whereby the essential trade routes would be serviced by new and modern vessels. In the years immediately prior to the outbreak of war in Europe practically all shipbuilding in this country was for the account of the subsidized lines. These companies have built 289 new vessels since passage of the 1936 act, and, according to the latest Maritime Commission report, these same companies have purchased 98 vessels under the Merchant Ship Sales Act of 1946. Prior to the recent war the vessels of these lines were operating 62 essential services in the foreign commerce of the United States. In 1940, the last full year of prewar operation, vessels operated by the subsidized companies made 785 voyages on these essential trade routes. Their operating personnel and their newly constructed vessels, the finest in the world, were available for immediate war service. Their construction programs, inaugurated under the Merchant Marine Act, 1928, and carried out under the 1936 act, had created the nucleus of this country's great shipbuilding industry which so amazed the world with its wartime production. Unquestionably the Merchant Marine Act, 1936, is the greatest single legislative contribution to the war effort. Without its farsighted planning countless lives and considerable time would have been lost before this country's shipbuilding program, so essential to the armed services, could have materialized.

The Independent Offices Appropriation Act, 1948 (Public Law 269, 80th Congress), provided that, after meeting certain obligations therefrom, the balance in the Maritime Commission's construction fund, established by the Merchant Marine Act, 1936, should be carried to the surplus fund and covered into the Treasury. The Appropriation Act provided further that all receipts which otherwise would be deposited to the credit of the construction fund during the fiscal year 1948, shall be covered into the Treasury as miscellaneous receipts. The act limited to $10,000,000 the obligations from such construction fund during the fiscal year 1948 for the purpose of paying operating-differential subsidies. The Maritime Commission had estimated at $28,000,000 its obligation under existing operating-differential-subsidy contracts during the fiscal year 1948. Obviously, the amount appropriated, $10,000,000, is insufficient to permit the Maritime Commission to meet its obligations and to carry out the purpose and the mandate of the 1936 act. Present indications are that the amount required for the payment of operating-differential subsidies during the fiscal year 1949 will be approximately $50,000,000. The Bureau of the Budget is reportedly asking for only $30,000,000 on this account. The failure of the Bureau of the Budget to recommend an adequate amount for payment of operating-differential subsidies gives a clear indication of a lack of understanding of the purpose and operation of the 1936 act.

Even more important is the implication which might be drawn from other language included in the Independent Offices Appropriation Act, 1948. This language is as follows:

"Except as hereinabove provided no obligation shall be incurred against such construction fund during the fiscal year 1948."

A question has been raised as to what effect, if any, this provision may have on the Commission's authority to carry out or to renew or extend operating-differential subsidy contracts. In other words, does this language in the appropriation act reduce to an annual basis the long-range contract authority granted by the 1936 act? In my opinion the quoted language has no effect whatsoever on the contract authority granted to the Maritime Commission by the 1936 act and I do not believe that any serious contention will be made in this direction. Certainly the entire philosophy of the 1936 act is founded on a long-range program of shipbuilding and ship operation, one which obviously cannot be sustained if the operator's contract with the Government were to be limited to 1 year. Nevertheless, it seems essential that the question of the Commission's contract authority be settled immediately if the subsidized lines are to be enabled to carry out their existing plans for new ship construction. The simplest means of putting this question to rest would be to restore to its normal function the Maritime Commission's construction fund. The same purpose might also be accomplished by legislation or even by express language in a report of a congressional committee to the effect that the limitation on the annual appropriation was not intended and does not affect the Commission's long-range contract authority. These are matters which interested members of the institute will wish to give serious consideration.

The cyclical nature of the steamship industry has long been recognized—the thought is inherent in the statutory requirement for an accounting of the operator's finances at the end of each 10-year period. The present need of the individual operator is not the criterion at all. In normal times the American steamship companies, operating American-flag ships with American crews, cannot compete in foreign trade without the type of governmental assistance provided by the 1936 act, and unquestionably the next 10 years will see our merchant marine in dire need of such assistance because of the competition of foreign-flag ships on their trade routes. If, in the long pull, operating subsidies prove unnecessary, they will be reimbursed in full to the Government. If, however, the future shows that cost-equalization payments are necessary for continued operation, then the payments will have served the purpose for which they are intended—the development and maintenance of a strong American merchant marine. It cannot be overemphasized that payments under the Merchant Marine Act of 1936, in view of the naval auxiliary factor, are just as much a part of our national defense as routine national defense appropriations.

I will be pleased to discuss these problems at your convenience.

Very truly yours,

JOHN J. BURNS, *General Counsel.*

ANNEX A. OBLIGATIONS, RESTRICTIONS, AND LIMITATIONS IMPOSED ON SUBSIDIZED OPERATORS

I. The holder of an operating-differential subsidy contract assumes the following obligations and is subject to the following limitations and restrictions:

1. He must maintain a capital reserve fund and a special reserve fund into which reserve funds must go (a) all profits over and above 10 percent on the contractor's capital necessarily employed in his business; (b) proceeds of all insurance and indemnities on the loss of vessels; (c) proceeds of sale or other disposition of vessels; and (d) an amount equal to depreciation charges on the operators' vessels (sec. 607 (b), (c));

2. He may make withdrawals from these reserve funds only for limited purposes: (a) Payments for replacement or reconstruction of subsidized vessels; (b) payments for acquisition of additional vessels; (c) payments on notes secured by mortgages on the subsidized vessels; (d) reimbursement to the contractor for operating losses; and (e) with the permission of the Commission, payment into general funds or limited distribution as dividends or bonus (sec. 607 (b), (c));

3. He must man his vessels under wage scales and working conditions and provide living quarters prescribed by the Maritime Commission (sec. 301);

4. He is required to employ a higher percentage of citizen seamen than unsubsidized operators (sec. 302);

5. He must undertake a program of vessel replacement (sec. 601);

6. His accounts and records must be kept in accordance with regulations of the Maritime Commission (sec. 801);

7. He is prohibited from operating, directly or indirectly, foreign-flag vessels in competition with other American-flag lines (sec. 804);

8. He is prohibited from operating, directly or indirectly, in the coastwise or intercoastal trade (sec. 805);

9. Compensation paid to officials cannot exceed the $25,000 maximum fixed by the act (sec. 805);

10. He must repay to the Maritime Commission 50 percent of his profits over a 10-year period in excess of 10 percent of capital necessarily employed in the contractor's business as determined by the Commission, not to exceed the subsidies received (sec. 606);

11. He must personally maintain, manage, and operate the vessels, without assignment (sec. 608);

12. He is prohibited from employing affiliates to do certain accessorial work (sec. 803);

13. He must carry on subsidized vessels cadets and cadet officers being trained by the Government to become licensed officers of the merchant marine (sec. 216); and

14. He is required by the terms of the standard form of operating-differential subsidy agreement to operate his vessels only on prescribed routes and to make an agreed number of round voyages each year upon sailing dates and with ports of call approved by the Commission.

II. The recipient of a construction-differential subsidy assumes the following obligations and is subject to the following limitations and restrictions:

1. Vessel on which construction-differential subsidy is granted must be documented under the laws of the United States (sec. 503);

2. Vessel must remain documented under the laws of the United States for not less than 20 years, or so long as there remains due the United States any principal or interest on account of the purchase price, whichever is the longer period (sec. 503);

3. Vessel must be insured against such risks and in such amounts as the Maritime Commission may prescribe or approve, such insurance to be payable to the Commission or to the parties as their interest may appear (sec. 503);

4. Vessel must be operated exclusively in foreign trade (sec. 506);

5. Operator must employ a higher percentage of citizen seamen than unsubsidized operators (sec. 302); and

6. Value of vessel on requisition or purchase by the United States cannot exceed actual depreciated construction cost thereof less depreciated amount of construction-differential subsidy theretofore paid, or the fair and reasonable scrap value as determined by the Maritime Commission, whichever is the greater; such determination by the Commission is final. This limitation runs with the title to the vessel and is binding on all owners thereof (sec. 802).

Seventieth Anniversary of the Lynn (Mass.) Item

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Appendix, I wish to include herein an editorial that appeared in the Daily Evening edition of the Lynn (Mass.) Item.

This newspaper that started from a humble beginning has established an enviable reputation in Massachusetts and is now considered among the leading newspapers throughout New England.

The readers, the advertisers, and myself are happy to congratulate and extend well wishes to this newspaper organization with the expressed desire that it will continue to be most successful in the future.

OUR SEVENTIETH ANNIVERSARY

It is fitting and proper for institutions, like individuals, to pause on important anniversaries in their careers for a bit of spiritual stocktaking and some meditation on the future.

Today, the Item is 70 years old. It has attained the Biblical fulfillment of "three score and ten," so far as age goes, but in spirit and vigor it is merely at the dawn of limitless potentialities of an expanding and dynamic institution.

The Item of today is a far cry from the four-page tabloid infant that first saw the light of day on December 8, 1877, yet the publisher's creed set forth on the front page of that original issue is as valid and applicable today as it was 7 decades ago:

"We shall endeavor to labor for the interests of the great public. We mean to be independent, to be fearless, and to be feared. Times like the present are not the time to falter; the goal of our ambition is on the upward path, and we have stepped upon it."

Newspaper publishing has become an increasingly complex and costly enterprise in the 70 years that the Item has existed as a daily, but the devotion to the service of the public which animated its first publisher and which over the years has brought it respect, faith, and success is still the guiding principle of today's management. The Item's most priceless asset—like that of every good newspaper—is good will. For 70 years the Item has sedulously sought to cultivate that good will and never more earnestly than at the present time. Without it, a newspaper is a sterile, worthless gesture.

Today, as they look back on 70 years of achievement, the men and women who make the Item possible are humble; grateful that the efforts of themselves and their predecessors have been so enthusiastically received in this community. For the Item considers itself an integral part of the community, sharing its ups and downs, its worries and triumphs, its prosperity and its depressions. As Lynn has grown from a modest community of 35,000 people in 1877 to the bustling metropolitan, highly industrialized city of today, so the Item has expanded from a modest, hand-printed sheet to a modern, complete, prosperous and influential daily, fully geared to the expanding demands of its territory.

On this, our birthday, we can best celebrate by assuring our readers and advertisers that we shall continue to be completely at their service in the years that lie ahead, and that we are still restless to improve the Item day by day and year by year and to prolong indefinitely that happy marriage of community and newspaper which has helped to make Lynn an enviable place in which to live and work and play.

European Wealth in United States of America

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an article by a Washington columnist printed in the Washington Post of December 10, 1947, as follows:

EUROPEAN WEALTH IN UNITED STATES OF AMERICA

Congratulations to young GOP Congressman WALTER NORBLAD, of Oregon, for one of the soundest proposals in helping Europe to help itself. Most newspapers missed it, but NORBLAD has introduced a resolution calling upon the Commerce and Treasury Departments to make public all property in this country owned by foreign citizens and to identify the individuals who hold the property.

Of an estimated $27,000,000,000 worth of bank deposits, gold, stocks, bonds and other investments held by foreigners in the United States, about 50 percent—more than $13,000,000,000 worth—is in the names of citizens who would receive help through the European recovery program.

NORBLAD isn't asking that the United States seize these holdings—but he does think it would be a good idea for the governments which want help from us to see what they can do about getting some value from these holdings. He proposes that the few lucky European citizens who have wealth in this country, share with the American taxpayers the burden of helping the mass of Europe's people get back on their feet.

MERRY-GO-ROUND

Massachusetts' impeccable HENRY CABOT LODGE, Jr., urged his colleagues to support a long-range program of aid to Europe.

"All I ask," he pleaded, "is that you keep open minds until we work out a bill for foreign aid."

JAMES KEM, of Missouri, doubted the Senate's ability to work out a practical long-range aid program.

"It shouldn't be a one-way street," LODGE agreed. "In return we should take scarce materials and air bases."

Eliminate Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article by my distinguished colleague the Honorable JOHN DAVIS LODGE, of Connecticut, which appeared in the Bridgeport Life of December 7, 1947, entitled "Eliminate Juvenile Delinquency":

ELIMINATE JUVENILE DELINQUENCY—THE MEN AND WOMEN OF TOMORROW

(By Hon. JOHN DAVIS LODGE, Member of Congress, Fourth District, Fairfield County, Conn.)

Juvenile delinquency is a natural and habitual concomitant of war. Because of their age, the excitement of a country at war was just beyond the reach of our teen-age boys and girls. This led some young people to misbehavior and others to outright lawlessness. They too felt the pressure of war and were subject to its tensions. The disruptions of war disturbed their lives also and produced a sense of insecurity which can be cured only by intelligent and sympathetic action.

Just as the world is still suffering from the terrible impact of World War II, so the children of today feel the demoralizing forces which were set loose by the war and which have not yet been defeated. Although we were spared the destruction of our cities and the desolation of our countryside, the ravages of war are still very much with us. In no case do these ravages demand our attention more insistently, more urgently, than with respect to our children.

The best way of all to protect children from harmful community influences is to safeguard the security of the home. Economic security is a vital factor. So also is emotional security. An increased sense of security brings a strengthening of family ties.

Accordingly, the first object of the social services and welfare agencies should be to help the family to meet its economic and social problems; problems arising out of illness, dislocation of employment, absence of the breadwinner and the like. Facilities should also be available to supplement home care and to provide competent supervision when mothers are employed. Adequate health and recreational facilities should be furnished in order that the child should have a balanced program of activities with special attention to wholesome companionship and the proper use of leisure time. The educational opportunities provided should be such as to inspire confidence in the American idea of a free society based upon the will of the people, to the end that the child may grow up self-reliant. In other words, while the government must help it must not encourage reliance on government. The child should be taught that the basic ingredient of our system is that freedom and responsibility are inseparable; that self-control rather than government control is the essence of true liberalism; and that when the individual citizen transfers his responsibilities to the government he eventually sells himself into slavery. A confidence in the American system will increase the child's sense of security and tend to minimize any maladjustments.

Finally, in order that their lives should have a deeper meaning, the resources of religious guidance should be easily available.

The confidence and hope and love which this will bring will do much to eliminate a sense of insecurity.

This, then, is the touchstone of the child's life. The family, with all that this means, of comfort and warmth and tenderness. The family has for many centuries been the most important political unit in the life of a nation. So it was in ancient Greece and Rome. So it has been in those countries of Europe from which so many Americans came. So it has been in America. Destroy the family, and you will have far more than a problem in juvenile delinquency—you will have destroyed America. It is interesting to note that the Soviets, realizing the political importance of the family, attempted to destroy it soon after they came to power in Russia. That they did not succeed is a measure of the vitality of home life. The laws that we pass and the treaties that we sign will avail us little if the families of America are not preserved.

In cases where these preventive measures fail then the churches, the social services, the welfare agencies, the health and educational facilities, the juvenile courts, the recreational organizations and the police, should all come into play in a concerted effort to eliminate the destructive influences which hamper the happy growth of our children. All these services should join in a comprehensive community program directed at the problems which surround children and adolescents during these strenuous times.

Essentially, the functions of these various groups whether on a Federal, State, or local level, whether lay or ecclesiastical, are to supplement the functions of the family. This is at best a highly difficult task. It is a formidable challenge. For there is no substitute for the family.

The multifarious aspects of family life are in many instances so elusive, so imponderable, that it is impossible to reproduce the family environment artificially. We must do the best we can. Children who are physically handicapped or mentally deficient, children away from their homes, children living under difficult home conditions, children with special problems of personality and behavior, all these and many others need help from the community in order that they should be able to lead happy, useful lives. Deprivation and neglect and maladjustments during childhood will produce an increasing load of dependents and delinquents for the community to care for. But more serious even than this is the hard fact that unless we take effective measures to cure these afflictions we are bequeathing a terrible burden of responsibility to our children.

America cannot grow and prosper, America cannot exercise world leadership, America cannot fulfill her destiny as a seat of culture, if we do not help young people to adjust themselves to the modern world. America is the achievement of the American people. America will be what the children of today make it.

Hawaii and Alaska, Too

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I should like to insert in the RECORD an editorial appearing in the St. Louis Post-Dispatch of December 8, which I believe is both timely and constructive on the question of statehood for Hawaii and Alaska.

The editorial follows:

HAWAII AND ALASKA, TOO

It is forecast that the Senate will take up and probably act favorably on the Hawaiian statehood bill soon after the regular session of Congress meets in January. With little or no opposition expressed, Senators TAFT and VANDENBERG and other Republican policy makers are said to be ready for a vote when the bill comes out of the Public Lands Committee. Some members of the committee are interested enough in speeding action that they may fly to Honolulu in the holiday period to settle any remaining questions.

Hawaii is entitled to first consideration since its statehood bill is under way in Congress, yet its advantage in time over Alaska should be only a short one. Alaska is vital to American defense. As long as the vast Territory is a stepchild, and that is exactly what it is in the American family, it will continue to suffer injustice. Without representation in the House and Senate, Alaska can get no adequate consideration for its needs. Its lone Delegate, who has no vote, cannot begin to keep up with all the hearings and committee meetings which pass on issues involving his constituents.

Siberia is only barely more than 50 miles across the Bering Sea from Alaska. The distance is so short that all the key spots are in danger of seizure by the Russians. There are other aspects of Alaskan life which will also get short shrift until this Territory with 90,000 American citizens becomes a State. But the issue of defense is enough in itself to win favorable action. The Sunday Post-Dispatch showed in detail how wide open we are to another Pearl Harbor through a "top of the map" attack.

Here is an issue on which a Republican Congress and a Democratic administration should get together without a trace of party differences.

Foot-and-Mouth-Disease Program

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report and recommendations of the Subcommittee on the Foot and Mouth Disease Program:

REPORT AND RECOMMENDATIONS ON FUTURE FOOT-AND-MOUTH-DISEASE PROGRAM

On December 26, 1946, the Department of Agriculture received reports of the outbreak of foot-and-mouth disease in Mexico. The disease is presumed to have been brought into Mexico by cattle imported from Brazil in violation of the Mexico-United States sanitation treaty.

On February 28, 1947, the Congress approved Public Law 8 (80th Congress) authorizing the Secretary of Agriculture to cooperate with the Government of Mexico in the control and eradication of this disease. The law was implemented promptly with ample appropriations and a campaign of eradication was undertaken.

That campaign has been under the direction of a joint Mexico-United States commission with the responsibility—so far as the United States is concerned—resting on the Department of Agriculture through its Bureau of Animal Industry, and on the Department of State.

Late in June, not entirely satisfied with the progress of the campaign, a committee of this Congress visited Mexico and spent a week inspecting the activities then under way. It was impressed by the need for a top-flight executive, one entirely free of bureaucratic restrictions and entanglements, to take over the direction of this campaign.

On its return to Washington the committee urgently recommended that there be created "the office of executive director of the campaign" to be filled by a man of "outstanding executive ability and experience" competent to "direct a campaign of this magnitude in all its ramifications and to bring about the speed, coordination, and efficiency which are absolutely essential to the success of this program." That recommendation has never been followed.

In spite of the slaughter of some 500,000 cattle and many small animals, the disease continued to gain ground until the Mexican Government—whose wholehearted assent is of course a necessary prerequisite to any activity on Mexican soil—notified the Department of Agriculture on November 25, 1947, that the economy of that country could not stand the immediate slaughter of the tremendous number of livestock which had by that time become infected or exposed to the disease.

Accordingly, on November 26, 1947, the Department of Agriculture announced a "modification" of its program. In plain words this meant abandonment, at least for the present, of efforts to eradicate the disease from Mexico by the slaughter and burial method which has several times conquered it in the United States and acceptance, instead, of a quarantine and vaccination program designed to control the disease so as to prevent its spread outside the present generally infected area.

On the same day the Committee on Agriculture announced a hearing beginning December 3, 1947, in which all interested parties were invited to participate, for the purpose of analyzing the threat to the livestock industry and the economy of this country presented by the failure of the eradication campaign, and to consider the best steps which might now be taken to keep the disease out of the United States.

Having considered carefully all of the evidence available, the committee makes the following recommendations:

RECOMMENDATIONS

1. That the campaign against foot-and-mouth disease in Mexico shall be conducted on the following basis: First, an all-out effort by both countries to hold a quarantine line immediately north of the present infected area, including a sterile zone as wide as possible south of such line in which all infected and exposed animals will be subject to immediate slaughter and burial, in order to prevent the spread of the disease into northern Mexico and the United States; second, extension and enlargement southward of that sterile zone as rapidly as circumstances will permit, with vaccination being employed by the commission only as an adjunct to quarantine.

2. That it shall be understood definitely by all participants that the program now undertaken is not an abandonment of the effort to eradicate foot-and-mouth disease from this continent but is merely a postponement of that effort until it can be undertaken and accomplished in a manner which is more acceptable to the Mexican people and tolerable to the Mexican economy.

3. That the best available scientists and economists be assigned immediately to research and study in Mexico and elsewhere on the disease itself, its prevention and control, and the effect of the disease and of proposed eradication methods on the economy of Mexico and the United States.

4. That there be created forthwith the office of executive director of this campaign and that this office be filled by someone of

outstanding executive ability, acceptable to the governments of both countries, who shall have sole and complete authority for the conduct of the campaign and who shall—insofar as the United States is concerned—be responsible only and directly to the Secretary of Agriculture.

5. That there shall be a congressional observer who shall work in coordination with the professional staff of the House Committee on Agriculture, whose duty it shall be to observe continuously and report to the Congress the progress of the program hereafter undertaken, with authority to see and examine all the books, records, and documents of the Joint Commission and of the Department of Agriculture pertaining to the campaign against the disease.

6. That the cost of the program hereafter shall be shared by the two governments on substantially the basis on which the campaign was being operated immediately prior to November 26, 1947.

7. That the program substantially as outlined herein shall be made the basis of a new agreement between the Governments of the United States and Mexico.

COMMITTEE ON FOOT AND MOUTH DISEASE OF THE COMMITTEE ON AGRICULTURE,
GEORGE W. GILLIE, *Chairman*,
SID SIMPSON.
ERNEST K. BRAMBLETT.
WALTER K. GRANGER.
EUGENE WORLEY.

Armistice Day Address

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. O'HARA. Mr. Speaker, my attention has been called by Judge Joseph J. Moriarty, of the Eighth Judicial District of Minnesota, to a speech made by Miss Betty Fossum, a student at the Central High School of Norwood-Young America, on Armistice Day of this year. Miss Fossum's speech is an exemplification of the thinking of our young people regarding some of the problems which confront us. She is to be congratulated upon having stated the problem so eloquently and succinctly.

Under leave to extend my remarks in the RECORD, I include the following speech:

We have gathered here today to honor the men who so gallantly fought and died that we may live in comfort. In a few moments we will pay silent tribute to these men. It is then that our thoughts turn to those who are absent.

If, by some miracle, these men could speak to us today I feel they would caution us about our methods of establishing world peace. Our world of today is one of friction and chaos. Fear overrules the world. People in all nations are hungry, cold, and homeless. In their simple way they appeal to us. Isn't it up to us to answer their appeals by sharing some of our material wealth?

Our Government is asking a small favor of us when it asks us to conserve food in the homes, restaurants, and in the school lunch rooms. Hereafter, may we let our conscience guide us.

After every war comes a period of readjustment when displaced persons must find new homes. America will have her share of these people. It is up to us to accept them, open the doors of our hearts to them, and teach them the American way of life.

Throughout our Nation today there is friction in various groups. Such evils as racial and religious prejudices should not be tolerated. Vicious inner circles are maliciously plotting against our democratic rights. We Americans should form a league of honor against these evils. Democracy has always been carried near our hearts, and let us continue to carry it there.

We, the young people, can hold our heads high for we are proud to be Americans. But we have a great responsibility—in our hands lies the future of America. It is never too early to learn good citizenship and good citizenship starts in the home communities. We must learn to respect one another's property and rights, and we must remember we all have the same privileges, for we are all created equal.

These men have made their appeal to us. They have stressed world peace, lasting peace, that they have not fought and died in vain. Can we fail them?

I quote from the Reader's Digest: "If there is righteousness in the heart there is beauty in the character. If there be beauty in the character there will be harmony in the home. If there is harmony in the home, there will be order in the Nation. When there is order in the Nation, there will be peace in the world."

Cure for Inflation: General Measures, Not Price Control

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Minneapolis Sunday Tribune, December 7, 1947:

CURE FOR INFLATION: GENERAL MEASURES, NOT PRICE FIXING

(By Arthur Upgren)

Practically everyone agrees the cost of living has been going up too speedily. We may properly worry also about a third inflation-boosting round of wage increases in a drive launched by the CIO. Yet I think we must avoid price control and rationing. The reason is that even worse distortions then are introduced into the economy. When one price is controlled, purchasing power is piled up in buyers' hands. It is used in other directions to cause still more inflation.

People who work in the lines that bear the heavy hand of price control try to escape. They try to find their jobs in uncontrolled areas. No raw materials flow into making the commodity whose price is controlled. They, like the workers, command a higher price over in the uncontrolled fields.

HOW IT WORKS

The more we control some prices, the higher all other prices go. That's inflation. In France the price of wheat was controlled to make bread cheap. But now the wheat there flows into anything but bread. It helps make meat for sale in black markets.

The trouble with price fixing is that it deals with symptoms, not causes. Two hundred years of economic history have proved the everlasting dangers of price fixing.

What is needed are sound plans to reduce the purchasing power the people are spending. That is a general measure. Price control is a specific measure. General measures do not upset price relationships. We go on having a free price system—easily the best as judged by today's price trouble everywhere else in the world.

Businessmen continue to make their price and cost calculations if we adopt only general measures. Workers, as consumers, then buy goods whose prices have not been juggled by specific measures. General measures can reduce purchasing power. As soon as output or productivity rises, general measures can be eased to allow a greater amount of purchasing power. That greater purchasing power can then buy that larger product.

How can general measures be adopted? What will be their effects?

SAVINGS IMPORTANT

One "general measure" is for the American people to increase their savings. Not spending helps hold prices down. Then the saver can spend later and get a lot more for his money. The Treasury and its Under Secretary, Daniel W. Bell, told us at the start of the war:

"If you don't save, all your money will go for higher prices.

"If you do save, you can buy all the goods there are, anyway, and have your savings, too."

The schedule shows how our savings rose. It shows, too, how they fell after the war, to cause the spending spree that gives us the inflation headache we are having.

The recent savings record of the American people is almost as bad as to make us say: "We deserve the inflation we are getting. If we insist on spending before new, high production is realized, we're only wasting our money."

This applies to all of us. It even applies to industry and business. A survey of current business showed recently that business plans to try to spend $15,000,000,000 for plant and equipment this year. Last year it spent $12,000,000,000. Even $12,000,000,000 was a new all-time high by a good margin.

Business should spend for improved productivity—but not so much for expansion with no greater efficiency. Here is a job for the bankers who have been, and will be, lending to business.

OTHER MEASURES, TOO

Other general measures, too, can be adopted: Slowing down consumer credit, reducing business and commercial credit, reducing over-all bank credit, continuing high taxes. Increasing discount rates, too, will help very much psychologically in showing that banking authorities also agree we should be defended further against inflation.

It would be near tragic not to be "debating and adopting" these measures now. We propose to adopt the Marshall plan. We also hope greatly to enlarge housing. We may adopt other employment sustaining measures. All that in the way of employment-sustaining measures allows us to "boil down" our excessive inflation of prices of today.

In these ways we can produce a sound basis for a long-run period with the highest prosperity we have ever known. Fair and reasonable prices, shorn of inflation, are the cornerstone for that objective.

Consumer income and savings

[Figures in billions of dollars]

	Net savings of consumers	Consumer spendable income
1940	4	76
1941	10	92
1942	25	116
1943	30	132
1944	36	146

Salaries of Postal Employees

EXTENSION OF REMARKS
OF
HON. FRANK L. SUNDSTROM
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. SUNDSTROM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. Thomas F. Flanagan, publicity director of the New Jersey Affiliated Postal Employees Legislative Committee, concerning salaries paid postal service employees, together with a story on the high cost of living from the Newark Evening News:

NEW JERSEY AFFILIATED POSTAL EMPLOYEES LEGISLATIVE COMMITTEE,
East Orange, N. J., December 7, 1947.
Hon. FRANK L. SUNDSTROM,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: I am enclosing the attached clipping from the Newark Evening News of December 3, 1947. As a representative of the New Jersey Affiliated Postal Employees Legislative Committee, which represents 10,000 postal employees in New Jersey, I wish to call to your attention the ever increase in the cost of living, especially in the area of your congressional district. This clipping proves that the Newark (N. J.) area is the highest in the country according to the latest data available.

On behalf of the 10,000 faithful postal employees in New Jersey, the letter carriers who deliver the mail, the postal clerks who sort the mail, the railway mail clerks who keep the mails moving in transit and the postal supervisors who see that all functions of the great mail services are carried out in an efficient manner I plead with you and through you with the Members of Eightieth Congress to act favorable on a substantial basic salary increase for all these faithful employees. Our salaries are fixed by Congress and we must depend on Congress to act in our behalf. I do hope that you will use your good graces of your office to influence the House Committee on Civil Service and Post Offices to take early action on a basic salary increase to meet this ever increase in the cost of living.

We will appreciate anything that you can do to be of help to us in the postal service. We will appreciate anything you can do for us in this Congress. With best wishes to you, I remain,

Sincerely yours,
THOMAS F. FLANAGAN,
Publicity Director, New Jersey Affiliated Postal Employees Legislative Committee.

[From the Newark (N. J.) Evening News of December 3, 1947]

CITY SETS HCL PACE—TOPS UNITED STATES WITH RISE OF 3.7 PERCENT IN MONTH

Newark had the doubtful distinction of experiencing the biggest monthly jump in living costs in the country—3.7 percent—according to the National Industrial Conference Board's latest consumer price index.

The jump, as recorded in mid-September over the previous month was 1.6 percent for the Nation as a whole. Detroit had the lowest increase—0.3 percent. Close behind Newark for the price skyrocket sweepstakes came Macon, 3.3, and Minneapolis, 2.9.

The biggest jump here, of course, was in food, which rose 5.6 percent in a single month—enough to make almost any housewife dizzy. Sundries were up 3.6 percent, housefurnishings 3.1 percent, fuel 0.7 percent, and clothing 0.3 percent. Only housing showed no change.

FOOD UP 24.6 PERCENT

As compared to a year ago, food costs here are up 24.6 percent, housefurnishings 13.9 percent, and sundries 8.9 percent.

The jump for a year in Newark was 14.3 percent, taking 1923 as a base. Figuring August 1939 as a base, the index had shot up to 154.6 in September, as compared to 149.1 the previous month and 135.3 a year ago.

The National Industrial Conference Board is the only non-Government agency which gathers consumers' prices for the country as a whole. The full name of its survey is Index of Quoted Retail Prices for Consumers' Goods and Services Purchased by Moderate-Income Families.

Rationing of Food and Fuel

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. PHILBIN. Mr. Speaker, I am inserting in the RECORD today two articles from the New York Herald Tribune which ought to give Members of this body food for thought.

The first is an article entitled "Congress Gets Bill To Ration Food and Fuel," and the second is an article headed "Russia to end rations by January 1, cut prices, 'consolidate' ruble."

While I am not unfamiliar with the chicanery and misrepresentation, cheap propaganda and patent deceit, of advocates of the Soviet system, yet there is something not only paradoxical but ironical about the fact, if it is true, that Russia should be terminating rationing and economic controls and reducing prices at a time when the American people are suffering from the highest prices in history and this Congress is considering the reestablishment of rationing and price fixing.

The situation illustrated by these articles indicates the urgent need of immediate action by this body to deal with our own social and economic problems along democratic lines, and not along totalitarian lines.

The articles follow:

CONGRESS GETS BILL TO RATION FOOD AND FUEL—HARRIMAN OFFERS PLAN TO ALLOCATE SCARCE ITEMS, EXTEND EXPORT CURBS—WOULD PERMIT UNITED STATES TO BUY FOOD CROPS—REPUBLICANS ARE COOL TO PROPOSALS, WILL PRESS FOR VOLUNTARY PROGRAM

(By Raymond J. Blair)

WASHINGTON, December 9.—A sweeping administration bill to authorize consumer rationing of food, fuel, and other items, priorities, allocations, and inventory control for scarce commodities, export-control extension, and Government purchase of entire food crops was given to Congress today.

The measure is the first concrete piece of legislation submitted by the administration to support parts of President Truman's embattled 10-point anti-inflation program since he presented it to a joint session of Congress November 17.

The bill was placed before a Senate Judiciary Subcommittee by W. Averell Harriman, Secretary of Commerce.

It covers in one stroke 4 of the 10 points in Mr. Truman's program. Administration officials are preparing suggested legislation to carry out the other 6 points. These are: control of consumer and bank credit, regulation of speculative trading on commodity exchanges, marketing of livestock and poultry at lower weights, expansion of the voluntary food-conservation program and encouragement of greater foreign food production, rent control, and selective price ceilings, and such wage ceilings as are necessary to maintain them.

CROP PURCHASE SUGGESTED

Although the administration draft stated specifically that it did not authorize the "direct establishment" of maximum prices, it developed that the requested authority to purchase entire food crops would enable the Government to fix the prices of these crops and thus exert indirect price control upon consumers. This was brought out in questioning of Adrian Fisher, Commerce Department Solicitor, by Senator JOHN S. COOPER, Republican, of Kentucky, the subcommittee chairman.

The initial reaction of Senator COOPER and other Republicans was that the requested grant of authority was far too broad. Republican leaders, therefore, proceeded with drafting their own program of voluntary price reductions and allocations of scarce commodities. Senator ROBERT A. TAFT, of Ohio, chairman of the Senate Republican policy committee, announced that House and Senate Republican leaders would hold another closed meeting on their program tomorrow. The leaders launched the program at a session last week.

REPUBLICAN PROGRAM

The Republican plan, being pushed as an alternative to Mr. Truman's, is based on giving the administration sufficient funds to promote a voluntary industry program of reducing prices and sharing scarce goods. Presumably, labor also would be called upon to hold down its wage demands.

The administration has told Congress it will try voluntary steps first before resorting to controls, but it is opposed to the Republican emphasis on voluntary means alone.

Secretary Harriman said today that voluntary cooperation by industries would solve most of the problems, but contended that mandatory powers were needed to force uncooperative firms into line to protect them against contractual commitments and maintain a competitive economy.

The heart of the Republican program is to amend the antitrust laws so as to protect from restraint-of-trade prosecution firms which enter into price-fixing or allocation agreements after consultation with the Federal Government.

The administration bill contains such a clause. It authorizes Government officials to try to promote voluntary agreements with a view to averting the use of mandatory powers. Then it adds:

"Any act or omission by such person or persons in compliance with a written request made pursuant to this section and with a voluntary plan promulgated thereunder shall not be the basis at any time for any prosecution or any civil action or any proceeding under the antitrust laws of the United States or the Federal Trade Commission Act."

Senator COOPER, whose subcommittee had been considering only legislation to extend export controls and Federal authority to allocate a few scarce goods, said he was "overwhelmed" by the scope of the administration bill. He stated that it would have been possible to act on the export-control legislation before the expected December 19 Christmas

recess, but added that the broad bill presented by Mr. Harriman could not be considered before that date.

The bill would do the following:

1. Authorize the President to apply priorities when he found that prompt filling of a contract was needed for production of items affecting industrial production or the cost of living or essential to carrying out the foreign aid programs.

2. Authorize, for the same reasons, allocations of these commodities to the most essential users: tin and tin products, antimony, cinchona bark, quinidine, nitrogenous fertilizer materials, grain and grain products, rice and rice products, dried beans and peas, fats and oils of vegetable, animal or marine origin, fatty acids, margarine, soap, soap powder, livestock, poultry and their products, milk and milk products, and freight cars and other railroad facilities.

3. Provide power for consumer rationing through this allocation authority.

4. Empower the President to restrict and control inventories of scarce commodities.

5. Authorize these allocations, priority and inventory controls until March 31, 1950, unless ended earlier by Congress.

6. Extend export controls, which expire February 29 until March 31, 1950.

7. Provide for quarterly reports to the President and Congress on operation of the controls.

8. Empower the Commerce Department, when licensing exports, to give preference to firms which have the lowest prices, and to fix export premiums. This authority is designed to attack what President Truman has charged is "profiteering" in the export trade.

The proposal of Marriner S. Eccles, chairman of the Federal Reserve Board of Governors, to require all banks to establish an additional reserve was opposed as impractical and inequitable by Edward E. Brown, chairman of the board of the First National Bank of Chicago and president of the Federal Reserve Board's Advisory Council. He appeared before the Senate-House economic committee.

The House Banking and Currency Committee was told by J. M. Mehl, Chief of the Commodity Exchange Authority, that it probably would not be necessary to raise margin requirements on grain futures above 33⅓ percent now, even if Congress grants such authority. This is the present margin requirement. Mr. Mehl said he would leave this figure alone, "until there is evidence of speculative influences developing."

RUSSIA TO END RATIONS BY JANUARY 1. CUT PRICES, "CONSOLIDATE" RUBLE—STORING OF MATERIALS AND FOOD RESERVES AGAINST ANY EVENTUALITY STRESSED

(By Joseph Newman)

Moscow, December 9.—Georgi M. Malenkov, a member of the Politburo of the Communist Party, announced in a statement published here today that rationing will be abolished in the Soviet Union this year. The announcement is of great interest and importance throughout the Soviet Union.

He made two other important announcements bearing on developments in the Soviet economy by the end of this year: that prices are to be reduced and that the Soviet currency is to be "consolidated."

Mr. Malenkov's disclosures of economic plans to be carried out by the end of this year (which means within the next 3 weeks) were contained in a report he made at the founding of the international Communist Information Bureau (Cominform) in Poland last September. The text of his report filled two pages of today's four-page edition of Pravda, Communist Party newspaper.

With Andrei A. Zhdanov, another member of the Politburo, Mr. Malenkov was one of two Soviet representatives at the founding of the Cominform by the Communist Parties of nine European countries. His report is comparable in importance to the one made at the same time by Mr. Zhdanov, who announced the division of the world into two blocs—imperialist and anti-imperialist—and called for international action to undermine the Marshall plan.

DEFENSE MEASURES STRESSED

Besides announcing the end of rationing and changes in the currency, Mr. Malenkov made the following points:

1. The current 5-year plan seeks to develop further the defensive capacity of the Soviet Union and to supply the Soviet armed forces with the latest military technology.

2. The 5-year plan is being revised to increase the development of certain industries.

3. Tremendous importance is attached to storing material and food reserves required for overcoming all sorts of difficulties and as a true guaranty against eventualities of all kinds.

4. In view of the current international situation the Soviet Union cannot count on the importation of considerable quantities of equipment from abroad, and therefore efforts are being made to establish a greater measure of self-sufficiency.

5. The Communist Party of the Soviet Union is now concentrating on improvement of the quality, instead of the quantity, of its membership, which increased during the war from 3,800,000 to 6,300,000 at present.

6. Recently the party has unleashed a resolute campaign against various manifestations of servility to the bourgeois culture of the west. * * * Survivals of these old capitalist notions are now being utilized by agents of American and British imperialism, who are sparing no efforts to find, within the U. S. S. R., support points for their espionage and anti-Soviet propaganda.

7. The Central Committee of the Communist Party is now preparing a new party program because the present one has been long obsolete, and is making changes in the charter of the party.

8. The foreign policy of the Soviet Union and democratic countries is directed toward undermining imperialism. * * * The ruling clique of American imperialists * * * is preparing new war plans against the U. S. S. R.

9. The class struggle has now been shifted to the international arena and here our party is called upon to try its weapons in battles against the cunning businessmen of bourgeois politics.

10. The Communist Party of the Soviet Union is selecting and training cadres capable of assuring that the party line is followed in foreign policy.

Mr. Malenkov noted that the successful Soviet harvest had provided "conditions for abolishing the ration-card system in the Soviet Union this year." He said the Soviet state can now return to normal commodity circulation and the general development of production and consumption. The agricultural drought last year, he said, made it necessary to postpone derationing until this year.

Mr. Malenkov announced that the Soviet state already has taken steps to abolish the current multiple-price system in preparation for derationing.

Since the German invasion of Russia in 1941 and the institution of rationing, about four different price levels have been in force here:

1. For rationed food and clothing. These are the lowest prices.

2. For unrationed food and clothing sold in state stores at what are called commercial prices. These are usually the highest prices.

3. For food and clothing sold by cooperatives. These prices are below the commercial but higher than the rationed prices.

4. For foodstuffs sold in the open market by peasants. These prices fluctuate in accordance with supply and demand.

Foods still being rationed are bread, cereals, meat, fats (butter and oils), sugar, tea, and salt. Other rationed goods are matches, shoes, rubbers, cloth, knitted goods, and clothing.

According to Mr. Malenkov's statement, all these goods will be derationed in the next 3 weeks and will be sold at uniform prices in state stores. Since last year, when rationed prices were increased, commercial prices were reduced. The new, uniform, unrationed prices will be fixed at a point which closes the present gap between rationed and commercial prices.

Politics or Economics

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following editorial from the Johnstown Tribune, Johnstown, Pa., December 3, 1947:

POLITICS OR ECONOMICS

The worst feature of the present impasse in Washington is the prevailing confusion between politics and economics. Each side is looking past the immediate threat of inflation to the Presidential elections less than a year from now.

As an example, President Murray and his vice presidents of the CIO have announced their support of another round of wage increases early next year. On the face of it, that is a purely economic question. In fact, the CIO is notoriously political-minded, and has already made it plain that it intends to support President Truman in 1948. How much of its conclusion was dictated by economics, and how much by a desire to discount Congress and if possible stampede it in the direction Mr. Truman has chosen?

A short time ago Walter Reuther, president of the United Auto Workers, one of the biggest CIO unions threatened wage demands unless prices were rolled back 12 percent. It was evident then, and is evident now, that a roll-back of prices cannot be expected early next year. The administration has no such hope, even if Congress gives it every law it has asked. Therefore it will be just as well not to gamble that anything Congress can do will prevent the third round of wage demands.

As for the administration's plans, they still give no evidence of workability. Secretary of Commerce Harriman told a House committee this week that "if we should wait too long, Congress may well be faced with the hard choice between disastrous delay and a hasty, ill-considered law." But the chairman of the committee, Representative JESSE P. WOLCOTT, of Michigan, said: "I have been sitting on this committee since 1932, and I have yet to hear a program as vague as this presented to us. I wouldn't know how to write a bill to carry out your purposes without giving you blanket powers."

Despite all its efforts, Congress has been unable to draw from administration spokesmen anything except the broadest generalizations. The authority they ask would be merely a delegation of the authority that Congress possesses, without the remotest idea of how or why or where it would be exercised. That is not lawmaking. It is the reverse—an abdication of the place that Congress holds as a coordinate branch of government.

Europe's Wealth in United States

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein the following editorial from the News-Sentinal of Fort Wayne, Ind., of Monday, December 8:

EUROPE'S WEALTH IN UNITED STATES

Will Congress, as it considers sending $20,000,000,000 abroad to finance the Marshall plan, overlook the fact that over-all foreign holdings in America total $27,000,000,000?

The Administration has disclosed officially through the National Advisory Council on International Problems, that gold holdings of foreign countries in the United States alone total $14,000,000,000. Short-term deposits and long-term stocks, bonds, and other investments amount to $13,000,000,000, according to the NACIP.

This is the first statement of foreign holdings we have seen recently. It should throw an entirely different light on the problem of appropriating American wealth to foreigners owning such vast resources in this country.

The $27,000,000,000 figure, incidentally, surpasses by nearly 10 billions the earlier disclosures of an independent survey made by the North American Newspaper Alliance. Its total of gold and investments secreted in this country by foreign citizens was $17,000,000,000.

What is the extent of holdings by citizens of the 16 nations which banded together to ask for the Marshall plan hand-out? The Government says its $13,000,000,000, which is only 3 billions less than the minimum of 16 billions these countries say they must have.

That isn't the extent of their North American holdings. Another $2,000,000,000 is held by Canada and Newfoundland and approximately $11,300,000,000 by other countries.

Senate Finance Committee spokesmen said that while the earlier NANA revelations seemed startling at the time, they actually were highly conservative in contrast to official reports.

There are other things Americans would like to know. What portion of the United States wealth is held by governments and what portion by individuals? How much revenue is thus realized? If the amount is considerable, to what extent, if any, is it being invested in rehabilitated business enterprises in Europe?

Part of the answers may come if Representative WALTER NORBLAD, Republican member of the Finance Committee, wins approval for his joint resolution requiring the Treasury and the Commerce Department to list owners of foreign holdings and all related information within 30 days. This ought to be in the hands of Congress before it acts on any European recovery plan.

It will be noted that it was Representative NORBLAD, a rival party spokesman, and not the administration, who released the report. The Oregonian demands legal steps for forcing use of at least a part of the huge hoard of European wealth in effecting the Continent's recovery.

Much ado has been made of the Marshall plan provision that the beneficiaries must demonstrate ability to help themselves as a condition of assistance.

Here, then, is the acid test of how much the 16 nations want to realize help from their own resources.

"But," it may be said, "using resources of individuals would be confiscation."

Let's see. One of the big arguments for the Marshall plan is that this country is so rich and well off that it can easily afford to give aid. To some extent, this Nation can. But the $20,000,000,000 program would entail sacrifices and foul up our economy. Before that's done, isn't it logical that western Europe should first draw on its own resources, private or Government-owned? Otherwise, the American citizen will, in effect, be subject to the legalized confiscation that comes with excessive taxes, higher prices, and further scarcities of vital commodities.

Truman Is Talking Us Into a Meat Famine

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. DAVIS of Wisconsin. Mr. Speaker, the farmers of my district—and it is an important agricultural area—are concerned with the President's threat of rationing and price controls, and with what those messages will do to the already short supply of food. Many farmers already have begun to curtail operations.

Mr. Speaker, I include a letter which I have received from a constituent in my home county, which is an indictment of the wasteful and contradictory farm policy of this Administration:

PLEASANT VALLEY RANCH,
Elm Grove, Wis., December 4, 1947.
Representative GLENN R. DAVIS,
House of Representatives,
Washington, D. C.

DEAR SIR: President Truman's threat of rationing and price roll-backs is seriously discouraging food production. Why don't you check with a number of farmers to find out how much they are curtailing their operations as a result?

We think an accurate survey would show an alarming decline. This is partially due to the short corn crop and poor prospects for winter wheat, but fear of rationing is making it acutely worse.

Truman is talking us into a meat famine. The hoarders already are buying up meat. You can show the people where the blame really belongs by revealing the damage that ration and roll-back threats are doing.

If you get the facts, the tables will be turned and Truman will be over his own pork barrel. The only conceivable way to head off high prices and critical food declines is to encourage farmers to produce.

Corn is short, but to counterbalance it, we have one of the best hay and protein feed crops in history. Humans can't eat hay. Livestock feeders can convert it into milk and meat and conserve on grain—if rationing and roll-backs are not on their list of worries.

Further, if you will investigate the Federal Government's own meat graders, you will find that they themselves are the cause of wasteful cattle fattening—by insisting on an overfat carcass for prime and choice grades. Tender, tasteful meat can be produced with half the corn required for prime beef—and housewives like it better. The United States meat grading system is itself encouraging a lard-type beef, like the old lard-type hog, which is wrong and wasteful.

Cordially yours,

CARLTON D. STODDARD.

Benefits Versus Costs in Federal Spending

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. RAINS. Mr. Speaker, Senator JOHN SPARKMAN, of Alabama, delivered an address on December 4, before the Congress of American Industry, in New York City, on the subject Benefits Versus Costs in Federal Spending. I commend this address to the attention of the Members of the House.

Gentlemen of the Congress of American Industry, the topic which you have given me the privilege of discussing with you—Benefits Versus Costs in Federal Spending—has a certain ring of familiarity. I remember that this topic was discussed frequently in the debates of the Eightieth Congress. One would find much about it in the pages of the CONGRESSIONAL RECORD. In fact, it seems safe to say that the bulk of the pages of the CONGRESSIONAL RECORD for 1947 deals directly or indirectly with this subject.

In your invitation to me you suggested that I outline what I believe to be "social values attainable through liberal exercise of Federal Government spending powers." Perhaps first of all we had better take a look at that word "liberal" which means so many different things to different people. You may remember Kipling's story of the man who invited all the animals in the world to a feast. He assembled thousands upon thousands of tons of food of every sort, whereupon one big animal rose up out of the depths of the sea, swallowed all the assembled food at one mouthful and grumbled at the stinginess of the meal. On the other hand there was the Scotchman who woke up one morning and said to his wife, "Maggie, it's ma birrrthday! Spare na expense! Gie the canary birrd another seed!"

I believe too that in considering this subject we should keep in mind the simple definition that Government exists for the purpose of doing those things for the common good which could not be effectively done by individual citizens or States acting separately.

LIBERAL VERSUS WASTEFUL SPENDING PROGRAM

In my opinion, liberal spending means a program that avoids both extremes, that of extravagance and that of parsimony. It should be measurable by many of the criteria by which sound private investment is measured. Such criteria include examination of the soundness of the objective, the wisdom and efficiency of administration, and an evaluation of the results obtained in the light of the expense incurred. In making such an evaluation there is one fundamental difference between Government and most private spending. While many governmental projects are self-liquidating and, therefore, may be assessed on an accounting basis, others find their justification in social values that increase the productivity and wealth of the Nation as a whole, but cannot be measured by a dollar-and-cent yardstick.

It should be particularly emphasized that liberal spending does not mean wasteful spending. It is my understanding that my good friend and distinguished colleague, Senator BYRD, for whose ability, industry, integrity, and sincerity I have the greatest admiration, is to speak to you on this same topic. He will doubtless call to your attention many instances of overlapping and duplication of work in the Federal Government structure. This is an extremely important

problem which has engaged the attention of succeeding administrations over a long period of years. It will be a continuing problem just as organization and administration are continuing problems in any large business, Government or private.

The Congress achieved some success in streamlining itself through the Reorganization Act of 1946 and should show further improvements as the new changes are understood. A nonpartisan commission is studying now to make suggestions as to how the executive branch may be reorganized so as to avoid unnecessary duplication of work in its several agencies. These are good signs. Certainly, in the performance of the Government's business waste should be reduced to a minimum, and excessive personnel should be removed from the pay rolls. A sane spending program does not preclude either.

GOVERNMENT SPENDING PROGRAM AS OLD AS GOVERNMENT ITSELF

At the outset it should be realized that the American people have shown social consciousness for many years. Contrary to current opinion held by some, the Government-spending program is not a fad that has developed overnight or even with the advent of the so-called New Deal. Our Government's efforts to take care of its citizens and to promote projects of national benefit are as old as the Government itself.

Let us take a quick backward look at the development of Government spending as it has adapted itself to the changing needs of our country, and the evolution of our social and economic institutions. From the earliest days of our Republic the Federal Government took responsibility for national survival and security. An early step in meeting the needs of a young people was the establishment of the Post Office Department in 1794. Federal spending for internal improvements, such as highways and canals, was the subject of early and bitter debate on constitutional grounds. President Madison vetoed such a bill in 1817. Large-scale Federal spending on highways did not take place until passage of the Federal Aid Road Act of 1916. By that time the problem to be dealt with had changed. Development of the automobile, the rapid settlement of the country, and the tremendous growth of the industrial life of our Nation had made interstate highways a matter of national concern. Indeed, all forms of transportation have rightfully come to be considered matters of national importance. The Federal Government, and also the State and local governments, gave huge grants of land, as well as subsidies and other favors, to the railroads of the country. This use of Federal property, like the Homestead Act of 1862, brought the inestimable social gain resulting from the opening up of the continent to settlement, thus contributing to the phenomenal growth of productive wealth which has characterized our history. The construction of canals, the improvement of rivers and harbors, the undertaking of such projects as the Panama Canal, the Mississippi River improvement, and the intercoastal waterway have all been projects of the Federal Government. We have come a long way from the thinking of an earlier day in this respect. A need was there, and the need was met.

GOVERNMENT SPENDING FOR PUBLIC EDUCATION ONCE DENOUNCED

Free public education was bitterly condemned as socialistic at the time of its adoption. Now it is recognized as one of our most priceless possessions. While the financing of education has been thus far a responsibility borne almost entirely by the States and local communities, the Federal Government played a part by enacting the Morrell Land Grant College Act in 1862 under which millions of acres of land were granted to promote education. Sixty-nine such colleges were established. Today members of both major political parties, recognizing the need for equalization of educational opportunity among our citizens, are advocating Federal aid to the States for general education purposes.

COMMON NEEDS REQUIRE GOVERNMENT EXPENDITURES

In these, and numerous other instances, it will be seen that action was taken in response to a need and not because of some theory of planning or in order to centralize power. We have become a great Nation because we have kept ourselves flexible; because we have kept marching forward. Yet, at all times in our history there have been those who lagged a little behind the procession.

PRESERVATION OF NATURAL RESOURCES LED TO NATIONAL AID PROGRAMS

As we look back at the pattern of our evolution, we see that almost all the programs of today have their roots in earlier developments. For example, as our irreplaceable natural resources began to be seriously depleted, we undertook measures for their conservation and improved use. In 1839 Congress gave the first appropriation for agricultural research. The Bureau of Biological Survey was established in 1885; the Bureau of Animal Husbandry in 1884; the Bureau of Fisheries in 1871; and the development of agricultural experiment stations in the various States was authorized by the Hatch Act of 1887. The Bureau of Chemistry and the Bureau of Soils were created in 1901. All of these programs were undertaken in recognition of the social values to be obtained by helping to improve agricultural activity and to conserve our resources by means of governmental research and technical help. From these beginnings have blossomed our soil conservation program and our many valuable research programs of today.

As early as 1891 Congress set aside 2,500,000 acres of land for forest reserves. In 1901 the Bureau of Forestry was established, which became in 1905 the Forest Service of the United States. A great movement for reclamation and irrigation based on the Reclamation Act of 1902 was undertaken during the Presidency of Theodore Roosevelt. The social value of all these measures was recognized as contributing not only to our national prosperity but to our very survival. It was recognized also that these problems could not be successfully met by individuals acting in their private capacity. They were of national scope.

CONSERVATION OF HUMAN RESOURCES IMPORTANT GOAL

As our country developed and as our whole system of production, both agricultural and industrial, became less a matter of individual skill and more a matter of mass production scientifically organized, new problems arose. Just as in the pioneer days when we did not recognize that our natural resources would not last forever unless conserved, so did we not at that time foresee the problems of individual security which a more mature economy would present. However, conservation of our human resources was a natural step to succeed measures for the conservation of soil resources.

Serious dislocations in our economy resulted in the Federal Farm Loan Act of 1916 and the Agricultural Credits Act of 1923. Such precursors of our present farm-support program came because it had been found that the welfare of individual farmers was of vital importance to the welfare of the Nation as a whole, and that changed conditions had made impossible the solution of the problems of the farmer on an individualistic basis.

OUR NATION NOT STATIC: PROGRESS REQUIRES CHANGE

These examples that I have cited seem to me to demonstrate that the scope of our objectives has progressively widened in response to definite needs and problems. The pattern of change has been gradual, far antedating the programs of the New Deal. Moreover, the direction of the change has corresponded to the general direction of man's evolution. I call your attention to the fact that we began by talking about considerations of mere survival, from which we quickly moved to considerations of the well-being of our material assets, and now we are talking about the well-being of our human assets. We have in recent years developed Federal programs for health, recreation, full employment, for fair wages and good working conditions, for adequate housing. Our programs for extension of electricity in rural homes and for the multiple-purpose projects in our river valleys have been motivated by the desire both to increase productivity and to increase cultural opportunities. Similarly man through the ages has struggled first for survival, then for material prosperity, and gradually for higher moral and spiritual values. The scientific developments of the last few years have confronted us with a new necessity for moral progress. If we are able to meet this challenge as the world becomes more stabilized, we can dare to hope that a smaller proportion of our budget will need to be spent on national defense and that we can then devote a greater proportion of our expenditures to productive uses.

However, we must come back to the immediate and practical problems of today. Are these Federal programs costing us more than we can afford?

THINKING OF RECENT CONGRESS

Evidently those in charge of the recent Congress think not. During the Eightieth Congress many verbal blasts were let loose at the so-called socialistic legislation of the last 14 years, and yet I do not recall that any Congressman or Senator openly advocated the repeal of a single law passed during President Roosevelt's term of office. It is true that a partially successful attempt was made to cripple some of the essential services by denying adequate appropriations, but this roundabout procedure of circumventing the laws of Congress is, to say the least, a refusal to face the issues squarely. In fact, one congressional leader of the majority party was careful to claim as the first session came to an end that no social gains made during the last few years were lost.

Some of you who followed closely the record of the Eightieth Congress perhaps recall the sharp disagreement between the two Houses on the question of expenditures for soil conservation, school lunch, and farm tenant loans under the Farmers Home Administration. In its efforts to make a large and what turned out to be an unattainable budget cut the House had voted to abolish or severely limit each of these programs. The Senate refused to accept the House decision and instead recommended figures very close to those of the President's budget. A joint committee was unable to reconcile the differences and the House voted to adhere to its original decision. When the matter again came before the Senate, on three separate roll calls there was not a dissenting vote on either of the motions that the Senate insist that its larger appropriations be accepted by the House of Representatives.

This one instance is proof that in our efforts to provide essential services necessary to maintain the dignity of our citizens, we accept tomorrow provisions which seem today by many to be contrary to our democratic way of life. When these measures were first advocated they were considered by some to be socialistic. A few still think they are. I do not believe, however, that many of us would term socialistic the entire membership of the United States Senate, Republicans and Democrats alike, who voted unanimously on roll calls for these activities.

It is now obvious that this legislation is only further evidence of the flexibility of the Constitution in enabling our Government to meet more adequately the needs of its citizens.

While it is true that no new social legislation was enacted during the last session, much was introduced. In my opinion, there will be new social legislation passed in several fields in the next regular session of Congress. No less an authority than Senator TAFT, policy maker for the majority party and an avowed candidate for his party's presidential nomination, has affirmed that the Federal Government must play a wide and substantial role in the whole range of social welfare and social security. In some of his campaign speeches throughout the West a few weeks ago he even came within shouting distance of the New Deal objective of using Government to achieve social security for those who cannot achieve social security for themselves.

APPLY THE YARDSTICK OF PRACTICALITY

Let us examine a few programs of unquestionable value which were so strongly opposed at one time and which still are threatened by a few perennial snipers. During the war period our farmers were urged to produce to the utmost food, fiber, and vegetable oils. Although the war is over, the need of the world for food is still as great as ever. Millions of people depend upon our production to save them from starvation. This all-out effort has inevitably meant unusual depletion of the soil from which, even in prewar days, fertility was being drained off year by year. The dollars-and-cents value of the soil-conservation program is demonstrated by the results of a careful survey made by the Soil Conservation Service in 1945 which compared conservation-treated farms with similar farms on which an average of only about half as much conservation work had been done. The results showed that the conservation-treated farms had an average income of $7,332, compared with $5,959 for comparable size farms not so treated, or an average of $4.90 an acre more. Moreover, it has been estimated that soil erosion has cost the country up to $14,000,000,000 since 1933. This figure includes direct cost to farmers, silting of reservoirs and harbors, flood damage, damage to highways and transportation facilities and other measurable costs. It does not include such items as reduced purchasing power, reduced tax value of eroded lands or impairment to health and community welfare. In the same period the Soil Conservation Service has spent $480,000,000 in its fight to stop the waste of our one basic and absolutely essential resource—the soil. From the results attained with this expenditure it seems that an even greater effort would be justified in order to put a stop to the devastating and irreparable waste that still exists on much of our farm land today.

It may be argued that soil conservation is the sole responsibility of the owner of the land. Experience has taught us that while this philosophy sounds good, it accomplishes little. Soil losses in the United States total more than 5,000,000,000 tons annually. About one-fourth of the arable land in this country is already ruined. In a normal production year erosion by wind and water removes 21 times as much plant food from the soil as is removed in the crops sold off this land. Soil conservation is the Nation's business and as such must be attended to by Federal encouragement and direction. The dust clouds which depleted the topsoil of large parts of Kansas, Texas, Oklahoma, and Colorado in 1934 are threatening again. If they return they can be as portentous in their meaning as were the clouds which rose from the atomic bombing of Hiroshima. I, for one, do not want to be a party to the sure ruination of this country by refusing to take steps to avoid further soil depletion.

May I point out here that at least part of the midwestern plains that suffered the tortures of the "dust bowl" in 1934 is no longer afraid. This is because of the expenditure by the Federal Government of a little money and a little effort a few years ago. The proposal by President Roosevelt of a shelter belt met with widespread criticism and opposition. The Louisville Courier-Journal in a recent editorial says:

"Cynics scoffed that the trees would never grow in that arid soil. People in general were skeptical over a scheme to pin down the soil in an area as vast as a Roman emperor's dream. There is not much talk about the shelter belt these days, but nobody laughs at it any more. It has worked."

The cost to the Federal Government was $15,000,000. A quarter billion trees were set out, of which 90 percent survived. As with most Government programs, now that it has proved itself it has been accepted. The Courier-Journal proceeds:

"Acceptance of the program has been quiet but decisive. The conservative magazine Business Week notes that 'many farmers credit the shelter belts for the fact that they are still on their land today.' It describes the benefits in this way: 'The shelter belts have modified winds and kept crops from blowing out of the ground or being smothered by dust; they have curbed soil erosion, conserved ground moisture on protected fields by checking evaporation, improved soil fertility, and possibly increased rainfall. They have brought millions of birds to attack insect pests.'

"Nobody knows how many square miles of farm land have been saved by the shelter belts, and how many more have materially benefited. Statistics are colorless things anyway, compared to the evidence of our own eyes. A trip through the midwestern plains is a revelation, for there across many hundreds of miles is fresh green evidence of restored land, happy and productive, saved for the Nation from hopeless waste."

Forest conservation is another essential program which is the business of all the people. This program is, of course, allied with that of soil conservation. A recent survey by the United States Forest Service showed that in the past 36 years our total volume of standing saw timber has decreased 44 percent. The present annual drain on our saw timber is 50 percent in excess of annual growth. Overcutting of the forests was enormously and necessarily increased during the war. Now three-fourths of all private commercial forest land is divided into holdings which average only 62 acres. The cutting practice on such small holdings is reported as from poor to destructive. Nationwide standards for forest regulation, development of a sustained-yield basis of cutting, and the adequate protection of our publicly owned forest lands are of urgent and immediate need.

The great bulk of the distressed farmers and unemployed agricultural workers are concentrated in regions where the resources of the area have been wrecked by erosion and deforestation. And yet today less than 1 percent of the Federal budget is spent on conservation. History clearly shows that a sure road to a Nation's collapse is refusal to conserve its natural resources.

Another highly desirable and self-liquidating program is the insurance of bank deposits. On September 9 of this year the Chairman of the Federal Deposit Insurance Corporation announced that reduction of the national debt had been accelerated by retirement of more than half of the capital initially subscribed to the Corporation. The sum repaid amounted to $146,595,250, retiring in full the $139,000,000 originally subscribed by the Federal Reserve banks and $7,500,000 of the $150,000,000 subscribed by the Treasury. The remainder of the original capital will be retired in annual sums. Note that the country is now well into its fourth year without a bank failure. I venture to say that few would now abandon this program, which at its inception was fought by many bankers and businessmen.

I could give you many other illustrations of the practical value of Federal programs. I could detail for you the lowered farm production costs and the increase in land values resulting from the REA program which has brought electricity to thousands of rural homes and farms. Not only is the REA program ahead in self-amortization, but it has pointed the way for private power companies to serve rural areas—a venture which the private companies had almost completely neglected. Despite the opposition and protests of most of the private companies to the REA program, there is much evidence to support the belief that the program has been a boon to private electrical companies. There is room for further expansion of rural electrification and, at the same time, larger sales of electricity by private companies.

I could describe the self-liquidating power projects and the great reclamation projects of our Western States. I could mention the great TVA project which contributed tremendously to the winning of the war. I could point out the farm-tenant-loan program which is ahead in its payments to the Federal Government for the money loaned to enable farm tenants to become farm owners. But time will not permit an examination of these programs one by one. Suffice it to repeat that the Eightieth Congress made effort to repeal outright neither such measures as these, nor any of the great programs of human welfare legislation developed during the years of the New Deal. This seems a clear indication of a general public recognition of the value of these programs.

COOPERATION BETWEEN FEDERAL AND STATE GOVERNMENTS

There are two important controversies about which discussions of Federal expenditures so often center. The first of these is the division of responsibility as between the Federal Government and the States and local communities. The second is the over-all size of the budget.

Cooperation of the various governmental units is essential to a democratic solution of the first problem. A judicious balance between Federal and State controls should be maintained. Where Federal financing and supervision is employed, administration should be decentralized as far as practicable and local advisory committees should constantly supply the grass-roots thinking which will keep such programs close to the people. Where funds are granted to the States on a matching basis, provision must be made for adequate standards of use. Again, we must seek a middle course, avoiding Federal dictatorship but maintaining the broad national interest.

HOW MUCH CAN WE AFFORD TO SPEND?

With regard to the over-all size of the budget, it is clear that this should bear a relation to the size of the national income. If our expenditures serve to maintain purchasing power and productivity on a high level, a large budget can be justified. Certainly it has been proved clearly during the course of the efforts to cut the present budget that we cannot return to the prewar level of spending. Not only have costs risen, but we are committed to many new items of expenditure. We are maintaining the armed services at a level greatly higher than prewar size; we have very large expenses related to the veterans program; we have commitments of increasing size and urgency for foreign rehabilitation and emergency aid.

Even a casual analysis of the items of present government expenditures should convince anyone that we can never revert to

the budget figures of prewar days. A comparison of 1940 and 1948 budgets, representative of prewar and postwar years, gives illuminating information.

	1940	1948
Approximate total of budget	9.2 billion.	37 billion.
5 chief items of expense:		
1. National defense	1.5 billion.	10.4 billion.
2. Veterans	0.5 billion.	7.5 billion.
3. Interest on national debt.	1 billion	5.1 billion.
4. International affairs and finance (does not include present proposed interim aid).	50 million.	4.3 billion.
5. Refund of tax receipts	91 million.	2.1 billion.
Total dollars of above items	3.1 billion.	29.4 billion.
Percentage of total budget of above items.	34 percent.	79 percent.
Total dollars of other items	6.1 billion.	7.6 billion.
Percentage of total budget of other items.	66 percent.	21 percent.

I do not think many of us are willing to reduce appreciably our expenditures for national defense until there is more stability in world conditions. Care for veterans will grow rather than decline. The interest on the national debt, four-fifths of which is due to World War II, is stationary except as the debt is reduced. We are committed to more international expense instead of less. Not many businessmen will advocate the discontinuance of the refund of tax receipts. Then, gentlemen, why need we talk of a pre-war budget? In the remaining approximately seven and one-half billion dollars of the budget are included all the services and expenses of the Government not named in the five items listed above. The atomic energy program is part of this amount. Road building, reclamation, hospital construction and other necessary programs discontinued during the war are also included. The increased cost of all these items over the pre-war cost is largely due to salary and material rises.

Thus, it is significant to note that present-day Government expenditures are comparatively the same as prewar except the added expense brought about by war. Economies relating to efficiency can and should be made. But the times are too critical to permit us to risk the stability not only of our own economy but the peace of the world through injudicious slashing. Within limits we can postpone certain undertakings, such as the building of new post offices and certain other public works which can be reserved as a cushion against depression. Even the United States Chamber of Commerce in its recommendation a few days ago came around in support of this proposal, although individual Chambers of Commerce will continue to ask for their own projects. But we should beware of cutting back on programs and services which are needed in good times as well as in bad. Among such programs are flood control, soil conservation, health programs, REA, and research.

RESEARCH

Because of new needs, I want to emphasize particularly research. The importance of research, long recognized in specialized fields, is becoming understood more clearly than ever before. A Gallup poll of October 9 addressed itself to the question of the advisability of an annual governmental expenditure of $2,000,000,000 for various kinds of scientific and military research. Seventy-six percent of those queried thought this a good idea and 50 percent said they would be willing to pay more taxes to make this expenditure possible. Businessmen were among those who most strongly favored this proposal.

The importance of research has also been recognized in the establishment of the President's Council of Economic Advisers, charged with studying the condition of our economy as a whole. The same concept may be applied fruitfully to studies of segments of our economy. For this reason I have joined with several other Senators in introducing a bill which would provide Government aid in the form of studies and technical advice in the industrialization of underdeveloped areas. These areas are to be found in all sections of the Nation. The reorientation of such areas so that they would contribute more fully to our total national prosperity is an important task in our postwar reconstruction.

To sum up, gentlemen, a liberal spending program is desirable in government as in business to the extent that it brings results. As a Nation, we have recognized this throughout our history. We have been flexible in adapting governmental programs to changed needs and circumstances. Recent years have brought more rapid and far-reaching changes than the world has ever before seen. We must continue to meet the challenge with foresight, imagination, and vigor. Business leadership can make an outstanding contribution as it addresses itself to constructive action and forward-looking goals. The spirit which developed the greatest technology that the world has ever known can bring equal ingenuity to bear upon the complex social and economic problems of this postwar era. New concepts will be required; new experiments will have to be undertaken. In the business of government let us be hard-headed but daring, prudent but far-visioned. This is the mixture of practicality and idealism which is needed now more than ever. This is the American tradition which has made our country great.

Aid for Devastated War Areas

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. BRYSON. Mr. Speaker, I have been greatly impressed by the generosity of our people generally in making contributions in money, clothing, and food to the unfortunate of the devastated war areas.

Those of us who live in the South and are descendants of Confederate soldiers probably have greater sympathies for those in distress than those of you who are descendants of Federal soldiers who participated in the War Between the States.

Our own fair Southland was overrun, comparatively speaking, as badly as any of the countries in which recent wars have been fought. The courage of the Confederate soldier, which had sustained him against overwhelming odds in battle and by which his family survived, ultimately restored our section to its present state of prosperity.

Our people are contributing generously to the Friendship Train and through other collecting and distributing agencies of food, clothing, money, and other substances which will sustain life and, we hope, bring some degree of happiness. I cannot, of course, enumerate the many outstanding contributions which are being made. Oftentimes the widow's mite is given in a better spirit than larger gifts.

From my home-town paper, the Greenville News, I clipped the following story:

MILLION YARDS OF CLOTH ARE DONATED BY MILLS FOR EUROPE

One million yards of cloth have now been contributed to Europe's destitute women and children by American textile mills, it was announced here last night by the American Cotton Manufacturers Association.

In making its announcement, the association indicated that the total of cloth thus far donated was, roughly, equivalent to the yardage needed to make 400,000 women's dresses, although it was noted that not all the goods were of a type suitable for this purpose.

The program was initiated in late October when appeals went out to all members of the trade group asking that they give one-twentieth of 1 percent of their 1946 sales for relief of acute suffering in the devastated countries of Europe. In the 6 weeks which have intervened, excellent response has been received from scores of plants.

Final distribution of the cloth is being handled by the American Friends Service Committee, a Quaker organization, and shipment is being made by individual mills to the Quaker warehouse in Philadelphia, from which point overseas shipment is made.

A wide variety of goods has thus far been donated, including sheeting, print cloths, poplin, seersucker, broadcloth, drills, twills, denim, duck, and birdseye. In addition to these items, one mill has contributed several thousand suits of children's underwear, subsidiary corporations of another have pledged dresses and other items of women's apparel and a third mill has made a substantial donation of turkish towels.

Mills which have advised the association of contributions include the following:

Arcade Cotton Mills, Rock Hill; Blair Mills, Belton; Clearwater Manufacturing Co., Clearwater; D. E. Converse Co., Glendale; Easley Cotton Mills, Easley; Industrial Cotton Mills Co., Inc., Rock Hill; Jackson Mills, Wellford, and Joanna Textile Mills Co., Goldville.

Norris Cotton Mills Co., Cateechee; Plymouth Manufacturing Co.; McColl; Reeves Bros., with plants in Chesnee, Greenville, Spartanburg, and Woodruff, and Bessemer City, and Rutherfordton, N. C.; J. P. Stevens Co., with plants in North Carolina, South Carolina and Virginia; United Merchants and Manufacturers, Inc., with plants in Georgia, South Carolina, Connecticut, and Massachusetts; Wellington Mills, Inc., Anderson, and Woodside Cotton Mills Co., with plants in Fountain Inn, Greenville, and Simpsonville.

Mr. Speaker, I hope that the contribution made by the textile interests, a large portion of which is in our section of the country, will be emulated and followed by other industries. It will be observed from this statement that cloth for 400,000 dresses has been contributed to those who are naked and cold.

Is the Marshall Plan "Operation Rat Hole?"

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to revise and extend my remarks in

the RECORD, I wish to include the following article which appeared in the Saturday Evening Post of November 29, 1947:

IS THE MARSHALL PLAN "OPERATION RAT HOLE"

(By Will Clayton, as told to Beverly Smith, Washington editor of the Saturday Evening Post)

(From the Man Who Knows: Former Under Secretary of State Will Clayton, who continues in the capacity of special adviser to Secretary of State George C. Marshall, is prabably better qualified to pass judgment on the Marshall plan than any other American. In this article he reveals findings which are based on the 4½ months he spent overseas directing the first steps of implementing the plan. Before he was drafted into Government service because of his unique knowledge of world economic affairs, Clayton was chairman of the board of Anderson, Clayton & Co., a $50,000,000 firm, the largest cotton brokers in the world.—The EDITORS.)

The doubts of those who are skeptical of the Marshall plan are summed up in the caustic question: "Is this 'Operation Rat Hole'?" It is a heartless phrase, applied to a situation involving the hunger and near despair of 270,000,000 human beings in western Europe. And yet it is a fair question. Americans have every right to ask it. It goes to the essence of the matter.

Here is a proposal that we hand over to Europe, during the next 4 years, goods and money in the neighborhood of $20,000,000,000. Some of it may be in the form of gifts or grants, some in the form of loans. Much of it will not return to America in any tangible form. This great outlay will not be just a bookkeeping transaction. It will represent a certain continuing strain on our economy, a certain sacrifice on the part of individual Americans. There is no use fooling ourselves about that.

The American people, as I know them, will not refuse to make such a sacrifice if they believe a great constructive goal can be attained. They will shrink from it if they believe that our aid will be frittered away by the recipients, leaving Europe as badly off as before, and yielding no permanent good to America and the world.

My own opinion is that the Marshall plan, adequately financed and competently administered, will succeed; and that its success will yield priceless dividends in world peace and security—which also means American peace and security—in comparison with which the cost of the plan will be insignificant.

In simplest terms, it is a proposal that America help western Europe to save herself from economic and political collapse; that we enable these people to continue to eat and work until they can stand on their own feet.

If the plan succeeds, the entire international sky will brighten like magic. With the 16 nations of western Europe restored to health, production and cooperative trade, the world will achieve a new stability which only a madman would attempt to upset.

Yet it must be admitted that success is not certain. This is a risky enterprise. It is something new and strange. As said by the London Observer, "In the whole history of the world, no continent has ever offered to save another from economic catastrophe." It is a task desperately difficult and complex. Most Americans, and even many Europeans, do not realize how close Europe is to a general break-down.

The task will require much from both America and Europe. On our part it will need a combination of understanding, firmness, and tact. We must not only send Europe food, fuel, and raw materials; we must give them something of ourselves. These people are just beginning to recover from great shock. We must be prepared to help them morally and spiritually, and to share with them the new production techniques and new business ideas which we developed while they were under the direct blast of war. In a sense, and for a while, we must stand ready to lead them by the hand. I remember from childhood the verse of James Russell Lowell: "The gift without the giver is bare." All this will bring big returns to us, both in material and spiritual things.

On the other hand, we must insist on certain wise but tough conditions and stand firm for their observance. For if any country willfully fails in its commitments or wastes the working capital provided, it will not only be taking unfair advantage of us and its neighbors but will be jeopardizing the success of the entire recovery program.

Europeans, for their part, must also have understanding if the plan is to succeed. America does not want any hosannas of gratitude, but we are entitled to a fair appraisal of the burden we are assuming, and of our motives—which I take to be a mixture of ordinary human decency, our old tradition of helping friends in distress, and an enlightened self-interest—shared by Europe—in the rebuilding of a free, prosperous, and secure world. Insofar as Europeans swallow the Communist line, which depicts us as a lot of greedy imperialists, dumping surpluses in order to prevent an American depression and to enslave Europe to the dollar sign, the entire program will limp. Men who believe that are not going to do the kind of work which recovery requires. Only if Europeans catch the spirit of this program, feel the pull of this mighty effort in friendly cooperation between countries and continents, will they be able to fulfill the great commitments which their governments have made on their behalf.

These commitments, agreed upon by the delegates of 16 nations meeting in Paris, constitute the best answer we have to the question of whether this program is Operation Rathole. They are Europe's reply to our offer of aid, her promise of good faith and self-help. They set forth an unprecedented schedule of production, stabilization, and mutual cooperation. I doubt if most Americans realize what extraordinary efforts the 16 countries are thus pledging. For example, in production these European countries are planning, during the next 4 years, an expansion from present levels on a scale comparable to that achieved by the United States under the war pressures of 1940 to 1944.

The long-range value of the Marshall plan to all concerned depends largely upon these various European commitments—their extent, their feasibility, their probability of performance. But before discussing the background and detail of these, I would like to go back to what I said about the risks in this enterprise.

I have said that the success of the plan is not certain. There is a possibility that our objectives may not be attained. But never forget that we must judge it in terms of the alternative. If we were to say to Europe today: "We are very sorry, but we cannot give you any further assistance," then we know what would happen in Europe. There is no uncertainty about that. The grim downward spiral, in which each critical shortage begets other shortages; would move faster. Spots of starvation would appear and spread as panic drove remaining food supplies into hiding. Shortages of coal and raw materials would progressively shut down the powerhouses and factories. Disorder, riots and chaos would follow.

In such a situation, it would seem inevitable that communism would take over in both Italy and France. The Communist Party is in the minority in each of these countries, but is headed by leaders trained in the technique of street fighting, revolution and the seizure of power in emergencies.

This would, in turn, leave the smaller countries of Europe isolated and helpless. They live by trade, and the Communists would have the power of shutting off that trade. This would bring Communist domination of the entire European Continent. England, even if it could resist the Communist tide, would be driven into some form of authoritarian or totalitarian government.

The result would be to leave the American continent as a relatively small and precarious island of freedom in a chaotic and increasingly hostile world. An island able to take care of itself, perhaps, but only at the expense of ever-increasing governmental controls and authority to meet the outside pressures—controls and authority which could, in the end, mean basic change in our Constitution and Bill of Rights.

I do not like this somber chain of reasoning. It has an incredible, alarmist sound, especially in the atmosphere of a cheerful, busy America. But I cannot, testing each link against the tragic realities of Europe today, find any escape from its logic.

How did Europe fall into this state, and why does the crisis suddenly deepen now, more than 2 years after the fighting stopped?

The truth seems to be that no one realized, at the war's end, how deep were the hidden wounds of the long conflict. Everyone knew the outward damage: the millions of persons slain, the cities destroyed, the shipping sunk, the railways and bridges broken, the machinery worn or obsolete, the fields long starved for fertilizer. But observers underestimated the damage to what might be called the nervous and circulatory system of the European economy.

Western Europe, because of the density of its population, has not in recent times been able to feed and clothe itself from its own soil. It has made up for this by its specialized industrial and agricultural skills, and by a highly developed and delicate mechanism of international trade, dependent upon the smooth flow of goods and services. And a considerable portion of its raw material imports was paid for by tourist expenditures, by shipping, banking, and insurance services, and by foreign investments built up over the centuries.

The long years of war destroyed this complex network of relationships. In the first surge of hope after the war this was not fully grasped. Europe went feverishly to work to repair the outward damage. In this she was helped greatly by the United States. The final shipments of lend-lease, the supplies of UNRRA, the loan to England, the loans of the Export-Import Bank—all these contributed to the initial recovery.

At first the recovery went even faster than after World War I. By the fall of 1946 it seemed that most of the countries of western Europe were safely on the upward road. Then things went wrong. The hidden damage began to show.

It was like a man who has been injured in the bombing of his home, and at first does not know how badly he is hurt. He runs about, pulling others out of the wreckage, binding up his outward wounds, reassuring the children, cleaning up the rubble. And then, a couple of hours later, he staggers toward collapse from delayed shock.

Something of the sort was beginning to happen to Europe last winter. There were other factors: the prostration of Germany; the failure of food and raw-material imports from eastern Europe within the Soviet orbit; the lack of sustenance from troubled areas of the East Indies and southeast Asia.

And then, as a final calamity, the weather of the winter of 1946–47—the most dreadful in recent memory. Cold which froze the seeds in the ground and exhausted slim coal

reserves; blizzards which blocked transportation; floods which washed away topsoil and drowned livestock in the valleys.

By late spring the full desperation of Europe's situation was becoming apparent. On June 5 Secretary of State George C. Marshall made a speech at Harvard University. This was the formal genesis of the so-called Marshall plan, which began as a suggestion or proposal made by Mr. Marshall to Europe, which took on a tentative outline in the report drawn up by a committee from 16 European nations, and which now awaits action by the Congress of the United States before it can become a definite plan or legal course of action.

Secretary Marshall said, "Europe's requirements for the next 3 or 4 years of foreign food and other essential products—principally from America—are so much greater than her present ability to pay that she must have substantial additional help or face economic, social, and political deterioration of a very grave character. * * * Before (however) the United States can proceed much further in its efforts to alleviate the situation and help start the European world on its way to recovery, there must be some agreement among the countries of Europe as to the requirements of the situation and the part those countries themselves will take in order to give proper effect to whatever action might be undertaken by this Government. * * * The initiative * * * must come from Europe."

Within a few days Foreign Minister Bidault, of France, and Foreign Secretary Bevin, of Britain, met in Paris and invited Foreign Secretary Molotov, of the Soviet Union, to join them in a discussion of the Marshall proposal. At this time several countries in the Russian orbit, such as Finland, Poland, Czechoslovakia, and Hungary, seemed eager to join in the plan. Subsequently Molotov denounced the plan and quit the conference. Thereupon the Russian satellite countries, taking the cue from Moscow, declined to participate. Ever since that time the Communist propaganda line all over the world has excitedly denounced the plan as a dastardly American trick.

So far as Russia's aims are peaceful and nonexpansionist, she has nothing to lose and everything to gain from the restoration of a prosperous Europe. So far as Russia's aims are to infiltrate the countries of western Europe and take them over from within as chaos develops, the Marshall plan is a barrier to all her designs. This, because Russia's technique is to bore from within, under conditions of hunger and economic disintegration. Thus, from the bitter Communist opposition to the plan, we can draw only one reluctant conclusion as to the present line of thought in the Kremlin.

With the Russian orbit out, Britain and France now issued invitations to 16 nations of western Europe to meet in Paris in July to work out a reply to Secretary Marshall's proposals. These countries were: Austria, Belgium, Britain, Denmark, Eire, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Sweden, Switzerland, and Turkey. Their delegates formed the Committee on European Economic Cooperation—or CEEC—to draw up an economic program for themselves and western Germany.

In the summer Europe suffered new blows. While I was working there during those months I usually traveled by plane. I remember being surprised, and at first pleased, by the fact that the planes were never delayed by bad weather. Day after day, week after week, the sun blazed in a cloudless sky. Gradually I realized what was happening. The weather was beautiful—and terrible.

For this was drought. A withering drought which, following upon the dreadful winter, has brought millions of persons within measurable reach of starvation. In France, for example, the drought, combined with other factors, produced the lowest wheat yield since Napoleonic times.

The sun was a smiling mask, sometimes deceptive to the American visitor. I am sure the conscientious Congressmen who studied European conditions during those summer days will make allowances for this. The sun gave pale cheeks and pinched faces an illusory glow of health. It warmed homes which had been icy for half a year. A European who might have no adequate clothing against the winter cold seemed decently enough clad, in his neat shirt and trousers, as he walked in the warm Sunday sunshine.

There were omens for the observant visitor. In European cities before the war the characteristic sound in the predawn hours was the rumble of farm vehicles carrying their produce in to the central markets. The streets are almost silent now. The stream has become a trickle. Even when the farmer has food to spare, he is reluctant to take it to the city, because he has lost faith in the currency. He cannot buy with it the things he needs. He would rather feed his produce to his farm animals, or sell it at inflated prices in the black market, or swap it to the city people who trudge out to his farm with clothes or household goods to exchange.

An American visitor might note that the elevator in his hotel had stopped. A minor inconvenience. But if he inquired further he would find that the electric power in an entire section of the city had been cut off because of lack of coal; that factories had had to suspend; that the hospital operating rooms were using emergency equipment; that the cold-storage plants were warming up, threatening precious food reserves; that the textile mill had closed; that the worker could not get his only pair of shoes repaired because the shoemaker's electrical equipment had stopped.

And thus in the brilliant summer weather Europe continued into its downward spiral. Each shortage begets other shortages. Not enough food for the miners—they can't dig as much coal. Not enough coal—you can't make enough steel. Not enough steel—you can't make enough farm implements to cultivate food or enough freight cars to transport your coal and steel. Not enough coal, and you can't operate your synthetic-nitrogen plants to make the nitrogenous fertilizer for fields neglected since 1939.

During these same summer days, in the spacious old Grand Palais, delegates of the 16 nations sat in unprecedented conference. They worked feverishly, for time was short. I cannot say that the ancient jealousies of Europe were completely forgotten or that nationalistic self-interest was entirely submerged. I do say that the various countries worked together with a rare degree of objectivity and mutual good will and attained an amazingly wide general agreement. Their historic report, with its voluminous appendices and supporting bales of statistics, has been under checking and analysis, this fall, by the President's Committee on Foreign Aid and by various congressional committees.

I would like here to touch on merely a few high points of this report. Let's look first at the two most vital elements of all: food and coal. In the years 1934–38 this area of western Europe produced an average of 210,000,000 metric tons of the basic foods—including cereals, bread grains, potatoes, sugar, meat, milk, oil, and fats. This year it is producing only 179,000,000 tons, for a population larger than it was 10 years ago. The deficit is 31,000,000 tons of food.

In 1938 this area produced 552,000,000 tons of coal. This year it is producing 439,000,000 tons. The deficit is 113,000,000 tons of coal.

The shortage of food and the shortage of coal, added together, have a conservative value of $6,000,000,000. Europe, in its present state, hasn't the gold, the dollars, or the exports to buy these things.

And these are only two of the short items, though they are the most basic.

With the Marshall plan, and with all-out efforts on their own part, the 16 nations say that they can and will, by 1951, raise food production to 222,000,000 tons, and coal production to 584,000,000 tons—figures somewhat above prewar in total, but somewhat less than prewar on a per capita basis.

In addition to this coal increase of about 33 percent above present levels, western Europe plans to increase its steel output 60 percent—perhaps overoptimistic—and power output by 39 percent by 1951. In America, from 1940 to 1944, we increased coal output by 34 percent, steel output by 31 percent, and electric power by 61 percent.

You will note that the scale is comparable, and that the Europeans will have to work without the dramatic incentives of war.

This production increase is vital to the success of the plan. Just as vital are the commitments of the 16 nations to stabilize their currencies and cooperate with one another in lowering artificial trade barriers. As Congressman CHRISTIAN A. HERTER and his committee said upon their return from Europe, "No program of American aid can achieve the objectives desired unless each country sets its own house in order to a maximum of its ability and cooperates with its neighbors in such a way as to obtain for all the fullest use of existing or potential resources."

Personally, I do not believe the production targets can be reached unless the various countries restore the value and function of their money. I have studied the function of money during my entire business life, but never until I observed the Europe of today did I quite realize how basic it is to the entire economy, to production, exchange, and distribution.

This commitment by the 16 nations to straighten out their finances and stabilize their currency will be one of the hardest of all to carry out. It will take will power, sacrifice, and courage. It will be especially difficult for those governments which are not very strong or stable. They will need our friendly help, and some pretty firm insistence on our part, to carry this through without losing the support of their own people. Yet if we push them too hard we are bound to hear the cry of "imperialist domination." Only a nice balance of wisdom, firmness, and tact will do the job.

As to cooperation, the 16 countries pledge themselves, first: To abolish as soon as possible the abnormal restrictions at present hampering mutual trade; and, second: To aim at a sound and balanced multilateral trading system.

In addition, many of the countries have formed themselves into study groups, which are now at work, to plan the formation of customs unions somewhat on the model of that set up between Belgium, the Netherlands, and Luxemburg—the so-called Benelux.

The first steps were taken toward the freer flow of persons from country to country. France and Italy are trying to make arrangements by which workers in Italy, where there is now an excess of population, can go to France, where there is a shortage.

Cooperative plans were also begun to expand electric power without regard to national frontiers; to standardize mining machinery and railway cars; to create an international pool of freight cars; and to interchange information on the steel-expansion programs.

The promises of European cooperation, to an American accustomed to a free-trade area spanning a continent, do not seem either as specific or as far-reaching as might be desired. But against the European background of jealous compartmentation, they will be a mighty stride forward if they are carried out boldly and in good faith.

Can all these commitments be carried out? Can the great goals of the Marshall plan be attained? I believe that they can if America does her part with understanding and administrative competence, adequately and on time; and if the people of Europe, as well as the governments, realize what is at stake for themselves and the world.

The West Has Not Forgotten

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. HORAN. Mr. Speaker, in the November 17, 1947, issue of Newsweek magazine, in the column designated "Washington Trends," there appeared the following report, which I have learned was forwarded to the magazine's Capitol reporters:

Western resentment against reduced appropriations for reclamation projects is dying down, Republican strategists feel. Hence they will be less likely to restore them next year.

Having spent nearly 3 months of this summer and fall touring the West, and having escorted three different congressional committees over the Columbia Basin project during that time and having talked with literally thousands of westerners who are vitally interested in this matter, I addressed a letter to the editor of the magazine, questioning the authenticity of the statement above quoted. The letter follows:

NOVEMBER 19, 1947.

The EDITOR, NEWSWEEK MAGAZINE,
New York, N. Y.

DEAR SIR: Since returning to the Capitol I have yet to meet one of the Republican strategists who feel that Western resentment against reduced appropriations for reclamation projects is dying down, as reported in Washington Trends, November 17. If there are such, they are not in harmony with the announced positions of most committee chairmen whose groups inspected Western projects during the recess.

Fortunately, most Congressmen are growing beyond the pork-barrel attitude toward reclamation and are realizing what a critical situation is facing the United States if a sound and continuing program of reclamation and soil conservation is not maintained. At a time when we are wearing out some 5,000,000 acres of cropland annually and jeopardizing the value of another 100,000,000 through overtilling to provide food for Europe, Americans can afford to accept no other position.

The need for reclamation is just beginning to be met. During fiscal 1948, only 87,300 new acres will be brought into production through irrigation, with supplemental water brought onto 283,000 acres now under cultivation. To bring the million-acre projects like Columbia Basin, Central Valley, Colorado-Big Thompson, and Palisades into production, steady construction schedules financed by regular appropriations are vitally necessary in the next half dozen years.

The people of the West are acutely conscious of these things. They have lowered their voices for the time being because they believe the statements made by congressional leaders this summer that money for completion in an orderly fashion should and will be appropriated. Additionally, they fully expect to repay the Government every dollar advanced them for these projects—and they are conscious of the tremendous increase in Federal taxes they pay as result of the newly created wealth.

The resentment may be dying down—but only because Westerners are hoping they have convinced Congress that the future of America's agriculture is no longer a partisan proposition.

Sincerely,

WALT HORAN,
Member of Congress.

This is the reply I have just received from Mr. Edward W. Barrett, editorial director of Newsweek, which I think will be interesting to all who believe in the reclamation program and who understand its importance in stabilizing our precarious position in the world agricultural crisis we face today:

DECEMBER 7, 1947.

The Honorable WALT HORAN,
The House of Representatives,
Washington, D. C.

DEAR MR. HORAN: Thank you for your letter of November 19, which we have delayed answering until we could do some rechecking with the original source of the item.

Our Washington bureau insists that this information came directly to them from top congressional leaders, giving impressions they had gained while traveling in the West and Midwest.

Assuming you have no objections, we now plan to use excerpts from your letter in our letters column.

Sincerely yours,

EDWARD W. BARRETT,
Editorial Director.

Mr. Speaker, I cite these letters here for the simple purpose of notifying any Members of this Congress who think otherwise that the people of the West and their friends throughout the country are more convinced than ever of the necessity of saving our Nation's most valuable resource—their land—and of making thousands of acres of new land available as quickly as possible to implement our foreign-aid program.

The western subcommittee of the Joint Committee on the Economic Report, disturbed by reports from reliable sources to the effect that our food production programs during the war and postwar years have been using up our crop lands faster than they have been replaced, is presently working on a proposal I have submitted for speeding up, rather than retarding, the reclamation program, so that as much new land as possible can be brought under cultivation in time to aid in reaching the food production levels necessary to help Europeans and still guarantee an adequate diet for our own people.

I am confident that the regular second session of this Congress will vindicate the judgment of western people that our leadership has gained, through the several investigations and inspections held in recent months, a new appreciation of the role reclamation plans in our national picture and of the necessity for keeping faith with the millions who have staked their future on the steady, orderly development of America's remaining frontiers.

The Refugee Problem

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

PREPARATORY COMMISSION
FOR THE INTERNATIONAL
REFUGEE ORGANIZATION,
Washington, D. C., December 5, 1947.

The Honorable JAMES G. FULTON,
Representative from Pennsylvania,
House Office Building,
Washington, D. C.

MY DEAR MR. FULTON: At the time of the meeting with the press and your special subcommittee to present your report on the displaced persons and the International Refugee Organization I was able to secure about 30 copies of this report, 10 of which were immediately airmailed to the executive secretary PCIRO, Mr. William Tuck, at Geneva, Switzerland.

A study of the report by this office indicated its excellence and comprehensive coverage and the value of this document and the demand for it by various agencies both in the United States and abroad was apparent. I therefore requested that 300 copies be held for this office and that they would be called for shortly. The 300 copies were set aside for this purpose. Following this action a cabled request from PCIRO headquarters was received asking that 10 additional copies be forwarded air mail with 90 to follow by straight post.

Upon making arrangements to pick up the 300 copies of the report which had been reserved for this office I have been informed that through oversight they together with all other available copies were issued to meet other demands for them.

I realize that this unfortunate situation is largely the fault of this office in failing to immediately pick up these documents when they were available. However, I am presently concerned in whether some action can be taken for a further reproduction of this report to meet the very substantial demands that have already developed and will continue to develop for this publication, not only by this office but by innumerable agencies and individuals.

This report, for the first time, presents a clear, comprehensive, and fair statement of the displaced persons' problem and the International Refugee Organization under a single cover. The value of such a report by a committee of the United States Congress is immeasurable and is only limited at present by lack of sufficient copies to give it the distribution it warrants.

I appeal therefore to you in the hope that a second printing of this report may be made and I will be most grateful for any action you find it possible to take in the matter.

Very sincerely yours,

W. A. WOOD, Jr.,
Major General, United States Army, Retired, Chief, PCIRO, Washington.

INTERNATIONAL REFUGEE ORGANIZATION,
OFFICE OF SPECIAL REPRESENTATIVE,
December 1, 1947.

The Honorable JAMES G. FULTON,
House of Representatives, United States Congress, Washington, D. C.

MY DEAR CONGRESSMAN: I have just finished reading the splendid report of your committee on displaced persons. It is by

far the most thorough and understanding statement of the refugee problem that has appeared. I am in particular agreement with your conclusions and recommendations, which furnish a clear guide to our Nation, our Congress, and to the International Refugee Organization in the steps to be taken to achieve an early and practical solution of the problem.

The energy and intelligence with which your committee approached the examination of the refugee situation was most heartening and refreshing to us all.

I am sure that your work will have far-reaching and valuable results.

Will you please remember me to JAVITS and CHELF, also Besterman and Roman. It was a great pleasure for me to be with you, and I hope that I can see all of you again before long.

With my high regards and best wishes, I am,

Sincerely yours,

JOHN S. WOOD,
Major General, United States Army, Retired, Special Representative, International Refugee Organization.

Public Business Is the People's Business

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. MACKINNON. Mr. Speaker, when it was first reported in the press of the Nation through the outstanding newspaper work of Nat S. Finney of the Minneapolis Star and Tribune that the administration was undertaking to promulgate regulations imposing secrecy restrictions with respect to the transaction of ordinary everyday governmental business, I was astonished. In fact, I did not believe it. I recognized that agencies such as the War Department, the Navy Department, the State Department and the Atomic Energy Commission that habitually dealt with matters of national defense involving the essential security of the United States must necessarily, in the interest of national security, maintain some matters in confidence and away from the prying eyes of foreign agents. But, I concluded, there must be something erroneous about the report that the Government was seriously proposing the imposition of similar secrecy regulations with respect to the transaction of ordinary governmental business.

However, I am now compelled to confess that an investigation by me has disclosed the truth of the charges made in the newspapers with respect to this matter. An attempt was made by the administration to impose secrecy and restrictive regulations on the activities of departments not concerned with national security, and on matters not directly concerned with national security.

Under leave to extend my remarks, I include an editorial further analyzing this situation, which appeared in the Minneapolis Sunday Tribune on December 7, 1947. This editorial should have the thoughtful consideration of every American. In this editorial it was charged "that the Truman administration proposes to handle the public business as if its relation to the American people were that of lawyer and client." If additional support is necessary on this particular point, I want to give it. I want to state that since coming to Congress I have heard this very argument made by substantial governmental officials in the present administration. The implications of such contention would have very far-reaching consequences upon the public. I feel that the press has made a noteworthy contribution to the American people and to American liberties in ferreting out this attempt to deprive the public of essential knowledge of the activities of their own Government.

PUBLIC BUSINESS IS THE PUBLIC'S BUSINESS

Postponement of action on President Truman's plan to blanket domestic government business with military secrecy is not a satisfactory answer to countrywide protests against the plan.

The men who created the plan should be rebuked.

The scheme should be publicly killed.

The Nation should be given real assurance that habits of secrecy formed during the war are being broken, not spread and confirmed.

Reasons why finis should be written to the scheme, in a way that is public, drastic, and embarrassing, are supplied by the Truman administration itself.

The security advisory board, which drew up the scheme, stands convicted, by its own acts, of trying to slip the plan into effect without public debate or the least color of legislative or executive authority.

By the clearest implication, President Truman approved what the board had done in putting secrecy rules into effect at the Veterans' Administration.

He stigmatized the newspapers of the Nation for discovering what had been secretly done, and he supported untrue assertions of the SAB that the scheme was in a preparatory stage.

It took the testimony of Hamilton Robinson, New York attorney who is chairman of SAB, to reveal fully that the Truman administration proposes to handle the public business as if its relation to the American people were that of lawyer and client.

Robinson told the House committee on executive expenditures that secrecy rules are already in effect in most Government departments, and that all his board proposed to do was to standardize them in a military-type pattern. He made this statement under oath.

Neither Congress nor the President has authorized any such rules. Executive departments have simply seized the power to decide what the public shall and shall not be told about the public business. That is the effect of what Robinson said—and anyone who has dealt with the executive branches since the end of the war knows it is the truth.

Robinson gave the House committee a clear demonstration that he cannot understand the simple fact that in a democracy the public business is the public's business.

Every development since disclosure of the Veterans' Administration's secret secrecy regulations has supported the conclusion that the Truman administration means to lock public business away from the public by open action, if it can, or by secret action if the public resists.

This purpose has become so apparent that David E. Lilienthal, Chairman, and W. W. Waymack, member, of the Atomic Energy Commission, have publicly warned against it. They see the danger of creeping secrecy to democracy because they have learned, through the lack of it, the value of public understanding to a Government agency.

The Truman administration's obstinate insistence that secrecy shall surround the public business is dangerous because it is completely at odds with the heart of the democratic idea.

It is dangerous because it is dead wrong—not a little wrong, or part wrong and part right, but dead wrong.

Dead-wrong ideas, the world has learned, are easier to sell than ideas that are just a little screwy.

Democratic government works because Americans are overwhelmingly conscientious, trustworthy, and patriotic. It works for a good deal the same reason that department stores are never put out of business by shoplifters—the habit of honesty is too universal.

This secrecy scheme rests on the assumption that Americans are not to be trusted to know what their Government is planning.

It assumes that the man who gives his vote to a public official is less trustworthy than the public official who receives that vote.

It assumes that a citizen will injure his neighbor by loose talk about rightfully private matters, but that a public official won't.

If the Truman administration believes these things, let its leader say so.

If it doesn't, let it purge itself beyond the shadow of a doubt.

What Makes Communists

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. RAINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I attach herewith an editorial entitled "What Makes Communists," which appeared in the Birmingham News on Friday, November 21, 1947, which I think will be interesting reading to all Members of Congress:

WHAT MAKES COMMUNISTS

In many countries there doubtless is a very small number of men and women infatuated with the idea of state control and domination and desirous of exercising such authority or deluded by the notion that the all-powerful state is the answer to mankind's problems. Such people actively take up communism or some other form of totalitarianism. Some of them are capable of becoming fanatical about controlling their fellows in all sorts of ways.

But persons of this inclination are relatively very few. Most people want strictly limited government. They want individual freedom to the greatest feasible extent. They want individual dignity and plenty of opportunity for the use of personal initiative and the development of personal capacities. That is so in many other countries—perhaps even in all other countries—in addition to the United States. Certainly there are vast numbers even in Russia who have not liked the ruthless regimentation of communism.

When pressures upon human beings become sufficiently acute, however, they may turn to any sort of government—to the totalitarian zealots, if they seem to hold any promise of relief. Even in France and Italy, as now may be seen, many have already turned in that direction. It is hopelessness—desperation—that prompts them.

It is not easy to conceive of the effect of hunger and hopelessness when we think of

them in connection with masses of people. We have to think in terms of particular individuals in order to obtain anything approaching an adequate emotional and mental awareness of the meaning of acute want and near despair.

From Berlin, a Birmingham dentist who served in the American Army during the war has received a letter that conveys a profoundly moving realization of what conditions in Europe now mean for millions of persons. The letter was written by a German who was captured by our men. He was severely wounded in the face. The Birmingham dentist operated on him and observed him over a considerable period. Now this man appeals to this Birmingham citizen. He writes in English:

"The great anxiety, the hard sorrows for my family, forces me to take the pen in my hand, as I know of no other way. We have often lost the courage to live, and only the belief in mercifulness and charity gives me the courage in trustfulness to turn to you with a request. In all the past hard years the Holy Writ has often given me consolation, as now in my great despair, the belief in your great kindness gives me the hope that my request will be heard, especially as I do not beg for a gift or a present.

"I am an artisan (artist), violin virtuoso, married, and father of two dear little girls 6 and 7 years old. My dear wife expects a baby, and since about 7 weeks she suffers often with prolonged fainting fits, as a result from acute anemia and weakness of the heart, caused by the long, hard time of hunger and in the failure of fat, albumen, and vitamins. As she is very infirm and tired through the shortage of food, her condition causes me much anxiety and great sorrow.

"As in spite of great help from the United States of America garrison, so many people die from weakness and hunger. I ask myself with anxious heart what will happen to my wife. How shall she bear the heavy time of birth, when her strength gives way now? What shall happen to our expected baby, of whom, in spite of hard times, we are looking forward to with much pleasure, when the mother is already now weakened from undernourishment? In a time when so many women in normal condition suffer * * * how is it possible for a pregnant woman to exist?

"My youngest daughter Gertraude is also ill since a few weeks and cannot properly recover for want of nourishment. It is hard indeed for anyone to make progress in regaining his health when food is scarce. I am sure you will be able to feel how heavy our heart is, and how it hurts when the children cry for hunger and one has nothing to give them.

"For some time now, people who have relations in the United States of America receive food parcels from them, but as I have no relations in the United States of America and in spite of that fact know that it is necessary to give my dear ones more food. * * * I beg you with deepest feeling to lend us $10 for 1 year. I promise faithfully herewith to repay this sum in the forementioned time, as in the next year I shall undertake a concert tour through the United States of America. With these $10 will you please be so kind and pay for a CARE food parcel for us? * * * Will you please let this parcel be sent to my address?

"In the great hope and in the belief in your charity and your generosity, I beg you once again from my deepest heart, help us, do not let my request remain unheard.

"With the greatest thankfulness."

This came from a German. But what hope can there be of a peaceful Germany, a peaceful Europe, if such cries are unheard? After the last war desperate Germans turned even to Hitler.

There are such hungry and desperate people in other European countries. That is why our Government is striving so hard and so urgently for the rehabilitation of Germany and of Europe.

The alternative is the danger of further surrender to some form of totalitarianism that promises bread and opportunity by governmental force. In such situations communism or fascism can be born.

The Marine Corps and the National Security Act

EXTENSION OF REMARKS
OF

HON. GEORGE W. SARBACHER, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. SARBACHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Marine Corps Gazette, issue of October 1947.

I believe this article is one of the most clear-cut and concise explanations of the Marine Corps function under the recently passed National Security Act of 1947, commonly known as the unification bill:

THE MARINE CORPS AND THE NATIONAL SECURITY ACT

(By Lt. Col. James D. Hittle)

The National Security Act of 1947, more commonly known as the unification bill, has already taken its place among the basic laws of the land.

In addition to those provisions of the bill concerned with national economy and foreign policy, and the Central Intelligence Agency, the new law contains provisions of interest to personnel of the armed services. Its provisions with regard to the Marine Corps are particularly significant.

This new law prescribes the basic functions of the major elements of the armed services. Such provisions in the law are, in effect, a directive from Congress to the armed services, stipulating the purpose for which the larger elements of the Nation's fighting forces are created and supported. Legislation of this nature is not altogether an innovation. Frequently in the past Congress has prescribed functions for various parts of the armed forces. But never before in our legislative history has any Congress so intelligently and deliberately set forth within one law the basic functions of the armed services. Congressional action in this respect was in harmony with the legislation's intent to eliminate unnecessary duplication within the armed forces and to prevent intraservice disputes over the performance of certain functions.

Within the armed forces each subordinate echelon deserves a clear-cut directive or order when a mission is assigned. Thus, it is consistent with sound military procedure that the armed services as a whole, charged with the protection of the Nation, should receive a "directive" from Congress—the higher authority—stating clearly the functions that each major element of the services will perform in accomplishing the common mission of all the armed services.

The National Security Act of 1917 prescribes the general functions for the Navy, Naval Aviation, the Marine Corps, the Army, and the new Air Force. That portion of the act pertaining to the Marine Corps reads as follows:

"The United States Marine Corps, within the Department of the Navy, shall include land combat and service forces and such aviation as may be organic therein. The Marine Corps shall be organized, trained, and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign. It shall be the duty of the Marine Corps to develop, in coordination with the Army and the Air Force, those phases of amphibious operations which pertain to the tactics, technique, and equipment employed by landing forces. In addition, the Marine Corps shall provide detachments and organizations for service on armed vessels of the Navy, shall provide security detachments for the protection of naval property at naval stations and bases, and shall perform such other duties as the President may direct: *Provided*, that such additional duties shall not detract from or interfere with the operations for which the Marine Corps is primarily organized. The Marine Corps shall be responsible, in accordance with integrated joint mobilization plans, for the expansion of peacetime components of the Marine Corps to meet the needs of war."

The first sentence of the new law gives legal recognition to the Marine Corps, perpetuates its relationship to the naval service, and directs that the Marine Corps shall include combat, service, and aviation elements. This guarantees that the Marine Corps shall continue to be a balanced fighting force, possessing its organic aviation and service units.

The second sentence of the Marine Corps section of the bill is of key importance. It states: "The Marine Corps shall be organized, trained, and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign." Thus, the law now recognizes and directs that the maintenance of fleet marine forces is the fundamental function of the Marine Corps. Such a stipulation is wholly consistent with the concept of the Marine Corps, which, for the last quarter of a century has pioneered and specialized in amphibious operations. It is in the concept of the fleet marine forces that the amphibious character of the Marine Corps finds its most convincing emphasis. True, the Marine Corps since its earliest days has engaged in amphibious operations. Also, the fact cannot be disputed but what the marines, in the years following World War I, developed the amphibious knowledge which in World War II proved to be prerequisite of victory in global warfare. Yet the fundamentally amphibious nature of the Marine Corps, so apparent in fact and action, was not recognized in the basic laws governing the armed forces. Neither the National Defense Acts of 1903, 1916, nor 1920 even mentioned the Marine Corps.

Unrecognized by previous basic defense legislation, the role of the Marine Corps as an amphibious force in the application of the Nation's naval power is now not only recognized in law, but the law makes it mandatory that fleet marine forces shall be a part of our armed forces. This, incidentally, is the only instance in which the National Security Act of 1947 makes any provision for the existence of an operating component of any of the armed services. Clearly, it was the intent of those who wrote the National Security Act that "fleet marine forces of combined arms," should be recognized by law and legally incorporated into the basic military structure of the country. To assure that these fleet marine forces would not deteriorate into lightly armed battalions or regiments used solely for landing

parties, the law stipulates that the fleet marine forces shall be forces of combined arms (tanks, artillery, and so forth), and supporting air components, thus assuring the continued existence of a Marine Corps capable of major combatant effectiveness.

Specific reference is made in the employment of fleet marine forces in the defense of advanced naval bases. Thus, the defense of advanced naval bases—a special aspect of amphibious operations pioneered and developed by the marines—is a function assigned to the corps by law.

In an even broader sense this portion of the bill relating to the fleet marine forces contains what is probably the most important passage affecting the conduct of future wars by the armed forces of this Nation. The key phrase is that referring to "the prosecution of a naval campaign." Statutory recognition of the naval campaign is of historic significance in the development of our national military thought. The concept of the naval campaign—a series of operations that are predominantly naval in character—is in its modern sense a purely American contribution to the art of war. The naval campaign is the forceful application of naval power in accordance with another American contribution to modern war—the theory of the balanced fleet. The balanced fleet, consisting of naval surface, undersurface, naval air, and naval landing forces, is a combat entity, capable of exercising naval power in the most forceful meaning of the term as used by Mahan. It is a well-coordinated team of aviation, landing units, and surface forces habitually trained to operate as an all-naval team under common doctrine and subject to unquestioned naval command.

This congressional affirmation of the naval campaign is, in turn, a statutory recognition that naval power—with its forceful application by the balanced fleet—is still, and for the foreseeable future shall continue to be, a fundamental instrument of our national security. Such congressional action was unquestionably based upon what some experts are altogether too prone to overlook—that we are still a maritime nation, bounded largely by the seas, and that our national security is, in the final analysis, dependent upon control of the seas.

The Pacific war demonstrated that the naval campaign, based upon the balanced fleet, is the true expression of naval power in its most forceful sense.

Fleet marine forces of combined arms are the unique attributes of our naval organization. Consequently, it seems to be more than a matter of coincidence that Congress should choose the section of the Security Act pertaining to the Marine Corps in which to give statutory recognition to the naval campaign.

The third sentence of the section states that: "It shall be the duty of the Marine Corps to develop, in coordination with the Army and the Air Force, those phases of amphibious operations which pertain to the tactics, technique, and equipment employed by the landing forces." This has the effect of congressional mandate that the Marine Corps shall have a major role in all future amphibious development. Most certainly, the corps is not to be the only agency within the armed forces responsible for the development of amphibious tactics, technique, and equipment, but at the same time the corps is designated, by statute, as a developing agency, thus assuring the corps that it will be able to continue its progress in the field of amphibious operations. Since amphibious operations may involve the employment of airborne units, the amphibious development activities of the corps will permit continued progress in the utilization of aircraft as a means of transporting landing force units.

Indeed, it is noteworthy that the only instance in which the National Security Act of 1947 makes reference to amphibious operations, with respect to either operating forces or development activities, is the section of the law pertaining to the Marine Corps. In this respect the law continues the precedent by which the Marine Corps has been the focal influence in the evolution of modern amphibious doctrine.

Also, the new law assigns the Marine Corps the traditional functions of providing detachments and organizations for armed ships, naval stations, and bases. This is a reaffirmation of such functions originally assigned the corps by law in 1798.

In addition to these specific functions, the corps may be assigned such additional functions as the President may direct. Accordingly, marines may still, as provided by previous law, be assigned for duty with the Army, or such other functions as are not specifically prescribed by law. There is but one restriction placed on Presidential assignment of additional duties. The law states "that such additional duties shall not detract from or interfere with the operations for which the Marine Corps is primarily organized." Thus, Congress pointedly insists that, regardless of what additional duties are assigned, such additional duties shall not endanger the fundamentally amphibious character of the Marine Corps.

Under the new law, the Marine Corps Reserve will continue to be a major factor in the expansion of the corps in event of a war. Such statutory recognition of the Marine Corps Reserve, as well as a guaranty of its continued existence, is contained in the portion of the law stating that "the Marine Corps shall be responsible * * * for the expansion of peacetime components of the Marine Corps to meet the needs of war."

In way of summation it can be seen that under the National Security Act of 1947 the Marine Corps is now by law assigned a major status within the armed forces of the Nation. The traditional detachment and garrison duties are reaffirmed. Of transcendant importance is the fact that the amphibious character of the corps is legally recognized. The concept of naval campaign, in which the fleet marine forces find their logical justification, is recognized as a fundamental feature of our Nation's sea power. Specifically, fleet marine forces of combined arms are accorded statutory status, and the corps is assured a prominent role in future amphibious development.

The National Security Act of 1947 has been authoritatively described the most important legislation of its kind in the Nation's history. The accuracy of this description cannot be questioned from the standpoint of the Marine Corps.

Congressman Philbin Paints Harrowing Picture of Conditions Overseas

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Clinton Daily Item which contains the substance of a statement I made upon my return from an extended European inspection tour.

The article follows:

CONGRESSMAN PHILBIN PAINTS HARROWING PICTURE OF CONDITIONS OVERSEAS AND SAYS IT IS OBVIOUS THAT THE UNITED STATES CANNOT AFFORD TO FEED, CLOTHE, AND SUPPLY EUROPEAN NATIONS INDEFINITELY

Returning from his extended tour of Europe, Congressman PHILIP J. PHILBIN, of Clinton, member of the powerful House Armed Services Committee, today painted for the Item a harrowing picture of the conditions he observed.

The Clinton Congressman says:

"Governmentally, socially, and economically," Congressman PHILBIN stated, "most countries of Europe are in a deplorable state. Only Ireland, Denmark, and Switzerland apparently enjoy satisfactory subsistence standards. Belgium and Holland are in fairly good shape.

"In other countries many people are living dangerously close to mere survival, with daily rations barely capable of sustaining life. Germany is prostrate. The nation is divided into various military zones, under which the economy of the nation, once self-sustaining, is not able to function. This puts the burden of helping to feed large numbers of people, including pitiable victims of persecution and war who are located in and out of displaced persons camps, upon our Army.

"It is nothing unusual to see women and children in the occupied zones going barefoot through the streets or about their daily work.

"Coal and fuel are in very short supply everywhere in Europe and this has crippled industry and transportation and also threatens hardship during the winter months. In our occupied zones, if it were not for the excellent work of the Army in keeping up morale, maintaining public order, encouraging the resumption of normal business and, to a large extent, helping to feed the indigenous population, conditions would be much worse. Both officers and men of the Army have full realization of the gravity of their tasks and are carrying them out in the main with fine spirit, sound judgment, and efficiency.

"I was particularly impressed with the work of Gen. Thomas F. Bresnahan, of Fitchburg, commanding officer, at Bremerhaven. Though the zone of his command was severely stricken by intensive wartime allied bombing and is in large part literally a shambles of ruin and wreckage, General Bresnahan has achieved splendid results in restoring morale and economic activity and in ministering to the needs of the indigenous population and the displaced persons who are sent through his port. On the whole and in most every respect our military commanders, officers, and enlisted men are conducting themselves with great credit but it was especially gratifying to observe an outstanding soldier from Massachusetts performing such conspicuous and valuable service.

"A natural, but very distressing incident of food and clothing shortages is the black market which thrives in many places in Europe, to the great detriment of ordinary people who have not the wherewithal to pay excessive prices for necessaries of life.

"Strict rationing programs legally in force have not succeeded in checking black market operations which exist not only in articles of food and clothing but also in dollar exchange. Everyone wants dollars. Severe penalties are imposed in France, for example, for purchasing francs over and above the quoted rate which can be easily done because of the anxiety of people to secure American dollars, but this has not served to control extensive dealings in dollars and other desirable currencies (Swiss franc and Dutch kroner) which, of course, adds to existing scarcities and promotes price inflation.

"England has also inaugurated very strict exchange regulations. Commencing October 1 it became practically impossible for anyone to take more than a nominal sum of money in pounds out of that country though hundreds of thousands of young Englishmen are seeking opportunity to migrate. The food and fuel wants in England are extreme and deplorable. Strikes and political controversy have stifled coal production. Export requirements seriously deplete essentials of life.

"Ireland was truly refreshing. There great physical beauty of surroundings, a bounteous nature, industrious habits, and the profound Christian faith and fortitude of the people combine to provide good wholesome living, orderly government and a happy contented citizenry. There is no discoverable communism or radicalism in Ireland and everyone has enough to eat, adequate clothes and shelter.

"Coal shortages exist but the Irish are effectively substituting peat to heat their homes and buildings. Warm of heart, they are generously sending food and supplies to other stricken nations. Their program for aiding displaced persons is considered the best yet in operation. I was very much impressed and touched by the placidity of spirit, tolerance, and friendly, neighborly attitude toward other nations and people which I found in Ireland because it was in such sharp contrast with the chaos, hate, passion and skepticism I observed in some other places.

"Collectivism in one form or other accompanies the privation and starvation which stalk over the Continent. Left-wing philosophy and left-wing government based on cynical materialism seem to be the rule in many countries and repressive measures aimed at capitalistic institutions and free enterprise are adding to the confusion and want by discouraging incentive and preventing production. Radical, antidemocratic concepts and practices are putting Europe deeper in the mire of stagnation.

"Because of the activities of these collectivist governments peoples of several countries are hampered in pursuing their regular work and literally millions helpless before actual or impending regimentation, are marking time waiting for the paradise which has been promised them by rabid Marxist, or Socialist political reformers.

"The frantic desire to migrate to the United States or some other western country is found everywhere and large numbers of aggressive, ambitious young people as well as the indigent and the starving are striving eagerly to escape from the welter of confusion and want which spreads over the Continent.

"In general, social, political, and economic conditions are so bad, morale so low and the spirit of the people so demoralized by privation, want, and radical agitation throughout much of Europe that it is very difficult to suggest workable panaceas or remedies.

"Our Government officials of high rank, including many of those of the armed forces, as well as many Members of the Congress, Committees of which are studying the situation who have visited stricken areas outside the iron curtain, are seeking some solution, trying to find some way by which we can aid the starving and the suffering and revive the languished commerce and industry of many afflicted nations.

"The Marshall plan, which has already been outlined, is being given careful study and full report will shortly be available to Congress and the public. Up to this time the nations concerned seem to be more anxious for additional large cash gifts and huge food and material shipments without conditions or restrictions than they are receptive to concrete measures for economic renovation and rehabilitation.

"It would appear that unqualified cash outlays by the United States, or for that matter unconditional shipments of food and materials will never adequately answer these problems. Whatever its form, we must be sure that the relief extended goes to the right places and is not misappropriated or misapplied.

"Fundamentally Europe must get back to work, back to sanity, back to stability in government as well as economic activity. Russian interference in the affairs of other nations must be stopped.

"Undoubtedly our people are willing to lend a helping hand, certainly willing to do whatever we can consistently with our own means and resources to alleviate the terribly compelling want and hunger which besets so many poor, unfortunate victims—women, helpless children, and aged and infirm—throughout Europe, and try to revive and restore waning or defunct economies.

"I think that in extending this help we shall have no desire to interfere in any way with the sovereignty, self-government, or internal economic affairs of any nation. On the other hand, it would be foolhardy to turn over any of our resources whether money, materials, or foodstuffs, as we have done in the past, to some nations, obsessed by ideologies, who will use them not so much for the constructive purpose of rehabilitation and readjustment as for the continuance and strengthening of radical reform, social experimentation, and socialistic or communistic programs hostile to our own Nation and to the cause of democracy.

"It is necessary that before extending further huge grants of money and materials we should first make a careful appraisal of our own resources and needs and financial condition. We have serious shortages of some essentials and very high prices in our own country which we cannot afford to aggravate, which, in fact, we should reduce.

"We have a stupendous national debt and a very high level of wartime taxation which continue to impose burdens upon our industry and people. In answering the call of humanity, in seeking to alleviate the plight of the hungry and afflicted of stricken lands, as I believe every American wants to do, we must make sure that we do not disorganize and disrupt our own economy, that we do not impose further grave burdens of taxation and inflation upon our productive system, txpayers, and people which they cannot stand, and be certain that we are not dispensing relief, economic resources, financial aid, and material assistance to further and advance the plans of radical-minded political leaders or governments who, in turn, may well use these great assets to work detriment and harm upon our institutions, prosperity, and security.

"Obviously, the United States cannot afford to feed, clothe, and supply European countries indefinitely. We cannot afford to sustain hostile, antidemocratic, anti-American totalitarian systems anywhere. It is said that communism breeds and thrives on hunger and want and that may be so, though its greatest gains to date have come through coercion.

"But it is idle to believe that the furnishing of money, food, clothing, and materials of itself will ever prevent or dissipate communism. In fact, if these are dispensed by pro-Communists and Socialists they will give an apparent vitality to collectivism which it does not intrinsically possess and will serve to strengthen such systems in the minds of the masses of the people.

"Europe must by all means, and primarily, show the will and purpose for recovery. There must be a spiritual regeneration. In many cases Europeans have voted themselves into radical government as a matter of choice and there is certainly no way that we can interfere with free elections. Lamentably, some elections have been tainted with totalitarian conspiracy and fraud.

"Actual aggression and ideological penetration in foreign countries are also matters difficult to control adequately unless we want to chance involvement in another war, or unless we are willing in the first instance to adopt drastic economic measures in conjunction with other democratic-minded nations of good faith to check these outrages, outlaw the transgressors against international morals and law from world commerce, and intercourse and work earnesty as we should do for a really effective, revamped international agency unhampered by the obstructive veto power of a single nation to secure peace, and political and economic stability. We must not further appease or strengthen communism or any other anti-American philosophy or government.

"It is a time for firmness and decisive action to protect our own Nation and all that it means. We must let no nation, however powerful, cajole or bluff us into the sacrifice of our sacred principles and our own interests.

"As matters now stand, the President and the Congress are preparing to implement our humanitarian program for relief of hunger and starvation abroad as rapidly as possible. Substantial temporary measures are already in effect and much is already being done to help afflicted peoples. These efforts merit our steadfast support. Complete data and official reports will soon be at hand and then we can determine as a Nation what further financial and material assistance we can prudently and reasonably render without bringing disaster upon ourselves and define strictly the circumstances and conditions under which long-term relief and rehabilitation measures should be effected. We can also continue our efforts to help feed, sustain and resettle the displaced persons, the persecuted, and the homeless, who are wandering over the face of the earth without refuge or sustenance.

"Meanwhile, if we would read clearly and interpret intelligently the plain, uncontrovertible lessons of history and the inescapable distressing facts of the present, including the revival of the Communist Internationale, we will first of all renew our determination zealously to protect our own national security and protect our own governmental and economic systems and democratic way of life from the ravages of destruction, decadence, and want which war and radicalism have worked over such a large part of the earth.

"We must not for any reason permit our Nation to be drawn into the vortex of ruin and dissolution that engulfs so many other nations. We must fight militantly against subversion at home.

"A visit to war-torn, socially upset, and economically disordered Europe, which I wish every American could take, evokes deepest sympathy for the homeless, distressed, impoverished, and hungry. It brings strongest resolution to help in every feasible practical way.

"It also sustains firm faith in the morality, soundness, and working efficiency of our great free democratic institutions which, through respect for the dignity and worth of the individual and regard for basic Christian principles of law, freedom, and justice have made our Nation the most prosperous and our people the most happy and best-provided-for in the whole world.

"Let us all humbly thank God for America and ask for His continued help. For without America, and what she stands for, surely the shadows of darkness will fall over the earth."

The Clinton Congressman returned from Europe on the steamship *America*, and was accompanied by Dr. Lawrence F. Burke, of this town, and Congressman Buck, of New York. Secretary of the Treasury Snyder, General O'Hare, General North, Colonel Biddle were among officials who returned on the same ship.

Defeatism in Congress

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following comments by Robert L. Norton appearing in the Boston Post of December 8, 1947, entitled "Defeatism in Congress":

DEFEATISM IN CONGRESS

(By Robert L. Norton)

WASHINGTON, December 7.—Considering the Communist insurrection in France and the stalemate at the Foreign Ministers Conference in London over the German and Austrian peace treaties, it is somewhat dismaying to note the defeatist tactics being employed in Congress to delay and chisel the interim-aid program for European relief.

LENDS AID TO REDS

This opposition, evidenced in the House debate, is not of a decisive character as affecting final action, but it, nevertheless, does serve to lend aid and encouragement to the Soviets in their planned anarchy in France and Italy.

The murderous rioting, the crippling of transportation, and the creation of chaos cannot be viewed in any other light than an organized attempt dictated from Moscow to seize the French Government. It is not the "cold war" which we talk about in this country, but was in its true sense, with the deliberate purpose of fomenting revolution. The Soviet objectives might be as easily attained through the process of sabotage as with the use of armed forces.

MUST STAND FIRM

There certainly can be no misunderstanding the fact that the Red insurrection is aimed to kill the Marshall plan in advance and to make stopgap aid ineffective, since this is openly avowed by the Soviets. Therefore, if we are to face up to the realities and disregard the evasive reasoning and soft pedaling of some Members of Congress, the present crisis in France can only be regarded as making war on the United States of America.

Nothing could be more unfortunate in this real crisis than the weakening of our foreign policy by not standing up to the Soviet onslaught. Any reduction of the amount set for interim aid by the House would certainly be so construed by the Schuman ministry which apparently has not yet gained a firm grip on the situation in France. It is the key battle, the results of which will determine whether our long-range policy in Europe is to be ditched before it gets under way. It's a test of Soviet strength and of our own determination to stand firm against the challenge.

NO TIME TO QUIBBLE

The possibility of an armed show-down in France is not to be disregarded. This is the measured judgment of many House Members who observed the situation in France at first hand during the recess of Congress. It does not represent an alarmist viewpoint. In the cloakrooms of Congress, one hears a much franker discussion of what may be the alternative facing this country if the economic and political power of the United States of America fails to restore stability to western Europe than in the public debate.

With the Soviets succeeding in bringing about chaos in France, the question naturally asked is why we should go ahead with the expenditure of some $20,000,000,000 if it appears that this help contemplated under the Marshall plan would prove ineffective. Would it not be thrown away?

It is at best a calculated risk, as Assistant Secretary of State Lovett explained to the House Committee on Appropriations. But just how justifiable the risk will be, as far as the Marshall plan is concerned, will depend upon the outcome of the struggle in France during the next few months. This is not the time to falter and quibble in the support of the initial move which is contained in the stop-gap aid program. Anything but an overwhelming decision favoring this appropriation by Congress would display a weakness which surely would be highly gratifying to Russia.

Otherwise, consider today's example of Soviet propaganda misrepresentation from the Moscow radio, broadcasting in Germany to Austria: "In the United States there is no real electoral freedom. The nomination of candidates is monopolized by two parties. The voices of all other parties are hopelessly drowned in the noisy election duel between the two old parties, which is a sham fight rather than a real one.

"The parties in the United States have no members and no subscription. They have no local branches.

"All election campaigns have the character of a commercial stunt organized by a highly paid expert, aided by bribed reporters. In order to get their candidate in, the monopolists are lavish in their support of the campaign."

It hardly seems necessary to observe that, in the Soviet elections, there is only one party—the Communists. The voters mark for Stalin, or else. Also, it is to be noted that the Communist Party is still on the ballot in this country and entitled to participate in a free election along with Republicans and Democrats.

The Pardon of Curley

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica (Calif.) Outlook:

THE PARDON OF CURLEY

We want to be fair to Boston's mayor, James Curley, and to President Truman who has let him out of prison with a pardon after serving 4 months of a 6 months' minimum sentence. It may be that Curley really was taken in, as he claims, by a smart confidence man who used the name of this idol of the Boston Irish to sweeten his racket, and used the United States mails to tell the suckers what profits they could make in wartime by joining him and Curley. But what was Curley's motive in being used, if not to line his own pockets? And wasn't it wartime and he a trusted public official, the former mayor of Boston and Governor of Massachusetts?

We want to be fair to Mr. Curley, who is 73 years old and reportedly suffering from diabetes and a heart condition. But the case smelled to high heaven at a time when American boys were dying to stop Hitler and Hirohito—and when Curley's Boston machine was needed by the Democratic Party to help win a fourth term. They had to do something about Curley, after that election was won, to get rid of the smell. So they tried him on the charge of conspiracy to use the mails to defraud. Not a nice charge against a high public official, and we may be sure that it would not have been brought if the facts had not been damning.

We want to be fair to President Truman. In ordinary circumstances it might be an act of merciful nobility to pardon an elderly man, suffering from a serious malady, who had served most of his short sentence. But along with Curley the President pardoned another disgraced former official who was in for the same offense and is apparently in sound health. So it will hardly do to say that the President's tender heart was melted by compassion for a sick man, by that and nothing else. Especially when Curley is not too sick to make a beeline to Boston and announce that he will resume the duties of the mayoralty office which has been kept open for him by the faithful party hacks of the well-oiled Curley machine.

We want to be fair to President Truman. But isn't it a remarkable coincidence that Curley rules Boston and that the Democratic Party is going to have to carry Boston by a whopping big vote in 1948 to win the State of Massachusetts? And, speaking of that, when Mr. Truman pardoned all that gang of Pendergast henchmen who were doing time for wholesale vote frauds in Kansas City, was it because they had diabetes and a heart condition?

Wanted in these United States: A return to simple honesty and probity in high office—especially in the greatest office in the world.

Shipments to Russia

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Hampshire Morning Union, of Manchester, N. H.:

SHIPMENTS TO RUSSIA

As usual voices are raised in the United States in support of the insane policy of shipping raw materials, heavy machinery, and machine tools to Russia to help build up her military strength.

These voices sound suspiciously like those raised before Pearl Harbor in favor of selling scrap iron, steel, oil, and other products to Japan when she was already on the warpath in China. Against the petty reasoning of that time, the grim fact now stares us in the face that we helped to build up Japan's military strength for an attack on ourselves and that our own scrap iron and steel were used later to kill our own boys.

Are we going to repeat this costly error, this time with Russia, when the evidence of our past folly is so clearly written before us?

There are times when common sense speaks so loud that opposition to its dictates becomes trivial. This case of shipments to Russia is one of those times. Against the voice of common sense, the arguments raised in support of these shipments have the clear ring of quibbling appeasement.

For instance, we are told by James Reston in the New York Times, and by some other newspapers, that the amount of goods going to Russia has been magnified. In reality, it is said, these shipments total only about 1.1 percent of our total exports, and about double our imports from Soviet Russia. What has that got to do with it? If a policy

is wrong and dangerous, it is still so although conducted in reduced form.

We are told that actually the shipments to Russia are not real, because the bulk of what is being transferred was purchased by the Moscow government for cash and stored in this country to be shipped as transportation became available. What kind of hocus-pocus is this? Are shipments any the less real because they were bought for cash and stored for later transportation?

We are told that we are getting the benefit of certain important imports from Russia that would be cut off if we ceased shipments to that country. Are not these materials available elsewhere, and does their advantage offset the destructive influence of helping to increase Russia's military strength?

Finally we are told that if we cut off shipments to Russia, we will invite the retaliation of not only Moscow, but also Russia's satellites in eastern Europe, and that the Marshall plan will be weakened thereby.

This argument reveals a fallacy that lies behind the whole chain of reasoning of the defenders of shipments to Russia. This is the silly notion that Russia is not hostile and that somehow peace and understanding must be reached with her. This is to overlook blindly Soviet opposition to every effort to achieve world peace and to aid the reconstruction of Europe. It is to overlook sinister and lying Soviet propaganda against the United States, and Moscow's avowed purposes of aggression. It is to overlook the fact that Moscow has decreed the wrecking of the Marshall plan, and that it is now filling France and Italy with chaos in the attempt to smash the economy of western Europe.

No! There must be no return to Munich! The purposes of the Soviets are plain, and nothing but the most arrant folly could induce us to continue shipping them materials that build them up as a potent antagonist. Every American hopes that the Soviets will change their purposes and decide to live with other peoples, but until they do, common sense leaves no other course than to stop selling them the intricate and complicated machines they need to become strong.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks in the RECORD, I include therein the following letter from a highly intelligent and patriotic citizen:

CORNELL UNIVERSITY,
DEPARTMENT OF HISTORY,
Ithaca, N. Y., November 28, 1947.

The Honorable ROY O. WOODRUFF,
House of Representatives,
Washington, D. C.

DEAR MR. WOODRUFF: Will you permit me to convey to you my opposition to the program of foreign aids.

When such gifts have brought us to the point that the President considers it expedient to ask Congress to make him the head of a police state, is it not evident that the issue at stake is the survival of American institutions?

For an independent state to give away vast sums of money to foreign countries is so unnatural, so contrary to all past experience and practice, that one has to conclude that such a course will soon terminate in the destruction of the country that follows it.

If Congress is to rush forward and give to foreign countries $600,000,000 whenever street fighting occurs in some distant land, it is to be presumed that the Communists will be only too glad to oblige by staging such commotions, with the object of draining the United States of its means and substance.

There are now on our list of countries 20 states with a combined population of 842,000,000 souls. If Congress should give these 20 countries eight and one-half billions every year, such gifts would amount to about 3 cents a day per person.

Experience has proved that it is impracticable to limit such gifts to a few countries. If a modest sum is given to all, the money will be spread so thinly as to have no appreciable effect, except on the United States. If large sums are given to so many countries (almost without exception the most densely populated countries in the world), the effect would be ruinous to the United States.

Whatever may be said for the program of foreign aid, there seems to be no justification whatsoever for haste, stampeding, and steamroller blitzkrieg methods. The problems of the outside world have been centuries in the making, and they will no doubt be with us for generations to come.

Thanking you for your consideration of my views on this question, I am,

Sincerely yours,

CURTIS P. NETTLES,
Professor of American History.

Language Hollywood Understands

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. PRICE of Illinois. Mr. Speaker, the best way "to combat Hollywood's canned contamination is at the box office," the Right Reverend James A. Griffin, D. D., bishop of the Springfield, Ill., diocese, states in a letter prepared for reading in all diocesan churches on next Sunday when the Legion of Decency pledges will be renewed.

Under leave to extend my remarks, I herewith include the text of Bishop Griffin's message as reported in an Associated Press dispatch in the Alton (Ill.) Evening Telegraph, December 9, 1947. It follows:

"All of us are familiar with the technique employed by communism in Europe. It has been called in picturesque journals packaged revolution, and consists of strategic coups d'etats formulated and prepared in Moscow or some other Red center, then smuggled within the frontiers of other countries.

"Now, Hollywood, always with an eye to modernization and efficiency, spurns the antiquated package technique. Hollywood believes in the canning process. And so Hollywood's canned contamination finds its way into the cities and villages of America.

"In these cans are thousands of feet of movie film, coiled like serpents, ready to pour their venom into the souls of our children. No equivalent of a Pure Food and Drug Act has been adequately phrased to check this evil."

The bishop said that "the decent producers and authors in Hollywood are tremendous forces for good."

He urged Catholics not to patronize films classified by the Legion of Decency as "C" or condemned, or those classed "B" or objectionable in part.

"This evil influence—immoral motion pictures—tries to squeeze itself into the armor of freedom of speech and expression, but its usurpation of this protection still leaves vulnerable spots exposed—the box office.

"The defenders of decency must strike one telling blow after another—at the box office."

Full Operation Due by Some Distillers

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal of Commerce of December 11, 1947:

FULL OPERATION DUE BY SOME DISTILLERS—INDUSTRY FOUND UNABLE TO AGREE ON FURTHER GRAIN-SAVING PLAN

WASHINGTON, December 10.—Some liquor distillers are heading for full-blast operation as soon as the voluntary shut-down of the distilleries ends on Christmas Day, it was learned today.

During a stormy meeting yesterday of the distillers coordinating committee of the cabinet food committee, one large distiller completely rejected the proposal of another group of distillers for a voluntary allocation plan, while still another very large operator advised the committee that it refused to be bound by its recommendations.

UNABLE TO AGREE

The impossibility of getting the distillers to agree to a common voluntary allocation program, as previously stated by Secretary of Agriculture Clinton P. Anderson, was borne out during yesterday's meeting.

Following the meeting, unconfirmed reports received here stated that some distillers were ordering substantial quantities of grain and malt in anticipation of full-scale operations during January.

One of the big four distillers was today reported to have advised its west coast distributors to order full lots of liquors because it anticipated unrestricted production, while still another was said to have advised its plant managers to prepare for January operations on a broad scale.

Failure of the distillers to agree on a voluntary program yesterday was high-lighted by the fact that there now seems to be disagreement between the Government representatives on the committee.

CLASH OVER SAVINGS

While James A. Stillwell, executive director of the voluntary food conservation program, is reported to be holding out for no more than 2,500,000 bushels of grain for the distillers each month, Department of Agriculture representatives are said to believe that 3,500,000 bushels would be all right.

During the meeting the Distilled Spirits Institute, represented by its executive-secretary, Howard Jones, proposed that each distiller be permitted to use 45 percent as much grain per plant as was used during the 4-month period December 1946, through March 1947, with a minimum allocation of 6,000 bushels per plant.

WOULD END MARCH 3

This program, DSI proposed, should run from December 25 to March 31, at which time it should be reconsidered in the light of existing conditions and extended if it were still needed to conserve grain.

During the December-March period the industry consumed roughly 30,000,000 bushels of grain, which would mean that if the 45-percent formula were adopted the industry would be permitted to consume grain at a monthly rate of around 3,500,000 bushels.

OPPOSED BY PUBLICKER

Publicker Industries, Inc., of Philadelphia, immediately opposed the program and let the committee know that it would not agree to any voluntary allocation program operating on a historical basis. This basis, the Publicker representatives maintained, as they had in court over a year ago, would strengthen the domination of established interests and would keep out newcomers.

On top of this development, the committee received a telegram from one of the "big four" distillers stating that its representative had attended previous meetings of the committee only as an observer, and refusing to be bound by the committee's recommendations.

The committee then finally agreed that the Department of Agriculture should develop a program, which is to be communicated to all distillers on Friday.

On December 16 the distillers have been invited to come in and discuss this program, or telegraph their acceptance or rejection of it, to the committee.

Meanwhile, a bill to control use of grains is pending in Congress but no action is expected before Congress adjourns December 19 for the Christmas holiday.

The Red Mass

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon delivered by the Reverend James M. Gillis, C. S. P., at the annual red Mass of the Catholic Lawyers Guild of the diocese of Brooklyn. The Right Reverend Monsignor William T. Dillon, president of St. Joseph's College for Women, is the spiritual director of the guild, and Howard Seitz, Esq., president.

RETURN MORALITY TO COURTS IN UNITED STATES, FATHER GILLIS URGES—CITES ADULATION OF GODLESS LEGIST AT ANNUAL MASS FOR LAWYERS, JUDGES—MONSIGNOR HOAR CELEBRANT—ST. CHARLES BORROMEO'S IS CROWDED; SPONSORED BY LAWYERS GUILD

TEXT OF SERMON

The text of Father Gillis' sermon follows:

"A French Communist of a century ago, remembered chiefly for his apothegm 'All property is theft,' made a much more significant observation when he said, 'at the base of every political system we find a theology.'

"I call this observation significant. It might have been profound. We find not theology but God. Communists of our day have achieved that deeper insight; the object of their attack is not theology or theologians, not the clergy or the church or religion, but God.

"When a smaller movement somewhat similar to communism was on in France in the 1870's Gambetta sounded the slogan 'Clericalism! There is the enemy!' The Soviets are not so squeamish. 'God,' they say, 'is the enemy.' Their atheistic organization was called not a League of Skeptics or of agnostics, nor like that of more shifty atheists in this country a 'Freethinking Society,' but plainly and boldly the 'Anti-God League.' It has ostensibly been dissolved, but so was the Comintern, ostensibly.

"Some observers of the communistic phenomenon, being perhaps purposely self-blinded, persuade themselves that the atheism in communism is a mere adjunct, unessential, temporary. It is not accidental; it is, as we say 'of the essence.' It is no passing phase; it is permanent. The ultimate objective of Soviet attack is not capitalism; not even Catholicism, but God.

"Another misunderstanding on the part of certain not-too-intelligent observers is that the war on God concerns only religion, which they take to be but one phase of civilization. If communism were to triumph, they admit, the Pope would be assassinated, the hierarchy and the clergy hounded and slain; the church would go underground (metaphorically if not literally), pious people would for a time lament, and then perhaps forget. But all other activities of civilized life would continue, modified, no doubt, in some respects, but substantially the same as before.

SOME WOULD REJOICE

"The seventy or eighty million people in our own country who have not sufficient religious conviction to admit church membership, and with them we know not how many millions of neutrals and indifferentists elsewhere, would enjoy a certain unconfessed satisfaction because the church, an irritant and a tacit rebuke, had been removed. The attack on God causes them no anguish, for their bond with God has long since been extremely tenuous.

"They would, so they think, be like the citizens of a kingdom whose king had been deposed to make way for a new form of government. The things in which they have a real interest, politics, science, the arts, literature, would continue. The physical sciences, which, as Laplace told Napoleon, need not the hypothesis of God, would flourish. The art of painting, which has been drifting away from the classical, not to say mediaeval standards, would receive a new impetus toward the modernistic and the futuristic. So would all the arts.

"Literature in all its forms, fiction, drama, poetry would shake off its few remaining inhibitions. Medicine would make swifter progress. Are there not many atheist physicians and surgeons?

"To come to the matter that most concerns this asembly, how could the science of jurisprudence, the practice of law, and the administration of justice suffer if the Communist revolution were to suceed in its primary objective, the abolition of religion and the destruction of the very idea of God?

"The answer to that question involves a slight dip into metaphysics, the science that is thought difficult because it deals with realities beyond the range of the eye or the ear, outside the grasp of the hands. But let us see if we can make it simple.

GOD IS BEYOND DESTRUCTION

"God is no king. He sits on no throne. The throne of God is a figure of speech like the battlements of heaven, the pearly gates, the streets of gold, and the rest. It is childish, therefore, to speak of dethroning God, abolishing God. God is not a man who can be snatched from His throne, or like the fugitive king of France who was arrested at the border, brought back, tried, jailed, guillotined to make a Parisian holiday.

"God is being. God is truth, justice, right. He is, in the phrase familiar to all philosophers since Socrates, the Good, the True, the Beautiful.' God is the absolute and the ultimate; alpha, the beginning, omega the end.

"Atheists complain of the superstitions of believers, but we have no superstitions to equal theirs. 'Vous incredules, les plus credules,' said Pascal. Unlike them, we cannot believe that God can be done away with and all else remain. It is like saying that you could kill a man but that his heart and brain, his body and his members would still live; or that you could destroy the universe, and yet the earth, the sun, moon, and stars would remain. God is all; if He goes, nothing remains. If God goes, there goes with Him good, truth, beauty, justice, being, all.

"Certain opponents of God, in the open or in secret, within or without the Communist movement, have recognized the identity of God with the good, the true, the beautiful, and have set to work to rid the world of Him by corrupting, debasing, and so destroying the good, the true, and the beautiful.

"In contemporary art, for example, there is the deliberate cult of ugliness. The ultramoderns try to persuade us that the obscene, the indecent, the grotesque is beautiful. There are also composers and performers of modern music who reject with scorn the majestic symphonies and harmonies of Bach, Beethoven, Brahms, Liszt, Mozart, and ask us to accept in their place a sophisticated, degenerate adaptation of the savage rhythm of the jungle.

BOTH MAD AND DIABOLICAL

"In literature there is just now a vogue for what is base and sordid, as if nothing noble or pure or holy were to be found in men and women. Even worse, perhaps, there is in certain highly reputed authors the purposeful cult of unintelligibility. Efforts are made not only by the lunatic fringe of the intelligentsia but by famous writers to demonstrate that meaning need have no place in literature. This is intellectual nihilism. It may be madness, but if it be madness, there is diabolism in it. The ultimate aim is to destroy logic. One of the names of God is Logos.

"Now all this may seem remote from the subject we have in mind today. But the attack upon God as beauty and truth and good is of a piece with the attack upon God as justice and right. In the science of jurisprudence, in the practice of law and the administration of justice we are concerned with God as justice and right.

"Now the pity of it is—and the tragedy—that there are leftists who have done all they could to degrade the ideas of justice and right and that among them are a few at the very top of the profession.

"Of one of them it has been said by the dean of what is perhaps the most renowned law school in America: 'He has done more than lead American juristic thought of the present generation. Above all others he has shaped the methods and ideas that are characteristic of the present as distinguished from the immediate past.' The great man's peer—perhaps his only peer in the other land where the Anglo-Saxon tradition of law has prevailed—has said of him: 'What he has done for the common law, taking it broadly and apart from obvious technical differences, is much like what Savigny did for modern Roman law.'

"Such eulogies could be multiplied indefinitely. But I shall quote only one more. It is that of a Justice of the Supreme Court of the United States who said of his illustrious companion on the bench: 'He is today for all students of the law and for all students of human society the philosopher and the seer, the greatest of our age in the domain of jurisprudence and one of the greatest of the ages.'

QUOTES ATTACKS ON GOD

"What then is the attitude of this paragon of lawyers, judges, philosophers on justice and right and law and truth? You all know whom I mean and you are familiar with his views, but I shall hastily recapitulate them as a preliminary to a conclusion in

line with my main theme, the attack upon God. It shall be mostly in his own words or those of his friendly interpreters. If I add a few words of my own it shall be only by way of amplification.

"Here then is the great man's mind. 'Truth is only what I cannot help thinking.' What I cannot help thinking is truth for me; what another man cannot help thinking is truth for him. If there be irreconcilable disparity between his truth and my truth, there can be no way of resolving the disparity. Truth exists only in the individual mind. There is no truth outside the mind, to which truth as seen within may be referred for correction.

"As with truth, so with justice and law. There is no metaphysical standard of justice. If my concept of justice differs from that of the majority of my fellow citizens they may attempt to coerce me into accepting their concept. If I resist coercion I must suffer the penalty. 'Justice,' said Hobbes in Leviathan, 'Justice is what the state says it is.'

"In a democratic community justice is what the majority declares it to be. The citizen haled to court and convicted may protest the injustice of the summons and verdict. The judge may agree with him and disagree with the majority. But nothing can be done about it. The prisoner at the bar and the judge on the bench are both victims of public opinion.

CITES POWER OF MAJORITY

"If there be agitation against the law as unjust, no reference may be made to a higher law or a purer justice beyond and above the present law. Reform of the law, if it come, will be only a change in the will of the state, or in the mind of the majority. There can be no certainty that the new law is nearer than the old to absolute justice.

"As for law, it is 'only that which I might expect a jury to enforce.' There is no natural law, recognizable within the mind of man but reflecting a higher law in a mind beyond and above the mind of man. There is no such higher law and no such superior mind.

"It follows, therefore, that man has, strictly speaking, no 'rights,' still less inalienable rights, bestowed upon him by a source higher than himself and outside the state. There is no source beyond the state. There is no absolute. The place of the absolute is occupied by the state. A man has, therefore, only such rights (improperly so-called) which he can vindicate for himself, or which the states sees fit to vindicate for him as its beneficiary.

"The state giveth and the state taketh away. The state may be a dictatorship or a democracy. In either case its will is law. The individual has no rights that a ruler, a bureaucracy, or a majority of his fellows is bound to respect. 'Since there' is nothing sacred about an individual life, neither is there anything sacred about a majority. * * * But there is something singularly convenient about a majority. * * * The first convenience of the majority is that it is powerful. * * * Nothing so adds to the dignity of right as power enough to make itself triumphant.'

ATHEISM JUSTIFIED NAZISM

"In the relations of one state with another the only arbiter is force. 'When the Germans in the late war disregarded what we call the rules of the game, there was nothing to be said except: We don't like it and we shall kill you if we can.' Appeal to some higher rules of the game, above the Germans and above ourselves, would introduce both metaphysics and ethics into the international relations.

"But metaphysics and ethics, as we have seen, have no part in law, or justice, or right, and they must not be introduced into the question of war and peace.

"But we must return to our theme and conclude. These astounding negations of the eminent American jurist are, in effect if not by intention, an attack upon God. To put it conversely, his rejection of God made it necessary for him to deny the existence of transcendent right, justice, law, truth. That denial involves logically the denial of anything on earth corresponding to those words. He was keen enough to see the consequences and honest enough to proclaim them.

"That he lacked belief in God is often evident in his voluminous writings. One sentence will suffice. It is from a letter to a friend with whom he exchanged opinions over a period of 60 years: 'We know nothing,' he said, 'of cosmic values and bow our heads—seeing reason enough for doing all we can and not demanding the plan of campaign of the general—or even asking whether there is any general or any plan.'

"Five years later, when death seemed near he wrote: 'I am too skeptical to think that what I have done matters much, but too conscious of the mystery of the universe to say that it or anything else does not. I bow my head, I think serenely and say, "O Cosmos—Now lettest thou thy ganglion dissolve in peace."

"'Thy ganglion!' It reminds one of Haeckel's equally base concept of man as a 'placental mammal,' of no more importance in the scheme of things than the 'microscopic infusoria' in the green slime of a stagnant pond.

"The rejection of God involves not only the repudiation of the good, the true, the beautiful; law, justice, right—and be it now added, mercy and love—but the denial of the existence of any being properly entitled to be called man.

"If God goes, all goes. It is the determination not only of dictators but of those who should be the enemies of dictators, scholars, legists, jurists to see to it that God shall go. It is our duty to see that God remains."

Red Army in Rome

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following powerful, realistic editorial, which distinctly has in mind the national interest of our country, appearing in the Boston Post of December 9, 1947, entitled "Red Army in Rome":

RED ARMY IN ROME

To those Congressmen who are now quibbling over the relief program for Europe the story of the Red Army marching through the streets of Rome might well be a warning that time is running out fast if Europe is to be saved from Russian domination. According to the report, advance notice had been given to the Italian Government that the Reds would parade, but such an alarming demonstration of their military strength by massing 20,000 of their shock troops through the streets of Rome had not been expected.

These 20,000 men were not bearing arms, but they were in uniform and marched in military formation past the Communists' leaders who had taken up reviewing stand positions at the Tomb of the Unknown Soldier. The ability of the organization to summon and transfer this large body of troops from distant points in Italy, from Trieste, Milan, Turin, Genoa, and other northern cities startled the citizens of Rome, who, naturally enough, thought it meant another seizure of the Government, similar to that staged by Mussolini in the "march on Rome" in 1922, when the Fascists took over control of the Government. How well prepared and how well financed was this movement is indicated by the fact that they were well supplied with motorized transportation, thousands of them having ridden all night in big 100-passenger buses.

That open warfare did not break out was apparently due to the policy adopted by the government of keeping the police and the army off the streets so that no collision might take place between the Reds and the government forces. That prevented open warfare for the time being. But how long can this truce be maintained? It is estimated that the Communist partisans now number some 280,000, which is well above the figure of 250,000 to which the Italian Army is limited by the peace treaty.

Patience by the Italian Government at this time may be a virtue, but when these Reds march through Rome shouting "Long live Stalin" and "Death to De Gasperie," the Italian premier, patience may be strained to the breaking point. The time may soon come when the Italian Government may decide that the "whiff of grapeshot" with which Napoleon cleared the streets of Paris becomes more effective in bringing about order. For the Red Labor Party has announced its policy of "keeping all workers mobilized" and "to intensify agitation for a general strike."

Evidently the Reds, having taken a partial beating in France, are now concentrating upon Italy where they appear to have greater strength in proportion to the total population. Furthermore, the French Government, not being limited by peace treaties, has the power to call out reserve troops and has twice in the past several weeks called additional reservists to the colors in order to be prepared to beat back any more serious demonstrations by the Reds.

The question of whether these Red demonstrations will be followed by more serious disturbances up to the point of open civil war, of course, lies entirely in the lap of Mr. Stalin. But how he will decide also lies probably in the lap of the American Congress. If sufficient aid and support is supplied quickly to France and Italy, Mr. Stalin may decide that further action on his part is too risky and that he had better bide his time for a more favorable opportunity to go ahead with his program of taking over the whole continent of Europe.

Meanwhile, all we can hope for is that the peoples of France and Italy, for whom our boys fought so desperately on the beaches at Anzio and Normandy, will come to realize in greater numbers that America is still their best friend and that Stalin is a worse menace than was Hitler.

Cleaning Up the Movies

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I should like to include in the RECORD an editorial appearing in the East St. Louis (Ill.) Journal of December 8, 1947. The stand that the American people have taken on nonpatronization of theaters showing vice and crime in a

glorified light has at last brought the motion-picture industry to the realization these kind of films are not wanted.

The editorial follows:

CLEANING UP THE MOVIES

The effort of the Catholic Legion of Decency and other groups to force Hollywood to clean up its product is gaining some rather spectacular ground.

Forever Amber is being withdrawn for changes in line with moral criticism of the picture; the British movie, Black Narcissus, already has been altered in conformity with protests of the Catholic Church that it reflected unfavorably on the religious life.

Now comes announcement by the Motion Picture Association of America, which includes all the Nation's leading film producers, that its members will refuse to distribute any more films glorifying gangster names and criminal practices. The action was a result of the protest of various women's organizations against the projected production of a movie carrying the title "Al Capone." Also on the distributors' blacklist are the titles "The Capone Story," "How We Trapped Al Capone," "Dillinger," "Roger Tuohy, Gangster," "This Gun for Hire," "The Murder Ring," "Ladies of the Mob," and "Born To Kill."

Once before, in the early 1930's, the Legion of Decency forced a major change in the moral tone of the American movie by hitting the producers where it hurts most—in the box office. The mere threat of another such blow is proving enough to bring the industry into line this time.

A Good Friend of Washington

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. LARCADE. Mr. Speaker, in the Washington Evening Star of this date there appeared an editorial paying tribute to my colleague the gentleman from Louisiana [Mr. HÉBERT] for his service for 7 years as a member of the District Committee of the House of Representatives. Under leave to extend my remarks in the RECORD, I include the editorial referred to, as follows:

A GOOD FRIEND OF WASHINGTON

It is too bad that Representative HÉBERT, of Louisiana, is resigning from the House District Committee. He has been a valuable member because of the consistently helpful part he played in working for the best interests of this city.

In a service on the committee of about 7 years he sponsored much local legislation and took a leading part in writing it into law. His bill to broaden the Commissioners' powers of regulation, which he correctly regarded as one method of diminishing the volume of routine matters sent to Congress, became one of the important local statutes enacted in recent years. He initiated a series of bills affecting penal and welfare matters in Washington and the forceful efforts he made in behalf of the law for medical treatment of alcoholics, as a substitute for repetitious jail sentences, should produce beneficial results for years to come under wise administration. He directed a local police investigation that was marked by its fairness and constructive results.

In a letter he has written to Commissioner Young, Mr. HÉBERT speaks of the fact that he has benefited from service on the District Committee in a manner that would have been impossible without the knowledge thus gained of his Nation's Capital. Were it not for his appointment to another committee he would remain. This is the attitude toward District Committee service which has developed so many fine friends of the Washington community in Congress who are working to make it a better city and a finer Capital. Though leaving the committee, Mr. HÉBERT's knowledge of municipal affairs and his continued interest will remain helpful.

Resolutions of the American Legion, Department of North Dakota

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. ROBERTSON. Mr. Speaker, it has long been tradition that the American Legion has stood the champion of many national and international questions, and in all cases their championship has reflected the finest in our American thinking. Under unanimous consent, I include herewith three resolutions from the American Legion, Department of the State of North Dakota, from its twenty-ninth annual convention:

Resolution 16

Whereas the Veterans' Administration, in response to congressional curtailment of services, has seen fit to drop allowances for travel for itinerant contact officers; and

Whereas such officers are rendering a great service to rural veterans in North Dakota: Therefore be it

Resolved, That the American Legion, Department of North Dakota, petition the Veterans' Administration to reinstate such service, and that copies of this resolution be sent to our Senators and Congressmen as well as to the Veterans' Administration.

Resolution 6

Be it resolved, That the American Legion, Department of North Dakota, in convention assembled do request that a full and fair investigation of the disposal of such building materials and petroleum products and farm machinery be made, and that if such practice of shipping vital building materials and petroleum products and farm machinery in short supply in the United States be found to exist, that we urge proper legislation by our Congress to immediately halt shipment to foreign countries of vital building materials and petroleum products and farm machinery, to the end that there be made available to our veterans immediately materials from which to construct homes for their families, and also for the purpose of conserving the vital natural resources of our country; be it further

Resolved, That a copy of this resolution be forwarded to each and every one of our Representatives and Senators in the Congress, and to the national headquarters of the American Legion.

Resolution 8

Be it resolved, That we, as members of the American Legion, Department of North Dakota, in convention assembled, ever mindful of our duties as citizens and of our solemn obligation and determination to promote peace and good will on earth, and to sanctify our comradeship by our devotion to mutual helpfulness and understanding, do hereby give our sincere effort and pledge our hearty support to any and all programs having for their purpose the voluntary enlistment of personnel to fill the ranks of our Army, Navy, Air Corps, National Guard, and the organized Reserve; and be it further

Resolved, That we memorialize the National Congress, setting forth the needs of our national defense forces and requesting and insisting that the program as announced by the American Legion providing for universal military training be immediately adopted and placed into operation, this to the end that we, as Americans, may speak with force and through strength maintain the peace of the world.

Forty Years a King

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Worcester (Mass.) Evening Gazette of Tuesday, December 9, 1947, which is deserving of wide publicity. This article is a tribute to a great king, a great country, and a great people.

Since the earliest days of this country's founding no racial group has surpassed the Swedish people in their loyalty and devotion to American ideals.

In my home city of Worcester the Swedish people through the years have been foremost in contributing to the social, civic, and economic advancement of the community.

From our own knowledge and admiration of our fellow Swedish-Americans we can all well understand why, in a world of unrest, the Swedish Nation remains a rock of fundamental stability.

The editorial follows:

FORTY YEARS A KING

The fortieth anniversary of the reign of King Gustav V, of Sweden, celebrated yesterday, is of interest to all the people of Worcester because of the respect in which we all hold our fellow citizens of Swedish descent. Not only do these form a substantial portion of our population, but they are so closely associated with the city's industrial, social, and civic life, that they are indeed a vital element in its economy, its democracy, and its neighborliness. Their attachment to the country of their race is based on a pride in its sturdy and righteous qualities, and this pride all, with neighborly friendship, are happy to share.

The visits of members of the Swedish royal family, and honors conferred on some of our citizens by the royal family, have strengthened this sentiment, as has the gracious gesture of the King in volunteering to embroider an altar cloth for the Trinity Lutheran Church here. Not only the members of the churches forming the new Trinity parish, but all the people of the city, look forward to the completion and dedication of this devotional work of art.

But there is a greater significance in this anniversary than these local and parochial interests. In the midst of a changing political world, the reign of a monarch who has held the loyalty and love of his people for 40

years represents a fundamental stability. That stability is reassuring for all who are hopeful that the world will find firm bases of security. For King Gustav has not been merely a mute figure in a palace. He has been a leader. The politics of his governments might change, according to the will of the Swedish people, but their ideals of loyalty and dignity, and of their place as one of the important peoples of the world, have been embodied and led by this resolute heir of an ancient tradition of dignity and leadership.

In their monarchy, and under Gustav V as King, the people of Sweden have had a chart, and a firm hand to follow it, among the shoals of change. Under his leadership they have been able to demonstrate that however much ideas may change, ideals remain constant.

Their King is now approaching the age of 90. It is not in nature that he can be spared to them for many years more, but he has been with them through many troublous times. His example, his council, and his influence have become part of their history. They will not forget.

Fighting Inflation: A Two-Front Challenge

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. AUCHINCLOSS. Mr. Speaker, it is with a great deal of pleasure that I append to my remarks a speech made on a recent occasion by Lewis H. Brown, chairman of the board of the Johns-Manville Corp. Mr. Brown is a comparatively young man who has attained his high position through his own recognized ability. He is an American of the finest type, having been born in the western part of our country, and he knows what it is to work with his hands as well as with his brains. Recently Mr. Brown made a survey and report on western Europe and Germany which I wish would be read by every Member of the Congress. In this speech he makes specific suggestions for waging the fight against inflation and makes a clear distinction between political and economic measures. Mr. Brown's views are sensible and sound and what is more, they are workable and would be effective. I hope my colleagues will all read this truly remarkable speech. It follows:

During the past 4 months I have had the opportunity to talk to more than 10,000 business men on the question of Germany's political and economic recovery.

In my report on Germany I outlined a plan to prevent the revival of German militarism, to get Germany off the backs of the American taxpayers and to start her on the road to recovery. I also suggested several ways that the United States could render assistance in the recovery of France and Great Britain.

Since my report to General Clay was summarized in recent issues of Collier's and Newsweek and is now available in the bookstores under the title, "A Report on Germany." I do not want to repeat here today the same ground covered in those reports.

I think it is now widely accepted that there can be no recovery of western Europe without at least western Germany's recovery, for Germany is the heart of industrial Europe. And until western Europe recovers there can be no political and economic stabilization of the world.

When I prepared my report on Germany last summer it was common knowledge in Europe that Communist Russia would not cooperate in any way to bring about the political and economic stabilization of western Europe. Her policy was then and is now to thwart any European recovery program and to prevent the unification of Germany on any other terms than her own.

With this in mind I suggested last July that we could expect no cooperation from Russia at the London Conference and therefore should proceed to unify the three western zones of Germany as a basis for western Europe's recovery.

The convening of the Foreign Ministers in London last week has not changed the basic picture. If anything, the Communist-inspired disorders and uprising in France and Italy give us further proof of Russia's determination to upset the European apple cart.

Under the circumstances, we should be realistic. For we have a big stake in the recovery of Germany and western Europe. We should proceed without delay to unify the three western zones of Germany. Until that is done we will simply be pouring more of the American taxpayers' funds down a rat hole as we continue to carry Germany on our backs.

Whatever help we give should be provided on a declining basis. By that I mean it should be substantially reduced each year over the next 5 or 6 years with the ultimate objective of having Europe stand on her own feet. Our aid should definitely be in the form of incentives to produce and should not be in the form of another dole or boondoggling operation. I think we are all agreed on that.

With that brief background I would like to discuss the effect such aid to Germany and to western Europe may have on the economy of the United States and what may happen if we fail to pursue a consistent, constructive, and realistic policy. If we realize the pitfalls ahead of us perhaps we will have the common sense to avoid them. Or, if we cannot avoid them, perhaps we can minimize them to some extent.

The gravest threat to our economy will be the adoption or continuation of policies which unnecessarily increase the inflationary trends that are already only too obvious. Most of us recognize these postwar inflationary pressures and realize they require Government action. In a political year, it is particularly difficult for those in political office to take any steps that might alienate the support of a certain group even though the country as a whole would benefit by that step.

Yet the times call for such action. Fighting inflation is a two-front challenge. It calls for statesmanship of the highest order if we are to assist Europe and at the same time keep under control the inflationary pressures which have already caught us in a vicious spiral.

When we abandoned controls we moved forward. We cannot afford to move backward now by again imposing controls and restrictions which retard production or discourage the investment of capital in new ventures or improved tools.

Such controls are definitely inconsistent with what we are trying to do to start Europe on the road to recovery. Instead of leading Europe out of her economic and political chaos we would be setting a poor example by adopting the same economic planning that is holding back Europe today. It is a matter of record that the planned economies of Europe have failed to make anywhere near the substantial recovery from the war that we have made here.

How the administration will deal with prices in general, with farm prices in particular, with purchases of food and supplies for Europe, with interest rates, wages, credit, taxes and the budget should be of deep concern to all of us.

The policies which the administration will adopt in the immediate period ahead can bring about a most serious inflation. Or they could help to restore a balanced economy. Or they could readily tailspin us into a severe depression.

At the moment the administration is again contemplating price and wage controls. In my opinion, this is a false solution to the problem. Price and wage controls are necessary in wartime. They have no place in our peacetime economy.

We should let supply and demand determine both prices and wages. Prices of raw materials, food, wages, and finished goods in the United States, should be left free to perform the most important of their historic functions, namely, to stimulate production and to permit competition to bring more value for the money.

The fact that our markets have been freed of most controls is why the United States has become the food basket of the world and the main reliance of millions of starving people abroad.

In 1946 we made the historic decision to abandon price controls, government rationing, allocations and many other measures which are necessary in war but which in peacetime are trappings of socialism. But every country in Europe has continued controls of some sort or another. We now produce 40 percent more food than before the war and our factories are turning out from 85 to 90 percent more physical output than before the war.

Where is there any other country that can come even within hailing distance of our production records? Most other countries are still below prewar levels of production.

We in this country have balanced supply and demand by letting prices rise to stimulate an increased supply. That is why we have surpluses to ship to Europe. But in Europe the planners have attempted to balance supply and demand by rationing supply and attempting to reduce demand. Instead of surpluses, there is in Europe underproduction, refusal of farmers to sell at fixed prices, austerity and outright hunger in the cities.

Admittedly a free market does not work to the complete satisfaction of everybody, but for the national economy it works vastly better than letting bureaucrats dream up prices from swivel chairs and enforce them on the producers.

Yet there is no doubt that rising prices can become dangerous when they pass the point where they increase production and go into an inflation spiral. It is for that reason that the Government should throw its full weight into the balance to check wage increases that do not help the employees but simply raise prices further.

From the day Japan surrendered to the present time our Government has used all of its power to maintain and increase food prices and to increase wages. The responsibility for the inflation that has already taken place must be laid on the doorstep of the administration.

There are a number of factors that have caused high food prices in the United States. First and perhaps most fundamental, is the enormous manufacture of money during the war through deficit financing, accompanied by the war boom, full employment, and the need to fill the delayed wartime demand for goods.

Among other factors causing high prices are the export boom and the short corn crop.

There is a further reason which, under present conditions is unjustifiable at this time.

Prices have been boosted by Government price-pegging operations and by extremely

heavy procurements of foods at the wrong times or by wrong procedures.

The entire legislative program for raising food prices and putting a floor under agricultural prices by Government subsidies should be placed under review. This program was the product of the low-price era during and after the depression of the thirties and the Stabilization Extension Act of 1942. Now the problem has changed drastically from once very low to present very high agricultural prices.

For example, the Commodity Credit Corporation is still compelled by law to support prices of certain farm products at 90 percent of parity. As a result of these legislative obligations, the CCC has entered the market and bought up large amounts of such farm products as potatoes, eggs, and so forth.

You may recall that last year substantial Government funds were used to buy up potatoes. They were then piled in heaps and saturated with kerosene to render them unfit for human consumption. This is a vicious form of "ploughing under" that takes us back to the worst traditions of economic planning during the great depression.

Only recently Senator MCCARTHY, of Wisconsin, reported that the Army had purchased 1,600,000,000 pounds of sugar at a price of $1 a hundred pounds above that quoted on the world market. The Army replied that it was buying sugar on the recommendation of the State and Agriculture Departments. It did not disclose the amounts. Senator MCCARTHY declared that he did not "know what right the Army had to help raise the cost of living when the administration is attempting to curb inflation."

In short, Government price operations have repeatedly worked against the interests of the consumer who is valiantly attempting to hold the cost of living within reach of his pocketbook by shifting from high-priced to somewhat lower-priced foods. Instead of allowing the consumer to buy when food prices are declining, the Government enters the market with the taxpayer's funds as the taxpayer's main competitor. Obviously there is something wrong somewhere.

Purchasing for export at the wrong time has also helped materially to make prices unnecessarily high. Recently the Commodity Credit Corporation made very heavy purchases of wheat in the open market. In a 4-week period about 58,000,000 bushels of wheat were acquired in addition to purchases of flour.

I have not yet seen a denial from Washington that $19,000,000 of wheat was bought by a Government agency on 1 day with the result that wheat rose $1 a bushel in 1 week.

Is it necessary for the Government to buy in this fashion when such purchases constitute the marginal amount that is sure to make the pitcher overflow?

Cannot more discretion and good sound purchasing sense be used?

At times it seems as if the Government, although compelled by law to buy, performs its purchasing function in utter disregard of what happens to prices and to the cost of living of the consumer-taxpayer whose sweat furnishes the money.

I do not recommend the abolition of price floors under farm products. But I do recommend their suspension for a year or two at a time like this. The marginal demand for food resulting from exports abroad is too much of a threat to the buying power of the American housewife's pocketbook unless procurements are skillfully handled.

I do not criticize the Government purchases of food for Europe. I strongly favor the export of food under a program which will utilize it as an incentive to start Europe on the road to self-support.

What I do criticize is the way purchases of food for Europe are handled, the way the Government has continued to support food prices when demand exceeds supply and the way the Government has continued to apply depression and wartime remedies when the depression is long past and the war is over and we have an inflationary boom.

Unfortunately it appears that when the Government finally hears the voice of the people crying out in protest against high prices the only remedy the Government can think of is to apply wartime controls to peacetime conditions.

What is really needed is for the Government to make intelligent use of some of the peacetime measures it has forgotten to use. Moreover, the Government ought to stop doing some of the things that cause inflation. These things may have been beneficial at the bottom of the depression but are positively detrimental at the peak of an inflationary boom.

What is needed are some gentle deflationary pressures.

Once the Government gave evidence of a clear understanding of the right way to deal with the causes of the problem there would be a good chance of getting a large measure of voluntary cooperation from businessmen. This cooperation would help to stop the inflationary spiral that is just as dangerous to business as to labor, the farmer, and the public. But businessmen cannot do this until Government first does its part.

But when the Government does everything it can to increase farm prices and then encourages one wage increase after another because food prices are raising the cost of living, business cannot be expected to do more than it has done to keep prices down.

However, it does little good to merely criticize the Government. Even though the President—in matters of economics—seems to accept the advice of the managers of politics rather than that of the managers of finance and business, we must remember that it is still our Government and it is up to us to continue to urge sound and constructive measures.

If sound measures are not adopted, then, when economic trouble develops later the record will be clear that the blame lies with what has been done by the Government and not with what has been done by business.

Let us risk the danger of oversimplification in an effort to state what ought to be done by Government, farmers, bankers, labor, and business.

Let us first determine where we were in the inflationary spiral 28 months after World War I on Armistice Day, November 11, 1918. Wholesale commodity prices in those 28 months had risen 16 percent and were about 135 percent above prewar. Then came the 1921–22 recession after which wholesale prices stabilized for a long period of years at roughly 45 percent above prewar.

Compare what happened after this war. In the 28 months after VJ-month—August 1945—wholesale commodity prices have risen over 50 percent instead of a mere 16 percent as after the First World War. Moreover, 28 months after the First World War prices were close to a peak and it was only a few more months to the downturn. In the present period, however, the spiral has taken a new violent turn upward and no downturn is as yet in sight.

Even in relative purchasing power, the farmer is about 68 percent better off than before the war and the factory wage earner, in spite of the rise in living costs, is 25 percent better off.

The rest of the population is either no better or no worse off than prewar.

This economic imbalance is just as great a danger to our continued prosperity as was the imbalance existing in 1928 when the relative purchasing power of the farmer and the laboring man was on the down side.

The other great danger is that the inflationary spiral threatens to go on and on while the Government prescribes political remedies for an economic disease.

What are the right remedies? In my opinion, here is what should be done, and done now:

1. Food prices must be turned downward. We should not try to do this by restoring Government price controls. Such controls merely choke off production, create shortages and bottlenecks, and set up black markets. Instead of controls, the Government should suspend for 2 years all of the depression measures, subsidies, and price parities designed to get farm prices up and keep them up.

2. Where the Government buys for export or lends money to foreign countries which in turn buy in our markets, the major purchases should be made under a centralized purchasing control agency. This agency would receive the cooperation of the top experts from business in each commodity. Thus, our Government, in buying, would minimize its competition with the housewife and our money loaned abroad would be used so as to least disturb the stability of domestic prices.

3. Instead of the Government trying to control prices, wages, and allocate commodities internally in peacetime, the Government should take full responsibility for allocation of materials in short supply for shipment abroad. This can be done through export licenses—a system of control still in effect.

4. The Treasury and the Federal Reserve banks should bring about mild deflationary pressure by simply stopping the depression and wartime policy of holding interest rates down. Letting interest rates rise would give investors an inducement to again put their money into long-term securities. With moderately higher interest rates the Government could begin to get some of the war-created deficit money out of the banks and into the hands of real investors, thus siphoning off as much as possible of this money supply which in the current market tends to bid up prices of goods. Such mild measures gently applied would also tend to tighten bank credit and thus put a brake on the inflationary spiral.

5. Just as soon as these measures by Government had turned food prices downward, then the President, the Cabinet, and Congress must take a firm stand against any further wage increases. Once food—the main item in the factory worker's budget—turns downward, then the leaders of organized labor will, I believe, cooperate by agreeing with the Government to forego demands for wage increases for at least 1 year.

6. On the basis of a year's moratorium on wage increases, the Government could then ask basic industries to stop price increases for a year. Since the spread between factory prices and retail consumer prices is abnormal, the Government should ask all distribution and retail businesses to reduce prices wherever possible as their contribution to stopping the inflationary spiral.

7. While maintaining an adequate national defense and giving necessary support to the Marshall plan, Congress should insist upon at least a $2,000,000,000 reduction in Federal expenditures as compared to this fiscal year, at least a $3,000,000,000 reduction in the Federal debt from surplus, and, finally, a tax reduction through community-property measures and any other tax-reduction methods compatible with a balanced budget. The community-property tax measure should be made effective as early as possible next January. Reduction in expenditures and in the Federal debt, together with tax-reduction measures, would help put a mild damper on inflation and at the same time leave the average housewife a little more of the family pay envelope to get into balance with the cost of living.

8. With these measures and a free market in effect, instead of Government price and wage controls, the Government and the press should urge housewives and all purchasers to avoid wherever possible buying commodi-

ties in short supply and to switch to commodities where the supply is better and prices are being lowered.

I am sure that if statesmanship prevails it will be possible under this program to ease the inflationary pressures due to ill-timed, inefficient Government purchases, parity and subsidy farm-price policies, low interest rates, wage increases that are nullified by accompanying high prices and unrestrained granting of credit.

Statesmanship is also needed to adopt and follow through with a sound, constructive tax policy, a policy that calls for a reduction in taxes as a result of increased efficiency and economy in Government while at the same time spending for absolutely necessary purposes.

If our foreign aid is given wisely and is of a nature that stimulates production in Europe, there is no doubt that we can help to get western Europe started on the road to recovery. A restored western Europe will not only be a bulwark against the westward march of communism but will be a potent factor toward the political and economic stabilization of the world.

If we are to avoid serious economic repercussions in the United States as a result of superimposing our foreign-aid program upon our already inflated economy, we must boldly tackle the problem and set aside partisan politics.

As I have said, the critical times in which we live require statesmanship of the highest order. Inevitably, such a program will not please everybody, but, in my opinion, it is required by our national interest.

Freedom Train Visit to Boston

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following speech made by me at a luncheon conducted by the Advertising Club of Boston in the Hotel Statler, Boston, Mass., in connection with the opening of Rededication Week in Massachusetts and the visit to Boston of the Freedom Train:

Mr. Chairman, distinguished and invited guests, ladies and gentlemen, at the outset I wish to express my gratitude to all of the officers and members of the Boston Advertising Club for your invitation to join with you in your contribution to the program of Rededication Week.

The advent of the Freedom Train in Boston, carrying with it the tangible evidences of the enshrinement of our democratic ideals, furnished to each of us a golden opportunity to look upon the handiwork of those who secured for us the blessings which we now enjoy. Since many of the sentiments in those priceless documents found their origin in the atmosphere of liberty, which has always been characteristic of Boston and vicinity, we of Boston and of Massachusetts take a special pride in the visit of the Freedom Train, and we shall need no urgent plea to our people to reacquaint themselves by seeing the historic documents while they are in our midst.

The assembly of any representative portion of our citizenry—no matter what the occasion—is always a good and wholesome thing.

It becomes more so when a group of public-spirited citizens like yourselves take the time and make the effort to gather together and pay tribute to the basic charter of liberty, which guarantees, as stated in the language of article I of the Appendix to the Constitution, "the right of the people peaceably to assemble."

It is indeed a sobering thought to realize that in many parts of the world today the right of assembly—and all the other host of precious rights which some Americans indifferently take for granted—are denied to whole nations of people.

Even more than 2 years after the end of a terrible war, fought ostensibly to vindicate those rights, we are faced with the frightening fact that their free exercise is denied and extinguished by the ruthless and unbridled use of dictatorial power.

In those nations behind the "iron curtain," where the puppets and the puppet masters are unrestrained by the laws of God or man, the people assemble only by leave of, or at the command of, their masters, and then only in fear, and to do their master's will.

If they have constitutions, they are not charters of liberty, but devices for control, domination, and exploitation.

If they have bills of right, they are not respected and held sacred, but subject to suspension and even abolition at the arbitrary will of the rulers.

And the dignity of man and the doctrine of inalienable rights in those lands are empty phrases, because a creature of the master state has no dignity, and his rights are the permissive grants of the master.

It is because of all these things that I can truthfully say "it is good for us to be here."

We need, more than any other people, the inspiration of rededication.

Having by the grace of Almighty God, emerged victorious from two world-wide holocausts, we have not suffered the deprivation of any of our liberties, and, as a result, some Americans have grown callous to their preciousness.

We declaim and exult in our rights and blandly forget that they entail solemn obligations of citizenship.

We glory in the vigor and vitality of our priceless American heritage, and supinely allow it to become emaciated by the virus of hatred and prejudice, and the cancer of civic indifference.

We are the proud inheritors of a system of government the like of which has never been devised by any other people on earth, and we stress and insist upon our right to criticize it, as we should, but sometimes the criticism goes to the utter exclusion of any defense of its unique virtues.

I do not make these indictments lightly. As a matter of fact, I regret that it is necessary to assent to their truth. Personally, I would much prefer to believe that our civic consciousness, our national integrity, and our vigilance for Americanism were beyond reproach.

But there is evidence that does not permit such belief.

Millions of our citizens do not even make the effort to vote in national and local elections.

Can it be denied, then, that there is an urgent and compelling need for rejuvenation of our civic consciousness?

But personal neglect of civic duty on the part of some is not the only indication of our lack of appreciation of the American heritage.

Far more deadly is our lackadaisical attitude toward the manifestations and eruptions of un-American conduct in our social and civic life. These range all the way from overt acts of hatred for minority groups to so-called intellectual skepticism concerning the worth and validity of our institutions.

The breeders and disciples of hatred, bigotry, and prejudice must be stamped out of our midst. That is the duty of all of us, the duty of all leaders of religion.

We must bear in mind that lack of protest against any deprivation of civil rights—either those of any individual or those of any group—means acquiescence in un-Americanism.

And what can be denied one person or one group by the prejudice of the dominant majority today can be denied to another or to any group tomorrow.

The overriding need, then, is for vigilance.

Vigilance to prevent the rise of racial prejudice.

Vigilance to prevent the growth of religious bigotry.

Vigilance to prevent the development of class hatred.

For these three things are festering diseases which will waste the fiber of America and destroy the sinews of her strength.

Our vigilance must be accompanied by tolerance—the tolerance of understanding, the tolerance of brotherhood, the tolerance that permits man to live in dignity and peace.

We must be intolerant only of social, racial, and religious intolerance.

Another manifestation of typical American indifferentism is lack of awareness of the more subtle attacks upon our ideals and institutions.

I think we will all agree that of the precious freight of documents in the forthcoming Freedom Train, the Declaration of Independence and the Constitution of the United States, are the most hallowed symbols of our political and legal freedoms.

While the documents themselves are symbols, the doctrines expressed in them are the basis upon which the whole structure of government is founded.

The natural law concepts of the Declaration of Independence were, and are today, the American challenge to tyranny. No individual and no nation can depart from the law of God without ultimately meeting disaster.

The justice of the preamble to the Constitution is not an abstract theory but a goal and an ideal to which we have been constantly striving.

The fine balance which the political and legal wisdom contained in these two documents has produced is the secret of the success of our democracy.

Because of it we have avoided the error of the political philosophy which teaches that the common good is completely subordinate to the individual good.

That would be anarchy.

Also because of it we have avoided the delusive doctrine that the individual good is completely subordinate to the common good.

That would be totalitarianism.

We have adopted the middle course—and that is democracy.

Yet, only the other day I read a polemic from the pen of a brilliant, highly educated associate editor of one of our leading and most respected journals, in which he stated that the higher law of the Declaration was formulated by Thomas Jefferson "under the necessity of justifying open rebellion against the law of the land, act of treason, and the breaking of the oath of allegiance to a lawful sovereign."

A little further on the same author asserts that "As to the theory of the inherent and inalienable rights bestowed by the Creator, I consider it sheer, convenient nonsense, in just about the same category as the other eighteenth century French assumptions concerning the natural man and the noble savage."

It is not my purpose to quarrel with the writer of these cynical comments. My own brand of tolerance concedes to him his right to his own brand of skepticism.

It is evident, however, that if the hope for our future lies in a choice between the faith of the founding fathers and the skepticism of modern-day intellectualism, it would be crass folly to place our reliance in a philosophy that denies natural rights and characterizes democracy, as does the same author, as

nothing more than "obedience to the public will."

It is that faith of the founding fathers to which we must return.

Reaffirmance of that faith is essential to our survival.

You are all aware that there is a conflict of legal, moral, and governmental ideologies raging in the world today.

In the political arena, this conflict is between the idea of the free nation and the idea of a puppet, slave state—of the dignity of the human being—of man, or the modern totalitarian state supreme.

In the economic arena, the conflict is between the philosophy of free enterprising and competitive capitalism of individual initiative, and that of controlled, state-dominated communism.

In the social arena, this conflict is between the rigidity of a state-enforced proletarianism and the fluid intercourse of a society of free citizens.

In the religious arena, this conflict is a struggle of survival between a civilization built upon belief in God and the traditions of His heritage and an alien civilization based upon the philosophy of atheistic materialism; of love or hate.

There is no room for debate upon the question of where we shall stand. If world order is to ensue from this period of postwar adjustment, such ordering must come from law and justice, and not from power and force.

Each of us can contribute to that ordering by accepting and performing the obligations of our heritage.

We can do it by an alert and active participation in the processes of democracy by fulfilling the duties of American citizenship.

We can do it by increased awareness of an appreciation for our individual rights and liberties.

We can do it by acting, thinking and living as Americans with justifiable pride in our past and in our accomplishments as a people, and looking with confidence to the future.

We can do it by recognizing our obligation to the world to maintain our free institutions as an example of democracy preserving the rights and dignity of the individual.

We can do it by rededicating ourselves to God, to our country, to the Constitution, and to the service of our fellow men.

NEWSOME & CO., INC.,
Boston, Mass., October 10, 1947.

Congressman JOHN W. MCCORMACK,
Dorchester, Mass.

DEAR CONGRESSMAN MCCORMACK: I am taking this opportunity to tell you how much I enjoyed your fine address to the Advertising Club last Tuesday on the occasion of Rededication Week. Also, I want to thank you for letting us have your own copy of the speech for the newspapers.

Enclosed please find the original as well as a new copy which I was happy to have made for you. You will notice that the fresh copy includes some of your extemporaneous remarks not found in the original.

Sincerely yours,

PAUL A. NEWSOME.

Socialism and Communism

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. DONDERO. Mr. Speaker, under leave granted by the House to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial by Hamilton Fish in Today's World showing the difference between socialism and communism. It is a short analysis of the two theories, and I commend it to the reading of my colleagues for the information it contains:

THE DIFFERENCE BETWEEN SOCIALISM AND COMMUNISM

(By Hamilton Fish)

It is surprising how little the American people know about the fundamental principles of socialism and communism, and the difference between the two. Ask any of your friends and you are apt to get an evasive answer.

One-half of Europe is under the Communist control of Soviet Russia and most of the balance of Europe is under the rule of Socialist governments, including the two most powerful western powers, Great Britain and France. The Socialists of Europe are, generally speaking, antireligious as are most Marxists, particularly in France, Italy, and Germany and to a lesser degree in England. The economic aspects of socialism and communism are very much the same. Both these social and political ideologies are derived from the same source—the Manifesto on Communism by Karl Marx, published in 1848. This is a statement of fact that will not be denied by either the Socialists or Communists.

It is of the utmost importance that the American people understand the aims, purposes, and principles of both the Socialist and Communist parties.

The Communists claim that socialism is the first step or stage in building a Communist state. Both socialism and communism are opposed to our American system of free enterprise and private ownership of property. They both advocate government control and operation of industries, transportation, and distribution systems. For 30 years Soviet Russia has carried out a socialist program under a terroristic dictatorship. The results have been the destruction of liberty and freedom and the creation of a police state honeycombed with concentration camps and supported by human slavery. Charles Sumner aptly said, "Where slavery is, there liberty cannot be, and where liberty is, there slavery cannot be."

Most Socialists will approve of the huge concentration of governmental powers and the seizure and control of means of production and distribution of goods that have occurred in Soviet Russia. They find no fault with the establishment of a Socialist state there. What many right-wing Socialists balk at is the abolition of democratic processes under the Soviet totalitarian state.

What the American people should understand is that the economic aspects of socialism and communism are alike as two peas in a pod.

The Socialists deplore the brutal and bloody Communist direct-action tactics instead of their professed evolutionary one, by the ballot instead of by the bullet and force and violence. To most Socialists the oppressive Communist totalitarian dictatorship is contrary to their fundamental beliefs in freedom and democratic concepts of government. Nevertheless, the various steps taken by the Soviets to transfer the ownership of industries to the state meet with their qualified approval. That is precisely what the Socialists would undertake to do if elected to power in the United States, just as they are doing in England and France today, and thereby ruining the economies of both hitherto prosperous nations.

The Socialist Party of the United States in its declaration of principles stated a quarter of a century ago that its purpose when in power is "to transfer the ownership of industries to the people (government), beginning with those of a public character, such as banking, insurance, mining, transportation, and communications."

That is what the Socialist Labor Party has already done in England except for insurance, which will probably come next.

Karl Marx, the god of both the Socialists and Communists, was most explicit in favor of "centralization of credit in the hands of the state by means of a national bank with state capital and an exclusive monopoly."

Lenin, the father of modern or oriental communism, understood what the control of the banks by the government really meant. He said: "One state bank as huge as possible, with branches in every factory, is nine-tenths of the Socialist apparatus. * * * Through the nationalization of the banks, they—the small businessmen—may be tied hand and foot."

The British Socialist leader, G. D. H. Cole, was forthright in his explanation: "Before a labor government nationalizes any industry it should first nationalize the banks. With the banks in our hands we can take over other industries at leisure."

The British labor government has been in power several years and has demonstrated its capacity to undermine and wreck the system of free enterprise that made the British Isles the center of world trade and banking. That formerly robust and prosperous nation in the short space of 2 years has been laid low economically and financially by the incredible follies and incompetence of the labor government and its Socialist program.

The coal mines, which have been the foundation of British economic expansion and wealth, have all closed down while the miners live on family subsistence pay and indulge their sporting proclivities in training and racing whippets.

We have gone a long way in the United States down the dismal trail of collectivism. The terrible example set by communism in Soviet Russia and the tragic failure of socialism in Great Britain should call a halt to further attacks on our American system of private enterprise based upon private initiative and reasonable profit which has made our country the richest, most prosperous, and freest in the world. It has also made our American wage earners the best paid, the best housed, the best clothed, the best fed, the best educated, and the most contented and free. Half the population of Italy, Germany, and Great Britain would migrate to the United States if we would let them in, and 75 percent would flee from Soviet Russia and its satellite countries if they knew how to escape from the terror and brutality of these slave and police states. Whole nations have made and will make mistakes and have been compelled to turn back or turn aside. It does not follow that because some industries can be socialized that all industries can.

There is no desirable social or industrial reform in the interest of the people that cannot put into effect through our republican system of government, instead of turning to the radical principles of Karl Marx, founder of both the Socialist and Communist Parties. There is no need for either of them in free America.

Early last month, Winston Churchill in addressing a Conservative Party convention declared: "The machinery for the totalitarian grip on British society is being built up and perfected. One could almost wonder whether the government do not reconcile themselves to the economic misfortunes of our country to which their mismanagement has so notably contributed, because these misfortunes give a pretext for establishing even more controls and ever larger bureaucracy. They make mistakes which make things worse. As things get worse they claim more power to set them right. Thus they move nearer to the scheme of the all-powerful state in which the individual is a helpless serf or pawn."

The wartime Prime Minister put his finger on one of the main difficulties or sore spots when socialism is actually applied. It requires either the Soviet type of ruthless Communist police state or a drastic totalitarian Socialist government to make it halfway workable. No matter how altruistic the Socialist remedies or reforms may sound, they are ineffective unless labor and the people are strictly regimented by the government. This invariably means the loss of personal liberty and economic freedom for both labor and the people. Until the average citizen, whether British, French, American, or any other nationality, grows wings and is willing to be regimented and ticketed by the state without coercion, neither socialism nor communism will work. The only alternative is a totalitarian state with all its enforcement apparatus, even including concentration camps as in Soviet Russia.

This Frankenstein of state socialism or Soviet communism requires a government based either on austerity or terror and the consequent loss of human freedom which hitherto has been the goal of all free nations.

Despite the fact that Britain won the war militarily, it has lost it by adopting the principles of national socialism, which requires a totalitarian state to be made effective.

The Conservatives in England today might well quote from Goethe, who said: "I hate bungling as I do sin, but particularly bungling in politics, which leads to the misery and ruin of many thousands and millions of people."

The proof of the pudding is the eating. The proof of 30 years of communism is the lack of eating and the lowest standards of living of any nation except China and India. Two years of Socialist government in England and France have brought about a stagnation of production and the decline of trade and living standards.

Speaker JOSEPH MARTIN said a mouthful of truth when he announced recently that a majority of Americans want to help Europe but think it is high time Europe was going to work and beginning to help itself. The American people want to know when are the Socialist governments of Britain and France going to increase production by increasing hours of labor, instead of our footing the bill for increased wages and less work. Speaker MARTIN is one of the most influential leaders in the Republican Party and is the choice of Today's World for Vice President in case of the nomination of General MacArthur or General Eisenhower for President on the Republican ticket.

Today's World favors spending a billion dollars of our Government's funds to supply the starving people of Europe with food and necessities of life including clothes and medicines, but not $1 to underwrite and keep in power Socialist governments in England, France, or any other foreign nation.

We are doing a disservice to the people of these nations by spending our wealth to rivet socialism on them. Its disastrous and ruinous effect on the economies of these nations and their people would soon result in an overwhelming repudiation by their own voters, if we stopped bailing out foreign Socialist governments.

Price Control

EXTENSION OF REMARKS
OF
HON. PARKE M. BANTA
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. BANTA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Farmington (Mo.) Press of December 5, 1947:

See where Congress is debating over whether or not it should reimpose price controls to halt the constantly rising price trend. We might put in our two bits worth by saying that the only way to hold prices down is to have a plentiful supply. And if Congress would quit giving all our food and merchandise to Europe we would have a sufficient supply to meet the demand in this country and prices would stabilize.

Naturally, we don't want to see anyone starve to death. But these Frenchmen, Englishmen, Italians, and so on wouldn't be so hard up for food and clothing if they would quit having revolutions, strikes, demonstrations, etc., and get down to work. If they worked as hard as the average American citizen, they would soon be on their feet again. But why should they go to work as long as they can make us sucker enough to support them. Russia doesn't give them anything, yet our Government is afraid they might become friends of Russia if we don't kick in. How about playing a dirty trick on the Russians and let them have all of Europe.

Why Italy Requires Prompt Help

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very timely and thought-provoking editorial entitled "Why Italy Requires Prompt Help," which appeared in the Evening Gazette of Worcester, Mass., Tuesday, December 9, 1947:

WHY ITALY REQUIRES PROMPT HELP

Sunday's Communist march in Rome was no "march on Rome"; that is, it did not seize the government in the manner of the Fascist Blackshirts of 1922, nor did it openly threaten to do so. But it was a sharp and ominous gesture just the same.

Only a few hundred Partisans had been expected for a week-end convention. Instead, between 20,000 and 30,000 arrived from the industrial north and paraded grimly in unarmed but precise military units. They had obviously been well drilled, and Communist insignia decorated a motley attire that included Russian fur hats, American army jackets, and Italian army uniforms. The paraders had been driven long distances by night for a plain attempt to cow Premier Alcide de Gasperi and his Christian Democrat government.

Whether or not the vigorous Schuman government's measures in France have led the Communist drive headquarters at Belgrade to switch the main pressures to Italy, Sunday's march in Rome had been carefully staged and timed. For the twenty-thousand-odd Communists, under their commissar commanders, were supposed to be a sample of an estimated 380,000 similarly organized and ready. The parade was a demonstration of the Partisans' ability to mobilize under orders. It was accompanied by a burst of anti-American and pro-Soviet propaganda in such Communist papers as L'Unita. It came on the heels of a Communist ultimatum, threatening a general strike and other outbreaks unless the government, by tonight, punishes police who put down a Communist riot at Primaville, near Rome, last Friday. There is not the slightest doubt that such an ultimatum is aimed at political upset rather than economic or social justice.

Italy is second only to France on the list of European prizes coveted by the Communists, and may be even more susceptible to Communist pressures. The country has 2,200,000 Communists, who rounded up 4,000,000 votes for 104 assembly seats in the 1946 election. That 20 percent of assembly seats, however, has never carried enough power so that the Communists can hope to win Italy by democratic processes. Their exclusion from the De Gasperi Cabinet last June forced them to resort to violence.

The yardstick of De Gasperi's strength will be the firmness with which he rejects the ultimatum. He does not possess much military power to face the 280,000 Partisans. Italy's police and army are limited by the peace treaty to 250,000, of which most units must watch the Yugoslav border. But the government has political shrewdness, and the Premier's move to enlist a couple of small moderate left parties in his ranks is a good sign.

This week may tell the story. For at midnight next Sunday, 30 days after the September 15 treaty ratification, the few remaining Allied troops must be out of Italy. The Communist leaders, Longo and Togliatti, are well aware of that. What the United States will do if De Gasperi asks American troops to remain is uncertain. It is certain, however, that the situation in Italy requires the psychological, as well as economic, bracing of prompt action on emergency aid from this country. The march in Rome last Sunday was evidence enough.

Brake on Housing

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post, Washington, D. C., of November 26, 1947:

BRAKE ON HOUSING

One segment of the housing program is grinding to a stop for want of legal authorization. The amount of mortgage insurance which the Federal Housing Administration can grant under title VI—emergency housing for veterans—has been limited by Congress to $4,200,000,000, and that maximum was reached about 10 days ago. Congress extended this authorization just before taking its summer recess, but it underestimated the demand for mortgage insurance of this type. Now it must act again with great speed if the building of homes for veterans is not to be seriously curtailed.

The importance of this aspect of the housing program may be seen from fact that approximately 30 percent of the new private housing currently placed under construction is being financed under FHA title VI insurance commitments. It is this title which gives special encouragement to large-scale construction of low-cost housing both for sale and for rent. The country is fortunate in having builders give special attention to housing of this type, although, of course, it does not take the place of low-rental public housing for families that cannot afford to pay for decent private dwellings of any kind. The hopeful momentum that has been attained in private low-cost housing is likely to be lost, however, unless

Congress acts quickly to extend the FHA's authorization.

Congressman SMATHERS and Senator SPARKMAN have introduced a bill to extend FHA's authority under title VI by a billion dollars. On the House side this bill has gone before the Banking and Currency Committee, of which JESSE P. WOLCOTT is chairman. In our opinion that puts a heavy responsibility on Representative WOLCOTT. The bill is not likely to be controversial. Yet it will need energy and push behind it if the veterans' housing program is to avoid a tragic bogging down. We think Mr. WOLCOTT ought to call an immediate hearing and report the bill out so that it may be passed at the extra session.

The Panama Canal in the Atomic Age

EXTENSION OF REMARKS
OF
HON. DAVID M. POTTS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. POTTS. Mr. Speaker, in accordance with permission unanimously granted to me today to extend my remarks in the Appendix of the RECORD, I insert a radio address made by me on the subject entitled "The Panama Canal in the Atomic Age" over the American Broadcasting Co. network, Monday, December 8, 1947.

The gist of my radio address was conveyed to the people of the eastern seaboard by television Tuesday evening when I participated in the Walter Compton news program over television stations WTTG in Washington and WABD in New York.

The radio address follows:

Friends, as you all know by now, the President of the United States has transmitted to the Congress a recommendation that the Panama Canal be converted to a sea-level canal. This request, if acted upon by the Congress, will cost approximately 2½ billion dollars. We may well ask ourselves why the Congress and the people of the United States are being asked to provide funds at this time for the Canal.

The answer is quite simple. The report of Gov. Joseph C. Mehaffey, of the Canal Zone, and the Administration's transmission of the same reflect a profound anxiety as to the vulnerability of the Canal in event of any emergency. May Almighty God forbid that a new holocaust—a new war—be visited upon us, but we are not children and brutal as it is, we must face reality in this Atomic Age.

We know now, but it could not be disclosed then, that as the year 1939 and the war in Europe approached, the United States had become, and is now, profoundly apprehensive about the Panama Canal—not only as to its defense, but also as to its capacity to accommodate the extra large battlewagons then being built for our Navy. You see, when the Canal was built, the locks were made 110 feet wide. At that time that width was considered more than ample to cover the needs of our Navy for many generations. However, naval building changed so greatly in the interval between the two World Wars that by 1939 we had naval vessels having beams greater than 110 feet. These ships could not transit the Canal. Incredible as it may seem, these ships had to go around Cape Horn at the tip of South America to get to the Pacific from the Atlantic or vice versa. They were thus subjected to greater danger from enemy submarines as well as delay in getting into action in the Pacific theater of the war. So far as these ships were concerned, the purpose of the Canal, which was to expedite the transit of ships between the Atlantic and Pacific Oceans, was defeated. We can only speculate on the number of lives lost, directly and indirectly, as a result.

A third locks project designed to accommodate these giant men-of-war was undertaken with a rush. However, the war engulfed us long before its completion. This project was discontinued because of the urgency of vital materials for other war purposes. The problem should have been tackled by previous administrations long before the advent of war forced its postponement.

The experiences of World War II indicated the need of reconsidering our interoceanic needs in peace and in war. As a result, the Governor of the Canal Zone was charged by an act of Congress with making a comprehensive review and study, with approximate estimate of costs, of the means for increasing the capacity and security of the Panama Canal to meet future needs of interoceanic commerce and national defense. He was also to make a study to determine whether a canal or canals at other locations, including consideration of any new means of transporting ships across land, might be more useful to meet the future needs of interoceanic commerce or national defense than can the present Canal with improvements. This is the report which has now been transmitted by the President to Congress.

It has been estimated that the Canal will not be taxed to capacity by commercial ships desiring transit for many years. Consequently, present consideration of Canal improvements is impelled principally by reasons of national defense, especially since the advent of the atomic bomb.

Of course, the Canal, as it exists today, could be wiped from the face of the Isthmus of Panama by bombardment from atomic missiles. We all know this. The question before us, then, is, What can we do to establish effective measures of defense? This is the problem which is posed by the Governor's report, and this is the issue upon which we must bring to bear our most expert knowledge and judicious consideration.

To assemble scientific data on canal building and narrow channel navigation, the David Taylor model basin was erected at Carderock, Md. There Panama Canal conditions are simulated—everything except the weather. Scientific data thus collected will to a very large extent be useful for canal building in any part of the world.

In addition, a model sea-level canal has been built at the Canal Zone at a cost of $180,000. This model is testing the effect of the introduction of currents if the Canal should be made sea level.

It has already been concluded by the engineers examining the problems that either a lock canal or a sea-level canal would satisfy the needs of interoceanic commerce and the needs of naval vessels. But it has also been agreed that a lock canal cannot be designed and constructed to give absolute security against loss of the waterway or to provide as great a degree of security against traffic interruption as the comparatively invulnerable sea-level canal. However, the sea-level project will be substantially more costly to develop. Accordingly, Congress will be required to balance security factors against comparative costs in determining what expansion plans will be approved.

Even before the report of the Governor of the Canal Zone was submitted, as required by law, the House Subcommittee on the Panama Canal, of which I have the honor of being chairman, gave intensive and extensive attention and study to the problem in its many complex and important phases.

The members of the subcommittee in April of this year went to the Canal and after a period of the most exhaustive and detailed examination drew up a report. This report was filed with the House of Representatives on July 2, 1947, and in it is contained the thoughts and conclusions of the members of the subcommittee. This report makes no recommendations as to what particular form the reconstruction of the Canal should take nor does it make any recommendations regarding alternative sites for the Canal. However, it is upon the basis of the facts contained in this report that the legislation, which will make possible the reduction of vulnerability to attack upon the Canal, will be drawn up for submission to the Congress. This report, then, is much more fundamental in character than either the Governor's report or the President's endorsement. It is definitive precisely because it will be the instrumentality which will be utilized by the Committee on Merchant Marine and Fisheries in its effort to produce the necessary legislative program affecting the Canal.

The term "sea-level" canal means to the layman that a ship comes from one ocean, sails into the canal at one end, and out the other into the second ocean. That, however, is a misconception. The Atlantic Ocean has a 2-foot tide; the Pacific Ocean, a 20-foot tide. It is only when there is a meshing of tides during the day that the Canal would be truly sea level. That would only be about 30 percent of each day. At other times a tidal lock would have to be used to control the difference of 18 feet in tide levels.

Many naval experts, in turn, prefer the present type canal—a lock canal—as the best from a navigational standpoint and safety to ships in transit.

Contrary to popular belief, navigational hazards do exist in the Canal of today, which has experienced many accidents and some sinkings. It is said that the sea-level canal will aggravate these perils and would also involve a tremendous expenditure of funds. On the other hand, it would make the Canal less susceptible to complete uselessness in the event of attack.

Let us consider together for a moment some matters which will have to be considered in determining the nature of the improvement.

Navy men say that if the Canal is made sea-level, tidal currents will be introduced. Navigation thus will be made more difficult and therefore some naval officers say it can be expected that accidents will be multipled.

You will recall that the bed of the Canal proper is 85 feet above sea level. It is the function of the locks to raise and lower ships in transit between the Atlantic and Pacific Oceans. If the locks were blown to bits, the waters of the Canal would promptly cataract into the oceans leaving behind a muddy mountain pass.

To make the Canal sea-level, it will have to be dug down an additional 85 feet the entire distance of the Canal and through the Continental Divide, that range of mountains running down through Central America.

Severe and many slides were experienced in Gaillard, formerly Culebra Cut, which runs through the Continental Divide, caused by the excavation when the Canal was built. If it is dug down an additional 85 feet, and the mountains on both sides made that much higher with a consequent greater weight and pressure on the sides of the cut, it is likely that the slides will be more numerous and intensive and a hazard to navigation.

Occasionally islands are pushed up from the floor of the Canal, creating a continuous dredging operation. These are brought about by the great weight of the mountains on the sides of the Canal pressing in on it, the tendency of which in the settling process is to push these islands up in the Canal. If it is dug down an additional 85 feet, it is also likely that many more of these islands will be created.

If it is to remain a lock canal, the question of lock width will have to be given serious consideration. This in turn will depend on what the best minds in naval engineering can foretell will be the nature of naval architecture and construction over a long period of time.

The committee has also reported on suggestions concerning the advisability of building a canal or canals at other sites in Central or South America or both. In all cases it must be kept in mind that the defense of the Canal is not a problem which can affect the United States alone, but, on the contrary, it is quite apparent that every nation in this hemisphere has the most vital concern in seeing established a canal system which not only will be able to transit ships plying the seas in times of peace, but also one which will offer the maximum possible security in times of war. And one, moreover, which will in itself be a mighty bastion against sudden and violent aggression. For their own protection, therefore, it is quite reasonable to suppose that every nation in this hemisphere and especially those contiguous to the Canal will cooperate in their own interests as well as for the interests of all the Americas.

I think we are all very grateful to the American Broadcasting Co. and to its representatives Michael Roshkind, Thomas Velotta, and Bryson Rash for their civic-mindedness in making this time available as a public service so that the people of America may be better informed about and act intelligently upon this tremendous project for our national defense.

Why Build Airports? Taxpayer Asks

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. VAN ZANDT. Mr. Speaker, sometime early next year the House will be called upon to consider appropriations for the activities of the Civil Aeronautics Administration, especially the item concerning airport construction and the maintenance of airport-control towers and other facilities.

When Congress considers this appropriation it is my fervent hope that serious attention will be given to the unfair competition provided for the railroads of America arising from the practice of financing the construction and operation of airports and airways at the expense of the taxpayers of America.

When the question was before the House early this year of appropriating funds for governmental maintenance of employees in airport-control towers in certain airports I took the opportunity to point out that if funds of the Federal Government were used to provide personnel to operate the control tower at Washington Airport why should Congress refuse to appropriate funds to operate the signal tower that controls the daily arrival and departure of hundreds of passenger trains at Union Station, Washington, D. C.

So that Members of Congress may realize that the taxpayers of America are interested in this unfair competition, I am making part of my remarks the following, and appearing in the November 30, 1947, issue of the Beacon Journal, Akron, Ohio:

WHY BUILD AIRPORTS? TAXPAYER ASKS

EDITOR, BEACON JOURNAL:

Optimistically assuming that our form of government is still democratic enough to permit freedom of speech and press, and being an interested reader of the Beacon Journal, as well as a taxpayer, will you bear with me while I take advantage of the democratic principle to which I have referred?

On November 12, I devoted an hour or more after dinner in poring over my tax bills. Finding no solution to my pressing financial problems, I turned, for solace perhaps, to the pages of the Beacon Journal. Did I hope there to find some news, some inkling that the spiraling costs, the ever-increasing taxation, would take a downward trend?

On the contrary, my troubles increased and my apprehension grew to such an extent that I felt compelled, for my own salvation, to join the ever-growing army of citizens who are rebelling against further exploitation.

My fears were multiplied because of two different news articles in your issue of November 12. One of them castigated the railroads for not building a new station in Akron. The other was a dramatic, all-out plea to build a new and better home in Akron for the air lines—at the taxpayers' expense.

I carry no torch for the railroads, but is it not about time that some citizen of this country ask somebody why we should demand, as you have done in rather violent language, that the railroads build us a new station while, in almost the same breath, your article demands that we, the homemakers, are asked to donate a portion of our own earnings to build a landing field for the air lines?

Just what is the angle here? Why must I pay out my money so that a plane can land in Akron, and not for a train to serve this city? The air lines published glowing postwar forecasts about what they were going to do for us in peacetime, but those long-haired planners failed to state that you and I would foot the bill. I am convinced that the immense contribution of planes to the winning of the war led to fantastic notions of their preeminence in peace. But whether they are notions or not, I, for one, cannot afford to finance their ambitions.

Furthermore, I think your caricature of the railroads is in poor taste, and certainly overlooks America's vaunted principle of fair play. Not so long ago, in the press, in the Halls of Congress, and throughout the country, the railroads were lauded as saviors of the Nation. Once again, as has happened so often before, they have become the peacetime football.

Our memory is short. And our scheme of things seems out of balance. We build highways for the trucks, runways for the planes, but our railroads not only build their own right-of-way, but, through heavy taxation, build many of our schools.

R. E. B.

Put Foreign Aid on Business Basis

EXTENSION OF REMARKS
OF
HON. PARKE M. BANTA
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. BANTA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rolla (Mo.) Daily News of December 8, 1947:

PUT FOREIGN AID ON BUSINESS BASIS

The President's Committee on Foreign Aid is to be congratulated upon its recognition of the fact that European recovery depends, primarily, upon the efforts of the Europeans themselves and that the most the United States can do is to assist slightly in accomplishing the end desired. Especially commendable is the definite statement that the committee "regards as nonsense the idea which prevails to a considerable degree in this country and abroad, that we need to export our goods and services as free gifts, to insure our own prosperity." It is to be hoped that, now that the committee has brought out this economic truth so forcefully, Members of Congress will no longer give heed to the notion that export of our surplus is necessary to prevent depression.

Another important truth brought out by the committee is that any sound export trade is dependent upon a return flow of goods or services. If we sell abroad, we must likewise buy abroad. Failure to recognize this truth has led to the adoption, by our own and foreign countries, of many absurd restrictions on trade. Let us send to Europe what she needs, and pays for, after our wants are provided, and let us buy from them, and pay for, what we need of our output. That's good business.

The Gentleman From Illinois

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STRATTON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. STRATTON. Mr. Speaker, this month is the one hundredth anniversary of the coming of Abraham Lincoln to the House of Representatives.

The following interesting article by Charles L. Allison, a resident of Lincoln's home town of Springfield, Ill., has just appeared in the Optimist magazine, and I believe this an appropriate occasion to insert this article in the CONGRESSIONAL RECORD:

THE GENTLEMAN FROM ILLINOIS—LITTLE-KNOWN INCIDENTS IN THE LIFE OF A SOLEMN-FACED, GAUNT MAN WHO FIRST APPEARED IN WASHINGTON, D. C., 100 YEARS AGO THIS MONTH

(By Charles L. Allison)

A hundred years ago this month there appeared in the National Capitol for the first time a solemn-faced, gaunt man in his thirty-seventh year, his great height of 6 feet 4 inches intensified by his funereal black stovepipe hat.

He had come to Washington to represent the Seventh Illinois District in the House of the Thirtieth United States Congress. Lone Whig Member from that important Prairie State, this gentleman from Illinois was Abraham Lincoln, the rail splitter, whom destiny was to recall to Washington 14 years later for a greater and more significant assignment in history, the role of President of the United States in its crucial period of civil strife.

Although hailing from comparatively frontier country and still years away from the immortality now accorded him by liberty-loving peoples everywhere, the new House Member was no green backwoodsman

of untried ability. Already carved into his beardless features were years of hardship, toil, and sacrifice in Kentucky and Indiana and later in Illinois. With less than a year's formal schooling, he had, through the miracle of self-education, become a lawyer, public speaker, and politician.

With him now was another driving, compelling force, his wife of 4 years, Mary Todd Lincoln, a daughter of a Lexington, Ky., banker, and their two sons, Robert Todd Lincoln, born in 1843, and the infant, Edward Barker Lincoln born in 1846.

Behind the newcomer were his early successes as a frontier circuit-riding lawyer and 8 years as a member of the house of the Illinois General Assembly. There, he had won renown for engineering the transfer of the Illinois State Capital from Vandalia to Springfield.

Washington, with its unpaved streets, filled with roaming pigs, was not much different than the Springfield he had left a few weeks earlier as Congressman-elect, except that Washington was ten times larger. Congress, he found, resembled the State legislature, except that the intrigues were more complicated and the personages were much more important.

As contemporaries in the House and Senate, Lincoln had such men as John Quincy Adams, the former president, then in the House; Horace Greely, the editor; Daniel Webster, with whom he was to breakfast frequently; Andrew Johnson, who was destined to succeed Lincoln in the White House following that ill-fated night at Ford's theater in April 1865; Jefferson Davis, later to become President of the Confederacy; John C. Calhoun, Lewis Cass, Thomas Benton, and Stephen A. Douglas, one of the six Democratic House Members sent by Illinois to round out its 7-man delegation.

Singularly, this Douglas, who loaned him money in at least one impecunious period in Washington, was the same "little giant" who in later years was to catapult Lincoln into the White House by means of a series of famous debates on slavery.

In the ensuing 16 months he served as Congressman, Lincoln not only associated with these men, but * * * keen student that he was * * * the future President of the United States observed and studied them to good advantage, as later events proved. During his campaign some of the Whig supporters raised $200 for his expenses, a sizable fund in those days. After his election, the Congressmen-elect returned all but 75 cents of these funds to his supporters, with this statement:

"I did not need the money. I made the canvass on my own horse; my entertainment, being at the houses of friends, cost me nothing, and my only outlay was 75 cents for a barrel of cider, which some farm hands insisted I should treat to."

Although elected in early August 1846, it was not until October 1847, that he set out for his new duties. The Illinois Journal (forerunner of the present Illinois State Journal) for October 28, 1847, carried this item:

"Mr. Lincoln, the Member of Congress-elect from this district, has just set out on his way to the city of Washington. His family is with him; they intend to visit their friends and relatives in Kentucky before they take up the line of march for the seat of government."

And "line of march" it was * * * by stagecoach, boat and rail * * * from Springfield to Lexington, Ky., thence up the Ohio River and over the Alleghenies to Washington.

Apparently the Lincoln family arrived in Washington on December 3, 1847, for on that day he wrote to "Friend Smith" (assumed to be Robert Smith of Alton, Ill.): "This is my first day at this place * * *."

LINCOLN THE STORY TELLER

It is duly recorded that the Lincoln family first stayed at the Brown Hotel in Washington, one of four hostelries then afforded by the community of some 40,000 persons, 25 percent of whom were Negroes.

Historians, however, make more mention of Lincoln's presence at the boarding house of a widow named Spriggs, in Duff Green's Row, near the present site of the Library of Congress. Among the boarders were seven other Congressmen, and while these worthies must often have argued politics, the listeners were more impressed with the Illinoisan's wit than with his profound observations.

A young physician who ate there, Samuel C. Busey, described Lincoln in these words: "When about to tell an anecdote during a meal he would lay down his knife and fork, place his elbows upon the table, rest his face between his hands, and begin with the words 'that reminds me.' Everybody prepared for the explosions sure to follow."

When the Thirtieth Congress convened for its first session on December 6, 1847, Lincoln was assigned to the Committee on Post Offices and Post Roads and to the Committee on Expenditures of the War Department.

The Whigs were opposed to the war with Mexico, then drawing to a close, accusing President James K. Polk of having provoked it. Lincoln, as the only Whig from Illinois, was one of the ringleaders in the movement to fix the spot on which the first bloodshed occurred, hence historians record his measure as the "Spots resolution."

The Appendix to the Congressional Globe, forerunner of the present CONGRESSIONAL RECORD, for the Thirtieth Congress, shows that Lincoln in his maiden speech in the House on January 12, 1848, less than 5 weeks after he took his oath of office, discussed the resolution which declared that the war with Mexico "was unnecessarily and unconstitutionally commenced by the President" (Polk). He concluded with these words:

"As I have before said, he (Polk) knows not where he is. He is a bewildered, confounded, and miserably perplexed man. God grant he may be able to show there is not something about his conscience more painful than all his mental perplexity."

The rail splitter's position on the war with Mexico was deeply offensive to his constituency. His law partner in Springfield, William Herndon, wrote gloomy letters about the political disfavor he was winning, inasmuch as the war had been popular with the people because the fruits included a veritable empire in the Southwest.

One opposition paper in Illinois denounced Lincoln in an article entitled "Out Damn Spot," and a mass meeting in another community resolved "that this Benedict Arnold of our district be known here only as the Ranchero Spotty of one term."

Meanwhile, in Washington, Lincoln won a reputation as an eccentric because of his practice of wrapping borrowed library books into a blue bandana handkerchief, looping the bundle over the end of his cane, carrying his cane over his shoulder like a squirrel rifle, and striding across the Capitol Grounds.

LINCOLN THE BOWLER

Although known as a profound student, Lincoln found time for occasional relaxation at the nearby bowling alley of James Casparis. Busey, the young physician who was so impressed by Lincoln's story telling at the dinner table, also watched him in these lighter moments, describing the gangling Illinoisan as an awkward bowler, who "played the game with great zest and spirit, solely for exercise and amusement, and greatly to the enjoyment and entertainment of the other players and bystanders." That Lincoln must have played the game with zest is indisputable, since he was a man of tremendous strength, so great that he could easily lift 400 pounds with his bare hands.

Lincoln gained a reputation as a wit in Congress, being one of those Members who frequented the House post office, a small room where Members congregated and swapped yarns. One historian of that time writes:

"His favorite seat was at the left of the open fireplace, tilted back in his chair, with his long legs reaching over to the chimney jamb. He never told a story twice, but appeared to have an endless repertoire of them always ready, like the successive charges in a magazine gun, and always pertinently adapted to some passing event."

A newspaperman wrote: "By New Year's he was recognized as the champion story-teller of the Capitol."

Mrs. Lincoln and the two boys soon returned to Lexington, Ky. Under date of April 16, 1848, we find Lincoln writing to his spouse:

"I thought you hindered me some in attending to business, but now having nothing but business * * * no vanity * * * it has grown exceedingly tasteless to me. I hate to sit down and direct accounts, and I hate to stay in this old room by myself * * *."

It was in this same letter that he wrote:

"All of the house, or, rather, all with whom you were on decided good terms, send their love to you. The others say nothing. Very soon after you went away I got what I think was a very good set of shirt-bosom studs * * * modest little ones, jet set in gold, only costing 50 cents apiece, or $1.50 for the whole.

"Suppose you do not prefix the 'Hon.' to the address on your letters to me any more. I like the letters very much but I would rather they should not have that upon them. It is not necessary, as I suppose you thought, to have them come free.

"Are you entirely free from the headache? That is good * * * considering it is the first spring that you have been free from it since we were acquainted. I am afraid you will get so well and fat and young as to wanting to marry again."

The Presidential election of 1848 held Lincoln's attention. As a Whig, he was one of the early supporters of that party's candidate for the Presidency, General Zachary Taylor, whose popularity had grown as a result of his military successes in the war against Mexico. In June of that year, Lincoln was a delegate to the Whig convention in Philadelphia which nominated him.

NOMINATION PLEASES LINCOLN

Gratified over the nomination of "Old Rough and Ready," Lincoln made a stump speech in his behalf in Congress the very next month, a speech so filled with sarcasm against the Democrats that the Baltimore American characterized Lincoln as a "very able, acute, uncouth, honest, upright man and a tremendous wag withal," describing his speaking habits as follows:

"He would commence in his speech far up one of the aisles, and keep on talking, gesticulating and walking until he would find himself at the end of a paragraph, down in the center of the area in front of the clerk's desk. He would then go back and take another head, and work down again. And so on."

By agreement with his party, Lincoln was not a candidate for re-election, and was in Washington during the election, to name his successor on August 6, 1848. The Whig nominee, Stephen T. Logan, was defeated by the Democratic candidate by a vote of 7,201 to 7,095.

Six days later the first session of the Thirtieth Congress adjourned. On September 9, Lincoln departed for New England where he barnstormed in behalf of General Taylor. The future President made a tremendous hit in Massachusetts visiting Boston, Cambridge, Lowell, Worcester, and

Dedham. Of one speech, George H. Monroe, a young Whig, made this observation:

"He was as sober a man in point of expression as I ever saw. In the cars he scarcely said a word to one of us. He seemed uneasy * * * I should say the atmosphere of Boston was not congenial to him. We took him to one of the most elegant houses in the town of Dedham, and here he seemed still less at home. The thing began to look rather blue for us. When we went over to the hall it was not much better. It was a small hall and only about half full; for Mr. Lincoln had not spoken in Boston yet, and there was nothing in his name particularly to attract. But at last he arose to speak, and almost instantly there was a change."

PLATFORM ABILITY

"His indifferent manner vanished as soon as he opened his mouth. He went right to work. He wore a black alpaca sack and he turned up the sleeves of this, and then the cuffs of his shirt. Next he loosened his necktie, and soon after he took it off altogether. All the time he was gaining upon his audience. He soon had it as by a spell. I never saw men more delighted. His style was the most familiar and offhand possible. His eyes had lighted up and changed the whole expression of his countenance. He began to bubble with humor. But the chief charm of his address lay in the homely way he made his points. There was no attempt at eloquence or finish of style; but for plain pungency of humor, it would have been difficult to surpass his speech. The speech * * * ended in a half hour. The bell that calls to the steam cars sounded. Mr. Lincoln stopped instantly. 'I am engaged to speak at Cambridge tonight and I must leave.' The whole audience seemed to rise in protest. 'Go on! Finish it!' was heard on every hand. One gentleman arose and pledged to take his horse and carry him across country. But Mr. Lincoln was inexorable."

From Boston the rail splitter entrained for Albany where he conferred with Thurlow Weed, Whig boss of New York, and the Vice Presidential candidate, Millard Fillmore. Traveling by way of the Erie Canal, he went to Buffalo, visited Niagara Falls, rode a lake steamer the length of Lake Erie, and then continued overland to Chicago and southwest to Springfield. Back home, Lincoln was quick to detect the sentiment against him. He later returned to Washington for the opening of the second session of the Thirtieth Congress, which began on December 4, 1848.

ANTISLAVERY BILL

Lincoln, who said he must have voted "as good as 40 times for the Wilmot proviso," which provided that all territory won from Mexico should be nonslave, on January 10, 1849, introduced a bill to abolish slavery in the District of Columbia. Subsequent to Lincoln's action, John C. Calhoun, of South Carolina, issued his famous warning to the Members of Congress that the South knew what to expect if it remained idle. He did not name Lincoln in this appeal but referred to him as the "gentleman from Illinois."

The Thirtieth Congress took its sine die adjournment at 7 a. m. on March 4, 1849, having worked all night in an effort to finish its business.

One of his last official acts was to attend President Taylor's inauguration, where his hat was stolen, an incident that forced him to walk home through the streets of Washington, bareheaded, at 3 o'clock in the morning.

Lincoln returned to Springfield, but was back in Washington the following June in an unsuccessful quest for the appointment as commissioner of the land office.

Failing in this, Lincoln went back home to resume his practice of law and to prepare for a greater destiny.

A Little Cloud Out of the Sea

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. PATMAN. Mr. Speaker, permission having been obtained, I am inserting herewith an address delivered by the Honorable Clinton P. Anderson, Secretary of Agriculture, at Everett, Wash., December 11, 1947, at a special meeting of farmers and representatives of farmer cooperatives of Washington, Oregon, and Idaho on the subject entitled "A Little Cloud Out of the Sea."

Secretary Anderson was introduced by the Honorable HENRY M. JACKSON, who so ably represents the congressional district in which Everett, Wash., is located and who is also known as one of the best and most effective friends of farm cooperatives.

The address is as follows:

Like Elijah's servant in olden times, I have been scanning the horizon. Like him, I must report that "There ariseth a little cloud out of the sea, like a man's hand."

The cloud seen by Elijah's servant was the forerunner of a terrible storm. The cloud I see arising bodes no good. It may be the forerunner of an all-out assault upon the farmer cooperatives of this country.

I have come here to counsel with you about the approaching storm.

I have come here because I believe in farmer cooperatives. It is time for all of us of like mind to reaffirm our faith.

Already the winds of dissension are blowing. The calm is over. After all these years, in which farmer cooperatives have found a firm place in the competitive free-enterprise system of this country, suddenly there arise adversaries who would restrict your rights to cooperate in a business way. So far they have not attacked the right of neighbors to share work—to help each other harvest or build barns—but they don't want neighborliness carried to extremes. Extremes, of course, are transactions that involve money, such as selling farm products or buying farm supplies. You mustn't do anything for yourselves that somebody else wants to do for you—for a price. That seems to be the logical conclusion of the arguments you hear.

Now, it's all right with me—and I know it's all right with you—if some people want to make that kind of an argument. We don't even worry too much if those who oppose cooperatives speak their pieces to vast audiences night after night. We have free speech in this country—freedom to speak, which carries along with it a right that is exercised too infrequently—the right to remain silent. Perhaps we who believe in cooperatives use our right to remain silent too much. Perhaps we have been too complacent in our belief that the fight for farmer cooperatives has been won, that they have proved their right to a place in the business community, that they are no longer a public issue.

Yes; evidently we have been too complacent, for the opponents of farmer cooperatives—made bold by the sound of their own words and by a well-stocked treasury—have begun a new assault. They now seek political action. Unfortunately, they have been able to use a congressional committee as their forum in which to raise their political issue.

This, of course, is an old technique. It works like this: You don't come right out and say you're against whatever it is you're against—farmer cooperatives, for example. You pick out some particular thing about it that is not widely understood and has some dramatic appeal, and you make sure it ties in with a particular objective of the party in power—an objective like reducing taxes, for example. You harp on the one thing you've picked out. Just, for example, you might say that farmer cooperatives under certain conditions are exempt from Federal income tax and you don't think they should be. You harp on that one thing, but of course you can't take time to spell it out all the time, so you just talk about "tax-free cooperatives." You buy newspaper advertising. You talk it on the radio—either in time you buy or in time you can get for free. You "sell" it to friendly commentators and editors and others who might influence public opinion. You "sell" your argument by mail, at meetings and cocktail parties, and in printed literature. Oh, yes; I almost forgot. You set up an organization with an important-sounding name so that your literature and all your doings will sound like the voice of the people. You make as much noise as you can, and then you go to a friend who heads a congressional committee, and you say, "Look, here's a matter you ought to look into. Where there's smoke there's fire." And the committee chairman says to his committee, "Where there's smoke there's fire, we'd better investigate." Even those who know the facts can't refuse to hear the facts except in rare circumstances. And so they investigate, and the people who have been making all the noise have their arguments all ready. They're really on the offensive now, and they've got their opponents on the defensive—exactly as planned.

In any argument there are always honest differences of opinion. That gives you a chance to step in and say, "See, I told you so. These people want action. They have found a party that can give it to them."

Thus is born a hot political issue. I shouldn't say born—manufactured is the word—manufactured synthetically.

Thus have our farmer cooperatives come under attack. The opening gun has been fired. The adversaries—many of whom have not seen fit to make public their names—still have the offensive. Their next maneuver is concealed by the smoke of their propaganda barrage. But it's coming—make no mistake about that.

Do you want to fight it out?

Are your cooperatives worth fighting for?

If your answer is yes, I'm with you. In a show-down, we're either for a thing or we're against it.

I want to say again in plain language that I am for farmer cooperatives.

I want to say just as plainly that the Truman administration is for farmer cooperatives.

I say that with the specific authority of President Truman himself.

Harry S. Truman, as one writer has put it, "grew up between the plow handles" on a farm in Missouri. He knows what it is to make a living on the farm. He knows how cooperatives have helped farmers to make a decent living and to preserve their economic independence. I told him I was coming out here to meet with you people. He asked me to bring his best wishes and to tell you to stay right in there and pitch for the cooperative principles you believe in.

As I said in the beginning, it is time for all of us who believe in farmer cooperatives to reaffirm our faith.

Vague generalities will not do. Therefore, in the remainder of my time, I want to do two specific things: First, I want to tell you the reasons I believe in farmer cooperatives as a part of the American way of life; and second, I want to give you a few observations about the future of our cooperative enterprises.

The first reason for my belief in farmer cooperatives is that I am deeply devoted to

the American system of free enterprise. In this whole Nation there are only 10,000,000 individual enterprisers apart from corporations, and more than half of those individual enterprisers are farmers. So it is that the farmers are the very backbone of our individual free-enterprise system. That's the way we want it. That is America.

Some would have you believe that when farmers join together in a cooperative enterprise they are no longer engaging in individual business. "Collective" is the word sometimes used to make the cooperative seem odious. I deny that a farmer carrying on part of this business through a cooperative is any less an individual enterpriser than his neighbor who does not belong to the cooperative. I assert that cooperation is simply a tool that farmers use to maintain their individual way of life, a means of applying modern business methods to farming. I assert that the farmer who belongs to a cooperative is just as much an individual free enterpriser as any single merchant or partnership of merchants in town, and he's certainly as much of an individual enterpriser as the usual impersonal corporation. When you form or join a cooperative, you do so for one reason—group service, not group profit. If your problem is credit, you may join a farm-loan association. If you are dissatisfied with the price you have to pay for marketing services, you may organize or join a marketing association that enables you to perform the marketing service instead of paying others to do it. If you think you can save money or get better merchandise by purchasing your farm supplies directly as a group, you can take part in a purchasing association. Perhaps you want one organization to perform several services. And that's all right. The point is that your cooperative is a nonprofit organization. It's your service agency that helps you carry on your individual free enterprise for your own individual profit. So I say that the cooperative is an aid to individual free enterprise and just as American as the family farm it helps to preserve.

How it is that anybody ever pays any attention to the wild charges made against farmers' cooperatives I don't know. You hear it said or implied that there's something left wing about cooperatives. I get a laugh just trying to imagine Republican Senator CAPPER as a left-winger, and as you know the Capper-Volstead Act which Senator CAPPER steered through the Congress is often called the magna carta of the farm cooperatives—the farm co-op bill of rights.

You hear it said that there's something communistic about cooperatives. And in answer to that I might point to Sweden the middle way, or to other Scandinavian countries where cooperatives have flourished and where communism has found less fertile ground in which to develop than in many other parts of Europe. I recall with a great deal of pleasure a visit to the beautiful Dalecarlia area of Sweden, which was my father's home before he came to America. I visited some of my people there. And I had a chance to learn a little bit about the cooperatives which they have used so extensively for so long. I can say, as probably many of you can say because of your experience and Scandinavian family ties, that individual enterprise and liberty flourish strongly with the help of cooperatives.

In our own country the farm co-ops attract a great many progressive people; and some of the most conservative people I know are among the strongest boosters for co-ops. If there's any radicalism in the American farm cooperative movement, I have yet to discover it. Of all the nonsense written and spoken about cooperatives, the charge of left-wing tendencies is by all odds the silliest. At the same time, let us recognize that cooperatives do not lend themselves to the other political extreme—fascism. It would be well to remember that Hitler killed the cooperatives in Germany because they did not fit into his totalitarian schemes.

My second reason for being a strong believer in farmer cooperatives is closely related to my devotion to individual free enterprise. It is my belief in the family farm. We are now, and for some time we have been, confronted with a trend toward fewer and bigger farms. I regard this as inevitable to a certain extent. We are becoming more efficient. Three people can now produce more than four could produce just before the war. If we are to make the most of our new machines and methods, we have to have more land and higher investment per worker. Otherwise, more and more farm people will become underemployed. But the trend toward fewer and bigger farms is not necessarily a trend away from the family-type farm. It is one thing to have family farms growing larger and continuing to compete. It would be quite another thing if the family farm could no longer compete but had to give way to gigantic factory-type units.

I have pointed out before, and I say again—because I believe this is an extremely important fact—that our family farms are competing in a world of economic giants. Think of the biggest family farm in your neighborhood. How does it compare with the company that manufactures the machinery used on the farm, with the company that makes the trucks, with the companies that make the household goods such as soap and light bulbs, and the shoes and overalls? How does it compare with the company that processes the wheat, the meat, or the fruit and vegetables? We do have many small businesses comparable in size to the farm. But in large measure our economic power is concentrated. In 1946 the 200 largest manufacturing corporations controlled nearly half of the total assets of all the manufacturing corporations in the country. Economic giants have an advantage in mass production and mass sales methods; they rule vast domains of natural resources; they have power.

Now, the farmer is essentially a manufacturer; he is a producer of goods. But he does not have the advantages of a big organization. He buys from powerful giants. He sells to giants. How does he compete?

A young fellow named David once contested a giant named Goliath—with rather notable success. But it should be noted that David's feat was not accomplished with bare hands. He had a sling-shot or something of the sort and a very considerable skill in using it. I do not for one moment suggest that the way to get along with economic giants is to give them the David treatment. Many of the giants are useful contributors to what we call the American standard of living. What I do suggest is that the little fellow must have the means to equal or surpass the performance of the giant.

Law and ingenuity are better than force.

In this country we have some traditions and public policies embodied in law which encourage family type farming. I suppose that to some extent these are expressions of sentiment. But to a greater extent they express a fundamental concept of the democratic way of life. We dislike the idea of a landed class or of corporate giants employing the tillers of the soil. We think families of small freeholders are good plantbeds for the propagation of freedom and democracy. So, as national policy, we try to keep the rules of the game fair to the family farm. And important among the laws for that purpose are those which guarantee the rights of farmers to do business cooperatively and which give positive encouragement to cooperatives.

Do we want to change all this? Have our ideas about democracy and the family farm been changing? I don't think so. The people of this country can change or kill any law at any time they choose. They can kill farmer cooperatives at any time. Some misguided or avaricious people would have them do so.

"There ariseth a little cloud out of the sea, like a man's hand."

We who believe in farmer cooperatives must give the people the facts.

Some of our adversaries would have people think there is something new and secret about the Federal Government's encouragement of farmer cooperatives. Let's see what the real situation is. In 1898 a Federal corporate tax law was enacted that stated the tax did not apply to agricultural organizations operated for the mutual benefit of its members. In 1916 the income-tax law also exempted farmer cooperatives. These exemptions have since been continued and spelled out. Present revenue laws provide exemptions from corporation income taxes and stamp tax on capital stock or bonds or any such certificates of indebtedness.

In 1916, also, the cooperative land-bank system was established in the Federal Farm Loan Act.

In 1921 the Packers and Stockyards Act assured cooperatives the right to pay patronage dividends, and this right was protected later in the Robinson-Patman Act dealing with price discrimination and in the Bituminous Coal Act.

In 1922 the Capper-Volstead Act freed farmer cooperatives of fear of involvement in antitrust laws provided they meet certain requirements.

In 1926 the Cooperative Marketing Act authorized Department of Agriculture service to farmers' cooperatives. In 1929 the Agricultural Marketing Act provided funds for loans to them. In 1933 the Farm Credit Act provided for 13 banks to make loans to farmers' cooperatives and also provided for the cooperative production credit system. Since 1935 farmers have been able to use the cooperative method to bring electricity to their farms whether the giant utility companies were ready or not—and REA today is one of the most useful agencies in the Government.

That in brief is the history of Federal legislation on farmer cooperatives.

It is spread out in full view on the statute books, and it developed during a good many different political administrations in response to widely varying farm problems.

Let me point out also that a number of State statutes providing for the incorporation of cooperatives antedate the first Federal legislation and that the cooperative movement in this country began long, long before. The first organized cooperative in this country began operations in 1752—a full generation before the American Revolution. It was a mutual insurance association called The Philadelphia Contribution for the Insurance of Houses and Loss by Fire. Benjamin Franklin and other future signers of the Declaration of Independence were among its founders. The association is still doing business.

Early farm cooperatives included a livestock shipping group in Ohio in 1820, a cheese factory in New York in 1851, and a creamery in the same State in 1856, mutual irrigation associations in Utah and California in 1860, and a grain-marketing association in Wisconsin in 1875. In the seventies and eighties the Grangers and Farmers' Alliance gave farm cooperation organized support, and later farm organizations have followed suit.

So much for history. I simply want to observe from this that those who attack farmers' cooperatives are attacking something which is fundamentally American—as American as the Declaration of Independence and as democratic as the temporary cooperatives called husking bees and barn raisings.

I have said I am for farmer cooperatives because they serve the cause of individual free enterprise and protect the family farm.

I am also for them because of the many definite contributions they make to the general community.

Cooperatives have enabled producers to build a closer link with consumers by pioneering in improvement of the quality of farm products offered to the public. They have set higher standards and promoted better methods of marketing. They have helped and are helping to change the old rigid price structure in farm-commodity markets so that true quality of product can be reflected in returns to producers.

They enable the producer to maintain some control over the sale of his product instead of having to take the first offer of the local market.

Cooperatives have pioneered in helping farmers get good farm supplies at reasonable cost and in helping to improve the quality of fertilizer and seeds.

They have earned the reputation of providing price and quality yardsticks by which all people can judge the merchandise in the market place. They reduce or hold down handling charges on products bought and sold.

They provide a forum for full and free discussion of economic problems. In co-op meetings many farmers have their best opportunity for free discussion of public policies.

Farm cooperatives provide an essential mechanism for the operation of various Federal-marketing agreements that have proved beneficial to both producers and consumers.

They have been pace setters in the farm-mortgage field and have pioneered with the budget loan for production purposes.

In passing, let me remind you that your cooperative credit facilities are frequently attacked. So far there has been little beating of the propaganda drums on this matter; the drums have been reserved for the tax issue. But a few master minds in the banking business have, in staid, conservative, professional utterances, been of the opinion that the sound, solvent private banking institutions could very well handle all of the sound farm-mortgage credit that our sound, solvent farmers might require. The aforesaid being true, now therefore might it not be considered possible that cooperative farm-mortgage credit is at this time unnecessary. All of which is the sound way of saying, "Come on, boys, let's cut the throat of this cooperative credit thing before times get bad again."

Fortunately, most bankers have more sense than that. Most of them remember how the cooperative credit system bailed out their boat when they were about sunk with farm mortgage paper. Most of them know that country banks are stronger today than they were after the other world war, and that part of their increased strength is due to our cooperative credit system. After the other war, country banks held most of the farmers' paper, and when depression started they had to press for liquidation. Today the country banks have the heavy end of their assets in Government securities, and our rural credit structure is strong.

Nevertheless, cooperative farm credit has come under attack, and you will probably hear more about it before you hear less.

Those of us who are for the farmer cooperatives had better be prepared.

This brings me to my observations about the future of our cooperative enterprises.

The cloud I see on the horizon is still no bigger than a man's hand.

We are not beaten. We have scarcely begun to fight.

Let us look on the attacks as a challenge and an opportunity. Every farm co-op in this country owes its existence to problems which had farmers sufficiently worried to take up group action.

I have tried to tell you today why I believe in farmer cooperatives. It has been a good exercise for my own thinking, and I heartily recommend the same exercise to you. Think what it is that you value in cooperation, and tell others. Co-op members have been lax in this. In a co-op, you can't let George do it. In a co-op there isn't any they—there's only a we. You may have a manager, and he may have a staff, but they're not the co-op. The members are the co-op. Let's remember that.

When the tax issue came up, the apple growers association over in Hood County, Oreg., took pains to point out that it is not tax-free, as the propaganda experts would have the people believe. On the contrary, it stated, the association is the second-largest payer of property taxes in the county, and pays seven other taxes, too.

That's all to the good. But you don't have to wait for a crisis to begin telling your story.

I also recommend continuous self-appraisal and criticism within every cooperative. Let us not complacently assume that we are completely righteous because we are a farmers' co-op. A co-op justifies its special place in our society only if it fully lives up to its responsibilities. The co-op is not just another business. If it becomes that, it is not a true co-op. The whole history and legal status of the farmer cooperative in this country are bound up with the fight against monopoly, the battle against problems which farmers as individuals cannot meet, the drive for progressive business methods, the struggle to maintain freedom for the little guy. Justify your existence through service. Keep pioneering. If farm co-ops had not pioneered in the past, we wouldn't have them today, and we probably wouldn't even have the legal right to cooperate. In my opinion, if co-ops don't continue to pioneer, they will die.

In recent testimony before congressional committees on long-range agricultural policy, Department of Agriculture representatives expressed the belief that cooperatives should have an important place in the agriculture of the future. They urged certain extensions of the farm cooperative field. The Department committee which studied this matter recommended that Congress grant legislative authority to broaden the basis of credit for forestry cooperatives and to encourage use of the cooperative pattern in forest conservation. The committee also suggested that the Department be given an opportunity to do a better job in research, service, and education in the field of agricultural cooperation. The committee further suggested continued vigilance against legislation which would interfere with farmers' rights to cooperate, or would handicap cooperative activities, or would cripple the cooperative credit system.

Whether these suggestions will be accepted I have no way of knowing. It depends to a large extent on your interest and your activity.

Cooperatives on their own initiative can do one thing to strengthen their credit system. It is time, I think, for you to acquire more of the stock of the banks for cooperatives, either through purchase of capital with cash or by leaving the savings accruing to you to be used for capital purposes. This should be done carefully, with regard for the stability of the banks. The objective should be to retire the Government capital in the banks completely and to provide a sound, permanent, and flexible credit base, so that the banks for cooperatives can obtain a large portion of their lending funds from the investing public.

I recommend this to your consideration as a forward-looking course of action. The Farm Credit Administration believes this action should follow a carefully developed procedure, and I hope you will discuss the matter with the Farm Credit people.

My final observation concerns the responsibility of the American farm cooperative in meeting the present perils to world peace.

So far there is no peace settlement. The agriculture and industry of war-torn areas are still bleeding—unable to build the firm economic base on which the structure of lasting peace can be built.

President Truman has asked Congress to provide special emergency aid to three European countries and to shore up our own economy to meet the dangers of inflation. He will soon present a long-term program through which we can aid the economic rehabilitation of Europe.

American food fought for freedom through the long years of war. American food still fights for freedom. In time of war food was one of many weapons. In the building of peace it is the primary tool.

Like Atlas carrying the world upon his back, the American farmer carries on his shoulders tremendous responsibility for the future of all mankind. The hungry and oppressed across the oceans, and the anxious people of our own land, turn their eyes to the American farmer. How much grain can he conserve? How much can he produce?

Now, if ever, is the time to prove again the value of agricultural cooperation.

Through your livestock marketing cooperatives, you can yield great influence to bring down and hold down the market weight of your hogs, to market beef with less finish, to spread the word about all grain conservation methods that fit your local conditions at this particular time.

Your grain co-ops can help prevent waste through careful handling, through an intensified fight on insects and rats, through all the ways in which people can work together to save grain.

Your State colleges have been given responsibility for education in the ways of saving grain and in the "why" of the program. Give them a helping hand. Even to let the college people know you back up their effort is a help to them. But you have the means to do much more.

Let every farmers' co-op stand out as a leading force in behalf of the homely tasks as well as the lofty aims while we, the people of the United States, press on toward peace and security. Cooperate for this, the greatest of all our objectives, as you are in the habit of cooperating for your personal goals. Let the Nation see once more the truth in the old proverb that "three helping one another will do as much as six men singly." Let the Nation see, through the example of the farmers, that this is true in great affairs as well as small.

Those who know from experience what cooperation means have something major to contribute to a sick and disordered world whose dire need is for cooperation.

The planning, the work, and the fighting that gave us victory and a new chance for a better world—all that was not in vain. But neither has our effort been fully compensated.

Only when we have secured the freedom and order and peace for which we fought will we have been paid in full for the pain, the sweat, the long labors of our people—only then will our task be done.

Hawaii, Training Ground for Democracy, Inspiration to Chinese

---

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an article from the Shanghai Post and Mercury of November 21, 1947, by J. K. Choy, an American of Chinese ancestry,

who was born and received his education in Hawaii. The article follows:

HAWAII'S CHINESE—THEY HAVE CONTRIBUTED TO DEMOCRACY

(By J. K. Choy)

The granting of statehood to Hawaii represents the fulfillment of a normal and natural process in the best tradition of the United States as a melting pot of the world. It is the official recognition by a great nation of the political maturity long ago reached by the Hawaiian Islands. Hawaii's new status has been won through the efforts and contributions of people of diverse national, racial, and cultural backgrounds. Hawaii today is beyond the stage of a sociological experiment; it is an actuality that is demonstrating, day after day, the interdependence of diverse ethnic groups of one another and the practicability of those groups living and working together in harmony and peace. This is living democracy.

To take one ethnic group and briefly survey its role in the history of the Hawaiian Islands, we may consider the Chinese.

Numbering 29,000, the Chinese people in Hawaii make up about one-tenth of the population. They represent one of the smaller Chinese communities overseas. The history of their immigration is similar to that of other peoples in the islands and also to that of their brethren in the United States.

However, we must note one significant fact in their immigration which differs from that of the Chinese immigrants to the mainland of this country, and which may well be the explanation to the comparatively more favorable position they now hold in Hawaii. The fact is that Hawaii was an undeveloped land when the Chinese first came, and so although they had to start from scratch as did other immigrant groups, they enjoyed equality of economic opportunity. Contrasted with Chinese immigrants on the mainland, they had a freer and more equitable chance to develop themselves and to compete for the resources of the land. With their sense of economic security thus established, they set up permanent homes in Hawaii, whereas the contrary is still true with most Chinese communities on the mainland. The Hawaiian Chinese felt at home in Hawaii, and as a result, they have the incentive to devote their full energies to the development of the community and its people.

This feeling of belonging, together with its psychological ramifications are prime factors in the success of Chinese settlement in Hawaii and the large contribution they have made to the development of the islands. These are factors which only true democracy can offer and which must be extended upward and downward for the well-being of any immigrant group.

Nor is this democratic spirit confined to the islands, for its influence is felt far and wide and is responsible for much of the democratic changes that have come about in recent Chinese history. The Hawaiian Chinese have directly or indirectly done much in the spreading of this spirit to China. The Chinese Revolution of 1911 led by Dr. Sun Yat-sen, which overthrew the Manchu dynasty and established the Chinese Republic of today, was intimately associated with Hawaii. Dr. Sun's first contact with western civilization took place in Hawaii where he attended the Iolani High School at the age of 12. The contrast between the despotic Manchu reign and the easy-going democracy of the west made a deep impression on the young man. Later in his career as a revolutionist, he many times sought the political protection of Hawaii from the Manchus. The Chinese people there still love him as their own, so many times had he gone to them for help and so many times had they contributed to his efforts and the cause of the Chinese revolution.

During the same period Chinese reformists like the great scholars, Liang Chi-Chiao and Kang Yu-Wei, who worked for constitutional government in China, more than once took refuge in the islands from the Manchus. They were the founders of the first political party of China, the Democratic Constitutional Party, which to this day works against despotism and dictatorship. Their present leader overseas is Lee Dai-Ming, a Hawaiian Chinese, who is active in the present "reform movement" in China. Thus Hawaii has played an important role as a school of democracy for the Chinese people.

Countless other young Chinese Hawaiians have contributed their service to China, bringing with them their experiences of democracy across the ocean. For there have been six members of the Chinese Cabinet since the establishment of the Chinese Republic in 1911 who have lived or taken political refuge at one time or another in the islands. It is significant that in comparison with the South Seas and other parts of the world where millions of Chinese reside, Hawaii has been the only training ground for Chinese cabinet ministers.

In profession and in commerce the Chinese also hold many leading positions in the society of Hawaii. A few of the prominent citizens are Dr. Fred K. Lam, physician, who has done much to fight for the immigration rights of the Chinese people in Hawaii; Mrs. H. C. Chan, the Chinese lady lawyer who is in charge of small estates for the court in the Territory of Hawaii; and Dr. W. K. Chang, the well-known surgeon, who brought more babies into the world than any other of his colleagues in the medical profession. There is Nick Char, the fighting lawyer, whose courage in the fight for the rights of the underprivileged deserves mention.

In the commercial field we have Mr. C. S. Wing, founder and president of the Wing Coffee Co., who has helped to establish a place under the sun for the famous coffee produced in Kona; Mr. C. K. Ai, the grand old man in business, who has been furnishing lumber from the mainland for the building trade in the islands for the last 40 years.

C. Q. Yee Hop is another old-timer who for the last 40 years has supplied in large scale the best meat and vegetables for the population. There are bankers like K. M. Ching, of the Chinese American Bank, who is also an expert in agriculture.

Democracy comes through practice and participation. Hawaii offered its immigrants equal opportunities, and the immigrants demonstrated their ability to make use of those opportunities and put democracy to work, both in the island and wherever they go.

Statehood of Hawaii, for the Hawaiian Chinese people, is an expression of democracy. Their forefathers left their homeland because they believed in democracy; subsequent generations have been participating in its processes. Now that Hawaii will become a full member in the United States of America, we can look forward to further contributions from the Hawaiian Chinese toward the advancement of the democratic ideals on which this Nation is built.

Ten Billion More for Britain, Says Peter Edson

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article which appeared in the Washington Daily News as of December 9. It seems quite obvious that the Democratic administration is determined to furnish relief in dollars or goods to all the world in spite of serious shortages and a continued rise in the cost of living. Mr. Truman must take the responsibility for stoking the boilers of inflation.

The article follows:

TEN BILLION MORE FOR BRITAIN

(By Peter Edson)

The state secret of how much Marshall-plan aid is scheduled for Britain will be let out of the bag soon. The British will want nearly $10,000,000,000 over the next 4 years.

Requirements from the United States will be around $5,800,000,000. From Canada and the rest of North and South America, $4,200,000,000. The United States probably will be asked to furnish dollars for a large part of this latter amount.

Senate and House leaders who opposed the original $3,750,000,000 loan to Britain are laying for exact figures on new British requirements. They have charged that much of this first loan was wasted and allowed to go down the drain. If cuts are made in the Marshall plan for economy's sake or for political reasons, the critics of European aid believe that reductions can be made in the British lion's share.

Exact amounts for British requirements will be revealed when the President's message and State Department documents supporting the long-range European Recovery Program go to Congress. They will give country-by-country estimates for the 16 cooperating European nations and western Germany.

In the initial Paris report of the 16 nations a country-by-country break-down was given for only the first year of operations under the Marshall plan. Of total estimated requirements for $9,200,000,000 worth of imports from North and South America, Britain's share was given as $2,630,000,000—roughly 28.5 percent.

Why the British have been so reluctant to give out estimates on their requirements for second, third, and fourth years has puzzled many Washington observers. Fear of stirring up anti-British sentiment may be one reason. But since the figures were bound to come out eventually, nothing particular seems to have been gained by trying to cover them up. On the contrary, failure to lay the cards on the table may have stirred up suspicion and antagonism.

One reason given for not releasing 1949–51 estimates is the desire to present the Marshall plan as a European recovery job covering the whole continent. It was hoped to avoid the impression that the plan was for scattered and uncoordinated aid to 16 nations individually.

Another factor in not making detailed estimates for the last 3 years of the plan was the difficulty in predicting what the price, supply, and political situations would be that far ahead.

Because of price changes up or down, good or bad weather, congressional cuts, and world upheavals, final figure for Britain for the whole 4 years may vary considerably. It may be as high as $15,000,000,000 or as low as $5,000,000,000.

Part of the total will be on a loan basis, part an outright grant. But it should be noted that repayment of the original $3,750,000,000 loan is not due to begin until 1952. Repayment in 50 years is called for, with interest at 2 percent when the British can find the dollars. When they can't, interest is waived.

In the best possible light, future advances to Britain have to be considered as investments to keep the British going so they can eventually pay off their debts by A. D. 2000.

Investigating Committees of Congress

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill which I introduced on November 24, together with an editorial from the Toledo Blade and one from the Washington Post regarding this bill:

H. R. 4564

A bill to prescribe the procedures of investigating committees of the Congress and to protect the rights of parties under investigation by such committees

Be it enacted, etc., That it is hereby declared to be the purpose and policy of the Congress that all legislative committees and subcommittees shall conduct their proceedings with the utmost fairness to all who may be affected by them and shall make every effort to avoid the abuse of their proceedings as a forum for the making of charges detrimental to the persons involved, which are not supported by convincing evidence. To this end the following specific regulations are prescribed.

SEC. 2. (a) All witnesses at hearings of the committees, whether public or private, shall have the right to have the aid and assistance of counsel and such other assistance as may be necessary to protection of their rights and to a full and fair presentation of the matter under investigation.

(b) Every witness who testifies in a hearing shall have a right at the conclusion of his testimony either to make an oral statement or at his option to file a sworn statement which shall be made part of the record of such hearing, but such oral or written statement shall be relevant to the subject of the hearing.

(c) If a committee or any member thereof shall make public any report furnished to it by its staff or others, or if any witness shall make, by oral testimony or documentary evidence, any statement reflecting adversely upon the character or reputation of any other person (including governmental officials or employees) the committee shall either at once strike such material from the record or shall grant to the person referred to an opportunity to cross-examine the persons responsible for the report or making the statement, and to present countervailing evidence. Such cross-examination and evidence shall be relevant to the interests of the individual who is involved, and may be subject to such reasonable limits of time and duration as the committee may impose. In addition, the persons concerned shall have the right, but unless subpenaed shall have no obligation, to file with the committee any denial, defense, or explanation they may see fit and they shall have the right to testify in person.

SEC. 3. The Congress hereby reaffirms the right and the duty of the press to comment on the activities of the Congress and individual Congressmen, whether favorably or adversely, and declares that it is contrary to this fundamental principle of a free society for editors, publishers, and reporters to be called into question before any committee of Congress unless it is deemed essential by a full committee to the conduct of a legislative inquiry. And it is further declared to be the policy of the Congress that, except at his own request, no reporter, editor, or publisher, shall be called to testify before a committee to be questioned concerning any publication by him, unless upon vote of a majority of the committee or subcommittee before whom he is called to testify: *Provided*, That no such person shall be called before any committee or subcommittee having less than five members.

[From the Toledo (Ohio) Blade]

MARKING OUT THE FIELD

The bill which Representative HELEN GAHAGAN DOUGLAS, of California, introduced this week to define the scope and standards of congressional investigating committees is the first sensible attempt to bring order out of the chaos which followed the most recent hearings of the House Committee on Un-American Activities.

In general, Representative DOUGLAS' bill would set up standards of conduct for congressional committees; and guarantee to witnesses the right to answer charges brought by committees. That makes good sense, no matter how you view what the Committee on Un-American Activities and other similar groups have done in the past.

Surely these committees should have certain responsibilities, in addition to their privileges. And witnesses called before them ought to have legal opportunity to answer charges made by the committees. Whether or not there have been violations of constitutional rights in the past, there should be definite guarantees that such violations cannot be committed in the future.

Congressional committees operate at present largely under rules of their own making. The result has been something like a sandlot football game in which the field is unmarked and the rules are dictated by the biggest boys involved in the game. In most instances, committees have exercised particular care to avoid any question of propriety. But there has been no way to check those groups which have been less scrupulous.

Had there been set standards, such as those now proposed by Mrs. DOUGLAS, when the Thomas committee launched its investigation of Hollywood Communists, there could have been no justification for the excesses committed on both sides. The extravagant charges and countercharges were possible only because no one was sure what such committees can legally do and what they may not do.

In proposing that this field be marked out clearly, Mrs. DOUGLAS is on firm ground. There will be some disagreement concerning the standards of conduct for such committees. But as soon as those differences can be ironed out, her proposal should be enacted into law.

[From the Washington Post of December 4, 1947]

INVESTIGATIVE PROCEDURE

The extremely important work performed by congressional investigating committees has sometimes been marred by excesses in the exercise of their authority. Now and then, indeed, as in the case of the House Committee on Un-American Activities, these excesses have amounted to gross abuse of the power delegated by Congress and have resulted in grievous injury to the reputations of innocent persons. Some regularization of investigative procedure has become imperative both for the safeguarding of individual rights and for protection of the prestige of Congress. Representative HELEN GAHAGAN DOUGLAS has sought to provide this regularization in a bill introduced last week which would prescribe the procedures of investigating committees while still permitting them the latitude requisite to their effective operation.

Mrs. DOUGLAS' proposal would impose three elementary restraints upon committee conduct. It would assure every witness, in the first place, "the right to have the aid and assistance of counsel" and "a right at the conclusion of his testimony either to make an oral statement or at his option to file a sworn statement which shall be made a part of the record of such hearing." The legitimate work of committees could in no way be impeded by such obvious concessions to fair play. But the denial of these "rights" by such committees as the one investigating un-American activities have made necessary the stipulation of what ought to be taken for granted.

The same can be said respecting Mrs. DOUGLAS' second provision—in our view the most important in her bill. It stipulates that when the reputation of any person is damaged by any report issued under the committee's imprimatur or by any testimony or evidence presented to the committee, the person referred to shall have a chance to present countervailing evidence and to cross-examine his detractors. This seems a more effectual remedy than that proposed for the same purpose by Representative PRICE—to make "privileged" the rebuttal statements of persons assailed in committee hearings. Again the House Committee on Un-American Activities must be cited as the outstanding exemplar of the need for protection of this sort. Time and again during its headlined Hollywood hearings, it permitted witnesses to defame persons not present, without requiring a shred of evidence to support the defamation and without affording the victims any opportunity of rebuttal.

The third provision of the Douglas bill is narrower in application, needlessly so in our opinion. It stipulates that a newspaperman should not be called to testify before a committee concerning any publication by him "unless upon vote of a majority of the committee or subcommittee before whom he is called to testify, provided that no such person shall be called before any committee or subcommittee having less than five members." This strikes us as so reasonable a provision that we should like to see it extended to all citizens, whether newspapermen or not. Star-chamber hearings before arrogant committee chairmen acting without the knowledge or consent of their colleagues are an outright perversion of the investigative process.

Cargo for Russia

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. WEICHEL. Mr. Speaker, while the Congress is in special session, called by the President for the avowed purpose of keeping down communism in Europe and keeping down prices, the Secretary of Commerce is continuing to permit commodities of every kind and description to go through to Russia, making our own supply scarcer and the prices higher. On November 18, 1947, while the House was in special session at the call of the President demanding hundreds of millions of dollars to stop communism, the Russian-named ship, U. S. S. R. steamship *Mikhail Kutuzov*, owned by the Government of the United States, being the former United States flagship named *Graham Taylor*, left the Atlantic coast for Russia with electrical machinery and

apparatus, car wheels, construction machinery, metallic working machinery, and other items, as follows:

Russian steamship "Mikhail Kutuzov"

(Cleared from New York Nov. 18, 1947, for Odessa)

Principal items of cargo and value:

Sisal rope	$43,439
Other nonmetallic minerals	19,952
Railway car wheels	59,000
Electrical machinery and apparatus	634,030
Engines, turbines, and parts	56,604
Construction and conveying machinery	82,534
Mining, well, and pumping machinery	267,162
Metalworking machinery	594,361
Other industrial machinery	656,971
Agricultural machinery and implements	307,555
Automobiles, parts, other vehicles and parts	239,550
Chemical specialties	6,942
Scientific and professional instruments, apparatus, and supplies	249,280
Commodities exported for relief or charity	1,954
Miscellaneous commodities	12,123
Lend-lease: Mining, well, and pumping machinery	11,475
UNRRA: Miscellaneous commodities	26,520
Total	3,269,452

And, further, on December 4, 1947, the Russian-named ship U. S. S. R. steamship *Novorossisk* owned by the Government of the United States and formerly the United States flagship *Edward Eggleston* left Longview, Wash., on the Pacific coast for Russia, with cargo as follows:

Cargo laden on the U. S. S. R. steamship "Novorossisk" (former "Edward Eggleston") at Longview, Wash.

	Weight	Value
	Pounds	
17 cases of spare parts for can-making machine	38,581	$154,090
256 boxes of spare parts for Diesel engines	32,945	110,815
1,000 pieces of sheet steel piling	3,669,559	153,291
1,082 pieces of tie rods, turnbuckles, and nuts	1,615,070	113,718
36 pieces of head cone crusher and spares for crushers fork	279,761	81,818
12 crates of jaw crushers and spares	56,570	16,105
5 boxes of crane steam locomotive, in bond from Canada	240,260	40,000
2 boxes of clamshell buckets, in bond from Canada	8,400	3,000
414 cases of complete dump trucks	2,002,385	228,178
16 cases of electrical testing equipment	3,690	8,740
18 pieces of flotation machine and electric motors and spares	55,740	15,990
2 boxes of filter presses and spares	1,364	615
11 boxes of spectrograph equipment	2,965	5,735
10 boxes of steel dredge pumps	71,650	19,299
20 spare parts for Marion model 840 machine	59,874	39,882
15 pieces of complete stone crusher	148,325	53,111
1 box of impellers for turbine pump	250	1,402
62 pieces of electric shovels and spares	116,694	33,111
20 boxes of steel vertical pumps and spares	124,340	32,239
2 boxes of deep-well turbine pump and spares	1,650	1,068
33 pieces of Symons standard cone crushers	184,195	81,280
10 packages of model 480 power shovel and parts	37,360	18,994
17 boxes of Slurry pumps and spares	39,572	13,564
95 pieces of ore-crusher parts	97,784	41,539
69 pieces of deep-well turbine pump and parts	27,315	9,893
21 boxes of engine parts	3,546	23,819
21 drums of steel grinding balls	39,900	1,741
96 boxes of drill rods	100,586	30,676
16 cases of electrical equipment	3,478	10,129

Cargo laden on the U. S. S. R. steamship "Novorossisk" (former "Edward Eggleston") at Longview, Wash.—Continued

	Weight	Value
	Pounds	
2 cases of motor generator set and parts	2,180	$2,329
8 cases of pumps, motor and parts	30,000	43,532
2 boxes of spare parts for shovel	490	471
18 pieces of crawler chain shovels	197,135	57,983
276 boxes of continuous drill rods	256,222	80,152
8 boxes of electric motors and switches	3,240	1,681
136 pieces of manganese steel feed and shell liners	116,403	17,356
3 cases of motor and drive assembly for Wemco Lohead conditioner spare parts and (2) deep welded steel tanks	14,690	2,786
89 packages of core drill rods	82,030	24,435
101 packages of march ball mill and spare parts	298,903	69,655
92 boxes of drill rods	84,955	25,259
4 cases of pumps	10,000	14,000

Mr. Speaker, this is all in the face of nearly $300,000,000 worth of exports to U. S. S. R. during the period from June 1946 through September 1947, and further in addition to $563,000,000 exports in 1945, of which only $26,000,000 were commercial, the rest being gifts, of nearly $400,000,000 in 1946 of which $64,000,000 were commercial and the rest being gifts; and of nearly $114,000,000 from January 1947 through September 1947, of which $66,000,000 were commercial and the rest being gifts, Mr. Speaker, flaunting to the public such exports to Russia making our supply short and the prices high and the President demanding special aid to stop communism, it is inconsistent with the call of the special session by the President to have his appointees go merrily on sending goods to Russia even in the ships owned and paid for by the taxpayers of the United States and ships Russia does not return.

A Debauched Currency and Its Responsibility for High Prices and Economic Chaos at Home and Abroad

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. O'HARA. Mr. Speaker, high prices are recognized as America's No. 1 problem. The American people are sorely disturbed at the economic chaos at home and abroad, and at the prospect of a return to regimentation and price controls. They want to know what has happened to their money—why their dollar buys only about one-third of what it bought a few short years ago. There is nothing mysterious about this dollar depreciation. Karl Marx said, and Lenin demonstrated, that "The surest way to overturn the social order is to debauch the currency"; and so persistently has the New Deal administration pursued its course that the dollar and all fixed dollar-value securities, including savings, pensions, and life insurance, have lost 63 percent of their value since 1933. Naturally it requires more of these depreciated dollars to buy the necessities of life and other commodities.

The methods employed by the debauchers of our currency, and a remedy to end this intolerable situation, are explained in a House committee print just off the press which has received much favorable comment in leading newspapers throughout the Nation. I include the following quotations from the Chicago Daily Tribune; Washington (D. C.) Times-Herald; Salt Lake Tribune; Dallas (Tex.) Times-Herald; and Charleston (S. C.) News and Courier for the information and thoughtful consideration of my colleagues and the American people, under the leave to extend my remarks in the RECORD:

[From the Charleston (S. C.) News and Courier of November 23, 1947]

SOUND MONEY: A CURB ON WAR

If it were possible to make a book on money a best seller so that everybody would be reading it and discussing it, wars and depressions would be eliminated. All wars are economic. All depressions are the result of unsound economic and monetary policies.

Until the administration repeals the Bretton Woods Monetary Agreement, the Reciprocal Trade Act, and Public Law 84, all talk of stopping inflation will be so much eyewash. Public Law 84, enacted in 1945, depreciated the dollar 37½ percent caused commodity prices to advance 60 percent, and is responsible for the vicious inflation and the resultant demand for higher wages.

It is a well-planted fifth column in our country that has blamed the free-enterprise system for our depression when it is the Government that is to blame.

High prices at home, economic chaos abroad, and threats of world war III can be attributed largely to the fact that we have permitted knaves and fools to so debauch our currency that in the short period of 13 years our dollar and all fixed-dollar-value securities have lost 63 percent of their value.

The world needs stabilization of currencies more than it needs our dollars. Sound money is the first requisite for peace and economic recovery. The United States alone has the power to give that stability by adopting a sound monetary system. This can be put into operation in 90 days and will cost us nothing.

Karl Marx said, and Lenin demonstrated, that the surest way to overturn the social order is to debauch the currency. It can be done in such a way that not one out of a million will see it.

It requires $2.71 to buy what could be bought for $1 prior to 1934. Your $10,000 life-insurance policy has a value equivalent to $3,687.50 prior to 1934. Your $50-per-month pension has a purchasing power equivalent to $18.43¾ prior to 1934. A $10 daily wage of today has a purchasing power equivalent to $3.68¾ prior to 1934.

Where have I gathered this information? From a book that could become a best seller, if our congressional leaders in Washington would appropriate moneys to put this book into the hands of every honest-to-God American. Inflation, depression, and world war III would disappear overnight. Russia, the greatest hoax in all history, would be at an end. Russia knows her only "out" is to keep the United States busy with Europe so she can overrun Asia and seize the rich rubber, tin, and oil resources of Asia and the Middle East.

The name of this book, Money Makes the Mare Go, by John McBride, clerk of Commit-

tee on Coinage, Weights, and Measures, printed for the use of the Committee on Coinage, Weights, and Measures, House of Representatives, United States Government Printing Office just off the press.

When you write for this book you may be told only 1,000 copies were printed.

But you cut this letter out and send it to your congressional leader and ask him if he will not do all he can to get a printing so you can have a copy. After you read it you will be a red-hot American and you will do your best to get your congressional leaders to get this book published and placed in the hands of all Americans.

And before I close I want to reveal another fifth column and that is the income tax. Those who are interested may write for a copy of From Solomon's Yoke to the Income Tax" by Frank Chodorov, Henry Regnery Co., Hinsdale, Ill., 25 cents, also just off the press.

If we can get the truth to the American people the day will never come when there will not be enough junk in this country to interest a junk dealer.

Rev. HENRY F. WOLFE,
Sacred Heart Parish.

CHARLESTON, S. C.

[From the Washington (D. C.) Times-Herald of November 13, 1947]

MONEY

(By Frank C. Waldrop)

Next to life itself nothing is so essential to mankind as money. You can neither be born nor can you die, without it You cannot advance without it nor can you escape it even in retreat. Money, it is the greatest invention in all human history.

It overpowers all enemies. It survives all friends.

Neither religion nor politics nor war nor peace nor virtue nor evil has ever conquered money.

Money is not only the most powerful of all human inventions, but also the most ruthless enemy of fools. It leaves the company of fools in a hurry and will have no truck with them.

We all know these truths, yet all of us try to deny or distort them. And for all of its importance to us, how many ever really try to understand money and its place in life?

For instance, it is a common habit to profess hatred of money and to cite money as an evil companion. It is not money that is an evil companion.

It is man's use of money that can be evil. Money, like any other powerful agent, can be a terrible evil in its effects if the intent behind its use is evil.

Just so, money can be the most powerful of all agents for good. Money was the universal weapon of our forefathers in making this country what it is, our inheritance of might beyond all other people of history.

There were many other weapons for the building of our inheritance, but none so tireless, so ingenious, so useful in all campaigns in all ways at all times, as money.

It begins to be time, therefore, for us to put a little effort into thinking about the nature of money. What is it and why is it so powerful?

There never will be a full answer to those questions. But some facts are easily told and can be easily understood.

First, money counts because it is symbolic of command over energy and goods.

Without it you cannot have civilization. You cannot even have anarchy. You can only have a return to the apes. No people this side of the apes have yet found a way of living together without money.

The better the money then the better the civilization that it serves. Money is "better" or "worse" according to how near it comes to representing accurately the measure of goods and services it is claimed to measure.

A dollar is as good as that which it buys for you.

Not so good these days; is it? Why not, and whose fault is that?

Back in 1933, when gold was taken away from the people of this country, the administration in power made a flat promise that we would none of us lose by the deal. In fact, the reverse.

In fact, among the many things Mr. Roosevelt set out to deliver was a dollar that would buy the same measure of wheat 20 years later as it would buy in 1933—an absolutely fixed value kinship between money and goods.

If he had been able to deliver that, he could be forgiven his multitude of other errors and false promises 10 times over. But he didn't deliver.

In opposite fact, his meddlings unhinged the dollar from value so completely that generations not even to be born 20 years from now will still be suffering the consequences.

Well, he wasn't the first statesman to be less able at making money do what he wanted it to, than at getting rid of money. Nothing is harder than to make money do what you want, nothing easier than to drive money into doing what you don't want.

Some very fascinating evidence on that subject has just come to hand from Capitol Hill. The House committee on coinage, weights, and measures of the Seventy-ninth Congress assigned its clerk, John McBride, to write a history of the money manias of the world these last few years.

It is not dull reading. Quite the opposite.

Mr. McBride, who is a westerner, a miner, and, as you might guess, a believer in "hard money" provided it is made of gold and silver, has finally turned in his report.

The title is "Money Makes the Mare Go."

You can argue with Mr. McBride if you like as to whether paper currency ought to be subject to exchange anytime for either gold or silver according to individual taste. It's not so simple an issue as it looks.

But it is hard for anybody to argue that the monetary history of the past 20 years reflects much credit on the brains of the people who have claimed custody over the valuation of money.

It is plain to anybody who has been to the grocery store lately that something is wrong with the alleged experts' management of money and has been for some time.

The report to the House Committee on Coinage, Weights, and Measures tells you some facts about that in language anybody can understand. It is worth reading and you can get it at the Government Printing Office for two bits or thereabouts.

Meanwhile, items from it will be reported in this space from time to time just as reminders, but nothing less than the full item will really do justice to your interest, if you have interest.

And if you don't, then quit kicking at prices, taxes, and other consequences of the Government's money management.

And it's no good pointing at somebody else. We people in the U. S. A. are responsible for the kind of government we get.

[From the Salt Lake City Tribune of November 18, 1947]

SOUND MONEY HELD PROTECTION AGAINST COMMUNISTIC INROADS

(By The Shift Boss)

John McBride, clerk of the House Committee on Coinage, Weights, and Measures, has written a book entitled "Money Makes the Mare Go," which, incidentally, any citizen can obtain by writing to his Congressman or Senator. It is a revealing piece of writing and compilation of facts. Some clue as to its expositions may be gained from its foreword, which says, in part:

"Governments operating under a regimented economy know they can never successfully compete with a free competitive economy. They must either emulate us, destroy us, or face revolution at home. Their more intelligent leaders were inclined to emulate us until our internationalists and left-wingers—more vociferous than numerous—misled the more fanatical Communists into believing that they represented majority public opinion of the United States."

SUGGESTS CURE

"If we would preserve our American way of life, the first and most essential requisite is a sound world economy and a sound monetary system. The very antithesis of sound money and a sound economy is the so-called managed economy and managed currency now being perpetrated in the most vicious form by that unholy triumvirate, the Bretton Woods Monetary Agreements, Reciprocal Trade Act, and Public Law 84. These are the vehicles on which the internationalists are riding to power.

"Introduced and passed as three separate and apparently unrelated pieces of legislation, they fit together like the parts of a jigsaw puzzle to create a financial superstate—an international OPA, financed by us but controlled by debtor nations—which will dominate and rule the world through the control and manipulation of money, trade, and credit.

"Unless these three acts are speedily repealed or drastically changed, they will destroy domestic economy, siphon away our wealth, and precipitate an economic collapse from which we may never recover."

BOOK EXPLAINS

Serious statements but interestingly and dramatically justified in the author's mind in his book, which must be read to understand his recommendations on how to meet the threat he outlines. And his preface goes a step further:

"This remedy can be made operative in 6 months. If we fail to adopt it, all present frenzied efforts to achieve permanent peace, recovery, full production, and full employment are just so much sound and fury signifying nothing."

[From the Salt Lake City Tribune of November 19, 1947]

SOUND MONEY PLEA RECOUNTS FABULOUS IDAHO MINE STORY

(By the Shift Boss)

In his plea for sound monetary principles and sound economy, Money Makes the Mare Go, recommended for reading (the book is free) in this column recently, John McBride, clerk of the House Committee on Coinage, Weights, and Measures, illustrates one of his points in a manner particularly understandable to western miners and westerners in general.

Discussing current Government pouring of funds into Europe, the author said:

LOST AT POKER

"Years ago, we had a rather odd character out in Idaho, a prospector named Norton. He discovered a fabulously rich gold mine near Custer Mountain in the Yankee Fork mining district. The ore was high grade, assaying up to $10,000 per ton; and in a short time, he had taken out more than half a million dollars in gold.

"Norton called his mine the Charles Dickens, and the proudest boast of other prospectors in reporting a new strike was that 'it is as rich as the Dickens.' Norton was inordinately fond of playing poker; and when those invited to join him in play demurred because they had no money, Norton promptly

staked them and sat down to play against his own money. He died in the poorhouse."

DRAWS COMPARISON

"But before you laugh at this true story of the impractical and improvident Mr. Norton, stop to consider that your Government is now engaged in an international poker game with nations staked by the American taxpayers. Norton at least had the virtue of gambling with his own money, but we are gambling with the money of our people, the safety of our country, and the peace of the world. And we haven't as much of a chance to win as Mr. Norton had because, in addition to playing against our own money, the international racketeers, with whom we are playing are filching marked cards from a cold deck."

Whether or not one agrees completely the comparison is crystal clear in the West.

[From the Chicago Daily Tribune of November 17, 1947]

UNSOUND MONEY BRANDED CAUSE OF DEPRESSIONS—FREE ENTERPRISE ABSOLVED IN HOUSE GROUP REPORT

WASHINGTON, November 16.—Unsound economic and monetary policies of the Government rather than any failure of the free-enterprise system are to blame for depressions, according to a report released today by the House Committee on Coinage, Weights, and Measures.

The report, drawn up by John McBride, committee clerk, and printed by the Government Printing Office, has been in preparation for almost 2 years and consists of a history of money and a digest of statements of various world fiscal authorities. The report has not been acted upon by the committee; it was submitted for the group's use in considering future legislation.

"In their effort to replace free enterprise with a regimented economy," it asserted, "the most potent argument for our fifth column has been that free enterprise is to blame for booms and busts—for periods of depression and large scale unemployment," the report stated.

HOLDS STABLE MONEY VITAL

"Government, not free enterprise, is to blame for depressions because of unsound economic and monetary policies forced on business by Government. All efforts of the administration and Congress to stop runaway prices and bring peace and economic stability to the world are doomed to failure until a sound, stable, dependable monetary system is adopted.

"All thoughtful citizens will approve of the administration's statement that, 'Inflation must be stopped before it is too late.' But before any constructive action can be taken, it must be recognized that Public Law 84, enacted in 1945, depreciated the dollar 37½ percent, caused commodity prices to advance 60 percent, and is responsible for the vicious inflationary spiral of rising prices and resultant demand for higher wages."

Public Law 84 was an amendment to the Federal Reserve Act reducing from 40 to 25 percent the amount of gold certificates required of Federal Reserve banks as a reserve for Federal Reserve notes. This enabled the banks to increase their reserves in Government bonds, which, according to many competent authorities, cheapened the currency.

TELLS DROP IN DOLLAR VALUE

McBride said that in 13 years our dollar and fixed-dollar securities have lost 63 percent of their value. He declared that the crying need of the world is for stabilization of currency rather than for dollars.

"Sound money is the first requisite for world peace and economic recovery," the report said. "The United States alone has the power to give that stability by adopting a sound monetary system. This can be put into operation in 90 days and cost us nothing.

The report explained a sound monetary system is based on money which will serve as a permanent standard or measure of value. The dollar was depreciated 41 percent in 1934 and was further devalued by the lowering of Federal Reserve requirements, the report noted. Congress could open the way for a sound system by passing legislation to outlaw future attempts to tamper with monetary standards, the report said.

WARNS AGAINST ANARCHY

"Will we take this common-sense course, or will we continue to pour billions down 'operation rat hole' until the economic structure of the world collapses and the entire world is swept by ungovernable anarchy?"

"Operation rat hole" is a term used frequently here to cover all schemes for pouring more American money into Europe.

The report states that for years there has been "a national and international conspiracy, well-financed, and cunningly directed, to pillage our country and overthrow our system."

McBride holds that the conspirators are a strange alliance of Communists with Wall Street and London financiers. He asserts that one group—the "so-called intellectuals, fellow travelers, Communists, self-designated 'great liberals,' left-wingers, and political opportunists"—would set up a financial superstate to control money, the value of money, credit, production, profits, and wages.

The other group of pure Communists would set up a totalitarian state to be "absorbed as a vassalage in a world superstate in which we would be outnumbered and outvoted 15 to 1."

"We must not permit ourselves to be propagandized into voting billions of dollars to keep western Europe from becoming Communist," the report said. "The people of Europe realize that Communist Russia is the most tragic hoax in all history; her own people are restless and disillusioned; the Balkans seething with revolt.

"Russia's arrogance, insolence, and synthetic belligerence do not reflect confidence but desperation and fear on the part of her leaders. It has always been the practice of tyrants and dictators to manufacture a war to scare and frighten people into docility when their failure to solve internal social and economic problems has led them to fear for the perpetuation of their power."

[From the Dallas (Tex.) Times-Herald of November 17, 1947]

UNITED STATES POLICIES BLAMED FOR DEPRESSIONS

WASHINGTON, November 17.—Unsound economic and monetary policies of the Government are to blame for depressions rather than any failure of the free enterprise system, according to a report released by the House Committee on Coinage, Weights, and Measures.

The report, prepared by John McBride, committee clerk, and printed by the Government Printing Office, has been in preparation for almost 2 years and consists of a history of money and a digest of statements of various world fiscal authorities.

"All efforts of the administration and Congress to stop runaway prices and bring peace and economic stability to the world are doomed to failure until a sound, stable, dependable monetary system is adopted," the report states.

DOLLAR DEPRECIATED

"All thoughtful citizens will approve of the administration's statement that, 'Inflation must be stopped before it is too late. But before any constructive action can be taken, it must be recognized that Public Law 84, enacted in 1945, depreciated the dollar 37½ percent, caused commodity prices to advance 60 percent and is responsible for the vicious inflationary spiral of rising prices and resultant demand for higher wages."

McBride said that in 13 years our dollar and fixed dollar securities have lost 63 percent of their value. He declared that the crying need of the world is for stabilization of currency rather than for dollars.

"Sound money is the first requisite for world peace and economy recovery," the report said. "The United States alone has the power to give that stability by adopting a sound monetary system. This can be put into operation in 90 days and cost us nothing.

"Will we take this common sense course, or will we continue to pour billions down 'operation rate hole' until the economic structure of the world collapses and the entire world is swept by ungovernable anarchy?"

The report states that for years there has been "a national and international conspiracy, well-financed and cunningly directed, to pillage our country and overthrow our system."

McBride holds that the conspirators are a strange alliance of Communists with Wall Street and London financiers. He asserts that one group—the "so-called intellectuals, fellow travelers, Communists, self-designated great liberals, left-wingers, and political opportunists—would set up a financial superstate to control money, the value of money, credit, production, profits, and wages."

The other group of pure Communists would set up a totalitarian state to be "absorbed as a vassalage in a world superstate in which we would be outnumbered and outvoted 15 to 1."

Congress of American Women and Comintern Ladies Aid

EXTENSION OF REMARKS

OF

HON. FRED E. BUSBEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a letter I directed today to the Honorable Tom Clark, United States Attorney General, and an article entitled "Comintern Ladies Aid" which appeared in the magazine Plain Talk of July 1947:

DECEMBER 11, 1947.

Hon. TOM CLARK,
United States Attorney General,
Washington, D. C.

DEAR MR. CLARK: On December 7, 1947, I received the following telegram from Rheua Pearce, Congress of American Women:

"As mothers and homemakers faced with a very serious problem, we are coming to Washington on Tuesday, December 9, to talk with you, our Representatives. Our organization represents 35,000 women from Chicago area. The delegation will include representatives from other organizations speaking for the women of Chicago."

Rheua Pearce is president of the Chicago Chapter of the Congress of American Women with offices located at 203 North Wabash Avenue.

In order to save their time and be as helpful as possible, I arranged for the following women who were in Washington from Chicago, in accordance with the telegram, to meet with Representatives THOMAS OWENS, ROBERT TWYMAN, RICHARD VAIL, and myself, at 4:30 the afternoon of December 9 in the office of Congressman RICHARD VAIL. The delegation consisted of the following: Mrs. M. M. Robin, 3541 Van Buren Avenue, Chicago, Chicago Federation of Consumers; Mrs. Irene M.

Gaines, 3262 Vernon Avenue, Chicago, Illinois Association of Colored Women; Mrs. George Winsberg, 1322 South Fairfield, Chicago, Emma Lazarus Division of Jewish Peoples Fraternal Order; Mrs. Grace D. Wells, Illinois Association of Colored Women; Mrs. Margaret Hayes, Chicago, Chicago N. D. A. of C. Clubs; Mary Andelman, 709 Cornelia, Chicago, Congress of American Women, Chicago; Anita Wolfson, Chicago, Congress of American Women, Chicago; Eva Levin, Chicago, Congress of American Women, Chicago.

This delegation, in addition to representing the Congress of American Women, claimed to represent the following organizations: Young Women's Christian Association, Progressive Citizens of America, Federation of Settlements, American Veterans Committee, International Workers Order, Chicago Association of Colored Women, National Association for the Advancement of Colored People, Illinois Association of Colored Women, Chicago Chapter of Negro Organizations, Victory Group of Consumers Civic Organization, and Chapter of Jewish Peoples Fraternal Order.

I have checked with the office of the Clerk of the House of Representatives and find that the Congress of American Women is not registered under title III of Public Law 601, known as the Federal Regulation of Lobbying Act. Section 307 of this law reads as follows:

"SEC. 307. The provisions of this title shall apply to any person (except a political committee as defined in the Federal Corrupt Practices Act, and duly organized State or local committees of a political party), who by himself, or through any agent or employee or other persons in any manner whatsoever, directly or indirectly, solicits, collects, or receives money or any other thing of value to be used principally to aid, or the principal purpose of which person is to aid, in the accomplishment of any of the following purposes:

"(a) The passage or defeat of any legislation by the Congress of the United States.

"(b) To influence, directly or indirectly, the passage or defeat of any legislation by the Congress of the United States."

Information I have in my files shows that the Congress of American Women is the United States branch of a foreign-inspired conference of the Womens International Democratic Federation, and that it is in fact a Communist-controlled front organization.

I, therefore, formally request action on the part of the Department of Justice in reference to this outright violation of the Federal Regulation of Lobbying Act and further information as to the prospect of this organization being formally cited by your office as a subversive organization.

Very truly yours,

FRED E. BUSBEY,
Member of Congress.

[From Plain Talk for July 1947]

COMINTERN LADIES AID

(By Suzanne La Follette)

Wrapped in mystery is the origin of Stalin's ladies' auxiliary, the Women's International Democratic Federation, which suddenly sprang into being in war-shocked Paris 6 months after VE-day with a full-grown planetary membership of 120,000,000. At least that was the inside figure which the well-informed Daily Worker announced on December 23, 1945.

The head of the United States branch of this colossal Moscow front is Dr. Gene Weltfish, a scientist and former member of the faculty of Columbia University. Dr. Weltfish has never volunteered any clarification of the federation's apparent parthenogenesis. But last month, in addressing a convention of her branch, the self-styled Congress of American Women, she did announce, according to the New York Herald Tribune of June 7, that the parent organization has expanded to a membership of 81,000,000 women in 44 countries.

Now Dr. Weltfish, who attended the Paris conference where the Comintern Ladies Aid was first launched, may have been ignorant of the Daily Worker's claim of 120,000,000 members. But as one of the founders, she surely knew the official figure, released in the New York Times on December 1, 1945, which claimed that the federation represented 81,000,000 women in 35 countries. How that figure had expanded to 81,000,000 by June 1947 is one of the little mysteries of Communist mathematics.

Such juggling of astronomical figures is but one index to the character of the organization which would mobilize the women of the world for peace and justice. The record of Dr. Weltfish as a Communist fronter and party-liner is another index. Her urging of American women "to assume their political responsibilities before it is too late to alter the dangerous course our country is being steered into by the Truman doctrine" is a familiar echo of the Moscow refrain heard the world over in recent months.

High-sounding indeed was the name of the organization to which the Paris conference of November 1945 had so mysteriously given birth. The Women's International Democratic Federation (WIDF) was a label designed to stir legitimate hopes and to lure innocents. Few realized that the American women who attended the Paris conclave and later set up its affiliate here were, almost without exception, consistent followers of the Communist Party line. Nor did many Americans associate the "Mrs. Elizabeth G. Flynn" of the United States delegation with Elizabeth Gurley Flynn, a member of the national committee of the Communist Party, United States of America, and columnist on the Daily Worker, who later became a vice president of the Congress of American Women (CAW).

Now, through a special membership drive, the CAW is launching a country-wide effort to draw idealistic—but credulous—women into its fold. It will try especially to reach workingwomen, Negro women, and women veterans. Dr. Weltfish stated that the organization already has a "membership representative of over a quarter of a million women in the United States." That this figure comes from the same mathematical primer as the official 81,000,000 membership of the parent organization goes without saying. According to that primer, of the world's 1,000,000,000 females of all ages, 1 out of every 13 is represented by this Communist "front." Perhaps all the women in Soviet government-controlled trade-unions are automatically included in the statistics. Of course, no Russian woman has anything to say about it—except possibly the bemedalled and uniformed women commissars whom Stalin sent to Paris to officiate at the christening of the Comintern's feminine offspring.

The "happy lot" of the Soviet woman has proved the main inspiration for the work of both the WIDF and the CAW. Elizabeth Gurley Flynn, describing the Paris meeting of the WIDF in the United States Communist magazine, Political Affairs, applauded "the tremendous progress" of women in "the only Socialist state as yet in existence." She urged that "we should use this example of the country of socialism to demonstrate to American women that Communists actively champion the rights of women * * * which bourgeois democracies grant them only piecemeal after tremendous struggles."

The well-known fact that Soviet women have won a new status under the Communist dictatorship—a status which permits them to toil as miners and bricklayers, as street-cleaners and hodcarriers; to stand in queues for hours before and after work in quest of bread for their children; to vote for only one party and one list of candidates; and to enjoy the privilege of raising children in slave-labor colonies—all this has been passed over in silence by the Flynn-Weltfish propaganda mill.

The creation of a powerful international women's movement has been a Soviet aim since the beginning of the Bolshevist regime. As far back as 1920, Lenin told Clara Zetkin, the grandmother of German communism, that "real freedom for women is possible only through communism. * * * We need appropriate bodies to carry on work amongst them; special means of agitation, and forms of organization. That is not feminism; that is practical, revolutionary expediency."

The organization that is working to turn Lenin's design into reality has close connections with Moscow's other international fronts, the World Federation of Trade Unions and the World Federation for Democratic Youth. Like them, it originated in Paris, where Jacques Duclos, secretary of the Communist Party of France and recognized mouthpiece of the Comintern, laid down the new aggressive postwar Soviet line. The Union des Femmes Francaises, which initiated the WIDF, is Communist-dominated. Eugénie Cotton, who was refused an American visa because of her pro-Communist activity, became president of the WIDF.

Members of the WIDF executive committee incude Ana Pauker, of the Central Committee of the Communist Party of Rumania, who directed the brutal purges of liberals in her country; Dolores Ibarruri, known as "La Pasionaria," Spain's leading woman Communist; and Tsola Dragoicheva, who has been called "Bulgarian Lady Executioner" for her activities as general secretary of the Communist Party of Bulgaria. A number of Tito's women guerrilla fighters were delegates to the Paris conference. The U. S. S. R. delegation of 40 women was the largest from any country and included two official Soviet deputies.

There were some delegates who took the announced program of the federation at its face value. They even dared to oppose the Communist steam roller. Thus Madame Sedoux, a representative of France, sought to aline the newly organized women's movement not only against fascism, but against totalitarianism of every color. She and two delegates who supported her were expelled from the conference. Also squelched was the suggestion of an Australian delegate that the slate of candidates for permanent executive office be submitted to the members of affiliated organizations in the various countries.

In the fall of 1945, when few Americans could get passage overseas, Elizabeth Gurley Flynn and her covey of United States women delegates flew to Paris. Now holding prominent positions in the CAW, these women have all been supporters of Communist-front movements. Dr. Weltfish signed the statement in defense of the Communist International agent, Gerhart Eisler, and has condemned American policy in China, Greece, and Spain in orthodox Soviet fashion. She is coauthor of a pamphlet, Races of Mankind, which glorifies the Soviet Union, and has also sponsored various "fronts." Mrs. Muriel Draper, executive vice president, has been acting as executive secretary of the women's committee of the National Council for Soviet-American Friendship, and spoke on a Daily Worker radio program. She is a confirmed party liner.

It was Mrs. Draper and Dr. Weltfish who, at a meeting in Moscow of the executive committee of the WIDF in October 1946, presented resolutions demanding disarmament of the United States and denouncing the "reactionary forces" in their country, which they said were aided "by the tyranny of the

press and the syndicates." Again on Soviet territory, though in the United States of America, Mrs. Draper was chairman of a meeting held in the Soviet Consulate, New York City, on March 7, 1946, to celebrate International Women's Day, a Communist holiday. Incidentally, the group has not so honored any other foreign consulate.

Chairman of the WIDF'S Committee on Child Welfare and a vice president of the CAW is Mrs. Elinor S. Gimbel, who has supported numerous Communist fronts. At the June meeting of the CAW, she stated that the children of Europe, Asia, and Africa "need food, clothing, school supplies, medicine, toys, and a feeling of democracy." True as this statement is, one wonders whether the brand of democracy advocated would be Soviet-style, which is admired by the CAW just as invariably as American democracy comes under their critical fire.

Others prominent in the organization are Ruth Young, who was a Communist Party convention delegate in 1945; Thyra Edwards, formerly a member of the Young Communist League, who conducted tours to the Soviet Union; Dr. Bella V. Dodd, a member of the National Committee of the Communist Party, U. S. A.; and such well-known fellow travelers as Henrietta Buckmaster, Mary Van Kleeck, and Florence Eldridge (Mrs. Fredric March).

The CAW has recently moved its headquarters to 144 Bleecker Street, New York, the address of the United States Committee for the World Youth Festival, which is being conducted in Prague by the revived Young Comintern. The June conference of the CAW met in Holy Trinity Church, Brooklyn, of which the rector is the "Red Reverend" William Howard Melish, vice chairman of the National Council for American-Soviet Friendship. Mrs. Melish is president of the CAW's Brooklyn chapter.

The cooperation of the CAW with other organizations is limited to well-known Communist fronts. It has had no dealings with the established non-Communist women's groups in the United States. In fact, it effectively scuttled an attempt to organize a bona fide International Assembly of Women. At the preliminary meetings held in New York last October American party liners and Communist delegates from overseas formed a tight bloc which insisted that the group work through the WIDF rather than set up its own central bureau for the exchange of international information among women. The meeting adjourned without having formed a continuing committee.

With fanatical persistence the disciplined pro-Communist women make sure not only that possible rivals fail to get a finger in the international pie but that the plums will be dished out to themselves. It is an ominous fact that they have secured consultant status for the WIDF with the Economic and Social Council of the United Nations.

The emblem of the WIDF and its American affiliate is a dove of peace holding an olive branch. Much has been said by the CAW about the menace to peace of America's "Fascist-minded monopolies," "imperialist aggression," and failure to share with Russia the secret of the atom bomb. But the group has a sizable blind spot when it comes to the encroachment of Soviet totalitarianism upon the freedom-loving peoples of Europe and Asia.

The slogan of "peace" exploited by the Congress of American Women is befuddling many sincere feminists. Our leading newspapers have given the WIDF much free publicity, and have characteristically taken little trouble to expose its real nature. Yet even a cursory examination of the facts is sufficient to unmask the organization as the Kremlin's "ladies aid," designed to perform a vital function in the secretly restored Comintern.

Handicapped Citizens

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. ANGELL. Mr. Speaker, one of the outstanding citizens of my district is Mrs. R. E. Bondurant who throughout her lifetime has performed a great service for the handicapped citizens of the Nation. Mrs. Bondurant has been most diligent in sponsoring legislation, programs, and community service for the blind and other handicapped people who are at a disadvantage in meeting the problems of life. No one in my State of Oregon has done more for these underprivileged persons in need of assistance in fitting them to meet the responsibilities of life and relieving them of some of the burdens resting upon them.

Mrs. Bondurant has now as one of her projects the education of underprivileged persons and particularly affording them the opportunity to perfect themselves in skills and crafts so that they may not only provide for their own care and upkeep but give worth-while contributions to the economy of our Nation. Mrs. Bondurant has recently opened in the city of Portland, in my congressional district, a craft shop where the products made by the handicapped are offered for sale, by means of which these handicapped citizens are enabled to earn a livelihood. This project is a worthy one and is under the sponsorship of the Oregon State department for vocational rehabilitation and the Oregon chapter of the National Society for Crippled Children and Adults.

I include as a part of these remarks an article by Mrs. Bondurant in the Portland (Oreg.) Journal of Friday, December 5, 1947, explaining this outstanding service in which she plays such an important part and to which she gives her time without monetary recompense. The article is as follows:

SHOP FOR HANDICAPPED

(By Mrs. R. E. Bondurant)

Oregon's thousands of home-bound persons, having lost some of their faculties but none of their courage, are building better "mousetraps"—and a myriad other types of hand-made, high-grade articles as a means of continuing as useful citizens, supplementing family income and otherwise demonstrating to themselves and friends that they've still got what it takes to help make the American system of a free enterprise work.

So successful are the men and women who make such a wide array of useful items, toys and handicrafts in their own homes that Oregon would be crisscrossed many times with paths to their doors by persons seeking the figurative "better mousetraps" were it not that efforts are being made to establish a full-time, year-round store in Portland as a State-wide outlet for the results of their imagination, industry, and skills.

The first step in the major project was taken about a month ago during the third annual observance of National Employ the Physically Handicapped Week, when one of Portland's large, downtown department stores donated easily accessible space for an exhibit and sale of hand-tooled leather purses and billfolds, slippers, toys, aprons, jewelry, lamps, plastic vases, and many other items—embroidery, lace, and sundry equally high-grade and compelling products. Long before the week ended, it appeared that the next step—the establishment of a permanent store—should be taken at once in order that this fine merchandise be made available to Christmas shoppers who pride themselves on the personal touch in their gifts.

Search was made for downtown space suitable for a craftshop for Oregon's handicapped and home-bound producers. The problem of availability of any space was bad enough, but suitability proved insurmountable, at least for the time being. Rather than be completely stymied, high-priced quarters were rented even though well out of the main shopping stream, in the hope that newspaper and radio publicity, together with enthusiastic word-of-mouth reports would reach enough potential supporters of the craftshop to raise it to a self-sustaining, nonprofit basis. It is the writer's hope that between now and the first of the year this sales outlet for products made by home-bound persons can be moved from its present location at 1325 Southwest Washington Street to more suitable space convenient to shoppers.

Under the sponsorship of the State department for vocational rehabilitation and the Oregon chapter of the National Society for Crippled Children and Adults, the craftshop for the handicapped is a basically sound idea.

I purposely have made no mention of disabled American veterans in connection with the new craftshop, mostly because their needs, when home-bound, are identified with the thousands of handicapped persons so urgently demanding an outlet for the products of their ingenuity and industry. Won't you help them, veterans and civilians alike, by visiting the craftshop between now and Christmas? By so doing, you not only will find better "mousetraps" but you also will help beat a new path to the collective door of Oregon's handicapped workers.

This Aid Continues America's Mighty Effort Toward a Satisfactory and Enduring Peace

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 11, 1947

Mr. MURDOCK. Mr. Speaker, I voted in support of the interim-aid bill, H. R. 4604, which the House passed today by a voice vote, but I have had so little to say during the many hours of debate that I take advantage of this leave to extend my remarks in order to express myself briefly on the bill. While there may be some features I could object to, I am satisfied with the amount of money which the House committee wrote in the authorization, and of course I am entirely in sympathy with and favorable to the intent and purpose of this bill as I understand its purpose.

I have heard the prophets of gloom predicting dire consequences to our own economy if this bill should become law. I am less inclined to heed these dismal prophets as I have heard them make

similar dire predictions many times before, even while we were trying to prepare our country on the eve of a terrible war. I recognize that there is some danger to our basic economy inherent in this move, but I feel that we must take certain fairly definitely known hazards rather than risk a greater hazard in any conceivable alternative.

Many of my colleagues have enumerated the tremendous sacrifices in blood and treasure which America has paid in recent years to win this war of survival. I do have some conception of that price, and that fact makes me willing to pay a relative high price to win the peace. Therefore, I think the vast investment in peace which we have already made and which we are making in this bill and which we are contemplating in additional measures are worth the price if together they give us a fair chance to win the peace. All life is a hazard, and that is true of the life of a nation. We did not hesitate to take long chances when it was a question of physical survival. We should not hesitate now when the decision is equally critical.

I was very much interested in the proposals made today in the two amendments offered by the gentlemen from Texas, Mr. GOSSETT and Mr. POAGE. I thought on first hearing those proposals that they sounded sensible, for I do want the peoples of the Old World, for whom we have done so much and sacrificed so greatly, to know of America's part in bearing the burdens of this great conflict. I have all along supported the Voice of America. I think it is very foolish of us if America's efforts are not fully made known throughout the world.

I have heard so many political opponents of the administration declare that the real America and her generous spirit have not been made known to the peoples of the Old World. Well, now, certainly America ought to have a great reservoir of good will abroad because of our humane intentions and sacrifical efforts, if the truth about us is known. However, these two proposals were turned down today on the ground that the agencies administering this relief are given authority to tell the world about our efforts. Surely the majority, even of this Republican Committee, cannot have such utter lack of faith in all of the administrative branch of our Government to deal with such matters effectively when they pass over an opportunity to direct how information concerning America shall be dispensed along with our aid. If there has been any failure in this respect in the past, it must be remedied in this program.

Opposed to Bypassing Antitrust Laws

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include the following telegram from George J. Burger, director in charge of the Washington office of the National Federation of Small Business, Inc.:

WASHINGTON, D. C., *December 11, 1947.*
Hon. ESTES KEFAUVER,
House Office Building,
Washington, D. C.:

This is to call to your attention the joint resolution to check inflation as reported in Nation's press today, and particularly that part of the resolution, "Parties to any agreement approved under the section are hereby relieved from the operation of the antitrust laws, etc." The federation, having the largest individual membership of any business organization in this Nation, and speaking for that membership, strenuously opposes any bypassing of antitrust laws. The federation's position in this respect was made known in its opposition to the Reed-Bulwinkle bill, which provided for the same exemption. The federation's position was made definitely known in its testimony before the Joint Committee on Economic Report, July 14, requesting and urging all-out enforcement of antitrust laws. We call to your attention testimony of the Assistant Attorney General before the Senate Civil Service Committee, February 13, 1947. In substance he stated that for 35 years or more the administrations have been giving lip service to the enforcement of antitrust laws. The federation, speaking for small business, is committed to oppose any weakening or bypassing of antitrust laws, and we see no justification to commit this to be approved by the Government. Please make known our views to the Congress. It is most urgent. You are privileged to quote the full message.

GEORGE J. BURGER,
Director in Charge, Washington Office, National Federation of Small Business, Inc.

The Farm Program

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Friday, December 12 (legislative day of Thursday, December 4), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address which I delivered at the annual banquet of the Farmers Union Grain Terminal Association, at St. Paul, Minn., on December 9.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In speaking before this cooperative tonight, I am addressing some of the most important people in world affairs today.

The American farmer more than anyone else in this critical period in history is influencing and shaping the economic and political destiny of nations.

Hunger is the great breeder of revolution. Hunger is the great destroyer of liberty. Hunger has toppled kings from their thrones. It has prostrated economies. It has caused multitudes to grasp in desperation at the promises of false prophets. It has bred war.

Many nations are today on the verge of political and economic chaos. Only relief from the fear of hunger and famine can avert catastrophe for some of them. The American farmer offers the only hope for providing that emergency relief.

Through the exports of food raised on the farms of North America, a degree of stability has been maintained to date by governments of Europe.

Only by maintaining stable governments in other countries has the foreign market for American manufactured goods been maintained and the employment of over 60,000,000 persons in the United States made possible.

There are still those who say, "Let the rest of the world shift for itself. Let us keep America an island of unprecedented prosperity in a world of chaos, poverty, and war."

What a ridiculous attitude that is.

How can anyone really believe that the 7 percent of the world's people living in the United States can forever remain prosperous and rich in a chaotic, poverty-stricken, and highly scientific world?

After recently traveling 6,000 miles throughout this Nation of ours, I have become convinced of one thing—that the American farmer harbors no such illusion.

He knows that unless harmonious working agreements among nations prevail; unless the world can be rid of the fear of famine, pestilence, tyranny, and war, that the prosperity now being enjoyed in this country cannot long be sustained. The American farmer is willing to strain his efforts to the limit to produce the grain, the meat, and other products so necessary to attain this stability.

In talking with a small group the other night, I mentioned the fact that the farmer is willing to go the limit in order to feed the people of Europe.

One member of the group responded with a rather derisive laugh, the inference being that the farmer was, of course, willing to feed Europe because it meant money and profits to him.

He ignored the fact that American grain today is sold to Europe for much less than the price of grain produced in South America.

He ignored the fact that the farmers have contributed thousands of tons of food without any recompense whatsoever, and he ignored the fact that the great majority of farmers in America have had their production costs greatly increased because of shipments abroad.

It evidently did not occur to him that the farmer looked beyond immediate and temporary high prices in his outlook on world affairs.

I fear that the snap judgment of this man on American farmers is too prevalent in some quarters.

The wonder is that there are not more people like this considering the vigorous and vicious campaign which is constantly being conducted for the purpose of putting the farmer in a false light.

You and I know the forces that are responsible for this campaign, conducted through magazines, on the air, and even before committees of the Congress.

We know how difficult it is for agriculture to get into print in some great publications, except in a biased or misleading sense.

It is a great tribute to the American people as a whole that more of them have not fallen for the propaganda designed to misrepresent farmers.

It is to the everlasting credit of our industrial workers that not one of their leaders, so far as I have been able to determine, has attempted to put the blame on the farmer for the unprecedented high cost of living which exists today.

They seem to know, as we know, that the campaign against farmers is designed to promote class antagonism between those who work in the factory and those who work on the farm, and to divert attention from some of the real culprits that contribute to the high cost of living.

I am not attacking American industry. As a whole, industry is as conscientious as other

groups, but there are monopoly-seeking elements of industry and commerce that know no scruples; that seem willing to stoop to any level to satisfy their lust for power or money. They are determined to break the strength of organized agriculture at any cost, by any means.

They would deny the farmer the right to market his grain and other crops except through channels which are controlled, and all too often exploited, by monopoly seekers.

They would deny the farmer the right to purchase his gasoline and oil except at a price above that which he should pay.

They would deny the 3,500,000 farmers who are still without electrical energy the privilege of getting that light and power except by paying tribute to the private utilities which are controlled, body and soul, by eastern financial interests.

They oppose the development of the Great Lakes-St. Lawrence seaway, which would give farmers in the Northwest access to world markets without paying a transportation bonus to the railroads.

They would destroy the Tennessee Valley Authority and all it has accomplished for the good of all people.

They would prevent the development of the natural resources of America unless the people pay monetary tribute to a small group for the privilege of using these resources.

They systematically propagandize the small merchants and businessmen of America in their efforts to weaken the ranks of the farm people of our great Nation.

They spend millions of dollars on radio programs and newspaper advertising. They hire a horde of so-called experts to try to substantiate, spread, and give credence to their one-sided, and often false, contentions.

They infiltrate into the membership ranks of thousands of organizations. This not only keeps them informed as to what is going on but enables them in many cases to actually control these organizations and their policies.

They retain any legal talent which might make trouble for them, if they can. They maintain extravagant lobbies in Washington and State capitals. They furnish speakers to spread insidious propaganda to churches, chambers of commerce, and patriotic organizations free of cost to those unsuspecting organizations.

They plant their stooges in cooperative meetings from coast to coast and they hire full-time henchmen to work against the friends of farmers in Congress and State legislatures.

They collect millions of dollars from corporate interests, commodity gamblers, and financial manipulators in order to carry on their campaign against the farmers. They do not pay one dollar of tax on the huge sums which they collect for this purpose.

In fact, they not only do not pay a dollar of income tax on these collections, but the contributor is actually permitted to deduct the amount he gives from his own income in making his personal return.

Why should organizations established for the express purpose of creating class prejudice be permitted to avoid the payment of taxes on millions of dollars contributed for this purpose?

A financial statement of every farm cooperative in America can be readily obtained. A financial statement of the affairs of nearly every labor union can be readily obtained.

Organizations set up for the purpose of weakening both agriculture and labor not only do not make financial statements available to the public, but resist all efforts to bring the source of their funds out into the light of day.

The Congress of the United States should require the National Tax Equality Association and other power seeking class organizations to make full and open financial reports, and to pay taxes on their enormous cash incomes.

If those groups which constantly wage war on American farmers are not curbed but should succeed in their selfish objectives the food production of our Nation will be seriously impaired.

History has shown that when a nation's source of food supply and of raw materials becomes weakened, the nation itself cannot long remain strong.

If the United States is to remain economically secure and politically democratic, we must maintain agriculture at its present strength and increase that strength as fast as possible.

We must eliminate international trade barriers as rapidly as we can, but until the time comes when a means of preventing war has been devised and the world has worked out feasible economic agreements, America must never become dependent on overseas countries for its food, shelter, and clothing.

Our agriculture can be kept strong only through maintaining our most precious heritage, the land itself, and by having that land operated by a strong and virile people.

Five hundred thousand boys and girls annually leave American farms to engage in other occupations. The farm, therefore, is not only the source of our food and fiber supply, but is also the source of strong young citieznship needed to contribute to the leadership and the industrial strength of our cities. Character is one of our greatest farm crops.

It is vitally important that we keep the right kind of people on our farms. If we are to do this it is necessary that we assure them of a living income.

It is not enough for the per capita income of farm people to remain at less than half the per capita income of city people. Such an inequitable income will not suffice.

We must continue our efforts until farmers in America are assured parity of income with other people.

It has been my privilege to be chairman of a Senate subcommittee authorized to study the needs and trends of American agriculture and to develop a long-range program. This study was authorized by a resolution introduced by your own junior Senator from Minnesota, Senator ED THYE.

We will not be satisfied with any program which does not bring us nearer the income level of all people than we have heretofore been.

Farm people are entitled to good schools, good hospitals, good roads, and good living, just as much as any other people are.

We realize our interdependence with other sectors of our national economy, particularly with those who are gainfully employed in industry, but we are within our rights when we insist upon equality of opportunity and equality of living standards for our families.

We cannot be selfish in this matter. We must seek only that which is properly ours.

Our fortunes, quite properly, should rise or fall with other groups engaged in commerce, industry, labor, and the professions.

No one group can long maintain a high level of prosperity alone. We are concerned not only with the income of these others. We must also insist that they too have high levels of health and education and the enjoyment of life.

We must never again let millions of people in the cities of this great Nation go hungry while food rots on the farm.

We must insist upon adequate levels of diet for all, not only because it makes for a stronger people in our Nation, but because it will actually pay cash dividends.

We must support measures to provide full employment for the working people and full operation for our factories and industrial plants.

We must support an adequate minimum-wage level for all workers.

We must extend the benefits of social security to the 26,000,000 workers including farmers who are now contributing to the costs but receiving none of the benefits from this program.

We must stand ready to adapt our agricultural practices to the needs of the Nation as a whole and to shift our production whenever these needs become clearly apparent.

We must encourage cooperation with other groups and unity among ourselves.

An unorganized agriculture would soon result in an economic peasantry and a weakened Nation.

There are too many who today would prey upon agriculture regardless of consequences to their country.

There are too many who are too self-satisfied with present conditions and their present status in society. They are the advocates of scarcity and high prices.

They lack foresight and are afraid. Afraid to make changes in an expanding world and completely blind to the consequences if we fail to do so.

Farmers must organize and stand by their organizations. I refer especially to cooperatives which have brought to the American farmer a high degree of independence and a higher standard of living. The cooperative is free enterprise in action. Contrary to what a few representatives of selfish interests have charged, the cooperative is one of the highest examples of private initiative.

Farm cooperatives have come in for increasing public discussion during recent years. They have been too successful to suit the speculators and profiteers. As farmers well know, a major aim of the cooperative is to give its farmer members the best possible service at the lowest possible cost, whether it be in the field of marketing, purchasing, or other business services. The more nearly it attains that major aim, the more it will draw the fire of its opponents.

Recent attacks in the public press—and elsewhere—provide convincing evidence of the effectiveness of our farmer cooperatives.

You, of the Farmers Union Grain Terminal Association, are to be complimented on the splendid progress made by your organization since 1938. The growth from the few million bushels handled in your first business year to the enormous volume in 1946–47 gives concrete evidence of your effective merchandising job. The savings made every single year since organization, and the very substantial equity you have built up through your system is almost beyond belief.

The history of cooperative grain handling in the Twin Cities is evidence of your persistence in support of a worthy cause—higher incomes and better living for the farm families of the Northwest.

You are familiar with the attempts of the opposition to hamstring or destroy cooperative institutions in the last session of Congress. It is certain that their efforts will be continued. We must be prepared to fight such moves.

We must protect the farmer's right to organize and to conduct his affairs cooperatively at all costs.

Let American agriculture break down and we would soon find ourselves in the position of many old world nations. Keep agriculture strong and healthy and the United States will retain its position of international leadership.

Through our organizations we can remain strong. We can beat off the efforts of those who would reduce our farmers to a dependency level.

Let us work for agriculture and an expanding economy on a broad front.

Let us unlock the great St. Lawrence River and utilize its navigation and power resources. To complete the development of this deep-water channel would make seaports out of Duluth or Chicago or Detroit so that ocean-going vessels of the United States and of the world could ply the waters of the Great Lakes transporting the life-giving wheat and meat of the great Northwest, or the manufactured products of our central cities, to the

far corners of the earth. These vessels could bring back to us cargoes of oil, lumber, or ore so that our own exhaustible resources may be conserved and protected.

The power now going to waste in the rushing waters of the St. Lawrence would provide at low cost a vast amount of additional energy that is needed so badly to turn the wheels of expanding industry and to light the farms and homes that are either without power now or are paying rates that are much too high.

Let us develop also our other great resources—especially the Missouri River system—thereby generating cheaper and more abundant power, holding back floodwaters, storing water with which to bring new life to parched fields, protecting us against future dust bowls, and making greater water transportation facilities available for the future welfare of our Nation.

We cannot take a narrow view of these developments and look upon them purely in terms of local benefits, as they may affect one State or one region. There are 48 States in our Union and the welfare of each is inextricably linked with the fortunes of all.

We in this country can produce enough to meet the needs of our increasing population and our growing economy and still be able to help the more unfortunate in other lands.

Agriculture must remain politically strong if it is to be economically strong.

Farmers have it within their power to beat down the attempts of ruthless monopoly seekers who would control them.

The people of America speak many languages, but there is one language that the elected representatives of the people understand better than all others and that is the language spoken by the voter at the polls on election day.

The health and happiness of every human being depends upon a bountiful production of food and fiber. The farm program for the future is far too important, too, vital to us all, too essential to the peace of the world and the existence of mankind to be manipulated by selfish elements of society or to be tossed into the maelstrom of partisan politics.

Regardless of our political beliefs we must unite our efforts in going forward to a richer, healthier, and more secure era for the American farmer and for our country.

Pay Increases for Federal Employees

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, December 12 (legislative day of Thursday, December 4), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me yesterday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR LANGER, STATION WWDC, THURSDAY, DECEMBER 11, 1947

The other day I received a letter from a man in Baltimore referring to the Langer-Chavez salary bill which would grant a $1,000 increase in pay to each man and woman in the Government service.

My correspondent asked me if I were making some sort of preelection promises, and whether this bill was in support of my promises. I replied to my friend that I have no campaign at hand and, therefore, it is unnecessary for me to make any campaign promises. I am not running for office. I still have more than 5 years before my present term expires and, therefore, there cannot be the slightest touch of politics in what I am trying to do.

My primary interest is to keep Government employees abreast of their economic needs. They are not responsible for the runaway prices and crazy economy in which we are living today. They are merely trying to be substantial citizens, just as you and I, and to discharge their obligations to their loved ones and their neighbors.

It should be recalled at the outset that a Government employee surrenders certain of what are regarded as commonplace prerogatives of those in other segments of our population when they enter upon Government employment. Even before the Congress inserted no strike provisions in appropriations acts, Government employees already had voluntarily surrendered what might have been regarded by some as a right to strike, and as we look across the waters today and notice the condition in which some nations find themselves, beset by one strike after another from the forces which are in open defiance of their constituted governments, pitting their strength against the government authority, and in some instances showing superior power and force, we cannot possibly underestimate what it means in our country to feel and be secure against strikes directed at the Government.

The Government employee further is required to prove his loyalty to his Government and here again, such condition of employment does not obtain in private industry or business. Outside the Government a man thinks and does very much as he pleases so far as ideologies are concerned, and if they are not too obnoxious to the employer, the individual carries on in his own manner and if he desires to harbor disloyal feelings there are not a great number of laws which forbid it.

And so, I am pointing out a few of the limitations under which a Government employee must operate, and to which he must conform—before we even get into the salary and retirement phase of the discussion which I plan to take up tonight.

My research indicates that $1,000 is yet a modest amount when we are confronted with the actual facts. I find that, all things considered and in line with what has taken place in industry, the Government employee should receive approximately $1,160 and not $1,000. A very substantial brief can be built on this statement.

In order that there be less prospect of the salary legislation, both for those in the postal service and those under the Classification Act of 1923, deteriorating into a discussion on the part of thoughtless persons who might claim political partisanship, I invited Senator CHAVEZ, our ranking minority member on the Civil Service Committee, to join me in presenting these wholesome bills. Senator CHAVEZ, always a true friend of the Government employee, believing that morale at all times should be promoted, readily collaborated in this legislation—and so we can now call these bills the Langer-Chavez measures, just as we refer to the pending retirement provisions as the Langer-Chavez retirement bill.

As a matter of fact, the Government is giving substantially the same services to its people today as it was several years ago, and is being required to operate with less personnel. This means that the remaining employees must carry about the same work load as they formerly did, but with fewer persons to help perform the jobs. So, we are requiring more of the Government employee today than we formerly did, and we are leaving him dangling by his economic eyebrows and at the same time, there are those who want to know why we should give the Government employee any more money.

It is true that the Congress has granted two pay adjustments in recent years. One of these was the first since 1925 for the postal employees, and served to correct some of the maladjustments so long existing.

Promptly, the Government abolished overtime and reduced the employees "take-home" pay. At the same time, the Government has permitted prices to go sky high. This simply means that Government employees now have to meet inflated costs with deflated incomes. Senator CHAVEZ and I are merely trying to get some degree of parity in the Government service with that prevailing in industry. There has never been a time when this has happened. There were Little Steel formulas, and there were all kinds of wage concessions during the war dating back to January 1, 1941, but not for the Government employee. He was left to suck his thumb and wait until 1945 for belated relief—out of all proportion to what had taken place in industry.

And so, I feel privileged and proud to have this opportunity to do my part to adjust the Government pay scales, in some degree, and in the direction of sane discussion.

You do not hear a great deal of public discussion in Congress on the salary legislation. I can assure you that the atmosphere is heavily charged privately with discussion of the need of doing just what these bills call for.

Now I want to talk to you about the retirement legislation.

When an employee retires after having spent his working lifetime with the Government, there are but a few remaining years in his life. We become concerned, however, about where the Government money is coming from for these few years, although it is very little when compared with the salary that he has received.

It would seem more logical to do a little more worrying about our active employees. They should be fitted into the jobs they like best, given supervisors who are well qualified and have a warm fellowship feeling for their helpers. They should be ready and willing to utilize such improvements as employees in the lower levels are able to suggest. We need the fullest information possible from our employees who leave the service both for retirement and other reasons. We need to spot light incompetence, particularly in the supervisory levels, for it is here that costs can be heaviest and greatest injury inflicted on workers' careers not to mention the damage done to the Government service as a career.

There can be little question that where there is a job to be done and a contented group of employees is doing it, the Government is getting its money's worth. In a pleasant situation we would expect a few retirements at the earliest age at which retirement is permitted.

My attention was recently called to the disparity in retirement and survivor benefits between the civil-service retirement and the Foreign Service retirement systems. Under the latter the average retirement benefit is approximately $3,000 as compared with less than one-third that amount for employees who have been retired under the civil-service system. The average widows benefits under the Foreign Service is more than 20 percent larger than is now being paid to the civil-service retired employees. It is approximately twice as much as the widow will receive under either S. 637 or H. R. 4127.

It is pertinent at this point to call attention to the fact that employees of the Foreign Service system contribute 5 percent of their salary as compared with 6 percent under the pending retirement bills. I do not object to the benefits under the Foreign Service plan but do object to the small and inadequate retirement benefits under the civil-service plan.

Every man with a family working for a salary has worries as follows:

1. Sufficient income to provide the necessities of life for him and his family.

2. Some protection for his dependents in the event of his death.

3. Security for time when he is no longer able to work, due to advanced age or disability.

It was the general practice among foreign countries long before the war to make ample provision for their public employees in all three situations. There is no question but that this was the correct policy and it is a mystery why dependents of our employees have been so long neglected in our country.

We talk of risks. There are business risks, venture capital, crop risks, and the probability of success in new lines of business, but we hear too little discussion of the risk of mothers and widows in rearing the future generations. In a well-balanced society we must attend to the rearing of future generations, whether the widows of children are those of public employees or not. It is commonly regarded as part of the employment system in private industry as well as in government. Conservation and development of the Nation's human resources needs to be foremost when we think of conserving the Nation's resources.

I am receiving evidence all the time that many of our employees are not able to work for physical reasons. Yet, they continue in some fashion, because our laws and rules tell them, in effect, that if they retire on disability, as they may, they will forfeit their rights to reemployment with the Government in the event of their recovery, and, furthermore, we will check on them annually to make sure that their disability annuity is discontinued if they should recover.

It is a reasonable assumption that many of our employees are needlessly dying and their dependents left in distressing circumstances because of our numerous requirements, restrictions, and failure to take into account the all-important human equation.

Certainly, if we live long enough we will reach the old-age stage. I do not think that old-age should carry a penalty. I believe that a Government employee has the same right to reach old-age as any other of our citizens. I do not favor Osierism. I do not think he must be hated because he grows old. I feel that some of those in the Senate who have been opposing the passage of the Langer-Chavez retirement bill likewise are opposed to old-age, dependent widows, and little children.

We should do everything we can to avoid returning to the good old days of the law of tooth and claw and survival of the fittest.

The Langer-Chavez retirement bill will go a great distance toward giving us better government, and to prove that the expressions of an appreciative Uncle Sam will not be lost by providing a humanitarian return on the investment by the Government and the beneficiary and his dependents under the civil-service retirement system.

I leave with you a letter I received recently, which tells its own story:

"My husband died almost 3 years ago after over 30 years in the Railway Mail Service. After his long illness and death, I used every cent I had to pay hospital and burial expenses.

"Since then I have had a hard time getting along. I do have my small house that my husband and I both worked hard to pay for, but the only income I have now is rent from a bedroom.

"If something doesn't turn up, I will have to sell my home. I cannot work because of poor health."

I ask you if some Senators are right in their opposition to old age and in their support of poverty?

The Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, December 12 (legislative day of Thursday, December 4), 1947

Mr. MARTIN. Mr. President, on November 13 last, at Harrisburg, Pa., the distinguished junior Senator from New York [Mr. IVES] delivered a very appropriate address on the Taft-Hartley law. I ask unanimous consent that the address be printed in full in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR IRVING M. IVES ON THE TAFT-HARTLEY ACT BEFORE THE COUNCIL OF REPUBLICAN WOMEN OF PENNSYLVANIA ON THE AFTERNOON OF THURSDAY, NOVEMBER 13, 1947, AT HARRISBURG, PA.

I appreciate greatly this opportunity to speak to the Council of Republican Women of Pennsylvania. When your distinguished Senator and my very good friend, EDWARD MARTIN, enthusiastically seconded your kind invitation, he specified that I should speak on the Taft-Hartley Act. I am glad to do so.

As you know, the Taft-Hartley Act deals with the subject of labor-management relations and is termed the "Labor-Management Relations Act of 1947." No single piece of legislation considered during the last session of the Congress aroused more controversy than did this measure. Never to my knowledge has so important a legislative measure been so maligned, misrepresented, and misunderstood.

Many who opposed it denounced it bitterly as a slave-labor law. On the other hand, many felt that the so-called abuses of labor should be curbed, and some of these people were of the opinion that an even more drastic measure was desirable.

As a member of the Senate Committee on Labor and Public Welfare, I subscribed to neither of these extreme views. Nor do I feel that most of my colleagues who voted for the Labor-Management Relations Act of 1947 have shared these attitudes. I believe that it is our duty as Republicans—yours and mine—thoroughly to explain this legislation, sponsored by a Republican Congress, to all the people of your State and my State and of the Nation generally.

The results of a survey made several months ago by an independent research organization are significant. This survey was conducted among a representative cross section of workers, both union and nonunion, to determine their attitude toward various provisions of the new labor law. In line with my own experience with hundreds of communications received at my office, the majority of workers questioned were against this new labor law.

But the results of the polls taken in this survey produced an extraordinary and striking anomaly.

When the union members were asked whether they favored preventive measures to eliminate Communists from holding union offices, 77 percent of them favored such preventive measures.

When the union members were asked whether they favored a requirement that unions make financial reports, 85 percent indicated their approval.

Fifty-four percent of the union members expressing an opinion registered opposition to the use of union funds for political contributions or expenditures.

Seventy percent of the union members favored delay in strikes in industries vital to the country's welfare. These union members, moreover, favored the temporary prevention of such strikes through a court order obtained by a Government agency.

Seventy percent of the union members were in favor of requiring unions to give 60 days' notice before going out on any strike.

Seventy percent of the union members agreed that unions, as well as employers, should be subject to lawsuits for breach of contract.

Sixty-one percent of the union members felt that employers should be granted the same freedom of speech as that given to unions and employees.

Seventy-four percent of the union members indicated that they favored the check-off of union dues by employers only after obtaining the consent of the workers.

Seventy-seven percent of the union members indicated that they favored the establishment of a union shop only after a majority of all the employees had voted in favor of it.

Fifty-two percent of the union members expressing an opinion felt that the closed shop itself should be outlawed.

Among the nonunion members who were polled in this same survey these affirmative percentages for the most part were even greater, and the affirmative average of all workers polled was decidedly overwhelming.

These 10 matters on which this poll was taken constitute the essence of the Taft-Hartley Act. As I have indicated, the union members themselves were in favor of every one of them. And this result also confirms the sentiment expressed in many hundreds of communications received at my office.

Therefore, when I stated that opinion on the Taft-Hartley Act contains an extraordinary and significant anomaly, I was not exaggerating. I was merely emphasizing that this law has been the subject of the grossest and most vicious kind of misrepresentation and misinterpretation on the part of those opposed to it.

The results of this poll obviously offer a sharp contradiction to the charges that the Taft-Hartley Act is a "slave labor law." These results show, moreover, that the hostility toward this act on the part of workers, union and nonunion alike, has been occasioned principally by false assumptions, resulting from a lack of proper and sufficient information and from calculated misinformation concerning the provisions of the act itself.

In these remarks I shall give my views concerning certain important provisions of the new law, a number of which have received thus far too little attention, due to the catch-phrase and slogan campaign which has been waged against it. I shall confine myself for the most part to the action taken in the Senate.

It is only fair to state, however, that the House Committee on Labor and Education, which was also charged with the consideration of this type of legislation, duplicated in large measure the efforts of the Senate Committee on Labor and Public Welfare, in an all-out attempt to obtain all the facts possible from all interested parties who could be heard by the House Committee.

Shortly after the Congress convened in January these two committees began to sit daily, listening to complaints, suggestions, and recommendations from public officials, employer groups, labor-union leaders, labor-relations experts, and individual citizens who wanted to be heard.

As the hearings continued, it became apparent that no constructive suggestions for even the most moderate changes in the law were to be proposed—or even tolerated—by

those who spoke for organized labor. These representatives of labor resisted every effort to amend the National Labor Relations Act or the Wagner Act, as it is sometimes called, in any way whatsoever.

Faced with this intolerable situation, I decided to, and did, introduce legislation which I believed not only would prevent possible abuses by labor, but would bring into proper balance the delicate relationship between workers and their employers. Most of the legislation which I proposed was subsequently incorporated into the Senate bill and finally into the Taft-Hartley Act itself.

This legislation, which I sponsored, provided for the creation of a joint committee of the Senate and the House to explore thoroughly into the whole labor-management problem. It provided for the establishment of a separate and autonomous Federal Mediation and Conciliation Service. It gave to the National Labor Relations Board the power to enjoin under certain conditions secondary boycotts and jurisdictional disputes. It set forth certain unfair labor practices on the part of labor organizations and employees.

The bill passed by the House of Representatives was quite different from that passed by the Senate. Subsequently in conference committee the final legislation, in the form of the Labor-Management Relations Act of 1947, was agreed to. This final bill followed closely the pattern of the Senate bill.

In this connection I desire to clear up a considerable amount of misrepresentation and misunderstanding where I myself am concerned. I have been accused by some who are hostile to the act of making an about face on this labor legislation. Nothing could be farther from the truth.

I had hoped that it might be possible to have genuine collective bargaining without new legislation. But the heavy preponderance of evidence at the hearings showed beyond question that my hope was in vain. I became convinced that without corrective legislation real collective bargaining would never have a chance.

A number of amendments to the original Senate bill, to which I was vigorously opposed, were offered from the floor of the Senate. Only one of these amendments prevailed, and this particular amendment was adjusted in conference committee to meet my chief objections. Furthermore, the final conference bill, which is now the law, contained none of the objectionable features which I opposed on the floor of the Senate. My position regarding this legislation has been consistent throughout.

Testimony at the hearings proved that a new law was vitally necessary. On several occasions at these hearings I so expressed myself vocally, and the transcript of the hearings bears me out. Throughout the consideration of this legislation I was striving to exert all the influence I possessed to the end that the final legislative product would be as equitable as sound, and as satisfactory as possible. I believe that the Taft-Hartley Act, although not perfect, in large measure meets the specifications which I laid down for my personal guide and chart.

Perfect legislation in dealing with the relationship between workers and employers is virtually impossible of realization at any time. The field of labor-management relations is dynamic and constantly changing. New techniques and new procedures are always appearing. The best we can do at any one time in dealing with this subject through legislation is to strive for perfection and be satisfied if we arrive somewhere in the vicinity of the goal of perfection. Most definitely the Taft-Hartley Act meets these requirements.

Experience is already demonstrating that this new law, far from being a slave-labor law is actually a worker-emancipation act. Moreover, I am sure that people are recognizing more and more that in our efforts to correct such abuses as existed and to bring into proper balance the relationship between labor and management, the Congress went far enough in passing the Taft-Hartley Act. Actually this act should contribute substantially to sound employer-employee relationships.

To understand fully the need for the new labor law and the place which it occupies in our economy, it is necessary to become acquainted with its historical background. This law, as many of you know, did not suddenly materialize out of space. Rather it is the product of evolution in the field of labor-management relations.

The so-called Wagner or National Labor Relations Act, which was passed in 1935 and declared constitutional in 1937, had been needed to meet an unbalanced relationship between workers and employers existing in the years prior to that time. In order to remove the previous unbalance, an act weighted on the side of labor was urgently required. The National Labor Relations Act accomplished this purpose.

With the improved condition of labor and the vastly increased power of labor which resulted from the enactment of the 1935 law, the relationship between management and labor once more became unbalanced—this time in the opposite direction. Inequality of bargaining power where labor was at the mercy of management was replaced by inequality of bargaining power where management was at the mercy of labor. This latter unbalance was just as harmful to our American economy as was the earlier unbalance. Consequently our task was to make the adjustment necessary to bring about equality in the law between employers and employees. This, as I have indicated, was a primary purpose of those who supported the Taft-Hartley Act, and this is what the new act, is intended to do.

Another objective of those supporting this legislation was to assure to the individual workers their full rights as American citizens, not only where management is concerned, but where their own labor leaders are concerned. The act of 1935 had guaranteed these rights with respect to management. The act of 1947 has merely extended these rights to protect the individual worker in all his relationships and activities connected with his job.

To be sure, the new law makes many adjustments in the labor-management field, but I am sure that—properly interpreted and administered—these adjustments will work to the advantage of the employees of this country and will bring about ultimately a more harmonious relationship between them and management.

Provisions such as those subjecting unions to liability for breach of contract or requiring unions to submit financial and other statements to the Secretary of Labor or prohibiting unions from engaging in costly jurisdictional strikes and secondary boycotts should result in greater mutual responsibility among workers and employers, and this improved condition should contribute both to increased happiness among them and to increased efficiency and production.

As I have indicated, contrary to what some allege, the individual worker has not been deprived of the gains made under the National Labor Relations Act of 1935. No basic concept has been deleted. Employees are still guaranteed the right given to them in that act to form labor unions and to "bargain collectively through representatives of their own choosing." The employer is still obliged to bargain with whatever union is the valid representative of his employees. Furthermore, the provisions prohibiting unfair labor practices by employers have not been removed or even changed in the 1947 act. All of these fundamental achievements in labor's progress stand unimpaired.

In addition to preserving the rights guaranteed in the 1935 act, the individual worker—as I have stated—is given additional protection in the new law by provisions against arbitrary or coercive action by union leadership. It is no longer necessary, for example, that he be a member of a labor union in order to obtain employment. Outlawing the closed shop removed this necessity.

Once the job is his, however, an employee must join a union if a union shop has been established by contract with the employer. But such a shop can no longer be imposed upon employees by a minority among them because the law now requires that a majority of all the employees of an employer—not just a majority of those employees who happen to vote—must vote in favor of a union shop.

The employee is further protected not only from coercion by employers as guaranteed by the 1935 act, but also from coercion by a labor union seeking to enroll employees for bargaining purposes. Furthermore, under the new law, a worker cannot be summarily deprived of his job by dismissal from the union except for nonpayment of dues, and he is thus protected against prejudice or unwarranted action by union leadership.

The requirement that, before a union may have access to the facilities of the National Labor Relations Board for the purpose of securing its rights and privileges under the law, each union officer must file an affidavit stating that he "does not believe in, and is not a member of or supports any organization that believes in or teaches, the overthrow of the United States Government by force or by any illegal or unconstitutional methods" has—to my mind—received a disproportionate amount of attention. As a matter of fact, this provision should assist individual union members in ridding themselves of known communistic domination. Whenever an official of a union refuses to sign and file with the National Labor Relations Board the required affidavit, the membership should have the right to replace him with someone else who will act in the best interest of the union members.

One feature of the Taft-Hartley Act which has received comparatively little attention is that portion establishing a new and independent mediation and conciliation service in the Federal Government. In the past, the chief role of mediation as it pertains to labor-management relations has been to endeavor to eliminate disputes between workers and employers after they have arisen. Under the 1947 act, a new and equally important function of mediation and conciliation is to be the prevention of disputes which, without such preventive effort, would be apt to arise. Thus, under the new law just as much attention is to be given to prevention as to cure and this change in policy and approach should be most effective in reducing the number of labor-management controversies.

At this point I would direct your attention to an additional feature of that portion of the act establishing the new Federal Mediation and Conciliation Service, which I feel has not received the attention or explanation it merits. This is the provision calling for the establishment of a National Labor-Management Panel consisting of 12 members to be appointed by the President. Of these members six are to be selected from persons outstanding in the field of management and six are to be chosen from persons outstanding in the field of labor. The specific duty of this panel is to advise on the avoidance of industrial controversies and on the manner in which mediation and voluntary adjustment should be administered, particularly with reference to controversies affecting the general welfare of the country. Thus, instead of government regimentation of labor and management, there is created machinery whereby the leaders of these two great segments of our economy are to advise and confer with Government, to the end that free

collective bargaining and mutual understanding, which constitute the foundation of mature and wise labor-management relations, shall be made realities.

Of great significance in the new act is that section establishing a joint congressional committee on labor-management relations which is to study, investigate and report on all important matters affecting the relationship between employers and employees. Not only is this committee, which has now been created and is presently functioning, studying the objective of the Taft-Hartley Act, with the purpose of ascertaining how it is working and what changes in it may be needed, but the committee is also exploring the whole field of labor-management relations, including such matters as annual wages, incentive profit-sharing, welfare funds, industry-wide bargaining and the methods of best carrying out the collective-bargaining process. It is further charged with examining into the internal organization and administration of labor unions and with giving special attention to the impact on individuals of collective agreements requiring membership in unions as a condition of employment.

I am pleased to have been selected as a member of this committee and can report to you how impressed I have been with the objective thinking as expressed by most of its members in their deliberations thus far.

This labor-management relations committee should be able to ascertain what further legislation can do to weld labor and management together for maximum happiness, productivity and progress. In its broad field of activity, it should go far in helping to bring about a happier era in American labor-management relations.

In these remarks, I have cited some of the important provisions of the new labor law. It is evident that some employers are still dissatisfied because unions are not to be crushed into impotence. Some labor leaders, too, are dissatisfied because they are not left entirely free to have license as well as liberty. But, as I have pointed out, with sympathetic and sincere administration the law can be made to work—without destroying trade unionism and without injury to the legitimate objectives of organized labor.

As I have intimated, I do not like some provisions of this new law. But the good that is in it far outweighs all of its shortcomings. Let us keep constantly in mind that we are just beginning our task of striking a working balance between the rights of unions, the rights of managements and the rights of the public.

In our political life our ancestors gave us a balance of powers between the legislative, the executive, and the judiciary. In our economic workaday life we must evolve a similar balance of powers between organized business, organized labor, and the national general interest. Let us seek that balance impartially, persistently and, above all, confidently, knowing full well that the inner light of American institutions cannot fail.

Items To Be Purchased With American Dollars Under the Foreign Aid Bill

REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. SMITH of Wisconsin. Mr. Chairman, many Members of the House have been surprised to learn that the bill H. R. 4604, now under consideration, is primarily a bill to rehabilitate the European economies of France, Austria, and Italy. The public also by now must know that its chief objective is not the relief of hungry and cold people in Europe. So there may be no mistake as to what our dollars will be spent for, I am including the following tables submitted by the State Department for use by the House Committee on Foreign Affairs while it was preparing the present bill. These tables indicate the specific categories of commodities to be supplied to Austria, France, and Italy:

Austria

Food	$16,000,000
Clothing and shoes	2,000,000
Petroleum products	1,000,000
Spare parts for agricultural machinery	1,000,000
Industrial materials:	
1. Spare parts for other machinery	2,000,000
2. Chemicals	4,500,000
3. Nonferrous metals and metal products	4,500,000
	31,000,000

France

Food	$30,000,000
Fats and oils	12,000,000
Petroleum products	23,000,000
Food imports for French zone in Germany	13,000,000
Essential supplies for French overseas areas	32,000,000
Imports of industrial materials	52,000,000
Service of foreign debt	26,000,000
Payment to Belgium on commercial account	17,000,000
Payment to Brazil on commercial account	3,000,000
Additional contribution to International Monetary Fund	10,000,000
Administrative and other expenditures	10,000,000
	228,000,000

Italy

Cereals	$25,000,000
Coal	13,000,000
Petroleum supplies	12,000,000
Cotton and other textile fibers	15,000,000
Raw materials for chemical industry	10,200,000
Rubber and carbon black	5,100,000
Industrial fats and oils	1,300,000
Hides and leather	4,000,000
Ferrous metals	11,000,000
Nonferrous metals	9,400,000
Minerals	1,000,000
Lumber	7,400,000
Other industrial materials	18,600,000
Other foodstuffs	4,000,000
	159,000,000

Mr. Chairman, a look at the items in the above tables reveals that only a few of them go to "alleviate conditions of hunger and cold," as alleged in the bill. In this connection, however, it must be said that the bill provides, in addition, that it is to "prevent serious economic retrogression." Thus, the Committee on Foreign Affairs has been forthright to the Congress and the people of this country in setting forth its objectives. Government propaganda, on the other hand, deceived the public into believing that it was strictly for the purpose of assisting people in Europe who are hungry and cold.

Mr. Chairman, the bill is not wholly to my liking. I attempted to cut $90,000,000 from it, although a deeper cut would have been justified. Further, I voted for constructive amendments. The bill gives to President Truman another blank check and many, many millions of dollars to play with.

Editorial Tribute to Hon. Leverett Saltonstall, of Massachusetts, From the Boston Herald

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, December 12 (legislative day of Thursday, December 4), 1947

Mr. LODGE. Mr. President, a few days ago there appeared in the Boston Herald a very fine editorial paying tribute to my colleague the senior Senator from Massachusetts [Mr. SALTONSTALL]. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIGN OF SALTONSTALL

Senator LEVERETT SALTONSTALL, who served Massachusetts as Governor from 1939 through wartime 1944, went to Washington in the latter year as a Mr. Deeds who lived up to the soundest implications of the name. His broad contribution as the head of the State had restored dignity and fair dealing in the best tradition of the office to replace the dictatorial patronage of the immediate years before. His actions, then as now, spoke louder than his words.

Massachusetts thought enough of him to hand him the Senatorial toga by an electoral coup d'etat in an overwhelmingly Democratic year. In the sweep of November 7, 1944, that put Maurice Tobin, John E. Hurley, and Thomas J. Buckley on Beacon Hill, the Bay State sent Governor Saltonstall to the Nation's Capital with the best showing of any Republican in the country. The State gave him a majority better than 400,000. In Boston, which learned that his South Boston face was never two-faced, he ran better than Mayor Tobin, his gubernatorial successor, and almost as well as Franklin D. Roosevelt.

This was an eloquent tribute to accomplishment without futile fanfare. Outsiders recognized his merit, notably the late Wendell Willkie who preferred him to Dewey as the GOP Presidential nominee in 1944.

In his Senate career Massachusetts takes a generally unspoken pride in the SALTONSTALL of unspectacular and considered liberalism in a career that lacks the youthful dynamics of Senator LODGE, or the ubiquitousness of Speaker MARTIN, or neighboring Senator TOBEY. Massachusetts, to her good fortune, is accustomed to his stability, to action without impulsive haste. Other regions know him less. They recognize him with delight.

Look magazine backs up the Willkie diagnosis in ranking SALTONSTALL as an outstanding dark horse in the race for GOP Presidential candidate. In a poll of 10 leading figures in the Nation on 10 Government problems—from Russia to education—SALTONSTALL is on record on every one. He does not compile his own views as did former Governor Stassen in Where I Stand. Look compiles them for him.

Of Russia, for example, emphasis falls on the SALTONSTALL faith in a firm bipartisan policy, and the conviction that a people, given the scantiest hope of freedom and de-

mocracy, choose them without hesitation in preference to communism. In education he holds for local autonomy with the stipulation that any Federal aid be no invitation to interference or dictation from Washington.

Massachusetts looks back on SALTONSTALL with affection and looks on him now with respect. In no sense does the State make him a "prophet without honor," but there is basis for the feeling that his popularity grows faster throughout the Nation than we here in Massachusetts realize. The publication of Look's interpretation possibly can give us a new look at the potentialities of a consistently high-grade public servant whose good qualities we admit. We must not merely take them for granted. It should be a matter of pride that he seems to captivate Americans everywhere he goes.

Report to the People: Part 5

EXTENSION OF REMARKS
OF
HON. W. LEE O'DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Friday, December 12 (legislative day of Thursday, December 4), 1947

Mr. O'DANIEL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD my fifth report to the people, broadcast on the 30th of September from Station KGKL, at San Angelo, Tex. This broadcast follows four which have been previously published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A few days ago I was reading an article by a noted economist who for a good many years has been rather close to the powers that be in our Capital City of Washingon. He had made a trip around over the different sections of the United States and the one thing he states which impressed him more than anything else was that the people throughout the Nation, regardless of whether they were farmers, lawyers, doctors, merchants, day laborers, or bankers, were at a loss to understand just what the condition of the country actually was—everybody was muddled in his thinking.

Well, now, friends, it is not difficult to understand why the average American citizen is muddled in his thinking at this time. I say to you as one who has been in Washington for a good many years as a Member of the United States Senate that the wonder to me is not that the people are muddled, but I am surprised that the people are able to think at all.

There is something very significant, however, about all this. I think you will recall that prior to the time we entered the last World War and during the time we were engaged in the war, I said in a number of speeches which I made in various sections of Texas and on the floor of the United States Senate that I thought the New Deal administration in Washington was deliberately undertaking to confuse the thinking of the people; that I thought they were deliberately attempting to present so many issues to the people that, finally, the people would give up in despair and say, "Let the Government do it." I believed that then, and I believe it now.

I am encouraged, however, by one fact and that is the American people as a whole have proved that they are not as easily fooled as the politicians thought they would be, they do not swallow all of the propaganda that is peddled by these "red" and "pink" Government agencies.

You all recall that while the war was going on almost every day long interviews were given out by various department heads in Washington pointing to the fact that just as soon as the war was over the country would enter into a depression, jobs would not be available, and that, therefore, the Government should move and move immediately to appropriate vast sums of money to build up great Government agencies throughout the Nation that would be ready just as soon as the war was over to begin to look after the millions of people who would then be unemployed.

Now, being as I was right in the middle of the situation I was able from my place in the United States Senate to see and to realize that there was just one thing back of all this propaganda and that was to create an excuse to build some more Government agencies and to pour out some more patronage. I realized that these prophets of doom did not know what they were talking about. I said on the floor of the United States Senate that American industry would pick up its burden and it would move successfully to provide goods and to provide jobs if the Government would just relieve industry from the tremendously burdensome taxes which they had piled up during the war and if they would relieve industry from all the red tape and governmental regulations which had been tied around industry's neck while we were engaged in the war.

Experience has proved that I was right in my conclusions then and I am satisfied that I am right in the conclusions which I hold now. Employment in the United States is higher now than it has ever been. Industry is moving aggressively to meet the demands made upon it, but this situation cannot go on forever unless industry is relieved from these wartime taxes which take away from the citizens of this country and from business in this country a large portion of what they earn.

I have been very much impressed with the oceans of publicity that has appeared in the press pointing out how the cost of food and the commodities which enter into the making of food has increased. Day after day, these propaganda bureaus are trying to hammer into the heads of the American people the idea that the cost of living has gone up mainly for two reasons.

One reason is that the farmers, the ranchmen, the dairymen, and the fruit growers and poultry producers throughout the United States are profiteering and they are, therefore, increasing the price of food. Another theory they advance is that industry generally throughout the country is without any good cause unnecessarily advancing the price of things which our citizens must buy in order that they may live with a reasonable degree of comfort. First, I want to talk to you somewhat in detail about our agricultural situation. I want to talk to you about this propaganda that is being peddled now with the hope that they can use it to form a basis for making the farmers, the ranchmen and the fruit growers the goat, and say that they are the ones who have done the profiteering, they are the ones who must reduce the cost of raw materials so that living costs will not go too high.

There is one thing peculiar about the Communist philosophy and that is, they have a particular philosophy to fit any occasion. There is just one thing that is consistent in the Communist philosophy and that is, whatever they advocate always has one objective and that is to put more people on the Government pay roll and to give more power to the Government and leave the people with less power. The whole Communist philosophy is a philosophy built around the idea that the individual exists for the state. It is absolutely opposite to the philosophy of democracy, which says that the state exists for the good of the individual.

These Reds and Pinks started out during the war period as outstanding champions and advocates of paying subsidies for agricultural production. I opposed all these subsidies and I stated then that what we should do was to allow the price of commodities to go up so that the market price would reflect the cost of production plus a reasonable profit for the farmers and ranchmen of this Nation. But these parlor-pink boys did not like this philosophy, in fact, it was not a popular philosophy with any of the New Deal bunch. If the cost of labor and the cost of feed and the cost of production warranted a price of 60 cents a pound for butter, they were not willing to let the price of butter go up from 40 to 60 cents a pound. They went on the theory that what we should do was to sell butter for 40 cents a pound and take money out of the taxpayer's pocket and pay a subsidy to the farmer of 20 cents a pound.

Now this was wrong, first, because the earnings of the men who worked in our war plants and our factories had gone up tremendously. There was no reason whatever why the Government should tax all of our people, including the farmers, to raise money, put in the Treasury to pay the farmers a subsidy to produce butter. The logical thing to do was to let the price of butter reach the level where the dairyman could earn a fair profit for producing it, a price for which he could afford to sell butter and still have something for his labor. The theory of the New Deal, however, was that by approaching it from the other standpoint they were putting millions of farmers of the United States on the Government pay roll, sending them regularly subsidy checks and they hoped to be able to make the farmers believe that the Government down in Washington was the farmer's friend and, therefore, the farmer should vote to keep them there.

Now, as a matter of fact I realized then the danger of this situation from the viewpoint of the farmer himself. I knew the time was going to come when the war would be over and with an enormous public debt piled up and with the cost of living exceedingly high, there would be a violent demand on the part of the rank and file of the people to reduce the cost of living and to reduce Government expenditures. I thought then, and experience has proved I was right, that unless this situation was corrected while the war was actually in progress and unless prices to the farmer were allowed to reach a level where he could afford to produce these commodities and still earn a profit, he might find himself in a position where when the subsidy was withdrawn he would have great difficulty in securing a sufficient increase in price to make up the loss which he sustained when he lost the Government subsidy for production.

Every farmer in the country knows now that that is exactly what has happened. Every farmer in the country knows now that the only hope of agriculture to continue to secure a fair price for the commodities produced is to get the market price of these commodities set on a basis that the farmer, the ranchman, the dairyman, and the fruit grower can afford to produce them without any subsidy check from the Federal Government.

These New Deal politicians like to mail out subsidy checks. They like to use this as an argument to the farming class of people that the Government is doing great work for you and, therefore, you should vote to keep us in power.

I said a while ago that the Communists philosophy, which is the philosophy these reds and parlor-pinks are now advocating, and it is the philosophy which controlled most of our Government departments during

the war period, is to have the kind of governmental philosophy that can be changed to meet every situation, but still be consistent in doing one thing and that is, putting more folks on the Federal pay roll and creating more Federal jobs. Those who think along these lines and those who thought along these during the war period see in it a means of keeping the average American citizen in the position of being a slave to the Government. They hope to keep him there by the simple process of not allowing him to get in a free open market what he is probably worth, but rather for the Government to artificially set the price and then make up the difference with a subsidy payment. If they can do this, it is easy to show how in any period we may have ahead of us Government bureaus will grow and Government employees will increase and Federal taxes will not be reduced.

To the extent that the money spent by these departments in Washington for publicity may create in the minds of the American people the idea that the farmers and ranchmen are profiteering, to the extent that they are able to create the idea that those engaged in agriculture are receiving such a vast income that they can afford to have it reduced, to that extent they will be able to create in the mind of the average man that the Government is the only agency to whom he may look for protection.

Now, to begin with, the prices of agricultural commodities in this country, things that the farmers, the ranchmen, fruit growers, and poultry raisers produce are not too high. The fact is that they are too low. The trouble is that the American people for years have been accustomed to buying products of the farm at about half of what they were worth, and they have done it so long they have gotten in the habit of it.

I say to you that farming is, and should be, an honorable profession. Work on a farm is an honorable job. Work in a dairy is an honorable job. Raising poultry is an honorable job. All people who are engaged in any and all phases of agriculture certainly have a right to demand and to expect that if they work and if they produce then their compensation for what they do and for what they produce and what they sell should be priced at a figure which will enable those people engaged in these pursuits to earn on a basis of what other people earn in other lines of endeavor.

You read in the press and hear over the radio many long stories about how much the price of cotton has increased, how much the price of corn has increased, how much the price of fruit has increased, how much the price of milk has increased, and how much the price of butter has increased, how much poultry has increased—these statements are all true. These prices have increased, but something else is equally true, and these things, as a rule, are never mentioned in these propaganda stories—it simply costs more now for the farmer, the ranchman, the dairyman, and the poultryman to produce commodities than it has ever cost before in the history of the country.

The compensation being paid to people in nonagricultural pursuits is now about 88 percent higher than it was prior to the World War. The farmer has to compete with all these industries for labor. The tools a farmer buys to operate his farm are made of steel and steel is produced, manufactured, and marketed at a tremendously increased price. It means that when a farmer buys a cultivator, a tractor, or any other farm implement today the price he must pay is more than double what he paid prior to the war. He must pay more than twice as much for practically everything it takes to operate the farm. It logically follows that the first thing the man engaged in any of these agricultural pursuits must do is to secure a sufficient increase in price to cover the increased cost of production. He has got to do that before he increases the profit he makes one single cent.

The farmer operating under conditions which he operated in 1939 could make far more net profit selling wheat at a dollar a bushel than he makes now selling it at two dollars and a half a bushel. But these propaganda artists who are constantly talking about what a great percentage the gross income of farmers has increased, completely ignore one thing and that is, they ignore the question of what it increased from.

The fact of the business is that agriculture in this country when we entered the World War was operating on a starvation basis. Yes, it is true there has been a tremendous increase in what the farmer gets for his product now and what he could get for it prior to the war, but let's inquire into that situation a little further. And what I am going to say to you now is not my opinion but it is based on figures of the United States Department of Agriculture.

Do you know what the per capita farm income was back in 1939 just before we started our last war preparations? Well, I will tell you what it was. The average per capita income on the farm in that year was $176. Now after the farmers of this country have had all of this vast increase which you read about in the papers, do you know what the per capita income in the United States of the people who live on the farm has increased to? Again I am giving you the figures of the United States Department of Agriculture, I am giving them for the latest year these figures are available and they show that the per capita income on the farm had increased to $585.

Now, of course, this was a tremendous percentage increase, to increase from $176 per capita in 1939 to $585 per capita at the beginning of 1946, but let's see how that compares with the earnings of people in nonagricultural pursuits. Well, folks, here are the facts and again I am giving you the figures from the United States Department of Agriculture. The per capita income of the average man on the farm at the beginning of 1946, which is the latest year we can get comparative Nation-wide figures, was less than one-half the per capita income of people engaged in nonagricultural production. So I say to you that this country faces a grave emergency at this time especially with the New Deal Democrats in power because they are definitely committed to do everything legal or illegal to hold the big boss-controlled left-wing city vote in line, and you will hear them preaching from every housetop about how fortunate the farmers of this country are now and they will be able by leaving the inference that for the welfare of the country the farmers ought to be ready to reduce their prices so they can furnish the commodities to the folks who are living in the cities and whose votes the New Deal is especially after, at a lower price.

Well, now, I do not have any objection to these New Deal politicians playing all the politics they want to, by using all the propaganda they want to, but I do propose as I go around over this State to give a few cold-blooded facts and the unvarnished facts are that the average per capita income of the man working on the farm in Texas today and throughout the United States today is less than one-half of what it is for those working in other lines of endeavor. And I say to you that the price of farm commodities not only must not be brought down, but it must be brought up and we must continue to bring them up until the same effort put forth on the farm will yield the same return that that effort would yield if put forth in our industries throughout the country.

The hope of America lies in maintaining a strong farm population, and you cannot do this if you allow the farmers of this country to be impoverished, and you cannot do this if you make the farmers of this country dependent on Government hand-outs in order that they may get a reasonable price for their commodities. The farmer is entitled to good prices, not as a gift, but he is entitled to them because he earned them and because it costs money to produce the commodities he does produce.

You know the farmers of this country are being charged today with being responsible for all the high prices insofar as food commodities are concerned. Well, that is all right for the politicians to put out that dope if it suits the particular thing they are trying to prove at the time, but the trouble about it is that it just simply is not true.

If you will stop these New Deal politicians from peddling the philosophy that you can forget costs and still control prices, you will do much to solve the question of the price of food commodities. So long as they continue to export to other markets of the world and give away a large percentage of what we produce in this country, just that long you may expect the prices of production will be high. The price of everything the farmer buys will be high and, therefore, the price of whatever he sells will be high, or he must go broke.

What the Nation needs now as it has never needed before is some good horse sense in the administration of our Government. What we need is to give the people of America a chance to go back to work and to run their own business. What we need is to give the people of America a chance to forget about these world-made and "Government-made crises." What the people themselves need to do is to realize that the less attention they pay to what these politicians in Washington say the better they will get along.

Now, I make this statement advisedly, and I think it is backed up by the record. Let me cite you, not all the instances because it would take a week to get through enumerating all of them, but let me cite you a few outstanding cases.

Back in 1940, when we were electing a President of the United States, the then President and candidate for reelection said to the people of America not on one occasion but on many occasions that the mothers of America need not have any fear that their sons would be called on to go forth to fight a battle on foreign soil. Now that statement was made by the highest officer in American Government. That statement was made by a man who had at his fingertips the reports of the State Department, of the War Department, the Intelligence Department, and every other agency that the Government had to gather information. I ask you now in light of experience, was this statement right or was it wrong?

I am not going to charge and I do not think the people generally believe that the statement was a deliberate falsehood. I think the fact of the business is that he simply did not know.

Now, let's move a little further down the road. We got into the war and we adopted the Atlantic Charter, and the world was assured of the fact that all we had to do was to stop Hitler and Mussolini and peace would reign throughout the world, from then on. Well, I ask you what evidence do you see now of that peace reigning?

We were told by the President of the United States, and by our State Department, and by our leaders in foreign affairs that we would be able to sit around the conference table and work out a peace plan which would guarantee the peace of the world and it would be

entirely acceptable to Mr. Stalin and to Soviet Russia. Well, what do you think about the accuracy of that statement? The President of the United States and our top-flight advisers in foreign affairs held conferences at Yalta, Tehran, and Potsdam, at which they were laying the basis for a treaty further down the road which would guarantee the peace of Europe. Well, now, let's see just what we actually did in these conferences of those master minds. Soviet Russia was able to secure complete control of Bulgaria, Rumania, Czechoslovakia, Yugoslavia, and Poland, and then after Uncle Joe had secured all the territory he immediately needed, we commenced to hold our peace conferences, and what has been the result?

Every time we suggested a plan to advance world peace, we were face to face with a veto. And now those in charge of our foreign policy, including the President of the United States, admit they were wrong in all these forecasts. They admit that they did not know what they were doing when they were dealing with Soviet Russia, but they tell us that they have a new plan now and this plan is going to work; and the new plan involves taking some $20,000,000,000 put up by the taxpayers of America and they are going to use this to buy the good will of what countries are in Europe and they think it is absolutely sacrilegious for anyone to even suggest they might be wrong in their last guess on how to deal with this situation.

Well, now, my friends, I am not criticizing those who are in charge of our foreign policy for having been uniformly wrong. I am not criticizing them for now admitting they were wrong. I am only enumerating these things to reinforce the statement I made awhile ago and that is, the best thing for the people of America to do is to realize that after all we have just a bunch of ordinary citizens, mediocre politicians running the Government of the United States. Generally they do not know any more about foreign policy that you do or I do and their guess on what ought to be done might be right; it is entitled to about the same consideration as your guess or my guess. Their batting average in dealing with foreign affairs up to the present time has been mighty low and so far as I am concerned, I am not going to shut my eyes blindly and follow them on the theory that now they have become mental giants and they are now all stars.

Frankly, I never have seen anything in the performance of the politicians who are handling our foreign affairs to cause me to believe they know exactly what they are doing. The fact of the business is, they are whistling in the dark and guessing about half the time. I think about the only man we have had dealing with postwar problems that has proved he knows what he is doing is General MacArthur and he is not very popular with the brass hats and the political spellbinders who inhabit the banks of the Potomac. The fact of the business is the boys of America won the World War and the politicians have gone a long way toward kicking the victory away.

Now why has Russia been so uniformly successful in achieving her objectives not only during the war but since the war? Why is it that Russia has uniformly outtraded us every time we have sat with them at the conference table? Is it because they have more sense than we have?

I do not think so. I think the foundation for the success of Russia in dealing with the United States was laid by Russia during the last 10 or 12 years of the New Deal Administration. You know from the time the New Deal blossomed into power until the time war was over every department of government in Washington was absolutely infested with these termites; they occupied places of power and authority; they belonged to groups that made decisions and determined policies. When Uncle Joe was ready to negotiate with the United States he did not have to arrange to get his stooges located in Washington. They were already there. They were already firmly entrenched in the various departments of our Government. When he sat down to a conference he did not know only his side of the case and our plan—a man does not have to be very smart to be able to negotiate under those conditions because he is sitting on both sides of the table. For many years I have warned the people of Texas that there was a definite determination on the part of the Communists to take over this government. I warned the people that these Communists were dangerous, that they were disloyal to this country, and should not be allowed to hold places of power in the Government at Washington. But you know what was said about me then: I was called a red baiter; I was called a demagog. I was accused simply of playing politics. Well, what is the situation today? Who was right and who was wrong.

All you have to do is to read the newspapers. All you have to do is look at the record of Congress and what do you find? You find that when Uncle Joe finally got into action and when the facts commenced to come to the surface the President of the United States felt it necessary to send a message to Congress pointing out the danger of the Communists in this country. President Truman decided it was necessary for him to issue an Executive order to the departments in Washington to look up these Communists and weed them out of the Government service.

Well, let's see what they have found—and bear in mind that these reports about what they found came from good New Dealers who still carry a shade of pink. They admit now that during the war period, that is during the critical period, we had over 4,500 people in Government departments who were definitely disloyal to this Government. They find that now, today, August 1947, there are still on the pay roll of the Government over 3,000 employees where there is a serious question as to their loyalty. They find that 13,000 have already been fired because of disloyalty.

It is not difficult to see why General Marshall, as your Secretary of State, has had trouble dealing with Soviet Russia. When he went in as Secretary of State he, of course, had to use what he found in the Department and make changes only as the facts could be developed.

Now getting back to the statement I made a while ago that what we need is for the people back home to use good horse sense, what we need is for the people to cease leaning on the politicians in Washington for too much leadership. Don't you think that this admitted situation with reference to a Communist-infested Government in Washington is absolute positive proof that those who have been running our Government are certainly not master minds? Do you think that if they had been such mental giants they would have ever allowed this situation to develop?

Now, my friends, when you read in the paper that it is absolutely necessary for the taxpayers of the United States to immediately start shipping money by the boatload over to Europe in order to buy the loyalty of what few nations Stalin has not already taken over, when you read that unless we do this the whole world is going to pieces tomorrow morning, don't get too excited about it, just realize that these same mental giants who are putting out this propaganda are the same ones that have been uniformly wrong in the past and they might be wrong again.

The strength of America lies in the intelligence and the individuality of its citizens. The strength of America depends on having the people do their own thinking and who do not allow a bunch of politicians in Washington to do it for them.

Now I want to warn you about another thing. You know we have a presidential election coming up in 1948. Don't ever be dumb enough to think that the present administration in Washington is going to allow that election to take place without some great Government crisis confronting the people, because you can be certain that until the election is over if we don't have a real crisis the politicians are going to make one.

Every time you read in the press that it is necessary to spend three or four billion or five or six billion dollars or ten billions more of the taxpayers' money and that it has to be spent right now in order to save the world, don't forget that there is a presidential election pending in 1948, and every time you spend a billion dollars of the taxpayers' money you are going to create a lot of political jobs, and don't forget the New Deal politicians in Washington are still there, and they still know how to use political jobs to get votes. They still know how to spend and spend, elect and elect, and then reelect.

So whenever they suggest some vast scheme for your consideration do a little thinking yourself—you can do it just as well as they—you may be wrong in the conclusion you reach, but they have generally been wrong, so you will be doing as well as they have done. Don't get it in your mind that either I or any other man in the United States Senate knows with certainty the course world affairs are going to take; none of us know, the only difference is that some of us are honest about it and others are not honest.

I say to you frankly that as I see the situation today it looks to me like we have about given Mr. Stalin control of Europe. We may be able to salvage something from the wreck or we may not. I do not think it was necessary to do this, but I think it was purely blundering foreign policy on the part of the present administration that brought us to this situation.

So far as I am concerned, I am in no sense an isolationist. I believe in taking part in world affairs and I believe America has an obligation to perform to all the rest of the world. I believe in performing that obligation, that times will arise when we must spend our money to achieve our objective and when such cases do arise I am willing to vote to spend the money. But I do not believe that we can best aid the maintenance of world peace by allowing ourselves to be branded as the greatest suckers on the face of the globe. I think we have got to be practical in our approach and in our application to our foreign policy. I think we have got to realize that it is possible for all the world to live at peace if it wants to, and I think that certainly should be the aim of all of us to promote world peace.

But, on the other hand, I think the security of America in the future will depend, as it has depended in the past, on keeping our own people strong and keeping our own industries strong. I think the free-enterprise system of doing business in America is the system which has built up individuality in America. It is a system which has made strong men and it is a system which has made a strong nation. So far as I am concerned I cannot get enthusiastic about pouring millions of dollars into England to enable England to establish a socialistic government. I like the English people and I believe the English people are making a definite effort to establish a socialistic government and not a communistic government, but I think that in the end one of two things will occur: either England will go back to a system of free private enterprise or she will go overboard and adopt the Communist

regime. I do not believe any nation can exist as a free nation or as a democratic nation when the government owns and controls the bulk of the great industries throughout that country. Yes, I want to help England. Yes, I believe in the sincerity of most of those who are now in charge of the English Government even though I disagree violently with them in their philosophy of government.

I most devoutly hope that they see the error of their way before they, without intending probably to do so, convert the English nation into a Communist nation. In my opinion, socialism in government leads to incompetence, incompetence leads to poverty, and poverty leads to communism.

In concluding what I have to say, let me again go back to the point which I have mentioned so many times in this talk, and that is, the importance of people doing their own thinking. Do your own thinking on foreign affairs. Do your own thinking on domestic affairs. Do your own thinking on National, State, and local politics. Don't let the politicians think for you.

Don't forget that if a horse is not in the middle of the stream by 1948, this New Deal Party will, if necessary, dig a creek, they will fill it with water, and they will import the horse and they will cry loudly to the people, "You cannot afford to change horses in the middle of the stream." Don't get too excited about that.

I have great confidence in the intelligence and the sound judgment of the American people. They reinforced that confidence greatly on the 5th of November 1946, when they cleaned out a bunch of old mossbacks that had been in Washington so long they didn't know how to do anything except be "yes men" for the political job dispensers. Frankly, I am beginning to have a little more confidence in the average intelligence of the people throughout the world; somehow I believe the people throughout the world are going to find a way to maintain world peace. I do not think these screw-ball artists who are posing as foreign experts in this country, or in any other country, will ever solve the problem. But somehow there will come, in my judgment, to the great rank and file of the people of the world a realization of the horrors of war and the beauties of peace. I think the road is getting a little smoother and the prospects a litle brighter and that the mass thinking of the great rank and file of the people will somehow, some way, solve the problems which confront the world in the future and they will have enough intelligence then, without resorting to war, to build in peace.

This is your United States Senator, W. LEE O'DANIEL, Democrat, of Texas, speaking and bidding you a most pleasant good evening.

United States Public Relations in Western Europe

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, December 12 (legislative day of Thursday, December 4), 1947

Mr. LODGE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Congress Now Sees Need To Combat False Reports," by James Reston, from the New York Times of Thursday, December 11.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS NOW SEES NEED TO COMBAT FALSE REPORTS—BUT THE EXECUTIVE BRANCH LAGS IN PREPARING TO IMPROVE REPLIES TO THE COMMUNISTS

(By James Reston)

WASHINGTON, December 10.—When Senator HENRY CABOT LODGE, JR., of Massachusetts, was in Europe this summer he had two conversations that annoyed and impressed him.

One was with a wealthy conservative French physician, the other with a deputy of one of the French parties of the extreme right. The doctor told him:

"Of course, we realize that medical science is way ahead in America of what it is in France, but then we also know that you have all those underprivileged people over there on whom your doctors constantly experiment."

The conservative politician said:

"We know that you Americans are trying to build up Germany industrially faster than you want to build up France. The reason you do this is because you intend to have a war with Russia and you want to get Germany into shape as your ally."

Astonished, Senator LODGE asked the politician why he thought we wanted to fight the Russians, and he replied:

"Because Russia has taken away so much of your export trade."

As a result of malicious misinformation of this sort, Congress is finally prepared to concede that Communist propaganda in Europe is more effective than many Congressmen used to think and that the United States Government ought to do something about it.

It is generally agreed that the appropriation for the United States Information Service in the State Department should be increased. In the fiscal year 1947 it received about $20,000,000, which is considerably less than the sanitation department's budget in New York City, and this year it has been cut to $10,900,000 with an additional $1,400,000 for liquidation of some of its former functions.

There also seems to be general agreement in Congress that the administration's Voice of America radio programs should be increased, and that they should be put out over medium- and long-wave instead of over the short-waves, which have a limited audience in Europe.

Moreover, Senator LODGE is now proposing that the administration consider translating some American newspapers into French, German, and Italian for distribution daily in Europe; that the Government buy advertising space in key European newspapers and time on some European stations; and that the information offices in our missions abroad be enlarged.

All these proposals, including the more radical ones, are getting sympathetic hearings from subcommittees of the House Foreign Affairs Committee and the Senate Foreign Relations Committee but little progress is being made in the executive branch of the Government to improve the substance of our information service if the Legislature agrees to increase its facilities.

The State Department is still without an Assistant Secretary of State for Public Affairs. The job has been vacant since last September when William Benton resigned. During that time, when Congress was out of session and the Executive had every opportunity to dominate the flow of news out of Washington, no information program about the Marshall plan was developed.

Similarly, during these same important months, no serious attempt was made by the White House to analyze the questions being asked by the world about our foreign policy with a view to answering those questions week-in-week-out in the President's press conferences.

The system used so effectively by President Roosevelt and his press secretary, Stephen Early, has been allowed to decline. In the Roosevelt administrations, an effort was made to use the White House press conference as a means of removing doubts at home and abroad about foreign policy questions.

When reports came in from our missions abroad about some misconceptions of our policy, a "brief" directed at that misconception was prepared by the appropriate official.

CORRESPONDENT ASKED QUESTION

Mr. Early then suggested to one of the correspondents that if a question were asked on this particular subject, the President would probably have something to contribute. The question was asked, and Mr. Roosevelt's answer was usually on the front pages at home and abroad within a few hours.

This system has not been dropped but is used far less effectively than it used to be. Mr. Truman and Secretary of State Marshall tend to look on the press conference as a difficult chore, which admittedly it can be; Mr. Roosevelt looked on it as an opportunity. His political opponents did not particularly like the system, but nobody denied his right to employ it, and everybody recognized it as a most effective way of bringing the authority of the White House to bear quickly on critical questions.

What a few observers in Washington, like Senator LODGE, are saying is that while more dollars must be spent to do the job, it cannot be done by dollars alone; that the substance of what we say is at least as important as the means by which we distribute it; and that, since we now have a clearer plan and objective for our foreign policy in Europe, it should be sustained and supported by a better plan of explanation and dissemination.

In fairness, it must be noted that the administration has had trouble in getting a man to head the program. They have sounded out Byron Price, Adlai Stevenson, and Mark Ethridge for the job and all have indicated they would not be available.

But in the meanwhile, the possibilities of filling the gap by carefully prepared statements from the White House and the State Department remain. For after all, as Senator LODGE has pointed out, the real Voice of America, in the minds of people abroad, is not a radio station but the President of the United States.

Reclamation

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the Appendix the able address on reclamation delivered by the distinguished junior Senator from Nebraska [Mr. WHERRY] at the luncheon on the final day, October 31, of the annual convention of the National Reclamation Association at Phoenix, Ariz.

The address delivered by the Senator from Nebraska stresses the urgent need for reclamation in Nebraska which is typical of the needs in every western State. Arizona wants to see reclamation extended wherever water can be conserved for irrigation and related power production, and joins with her sister States in this laudable program. The address has special significance as an utterance of the chairman of the Senate Appropriations Subcommittee for the Interior Department.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Rotarians, members of the National Reclamation Association, honored guests, and ladies and gentlemen; it goes without saying that I am indeed glad to be in Phoenix this afternoon. This reminds me of Nebraska, and, in keeping with Nebraska tradition and custom, I'll permit you, if you'll permit me, to take off my coat. What do you say, everybody out there?

Of course, it is a pleasure to be on a program with such distinguished guests as CARL HAYDEN and Senator MCFARLAND, and, also here today, JAMES MURRAY, from Montana, and other distinguished men with whom I am associated in Washington. It is also an honor to be on the program with Secretary Krug and I know you join with me in wishing him good health and a speedy recovery. Let's give him a hand. [Applause.]

We also have with us Mike Straus and many other good friends who are so intensely interested in Reclamation, as well as the boys on the firing line like Bill Warne and G. W. Lineweaver.

It surprised me and did my heart good to arrive in Phoenix this morning at 8 o'clock and be welcomed by the Nebraska delegation of over 100 who came here to learn about the workings and program of our National Reclamation Association. Give them a hand also. [Applause.]

You know a Nebraskan called me on the phone this morning and said, "You know what this is, don't you?" They surely pay one in public office the compliment of assuming he has an enormous memory. Once I even misspoke my friend Lineweaver's name and called him Lineberger. At any rate I want to tell you an experience I had about remembering names. I was with my brother-in-law, Morris Van Horn, a man who stands 6 feet 4 inches tall and weighs 253 pounds. You wouldn't think he'd be afraid of anything—not even those white-faced Hereford bulls we have in Nebraska. Well, we decided to go down to the Naval Academy at Annapolis one Sunday. Dr. Spear from Baltimore had been invited to preach and he delivered a wonderful sermon. After the service, Dr. Spear and the Academy chaplain were on the steps of the Chapel and my brother-in-law thought we should speak to them and ask Dr. Spear about a mutual friend from Nebraska who also was a minister. We met Dr. Spear and said, "We came over for two reasons. We wanted to thank you for that sermon, Dr. Spear. The second reason is that we want to inquire about our home-town boy. Well, you know, that name left me and I could not think of it. I talked and talked about what a wonderful boy he was, and what a fine family he came from, and I got him way up on a pinnacle and still I couldn't think of his name. Finally, I turned to this brother-in-law and said, "What was his first name, anyway?" Do you know what that man did to me? He turned white and red and purple, and he said, "I don't even remember his last name."

Well, I am glad to be here because I think it is a wonderful thing also to make the acquaintance of members of the National Reclamation Association, who have had an interest in putting on such a great meeting here in Arizona. Let's engage in an old Nebraska custom and give them a great big hand, what do you say? [Applause.] How wonderful it is to be herein Arizona!

Out here we look upon Arizona as synonymous with reclamation. Here you convince those who are not well acquainted with reclamation, because one can see what water and sunshine do for crop production and then you can see what happens when you go without water and what happens to this country without irrigation. To me it is most convincing. I'll go back to Washington determined not only to continue as an advocate of reclamation but to look upon these reclamation projects as giving full economic justification for the reclamation program. [Applause.]

It also was a privilege to be introduced by Senator HAYDEN. CARL and I like to have nice things said about us. I deeply appreciate the remarks made by CARL HAYDEN not only on this occasion but on others. Because he comes from another party there are times when Senator HAYDEN and I are just as far apart as the sun and moon, but we get along well about reclamation. I'm proud of CARL HAYDEN and treasure his friendship. Let's give Senator HAYDEN a hand. What do you say? [Applause.]

Yes; we like to have nice things said about us.

When I first reached Washington a letter arrived addressed to KENNETH S. WHERRY, S. O. B., Washington, D. C. The inside of the letter wasn't very complimentary either. My secretary remarked that, "At least they could have put S. O. B. on the inside of the letter." At the time we had an experienced Washington stenographer temporarily employed in our office, and she said, "You men know what that means, don't you?" We said, "No; what does it mean?" She said, "It's an abbreviation for Senate Office Building. I wouldn't worry too much about that."

I am glad to be here. I am happy to again join you, Senator MCFARLAND, and you will recall what I mean. The first bill I voted for in the Senate was a piece of legislation introduced by ERNEST and affected Arizona. We haven't always been together since then, but I voted with him on the very first chance.

I am also glad to be here with my senior colleague from Nebraska, who gave a fine address at your banquet last night. He made a very forceful plea for the need of reclamation. We all love HUGH BUTLER in Nebraska. The Nebraska delegation meets every Tuesday morning in Washington to discuss problems of our State and there he demonstrates that he is a true leader. We often discuss these problems and needs of Nebraska in the way of irrigation. A million acres of our State must be brought under irrigation if we are to continue to produce and hold our population on the farms. I see what water will do out here in Arizona to build up your land under irrigation. When I see this, I can't help thinking of that rich, black-loam soil in Nebraska that needs only irrigation to make it blossom like a rose.

Just a few months ago floods in Nebraska washed out precious crops. We have hundreds of miles of river where such water could be conserved to produce crops we need badly. We need irrigation over large portions of our dry land, and on that land that is now irrigated, we can always use supplemental water. Don McBride knows it. He was born there and we claim him as a Nebraska boy.

Out in Scottsbluff, Nebr., in 1910, if you will permit an example of how a country grows with irrigation, we loaded only 190 carloads of agricultural produce for export. In 1942—just look what occurred out there after irrigation went into the North Platte Valley—we shipped through the Burlington and Union Pacific Railroads 3,140 cars of agricultural products. Oh, my, what that means to the farmers. How much that means for a great district out there in western Nebraska. Irrigation develops not only agriculture but all industries and all labor also benefit.

In September I made a trip over the reclamation activities in Nebraska with Regional Director Batson and Mr. Lineweaver. We are making progress but we must make more there as well as elsewhere in the West.

How wonderful it is to see water brought to the soil of these two great States of California and Arizona. It shows how Nebraska needs irrigation. Our State dropped from seven Congressmen to four, for due to the lack of irrigation our people left the farms and the State. Think of it. Such a decrease in population.

I want to serve notice now on the National Reclamation Association and the agencies in Washington that Nebraska is sold 100 percent on reclamation. From here out we will develop our projects and keep our population in Nebraska, and not let our Nebraskans move to Arizona to vote for Senators HAYDEN and MCFARLAND.

Yes, as CARL HAYDEN told you, I am chairman of the Department of the Interior Appropriations Subcommittee in the Senate. CARL was formerly chairman of the Interior Subcommittee. When the Republicans became the Senate majority, I replaced him. I got his job and he has mine. I chose it. I could have selected any one of six other subcommittees, but I chose Interior because of the need we have in Nebraska for reclamation. To provide irrigation for western America will create new farm opportunities in many areas. We need have no fear of overexpanding reclamation through our arid lands.

Then, I happen to belong to another committee in the Senate with JIM MURRAY, of Montana, and that is the Special Committee To Study Problems of American Small Business. We have gone to all parts of the United States and listened to many problems. Irrigation will help their needs. I am for reclamation. We can help the small businessman tremendously by developing these great reclamation projects that help bring business into existence. There are 9,000,000 individually owned units in the United States today and of these 6,000,000 are farms. We should increase the number of these individual owners because it is my humble opinion that if we are going to continue this American way of life—this great representative government—the thing we must make sure of is that we continue to have individual businessmen operating throughout the United States. [Applause.]

Imagine 9,000,000 men planning their own destinies in comparison to the communistic and totalitarian systems where only a few plan and say what the rest must do. It was the local banker who believed in the faith and integrity of the individual who made loans to build the great communities and got the small businessman started. We need both that banker and merchant more than ever today to keep the Communists out of the United States of America. We need those who believe in the fundamental principles of representative government.

There is a need not only throughout the United States but throughout the world. Why, every paper you read sets forth reclamation projects being sponsored across the water. Look at Greece. They are doing wonders with their facilities, building for great reclamation projects and developing their agricultural territory there. But don't forget we furnish the money. You can look at the Italian states and find they need

reclamation there. They need agricultural products. The Kansas City Star wrote about an Arabian farm area to be developed. The need is not only here in the United States but we need it abroad.

There is no question about the need at home. Look at our expanding population. There is an increasing need for food. The average meat consumption per capita, according to figures revealed by the Agricultural Department, is 156 pounds per capita. That is the rate of consumption now. It is 35 percent more than ever before. The expanding need has come home to us here in the United States. A great portion of our agricultural products are produced in Arizona and California and all of the other reclamation areas included in the 17 States in the western part of the United States. The need is here.

Let's go to another subject which I think should require your full consideration. We know there is a need, but how fast can we build these projects in keeping with sound policy and where shall we build them in the United States? Let's be brutally frank about this thing. When I say how many projects shall we build and how fast can we build them, I make that statement in the light of other demands made on the budget. How fast can we do it? That depends on or must be in keeping with a sound financial policy. The budget includes our reclamation construction program. I haven't seen the order but I have been told the President's order provides that the 1949 appropriations shall not exceed those for 1948. That is not my quotation. I don't know whether that is true or not. It is being spoken around the Halls of Congress. Appropriations depend upon how the administration handles the budget.

In other words, we become salesmen and should be salesmen. The members of the Department should become salesmen to be able to go in and sell the Appropriations Committee of the House and Senate on the needs for reclamation. Well, we all agree there is a need to build reclamation projects here in the country.

Let's examine the budget. The first item on the budget is the interest we have to pay to service the debt. That is a "must" item, regardless of how we feel about reclamation. That is $5,500,000,000 we must raise to pay interest and service the debt. What is the second item? Another "must" item is the veterans' benefits of all wars. This has been increased tremendously, of course, by benefits passed in the Seventy-ninth and Eightieth Congress. The amount today is $7,500,000,000 that we must have for those veterans' benefits and if the benefits now proposed are passed, it will mean instead of $7,500,000,000 an increase of $1,000,000,000. That means there is $13,000,000,000 that must be provided for.

Then we must provide for our national security. It has finally been agreed that the military budget for this year from all sources will run in the neighborhood of $10,500,000,000. Already we have upward of $25,500,000,000 to provide for before anything else can be included. I don't know how you feel about national security, but I am one that has always felt we must continue to appropriate for the military in keeping with the national defense job confronting the country. Well, there is $26,000,000,000 before we get started on domestic government services. I am giving you some of the problems that confront your Senators when they have to determine what to spend for reclamation in the United States. These are practical questions after the program is endorsed.

There are those who say that it is impossible for us to lower the living costs of this country unless we stabilize the dollar and check inflationary currency practices. They say this is the only way we can plan an orderly retirement of the national debt. We have $41,000,000,000 in greenbacks and time and demand deposits. We've got to start paying that debt. How much are we going to allocate for the payment of the debt?

Then there is the problem of taxes and whether or not these can be reduced and the difficulty those in the lower-income brackets have because of reduction of buying power.

On every hand are demands that make it difficult for us who believe in reclamation to get appropriations from the Congress. But I'll tell you what I think. This is the time when much of the United States, regardless of the party in power, has begun to feel that while we, as a great Nation should continue to do our part in aiding the rest of the world, we have got to think of the home fires and keep secure the economic strength of the United States of America. [Applause.] Yes; you must study these reclamation projects across the country very carefully, because if we do not take care of the home fires, no one else will take care of them for us.

Yes; let's be brutally frank. It is difficult when you come into committee and find a difference of opinion. CARL HAYDEN hit the nail on the head when he said we want to have a uniform program. We must have it. There should be no dispute on these programs between the States. There must be uniformity in the Agency. We must have it if you are going to sell Congress on reclamation needs. Settling the disputes and differences existing between States and differences over individual projects will go a long way in getting the necessary appropriations for reclamation. If that is done, we will have given valuable assistance when the reclamation program comes before the Appropriations Committee.

This year our Appropriations Committee had hearings that lasted 27 days. We were there from 9 o'clock in the morning until sometimes 7:30 or 8 o'clock at night. There were 3,700 pages of testimony. It is said to have been the longest hearing ever had before any standing committee in the Senate. It took that long to iron out the difficulties about these appropriations. It was a tremendous job. And I want to say that our committee took politics out of reclamation. We certainly did. The report of the subcommittee was adopted unanimously.

If you want to make it easier for us legislators, get a uniform water policy and be agreed among yourselves on a uniform public power policy throughout the entire United States. I long for that day. Decide what the policy should be—whatever is the best thing for America.

So far as appropriations are concerned, Congress knew there would be a large sum of money carried over from the 1947 funds because reclamation had not been able to use all of its appropriations in 1947. This amount was $75,000,000. Congress has appropriated for 1948, $90,129,838 for 1948. This is about $12,000,000 less than the 1947 appropriation, which was the largest appropriation ever made. But there is more to the story than that. Despite the large amount available in 1947, only $1,125,690 was actually used. We got into a real tangle about unexpended funds and unobligated funds. The 1947 appropriation of $90,129,838, plus the carry-over of $75,000,000 estimated for 1948 resulted in $166,298,000 being available for reclamation this fiscal year. That's the best we could get, but in the main we did mighty well. This was the biggest year in the entire history of reclamation. I don't mean that is enough.

We must also be on guard to protect reclamation and our Western States. The Missouri Valley Authority proposal is proof of that. It would create an empire within a republic. Anyone thoroughly familiar with the Tennessee Valley Authority knows what I mean.

Federal appropriations have provided these reclamation benefits and that shows what representative government can do to expand these activities. We need progress reports every quarter of the year on the reclamation projects. It is highly essential. Allocated funds for specific projects should go to those projects. It not only should go to those projects but they should be built up as speedily as possible.

The Bureau of Reclamation has been asked to make those progress reports. When we know what progress is being made with the funds appropriated, and can show Congress how we are spending money on the projects, additional funds will be appropriated more quickly for the projects you want down here in Arizona and throughout the 17 Western States. Yes, the Interior Department deserves some credit for the progress so far, but we can do a lot better. If you give us performance, we, in turn, will get the appropriations.

I appeal to you who are leading this fight to get reclamation projects approved. I make this appeal in the interest of the farmers of our western country who should have electricity on their farms and for the young people on those farms who deserve such advantages. I make this appeal to keep faith with those concepts that I learned at my mother's knee, and to keep faith with the traditions that made America great.

When I was overseas during the war, I visited our boys in the hospitals there and one of those boys said to me: "Senator, could I ask you something? When you get back to the States, won't you stoop down and kiss the soil for me?" That was the roughest lesson I ever learned, and I learned it in France. And when I got home I went into the yard with my wife, daughter, and son and I stooped down and kissed the soil to keep faith with that American boy.

What did that boy mean? Why was the soil so important to him? I tell you it was because it represented the home whence he came; the school he went to and the rights he had—the rights of freemen, the right to go to the church he loved and worship God after the dictates of his own conscience. That is what it meant to him and what it should mean to all of us today. Keep faith with the traditions of this great country! That is your challenge and mine!

Stabilization of Commodity Prices

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. MADDEN. Mr. Speaker, the President called the Congress into special session on November 17 to pass practical legislation which would reduce the high cost of living, and also to extend aid to the suffering people who were victims in war-devastated countries.

The Gallup poll recently revealed that the problem uppermost in the minds of the American people is the necessity for immediate reduction of the high cost of living.

Today the Republican leadership in this special session has submitted Joint

resolution 273 as their solution to our inflationary dilemma.

This resolution is supposed to aid in the stabilization of commodity prices and further aid in stabilizing the economy of the United States.

This resolution is the Republican leadership's answer to the crying need of the American people that prices must be reduced.

This resolution, instead of effectively legislating on the 10 points which our President asked for, as necessary to stop inflation, is ineffective, impractical, and a malicious sham to fool the American people into thinking that the congressional leadership is serious in curtailing high prices.

This resolution sets up four "skim milk" provisions, so the Republican Party can tell the Nation that they submitted some kind of legislation to stop inflation.

The first provision authorizes the President to enter voluntary agreements with representatives of industry, business, and agriculture so as to provide for allocation of transportation, marketing, and so forth. This does not set out any effective penalty or power for the President to enforce such agreements. This provision is merely a vacuum and an empty gesture.

The second and third provisions set out an extension of time from February 29, 1948, to February 28, 1949, of export controls and allocation of transport facilities. These two provisions are meaningless as far as the special session is concerned because these controls will be in effect until February 29, 1948, regardless.

The last provision sets up requirements for the Federal Reserve banks. This provision in itself would not have an immediate effect on the high cost of living throughout the country, and would eventually increase the interest of our present stupendous national debt.

The public will be amazed that this resolution contains no provision to halt the skyrocketing of rentals throughout the country .

The most astounding provision in this resolution is part (c) of section 2 which begins as follows:

(c) Parties to any agreement approved under this section are hereby relieved from the operation of the antitrust laws, and of all other restraints, limitations, and prohibitions of law, with respect to the making of such agreements and with respect to carrying out such agreement prior to March 1, 1949, in conformity with its provisions.

This paragraph no doubt was demanded and included in the resolution through the insistence of the National Association of Manufacturers. It is a continuing of the effort of the National Association of Manufacturers to nullify and weaken the antitrust laws of our country. It also coincides with their propaganda campaign to justify the record-breaking seventeen and one-half billions in profits piled up by American industry in 1947. These profits represent more than a 40-percent increase over the previous year, 1946.

Today is the first time in 14 years that the Committee on Banking and Currency has sponsored a piece of legislation, either important or unimportant, under the "gag" rule. The Republican leadership has limited the debate on this so-called inflationary resolution to 40 minutes—20 minutes on each side. The high cost of living today is staggering millions of American homes under its pressing burden. The leaders of this Congress are in effect telling the American people that this body should only have 40 minutes to debate this most important of all problems.

The American consumers, who are stretching the family budget to cover the grocery, rent, and clothing bill, should remember this legislative operation that the Republican leadership is forcing on us today.

I firmly believe that the leadership would not have submitted even this weak resolution had not their conscience haunted them for advocating their killing price control in June 1946.

Congressman HALLECK, the majority leader, states that because of the impending adjournment, we have not time to give full and extended debate to price-control legislation. The American people are expecting this special session of Congress to remain in Washington and pass legislation which will solve this important problem.

The public should secure copies of this so-called anti-inflation resolution—House Joint Resolution 273—and ask the leaders responsible for it if they are serious in reducing the cost of living in America, or if they are merely playing 1948 Presidential politics.

This feeble effort to submit practical legislation against inflation will disappoint the American consuming public. They will be fearful that they cannot receive cooperation from the leaders of this Congress to take drastic steps to reduce prices.

Our leaders fail to realize that the American people will gladly submit to sacrifice when they see disaster facing our American way of life. They demonstrated that during the war, and will gladly cooperate to prevent inflation from ruining our economy.

An Explanation Is Due

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, I wish the Secretary of Agriculture would stay in Washington long enough between political speeches to see that the Steagall amendment is put in operation in accordance with the law. His dire predictions about the future meat supplies of the country may come true, but if they do this administration will be responsible. When the present Secretary of Agriculture was chairman of the committee to investigate food shortages the report quoted the following:

One of the factors that has shaken the confidence of producers is whether requirements, once indicated, will actually be absorbed in full by the claimant agencies at the time production becomes available.

This can be found in Union Calendar No. 248, page 3.

It is known that Marvin Jones, who had the responsibility for these situations at that time, did do something to iron them out. In the same Union Calendar No. 248, page 3, we find:

It seems to this committee that a greater degree of responsibility should be recognized by the various claimants. Their requirements once agreed upon, should represent firm commitments, and each claimant should be under an obligation to take in full the commodities claimed.

Why does not the Secretary of Agriculture, Mr. Anderson, take the same position he did when he was chairman of the Special Food Investigation Committee?

Some people want to put a ceiling on meat, as if one commodity could be successfully subjected to control. Do you suppose that they, including Secretary Harriman, want to put a ceiling on the Midwest chickens when they are bringing 10 to 20 cents per pound and the law states that the support floor is 24.8 cents per pound? If there is any doubt in anyone's mind that chickens are selling for 10 to 20 cents per pound in the Midwest, please read the following letter from a county agent, one of the employees of the United States Department of Agriculture, which is as follows:

COOPERATIVE EXTENSION WORK
IN AGRICULTURE AND HOME ECONOMICS,
Menomonie, Wis., December 9, 1947.

To the Honorable REID MURRAY,
House Office Building,
Washington, D. C.

DEAR SIR: I am somewhat alarmed to find that poultry was selling last week for 11 cents a pound at Boyceville, Wis., and has been selling for several weeks at about 15 cents a pound. I am wondering if there isn't a support price on poultry at about 22 cents a pound.

I have contacted the local AAA chairman regarding support prices for poultry and corn, but he doesn't seem to be familiar with any program that is in effect on these commodities.

I am wondering if you would inform me as to whether or not there has been a support price for poultry and other commodities and if so I wish you would explain what methods should be used in obtaining this price for the farmers.

I am sure that you realize that it is not possible to market poultry at that price and even pay for the feed under the present ratio.

Most respectfully,
ARCHIE JOHNSON,
Dunn County Agricultural Agent.

If you do not believe that the great bulk of midwestern chickens are not being purchased at less than the legal

lawful prices, read the following market reports from the Midwest and Northwest:

	Cents
Dickinson, N. Dak., Nov. 27, 1947:	
Heavy hens	16
Light hens	10
Heavy springers	18
Light springers	15
Cocks	7
Eggs	45
Aberdeen, S. Dak., Nov. 17, 1947:	
No. 1 heavy hens, 4½ pounds and up	19
No. 1 hens, under 4½ pounds	13
Old roosters	8
Heavy breed springs	20
Leghorns	16
Eggs, extras	46
No. 1 eggs	36
No. 2 eggs	27
Oelwein, Iowa, Dec. 1, 1947:	
Leghorn hens	13
Heavy hens	18
Leghorn cocks	8
Heavy cocks	8
Springs, over 5 pounds	18
Springs, under 5 pounds	13
Leghorn springs	13
Eggs, hennery	50
No. 1 eggs	34
No. 2 eggs	29
Muscatine, Iowa, Dec. 1, 1947:	
Heavy breed hens	19
Leghorn hens	15
Heavy breed springs	23
Leghorn springs	16
Cocks	12
Eggs, grade A, large	50
Eggs, grade B	40
Eggs, grade C	28
Wadena, Minn., Nov. 13, 1947:	
No. 1 hens, 4½ pounds and up	20
No. 1 hens, under 4½ pounds	13
Roosters	8
Springs, colored	21
Leghorn springs	14
Eggs, grade A, large	46
Eggs, grade A, medium	35

If the Steagall and LaFollette-Taft amendments are of any value as a part of the law of the land, why hasn't the legal lawful support been extended to these chicken producers in conformity to the expressed wishes of the Congress?

This chicken price program should be rectified at once. Otherwise the packers will make a cleaning by purchasing these chickens now below the lawful prices like they did the light hogs in the winter of 1943 and 1944, and putting them on the market next spring when the Secretary of Agriculture states that meat will be scarce. The prices that people pay for chickens in their butcher shop is not reflected by these 10- to 20-cent chickens in the country.

This chicken situation is just one more example of the fact that the farmers could give away some of their products and still the consumer would be paying high prices for them. This indicates that there is more involved in this price situation than the price the producer receives.

Price Control Bill

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. LUDLOW. Mr. Speaker, I am perfectly clear in my opinion that the passage of this bill would not have been in the national interest. Not a single Member who spoke on the bill argued that it would meet the requirements and give the people the relief from inflation which they have a right to expect. Its best friends put it forward merely as a stopgap measure and the best that can be had in the limited time of the special session that it left. There was great danger, in my opinion, that if we had passed this bill it would stop the gap permanently and would be used as a means of foreclosing effective legislation on the subject at the regular session of Congress which is coming in a few weeks. This sort of a bill must not be used as an excuse to prevent real legislation on the the subject and it will not be with my vote.

When I read the bill I wondered if it would not be more in the interest of monopoly than of price control. To say the least the liberality with which it would suspend the antitrust laws calls for close inspection. I do not challenge the good faith of the proponents of the measure, whose sincerity I do not doubt, but I feel it is simply an impossible bill when it comes to meeting the country's requirements. The biggest job before the Congress is the enactment of legislation to hold down the spiral of price inflation and I do not think it should be approached in this lick-and-a-promise way by attempting to jam through under suspension of the rules, with only 40 minutes debate, a measure which, curiously enough, was defended in a wholehearted way by no one, not even by those who proposed it. Our patriotic duty was to kill this bill and then do a real job of price control after full consideration and ample debate when Congress reconvenes after the holidays.

Letter From Marcus G. Cameron, Deputy Chief of Staff, Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

TRANSPORT DIVISION,
OMGUS, UNITED STATES ARMY,
APO 742, CARE POSTMASTER,
New York, N. Y., December 4, 1947.

Hon. CARL T. DURHAM,
New House Office Building,
Washington, D. C.

DEAR MR. DURHAM: I apologize to you for not having written to you sooner, but we have had the national adjutant of Disabled American Veterans over here the last of September for a 17-day tour of the American zone. The 5th of October I left for a tour of the American zone also and spent 11 days touring 3,000 miles over the farming region and dairies of Germany.

Mr. DURHAM, I traveled into the wagon roads of the southern part of this country where I could see just how the farmers were working. I viewed many thousands of acres of farms; all I could see everywhere was obsolete methods of farming. All work is done with oxen, the land is so poor from overwork that they cannot produce food in abundance. All crops were being harvested, and as soon as they removed the food from the land they were preparing the soil for the winter grain crop to feed the cattle. You would see men, women, and children in the fields working from daylight until dark. It is my opinion that if the farmers of Germany, as well as Europe, for I have found these same conditions existing in all the countries I have been in, had modern machinery, fertilizer, and the abundance of seed that they could produce three times the food that they now produce under existing conditions.

Mr. DURHAM, we are not in sympathy with the German cause or any other country that tried to dominate the world under its Nazi or Fascist leaders, but we do believe in giving them the necessary aid to get them back once more on their feet so that they can once more carry on peaceful world trade. The American taxpayers cannot continue to sponsor the burden of the European nations, neither can we take them all to the United States until we have obtained for our own American veterans homes and jobs—the men who fought that these people here might be free again.

Conditions do not look any too good to me for the future; however, we will have to take what comes. It seems to me that the Russians are determined to run us out of Europe if they can devise any way to do so. If Russia can get a peace treaty to suit herself so that we will have to withdraw our occupation forces from Europe then what we fought for is lost. As the Red armies moved across Europe westward her trained Communist organization from Moscow moved with it, everywhere the Russian Army went it cleared the path so that the Communists could move in and take over with no opposition. Russia has repeated the same tactics that Hitler and his henchmen used.

I feel that when universal military training is passed that the whole economic, social, and political situation will change for the better. The psychopathic war lords of Europe will then realize that we are just as strong as they are and will not attempt to dominate the world.

They know that as soon as we win our wars that we return to our homeland and fall asleep again, while they can prepare for the next war of aggression. They have reasonable assurance that we will not make any attempt to stop their crusade until it is almost too late.

Mr. DURHAM, you were in Congress when appropriations were made for the experimentation and development of scientific warfare, and I am sure that if Congress as well as you had not been reasonably assured that we had something that the money would never have been appropriated. If Russia does not have something then why is she enslaving 25,000 Germans in the uranium mines of Chemnitz, Germany, to mine the ore for atomic bombs and flying it out to the Russian factories.

Our post of Disabled American Veterans here have adopted and are now preparing a resolution to go to our national headquarters and with an information copy to each one of our 400 national service officers pertaining to communism and national defense.

I was also in constant contact with our constabulary of the Army during my tour. I must say that I have never seen an organization within the United States Army that could measure up with the qualities of this organization. I only wish that we had an army of 1,000,000 men that could come up to their qualifications and training.

With best regards to you and the folks in the office, I am,

Very truly yours,

MARCUS G. CAMERON,
Deputy Chief of Staff,
Disabled American Veterans.

Western Development: The Nation's Key to Prosperity

EXTENSION OF REMARKS
OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. McFARLAND. Mr. President, I ask unanimous consent to have inserted in the RECORD an able address delivered by the Honorable J. A. Krug, Secretary of the Interior, at the 1947 annual convention of the National Reclamation Association, in Phoenix, Ariz.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, it is well to remember that our Nation is great—not because of its fertile acres, its rich mines, and productive factories, but really because of its people and their heritage. Our Government system and our economic system, in which we take such pride—are merely manifestations of the living precepts, of the millions of men and women who came here to live in freedom, and of their progeny who have steadfastly followed in their footsteps.

Here in America—the country—as well as its government—lives for the people.

Some 10,000,000 persons will be added to the Nation by 1960. The majority of them should make their homes in the West. With the development of western agricultural and industrial facilities, no other area has the same economic opportunity. Should these people settle in the established population centers of the country, they will merely compete for existing jobs with a most depressing effect on the labor market. In the West they will find jobs, a good living, and security.

We know that the United States is a dynamic economy. Only a constantly expanding agriculture and industry can support the steadily rising standard of living which fulfills American ambitions, satisfies American desires, and keeps America strong.

Western development means reclamation and reclamation means western development. I am sure that no one in this audience would doubt the soundness of this basic thesis. Therefore, instead of presenting further arguments in support of western development as the key to the Nation's prosperity, I would like to present to you a specific program of reclamation construction and development for the next 7 years.

It should be considered against the background of possible public investment in the West. In addition to the work now authorized, there are about 15,000,000 acres of arid and semiarid lands in Western States for which irrigation can be provided. Additional millions of acres need improved water supplies. The fall of western river waters will produce at least 22,000,000 kilowatts of hydroelectric power in addition to that now existing or are authorized for construction. Another 3,000,000 kilowatt potential may be found in sites not yet fully explored. These irrigation and power potentials could be made realities at a cost of approximately $15,000,000,000.

These are realistic, total potentials as now recognized under present conditions and with the present information on land use and hydroelectric power sites. This great unexploited frontier would provide a tremendously valuable backlog of public works into which we could dig deeper and more rapidly at great benefit to the country when construction and employment may have declined to a point which threatens our economy with depression.

The reclamation construction program I shall now outline for completion in the next 7 years is only a modest part of this great western potential and is designed for a period of prosperity and full employment such as we now have. It is designed to keep open the gates of opportunity, to provide rising living standards, an expanding industry, and food and electric power for our growing population.

Since the National Reclamation Association includes the best informed people in the world on this subject, I can take the liberty of talking on some of the technical details of this program.

Perhaps the best way to describe the scheduling of construction is in terms of the results in irrigation and hydroelectric power benefits anticipated for each year. Of course, you will bear in mind the many collateral benefits, such as flood control, municipal water, silt control, recreation, etc., which, for sake of brevity, I am not describing in detail.

Rather than to read this, I have had it reproduced for distribution. I should like to point out, however, that the figures are still under study, and some of them will be adjusted. However, they are of sufficient permanence to give you a good perspective of the Bureau of Reclamation's program.

Specifically, the performance of the work outlined on the schedules calls for an investment of $2,148,000,000 over a 7-year period. It would bring under irrigation by the end of the 1954 fiscal year, about 4,000,000 acres of new and supplemental irrigation embracing 40,000 farms. This would increase the lands now irrigated with reclamation water to over 8,000,000 acres. The programming of power developments anticipates adding some 2,250,000 kilowatts of generating capacity by 1954, or enough power for 21 cities the size of Denver. The detailed power scheduling has been completed only through 1952, and the Bureau is still working out construction beyond that date. The power units to be added by 1954 would more than double the generating capacity now available on the Bureau's power systems.

The Bureau of Reclamation has carefully estimated the construction costs of this 7-year program. The work was planned from the grass roots up, beginning with the recommendations of the men closest to the job, and was reviewed by regional and top engineering officers at the Salt Lake City Construction Scheduling Conference last July. With certain adjustments subsequently made, expenditures for the six succeeding years have been estimated as follows:

1949	$295,000,000
1950	408,000,000
1951	422,000,000
1952	398,000,000
1953	354,000,000
1954	271,000,000

This comes to a total of $2,148,000,000 now programmed for the 7-year period ending June 30, 1954. It would result in completion of less than half of the presently authorized reclamation construction which at today's prices would cost a grand total of $4,435,000,000.

This program is a long step toward placing reclamation construction on a sound, businesslike basis, assuring the water and the power users the lowest possible costs. While the proposed schedule embodies an economical rate of construction progress, it may well be that the projected rate will not keep pace with the growing needs of the West. Continuous review is necessary and further study may show that a more rapid rate of progress is necessary.

If this long-range program is to be worthwhile, and if reclamation construction is to go forward at minimum cost, the method of financing must have reasonably comparable long-range planning.

Although reclamation appropriations for construction are good until expended, they are actually on an annual basis. Dams, hydroelectric plants, canals, and other engineering structures require long periods, stretching into years, to build. Many contracts for integral units run from 2 to 4 years.

In order for contractors to bid on a basis that will result in low-construction costs, they must have assurance of continued, orderly progress. Once a contract is let, the contractor cannot be slowed down or stopped without serious waste. Other contracts which must be integrated with the primary work cannot be postponed if the work is to proceed on schedule.

Pint-sized appropriations, even though for the desirable aim of reducing Government expenses, disrupt the orderly progress of construction, causing waste, delay, and high costs. So do limitations placed upon the exercise of judgment by our engineers, such as those upon our Branch of Design and Construction and on force-account operations.

We have already discussed the advantages of appropriations continuity with the Bureau of the Budget. We shall follow it up with the Congress when it reconvenes.

For this 7-year program to be effective, reclamation management, too, must have careful attention. The demands of the country have made reclamation big business, and you can't run big business, either in the Government or in private industry, without competent and adequate administration. To stint on that is to waste.

Today's job requires top administrative direction, coordination of multiple activities, and engineering perfection. Through regionalization of its administrative work, Reclamation has made progress, but it has been handicapped by lack of adequate administrative finances.

I think that the most important part of Reclamation in supporting western development is what we prosaically call "general investigations." This is where we study the ground, plan the dams and ditches, and prepare for the community changes which inevitably result from these great projects. Without these investigations Reclamation will lack the knowledge to build new projects, Congress will be without recommendations, and the people of the West will be without a future.

It is up to us who need and use this kind of planning to defend it. There is an economic superstition fostered by some theoretical economists that "planning as such, is socialistic." Planning for construction isn't socialist, capitalist, Communist, or anything else. It is just good common sense. You don't build a house without plans, without surveying the ground, checking the title to the property, studying drainage, sketching in the landscaping, and considering the neighborhood. A good planning staff will pay the biggest returns in sound engineering and economical construction.

This type of planning can go much farther than the direct, on-the-job investigation of immediately attainable construction. It can build up for us a $15,000,000,000 reservoir of construction projects which can be used to speed up reclamation development whenever the level of employment and private construction falls below that which is sound for the American people.

To keep western development in pace with the Nation's needs we must have projects ready both for today's high level of employment and for a possible tomorrow when

greater construction efforts will be needed. We all learned from the bitter experience of the thirties that major construction projects cannot be let for contract without long periods of engineering preparation. That preparation must precede the hour of need or our recovery funds are squandered on leaf-raking and work-making projects of every description which do not and cannot contribute much to renewing the basic cycle which leads to economic prosperity.

It is imperative that project planning activities also be conducted as a long-range program. The Bureau of Reclamation has now scheduled a 7-year program of general investigations on a basis comparable to that for its construction activities.

This program contemplates development of river-basin-wide reports on every western river, covering all beneficial uses of water and related resources on a scale of ultimate, full development.

The rate at which project planning will go forward is governed, of course, by appropriations. The Bureau of Reclamation cannot retain competent technicians, necessary to the sound planning of reclamation, on a hit-or-miss, stop-and-go basis. It needs a full-time research staff with continuity of employment.

While the year-by-year details of our scheduled project-planning activities would be too tedious, many of you will be interested in the project reports which we expect to complete this fiscal year. They include:

FOR REGION 1

Idaho: Cambridge Bench, Council, and Hornet Creek.

Oregon: Crooked River, Canby, and the Dalles.

Washington: Kenewick, Division of Yakima.

Wyoming: Upper Star Valley (supplemental to Columbia Basin report).

FOR REGION 2

Santa Barbara County Basin, Yolo-Solano Sub-basin, and Sly Park.

FOR REGION 3

Arizona: Central Arizona, Chono Valley, Hassayampa, and Snowflake.

Southern California: San Diego, including All-American canal connection.

FOR REGION 4

Idaho: Preston Bench.

Colorado: Silt, Minnesota.

New Mexico: Hammond.

Utah: Emery County, Gooseberry, and Jensen.

FOR REGION 5

Oklahoma: Canton.

Texas: Cotulla.

New Mexico: Middle Rio Grande.

We may be able to complete certain other project reports this fiscal year, including those on units of the Missouri River Basin. Although work is continuing on a large number of projects, we have scarcely begun to explore the opportunities. There are many that offer greater returns than the famous Hoover Dam.

I cannot pass by without a special word about the Colorado River Basin report. Since the last meeting of this association, I have placed an interim report, including comments from the States, before the Congress, so that complete data could be officially before that body. Major reclamation advancement on the Colorado is still blocked, however, until a solution to the water allocation problem is found. It would be tragedy for the West, and for the whole Nation, if development of this basin is halted or long suspended.

In the basin of the Colorado, the driest of all our great valleys, there is no future except that founded on employment of the water resources. Half utilized today this is no time to stop our work in the valley of the Colorado because of fear of tomorrow and of each other. We must go forward.

As President Truman said on October 8, 1945, when speaking in the Tennessee Valley:

"The valleys of America await their full development. The time has come to press forward. The days of the pioneer are not dead. The development of our natural resources calls for men of courage, of vision, of endurance, just as in the pioneering days of old.

"The Nation I am sure is determined to march forward. We will not listen to the whispers of the timid. In the great valleys of America there is a challenge to all that is best in our tradition. Ahead of us lies a great adventure in building even stronger the foundations of our beloved country. America will not hesitate to meet that challenge."

Today, reclamation is needed more than ever before to increase acreage under cultivation and to provide power for great industrial production. Survival in this and other countries depends on America's ability to produce.

Firm leadership during this period of expanding western development falls squarely on your shoulders as members of the National Reclamation Association. Many of you settled in the West because you believed in greater opportunities for yourselves and your families. You have achieved world fame for your miraculous transformation of desert into growing, thriving farm lands where visitors come, look, and want to settle. Your family-sized farms are an anchor of democracy that is good and strong and comforting in times of upheaval.

To hold what you have gained and to implement a long-range conservation program, the reclamation work in the West needs your help in obtaining some forward-looking legislation. The Bureau of Reclamation and the Department of the Interior do not seek to advance this work under the banner of any new social doctrines. Laws governing reclamation are of long standing. They include the 160-acre limitation, which had its origin nearly a century ago in the Homestead Act, and the congressional mandates which provide that power at Federal dams shall be used for the benefit of all the people.

In asking you to give careful thought to forwarding the reclamation program through adjustments of the laws to fit current needs, the Department of the Interior does not recommend that you uproot the laws that protect the family-sized farm and assure the domestic and rural power consumer served by public agencies and cooperatives of first call on reasonably priced energy for Federal plants.

Rather do we suggest that, as an association founded to perpetuate land and water conservation, you support legislation to strengthen the present reclamation program which you have so ably defended in the past.

The lowered interest rate on power provided in the pending Rockwell bill would be a great accomplishment. But I hope, and think, that eventually the Congress will see the wisdom of making the rate less than 2½ percent now provided by the bill.

If we can do these things—you of the National Reclamation Association who provide the leadership, and we of the Interior Department who build the dams—we can insure a healthy and prosperous West. If the West is prosperous, if it provides an outlet for the vigor of the youth of America and a place for new capital investment in productive facilities, the prosperity of the Nation will have a firm foundation. A sensible, steady program of reclamation construction geared to the needs of the West—sound planning so that further construction can be authorized and started promptly when desired—maintenance of the time-tested benefits of family-sized farms and reasonably priced power—all of these will foster a rapid western development which will keep our Nation prosperous, strong, and able to share our bounty as well as protect the resources from which it comes.

Project land-development schedule—Irrigation projects currently under construction and development or authorized for construction, fiscal years 1948–54

[Preliminary (October 1947), subject to appropriations and availability of funds]

[1] An agreement is pending whereby additional lands to be served in the Gooding division are limited to 9,000 acres, including 3,226 acres opened to settlement in fiscal year 1947.
[2] Includes temporary water service for 160,000 acres of lands not included in ultimate Central Valley project development.
[3] Includes Wellton-Mohawk division, recently authorized.
[4] These totals (10,074,058 acres) include 616,643 acres already subject to irrigation from Bureau-built systems.

GENERAL NOTE.—Not included and not yet scheduled as to land development are the following projects: Palisades, 650,000 acres (supplemental water); Kings River, 800,000; total, 1,450,000.

Scheduled program for development of authorized power projects (subject to appropriations), through fiscal year 1952

Foreign Relief

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of an Associated Press dispatch from Athens, Greece, as follows:

ATHENS, December 15.—The Ministry of Justice today ordered an investigation into charges by the Piraeus League of Merchants that approximately $4,500,000 worth of foodstuffs had spoiled in Greek warehouses during the last 5 months because of failure to distribute them.

The league said the spoiled foodstuffs included cheese, canned milk, sugar, powdered milk, vegetables, codfish, herring, lard, and canned goods.

The American Mission to Aid Greece previously had reported that $75,000,000 worth of supplies and equipment shipped in by the UNRRA and other agencies were lying undistributed in warehouses and on docks.

Air Force Reserve

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mrs. SMITH of Maine. Mr. Speaker, for a long time now I have been urging that the Air Force Reserve be given parity with the other civilian components of the armed services. It has been my privilege to introduce most of the original Reserve legislation in this Congress. Among the foremost of the measures which I have sponsored are those proposing, first, inactive training pay; second, Reserve retirement; third, death and disability coverage for reservists in training; and, fourth, the creation of a Reserve Medal and Reserve Special Commendation Ribbon in recognition of peacetime Reserve service.

It is therefore most gratifying to me that the National Aeronautics Association, an organization of top-level leaders of all segments of aviation, passed the following bill of policy at its annual air clinic last month:

STRENGTHEN THE AIR RESERVE BY THE FORMATION OF READY UNITS IN ALL AREAS, TRAINED AND EQUIPPED FOR EMERGENCY

Be it approved by the delegates to the Fifth National Aviation Clinic:

SECTION 1. Since the Regular Air Forces can be maintained in peacetime at only a small part of the strength required in war, a large and ready Nation-wide reserve is essential to fast mobilization.

SEC. 2. The Reserve of the United States Air Force is without combat aircraft, pay, and incentives, and adequate facilities such as have been granted to the Naval Air Reserve and the Air National Guard. Only a small percentage of its officers and even fewer enlisted men are training, at a limited number of points. Recruiting and training of young people is insufficient for reserve replacements.

SEC. 3. Congress is urged at once to increase funds for the Air Reserves so that modern combat aircraft and other needed equipment may be used by the Reserve and new equipment may be developed for economical use on small airports within reach of reservists who lack access to larger fields.

SEC. 4. The pending legislation for inactive duty pay, retirement, and other measures to raise the Air Reserve to a parity with other

reserves should be passed; all legislation should be codified in a single Air Reserve Act.

SEC. 5. To conserve Federal funds, provision should be made for contracts at civilian airports for flight and ground training of air reservists and Air Reserve prospective recruits.

Mr. Speaker, this realistic and comprehensive act of endorsement of parity for the Air Force Reserve stems directly from the intelligent determination and patience of Lt. Col. Kendall K. Hoyt. I urge the most serious consideration of this NAA bill of policy by every Member of Congress.

Down to Earth

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. CANNON. Mr. Speaker, under leave granted to extend remarks in the RECORD, I am including an excerpt from one of the great farm journals in America.

No one has ever accused Wallace's Farmer of being partisan. If it leans in any direction, it leans toward the party which dominates the State in which it is published. Likewise neither General Marshall nor the Marshall plan are partisan.

For that reason the following editorial from Wallace's Farmer and Iowa Homestead is particularly timely:

WE'LL HELP EUROPE—AND OURSELVES

What difference does it make to you as a Corn Belt farmer whether Congress sends emergency help to Europe? It makes this much difference.

1. If European nations can work their way back to a modest prosperity, chances of another war will shrink. Your younger boy may not have to fight.

2. If Europe revives, our lard, cotton, fruit and tobacco exports will be helped. And farmers will sell more meat and butter at good prices to city workers who make goods for the export market.

The revival of Europe may mean peace and profits to Corn Belt farmers. If Europe slips back into anarchy we'll pay for it in war and depression.

It is good news to farmers, therefore, that Congress is apparently going to rush emergency aid abroad. It will be better news if the Marshall plan for 1948 aid also goes through early in the year.

But some ask: Can we help Europe by heavy exports without bringing on a worse inflation here?

In the first place, 1948 exports will not be heavier than in 1947.

In the second place, our inflation is a product, not only of high demand but of bad handling of credit.

If Congress puts back controls of installment credit and fixes ways of preventing a further boom in bank loans, inflation can be checked.

Congress can help Europe and check inflation at home, too. Both need to be done.

Can American Dollars Save Europe From Communism?

EXTENSION OF REMARKS
OF
HON. JOSEPH H. BALL
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The European Recovery Program" delivered by me on December 13, 1947, at Philadelphia, Pa., before the Philadelphia Foreign Policy Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The genesis of the Marshall plan was two sentences in a speech by Secretary Marshall at Harvard last June in which he suggested that it was about time Europe tried to help itself, and that then we might feel better about helping them. Sixteen nations met at Paris and did two things. First, they decided on a level of living standards for the 200,000,000 people in their countries for the next 4 years and a level of production they would like to achieve by the end of the 4 years, in most cases considerably above prewar levels. Then they estimated how much of the materials to reach these goals they could supply themselves and the deficit, $22,000,000,000, is the Marshall plan, so-called.

Of course that is not a plan at all, in the sense that it includes any specific and detailed series of projects to increase Europe's production. Reports are that the first figure was twenty-nine billions. Will Clayton persuaded the nations to lop seven billions off, and our own Harriman committee cut it several billions more. But there is still no plan that anyone can get his teeth into. What is sought, apparently, is authority for the Administration to spend from four to six billions a year for the broad purpose of "European recovery."

Although I am critical of such a vague proposal to spend more American billions in the same way that twelve billions have been spent unsuccessfully in the past 2 years, let me emphasize here that I have no quarrel whatever with the fundamental premise of the Marshall plan.

A free and economically solvent Europe is a sound objective of our foreign policy; it would be tremendously to our advantage, and if substantial assistance from us stands a reasonable chance of achieving it, then the expenditure is justified on the basis of national self-interest. But I do want assurance that our expenditures stand at least a 50-50 chance of achieving results, and I am very certain that if the Administration is left free to pursue the policies it has pursued in the past, it will fail again. Therefore, I believe Congress must insist on some severe restrictions and conditions on any future grants of funds or authority.

One of the major arguments by the proponents of this plan is that unless we extend this aid Europe will be taken over completely by the communists. In other words, we must buy off communist aggression with American dollars.

Granted that severe economic distress provides more fertile ground for communist treachery, that argument still does not jibe with facts. Nowhere have the communists ever taken control of a country through the free choice of the people, whether the people were hungry or not. Always the communists have been a minority, usually a small one, which seized power by naked force, usually with the backing of the Red Army. Then the communists proceed to exterminate all political opposition, liquidate freedom, and bleed that country to the limit for the benefit of Soviet Russia. The people are always worse off than before.

That is what has happened in one country after another in eastern Europe. With that horrible example of what communist dictatorship means right next door to them, is it logical to assume that the peoples of Italy, France, or any other country will freely choose that course out of their troubles, regardless of how serious these may be? I cannot believe it. To use a favorite metaphor of the Marshall-plan proponents, that is like saying that a man whose house is burning will pour gasoline on the flames unless you help him carry water.

I agree completely that communist dictatorship and aggression are the most serious threat to both world peace and recovery today. But it is a threat based on power and force. The fifty-odd Russian divisions in eastern Europe have a lot more to do with it than economic problems in western Europe. Like the Nazi dictator, the communist dictator will be finally stopped in his aggressions by the presence, or if worse comes to worst, by the use of superior force. It is just as dangerous and wrong to try to fool the people into believing that we can buy off communist aggression with dollars as it was to try to appease Hitler.

It has been argued that if we attach conditions to future loans and grants we will not only spoil the effect of our gifts but that we would be accused of interfering in the internal affairs of the countries we help. Being an international Santa Claus is becoming a bit too expensive, and as for interfering with their affairs they don't have to take our money if they don't want it, and maybe it's time somebody did do a little interfering. They don't seem to be managing so well by themselves.

No aid program can be put on a humanitarian basis, deeply as we may feel about Europe's plight. Congress has no power under the Constitution to appropriate public money for charity abroad and we would violate our oaths if we acted on that basis. Likewise, our assistance cannot by any stretch be termed an economic investment. If conditions in Europe were such that these expenditures would be a sound economic investment, there would be no need for government to step in. Private capital would do the job.

The only basis on which Congress can act is that our aid to Europe will advance the interests, national welfare and security of the United States. This is a political program, and must be such to be constitutional. Therefore it is perfectly sound to attach to it any conditions which we believe are necessary to achieve those political objectives, with the recipient countries always free, of course, to turn down our help if they don't like the conditions.

What should those conditions be? I can suggest a few. It is now costing American taxpayers at the rate of over $700,000,000 a year to support the economy of the British and American zones in occupied Germany. All studies of the problems there that I have seen agree that an integrated economic and political administration of at least the three western zones in Germany is essential if German production is to be increased enough so its economy will at least be self-supporting, let alone repay these sums or pay any reparations. France has consistently opposed unification of even the western zones in Germany. We can understand her fear of

a strong Germany, but our own generals are convinced they can prevent any rearming of Germany while increasing her production so she is self-supporting. Shouldn't we insist that France, as a condition of participating in future aid, go along with us on an integrated administration of Germany?

Britain would be one of the heaviest participants in the Marshall plan under the Paris report. Personally, I am convinced, and the record bears me out, that a free economy will always outproduce and provide a higher standard of living for all the people than either a socialistic or government-planned and controlled economy. I believe that when economic freedoms are liquidated, the other freedoms are in jeopardy and the socialists have always had too much in common with the communists for my taste. I don't know how long Britain's socialist government can continue to fool their people by subsidizing their cost of living at the rate of $1,600,000,000 a year, and I rather resent it that some part of our loan has gone into that kind of fiscal legerdemain. But I would not for one instant think of trying to tell the British people what kind of government they should have or even making that a condition of our help.

However, its own production is absolutely essential to Europe's recovery. Even at best, we can carry only a small fraction of the load. One of the key bottlenecks to European recovery is lack of coal, and a major part of it is due to the fact that where Britain used to export ten or fifteen million tons of coal a year to seaports on the Continent, she is now a coal-importing country. America has to make up part of the European deficit, and our coal delivered costs us $26 a ton. The rest is taken from the current low production in the Ruhr, requiring long rail hauls over a transport system that is near the breaking point. In the opinion of many, a resumption of British coal exports to the Continent is absolutely essential to the success of any European recovery program. Why shouldn't we then insist that as a condition to participation in an aid program, Britain supply, month by month, a million tons of coal a month for export to the Continent of Europe? We would not tell England how to mine the coal. That is her problem. But we would insist that somehow she achieve the production essential to the success of the whole program, so that our help stands at least some chance of succeeding.

Another bottleneck to European recovery is the foreign exchange situation. The legal exchange rates in many countries are 50 percent or more below the actual buying power of the local currencies as reflected in the free (or black market) exchange rate or that in Switzerland, which has a free exchange market. This means the foreign importer must pay double or more the true value of any goods he buys, in terms of his own currency, and that prices most goods out of the market. This at a time when it is urgently necessary for Europe to build up its exports to pay for food and raw material imports. Shouldn't we insist on an immediate correction of that situation as a condition to our further assistance?

Even if these and other conditions of a similar nature, all aimed at achieving the increase in domestic European production which is essential to the success of any aid program, are met, there is always the danger that the communists in these countries, through their control of or influence in the labor unions, will so sabotage production as to completely defeat the program. That is a chance we may have to take. The recent developments in France are encouraging, but our future course should be determined in part by how effectively the governments we are to assist move to meet this very serious problem.

There is little question about the program for interim aid to France, Italy, and Austria. The failure of European harvests is a hard fact, and the aid is necessary to keep hunger and cold from reaching proportions in Europe which would endanger our own troops there and our security. The bill already has passed both Houses and the differences will be ironed out speedily in conference.

Unfortunately, the urgency of the need did not permit a thorough examination of the estimates for the interim aid. Whether the $597,000,000 total approved by the Senate is the proper one or not, I doubt whether any Member of Congress knows. Personally, I voted for some reductions in the Senate, first because I was very doubtful whether we can supply the volume of grains scheduled for export, and second, because the justification for the amounts proposed was inadequate.

Great emphasis has been laid on the "thorough screening" given the requests of France, Italy, and Austria for interim aid by the State Department. Under Secretary Lovett testified, with some pride, that the request by France had been reduced $131,000,000, from four hundred fifty-eight to three hundred twenty-eight millions. But then he went on to explain that the reduction included an item of $80,000,000 for balance of payment debts between France and Belgium, another $20,000,000 for an old debt to England which the French were going to pay in dollars although they had $200,000,000 of blocked sterling, and finally an item of $15,000,000 which also was an old foreign exchange debt. These three items, which are pure paper padding and had nothing to do with urgent needs for food and fuel, total $115,000,000 of the $131,000,000 cut out of the French request, making it apparent that her request for actual commodities could not have been reduced at all materially. Since applicants for either gifts or loans seldom pare their requests to the bone, I believe we are justified in questioning whether the State Department's "screening" of these requests was too vigorous or careful.

On the other question, America's ability to spare the 570,000,000 bushels of grain exports at which the administration is aiming without very dangerous repercussions on our own economy, the testimony before the Appropriations Committee raised grave doubts in my mind. The five major grains—wheat, corn, oats, barley, and rye—are tied together in our economy, being to some extent interchangeable as human food or livestock feed. This year our total production of these five grains is 5,395,000,000 bushels, which is 703,000,000 bushels less than our total domestic consumption and export last year of 6,098,000,000 bushels. Expert witnesses before our committee were very doubtful, in view of these facts, whether we could export the 500,000,000 bushels of wheat planned by the administration without driving the price of wheat up to $3.50 or $4 a bushel and leaving us with a dangerously low carry-over.

There are many other aspects of this program which need a thorough study and discussion. But I would like now to turn to the whole field of American foreign policy.

For 7 years in the Senate I have supported consistently every major foreign-policy proposal of the national administration. I have done so in the face of administration justifications, which were often weak and vacillating, and which failed to give Congress or the people a full and complete report of the facts. In the past year my support has been tempered by growing doubts as to the wisdom of some programs.

I am convinced that it is time now for a thorough and critical discussion of United States foreign policy, both its programs and their administration.

I have reached that conclusion because it is glaringly apparent that our foreign policy, judged by the acid test of results, has failed badly.

Two years ago the United States stood at an all-time peak, probably unprecedented in history, of international prestige and power. We had just won, virtually single-handed, a great war in the Pacific. Our military power was the major factor in winning another great war in Europe.

Out of a flood of production from our farms, mines, and factories we had furnished to our allies and friends in the war over $50,000,000,000 of lend-lease supplies, only a fraction of which was offset by reverse lend-lease.

All the peoples of the world were tremendously impressed by the military power we had mobilized for the war, and were even more impressed by our almost miraculous productive capacity. Peoples and governments were convinced also of our good intentions, the fact that we had no desire either to exploit or enslave them. Whenever in history, for instance, had a great world power given away $50,000,000,000 worth of supplies and exacted no commitments or even promises to repay in return?

It would appear, looking back, that the United States with a wise and foresighted foreign policy, should have been able to obtain in the world very close to whatever international system we desired; particularly so since what we desired, and what must always be the fundamental objective of our foreign policy, is an ever-expanding area in the world where individual men and women are free to worship, think, and speak as they please, to choose their own governments, and to labor at the occupations of their choice and enjoy the fruits of their toil. That objective surely is one which all people who have had even a distant glimpse of the great benefits of freedom must share.

Yet what has happened? In the 2 years since VJ-day, far from moving in the direction our foreign policy sought, the world has moved the other way. Millions of people whom we fought to free live under Communist dictatorship, and the rest of Europe and Asia is torn by civil strife.

American military power, while still tremendous potentially, is much smaller in actual combat strength. Our prestige with the peoples of the world has deteriorated even more. The editorials in European publications sound shockingly like those of 20 years ago, when they were calling us "Uncle Shylock." This time the criticism is not because we are attempting to collect what is owed us. We have been too gentlemanly even to suggest repayment. This time the criticism is because we are not willing, without debate, to give Europe a blank check underwriting its economy for the next 4 or 5 years.

Finally, our shrinking free world is facing a great aggressor power, Communist Russia, whose dictatorship is as cruel and ruthless as any the Nazis ever imposed, and whose aggressions bear a terrifying similarity to those in the late thirties which heralded the Axis attempt to conquer the world. The main difference is that Russia, in the communist parties tolerated in free nations, has a fifth column infinitely more effective than any the Nazis ever had.

The deterioration in our international position in 2 years is almost unbelievable. Yet in those 2 years every foreign policy proposal of this national administration has been approved by Congress.

We ratified the United Nations Charter, with only two dissenting votes in the Senate. Yet we are continually on the defensive in that great world forum, answering the ridiculous warmongering charges of Russian dictators, who speak fresh from their armed subjugation of eastern Europe in violation of

the Atlantic Charter and their other agreements.

Congress approved the Bretton Woods agreements establishing an International Monetary Fund and the World Bank. One was supposed, we were told, to stabilize currency exchange rates and the other to finance reconstruction projects. Fictitious exchange rates still are one of the bottlenecks to European recovery today, and there would be no need to discuss a Marshall plan if the World Bank were functioning as promised.

Pending the operation of the Bank and Fund, the United Nations Relief and Rehabilitation Administration was set up to do the relief job, and Congress, at the administration's request, appropriated $3,700,000,000 to it. Members of our Senate Appropriations Committee found $75,000,000 worth of UNRRA supplies, mostly tractors and farm machinery made in America, rusting in an open-air depot at Athens this summer. UNRRA was not a very happy venture either.

Recognizing the importance of British recovery to our hopes for the world, Congress voted the $4,400,000,000 British loan. It is already exhausted, with none of the purposes promised for it achieved. In fact, Britain is in worse straits economically than before the loan was made.

In the 1947 session, Congress approved the $400,000,000 Greek-Turkish aid program, voted another $332,000,000 for relief purposes in Europe and Asia, to say nothing of $600,000,000, now raised to $1,090,000,000, for relief in occupied areas during this fiscal year. Relief in occupied areas alone will have cost us $2,625,000,000 by July 1948. In addition, hundreds of millions have been loaned by the Import-Export Bank, whose lending authority was increased $2,700,000,000 in July 1945 for that purpose.

In all, our loans and gifts in Europe have totaled more than twelve billions in 2 years, plus another two or three billions in Asia.

What has been the result of all this expenditure of American resources? The realization of our objective, a free world, appears further away than ever, and 16 nations in Europe have presented to us a bill for twenty-two millions more "to save Europe from communism."

I grant you there are extenuating circumstances in the record. There is no question but that serious blunders were made at Yalta and Potsdam, blunders which are still blocking tragically our hopes for peace and stability in the world. They were made at a time when few of us realized that the aims and strategy of Communist Russia were just as repugnant to free peoples and the Atlantic Charter as were those of the Nazis. Probably our leaders were in a position to have known better, but there is little to be gained by trying to assess the blame for past errors.

Then, too, it is unfortunate, to say the least, that at a period when strong and consistent administration of our foreign policy was all important to America, we have changed horses in that administration three times in the middle of the stream. Our State Department hardly has had time to adjust to one set of leaders before it had a completely new set. But that also, we may hope, is water over the dam.

I agree that hindsight is always easier than foresight. The big question is what do we do from here on. But I do insist that in view of this Administration's almost 100-percent record of erroneous predictions and failure to achieve promised results in foreign policy, its current proposal to commit the resources of America to a European-recovery program to the tune of sixteen to twenty billion dollars over 4 years must be given the most careful and searching scrutiny.

There are many other urgent questions which cry out for full and honest answers. Why, for instance, shouldn't the United States at least try to regain the initiative in the United Nations? Why must we always seem to be on the defensive, apologetic about our free, capitalist economy? If we think it is the best yet devised, and I do, let's say so a little more vigorously.

We are still scrupulously observing the Yalta and Potsdam agreements, even to the point of dismantling and shipping German war plants into Russia, although for 2 years the Russians have violated every major commitment of those agreements. How much longer do we have to wait before telling the Russians that they themselves have nullified those agreements by their repeated violations and that we are repudiating the agreements and their blunders?

I have never heard of a football game or a hot war being won by a good defense and nothing else. I doubt whether a cold war can be won by a good defense and nothing else. Individual freedom, both political and economic, is still the most powerful and dynamic idea in the world and we in America should be its most vigorous exponents. We have let ourselves be pushed around for 2 years on the defensive and the results are not happy. Let's try a little offensive strategy for a change.

Incentives To Sell Wheat

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Incentives To Sell Wheat," published in the December 6 issue of the Nebraska Farmer. The closing sentence of the editorial reads as follows:

Should any of these plans be tried and found effective in speeding up the wheat market, it should also enable the Government to fulfill its export commitments sooner. That would take the Government out of the buying market and should ease the upward pressure on prices.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INCENTIVES TO SELL WHEAT

Farmers are holding a lot of wheat from the 1947 crop for later sale. They are doing so to benefit from lower income taxes by spreading their high 1947 wheat income over 2 years, as well as from a possible lower tax rate for 1948, and in the hope of a higher price.

Many big wheat growers are faced with the payment of 50 percent or more of their taxable income to Uncle Sam, if they sell their wheat this year, which means that $3 wheat would net them less than $2 per bushel. Should their 1948 crop be small, as indicated in some sections, by distributing their income over 2 years they would be in much lower tax brackets. Poor crop prospects plus the continuance of high exports to Europe for relief also are favorable factors for higher prices. In the face of poor wheat crop prospects and unprecedented exports of grain, many farmers think they would be foolish to empty their bins now.

Another factor which has held wheat off the market is the boxcar shortage, which makes it impossible to deliver wheat in many sections. All of these things make it difficult for the Government to find enough grain to take care of immediate export commitments and needs.

Among the suggestions for solution of the problem, the purchase certificate plan seems to have some merit. It would permit the Government to issue purchase certificates on wheat for immediate delivery, to be redeemed for cash at the current market price at the time of delivery or at any time the following year. Assuming that the Internal Revenue Bureau would agree, this would permit wheat sellers to report their income for next year, if the certificates were cashed after January 1, as well as to wait for what may be a higher market.

Senator HUGH BUTLER, of Nebraska, is author of a bill to stimulate wheat and rye sales by limiting income tax on them to 25 percent, plus the 3-percent normal tax, for a period of 1 year. This in principle is applying the capital-gains tax to wheat and rye income. There are good precedents, Mr. BUTLER contends.

The proceeds from the sale of oil and gas properties already enjoy a tax ceiling, and the Government has granted a tax concession to encourage the production of lumber. Wheat farmers are shut out of the world market, which is now about $6 per bushel f. o. b., because the Commodity Credit Corporation handles all grain exports. Meanwhile, coal can be exported through regular channels at soaring prices.

The Nebraska Senator drives home a telling argument by citing that grain trade speculators, who buy and hold futures for 6 months or more, are taxed on the basis of capital gains on any profits they make. He thinks the farmer who toiled and sweat to plant and harvest the crop is entitled to an even break with the speculator. And that sounds reasonable, too.

Should any of these plans be tried and found effective in speeding up wheat marketing, it should also enable the Government to fulfill its export commitments sooner. That would take the Government out of the buying market and should ease the upward pressure on prices.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on the subject of justice for Poland, on November 30, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is fitting and proper that we should dedicate a day to the Polish Army. It is particularly appropriate that we should remember it in this year of 1947 when the world has just finished a war, which was begun in the name of Polish integrity, which was fought for almost six long years in the name of human freedom and which, having ended, finds the world still with many places

where freedom is but a hollow mockery and with Poland in a condition which evokes our sincere concern.

In this spirit let us take a brief glance at Poland's past and express some hopes about Poland's future.

It is in many respects a tragic history, but also a noble one. We are apt to forget that from the tenth century until the first partitioning at the end of the eighteenth century, Poland was an enormous country, being as large as the German Empire, Switzerland, Belgium, Holland, and Denmark together and, among all the nations of Europe, being only exceeded in size by Russia. The Poland of those days was nonaggressive and tolerant. Offensive warfare was prohibited in the constitution. The King—who was elected—was compelled to swear that he would tolerate all sects and religious beliefs. The Polish constitution subscribed to the principles of Christian morality.

Then came the virtual end of Polish independence in 1696 when four kings were imposed by foreign powers to succeed John Sobieski. In 1795 Poland was erased from the map of Europe. A tragic era intervened, brightened only by the superhuman courage and love of country shown by Polish patriots who never gave up hope. May their devotion to their country be an inspiration to us all in America today.
